# PEACE & SECURITY

## CUBA: THIRTY YEARS OF FIDEL

*What became of  
the revolution  
that was  
supposed  
to work?*

BY CAROLE JEROME

*Also in this issue:*

**Kim Richard Nossal**  
There was no debate about defence policy during the election because there was nothing to debate.

**Yves Bélanger and Pierre Fournier**  
The usefulness of investment in military production is increasingly in doubt.

**Nancy Gordon**  
Better late than never, the Soviets have begun to take the UN seriously.

**Bernard Wood**  
Hostile domestic constituencies could come together on a new meaning of "security."

**Stephen Handelman**  
Soviet Uzbekistan operates according to political imperatives much older than those of Lenin.

## Institute Publications 1988-1989

### OCCASIONAL PAPERS

4. **From Lenin to Gorbachev: Changing Soviet Perspectives on East-West Relations**, by Paul Marantz, May 1988, 89 pages.
5. **The Debate About Nuclear Weapon Tests**, by Jozef Goldblat and David Cox, August 1988, 86 pages.
6. **The Return of Vietnam to the International System**, by Gérard Hervouet, December 1988.

7. **Of Fire-Proof Houses: Canada's Security**, by Geoffrey Pearson, November 1988.

### CONFERENCE REPORTS

5. **Measures for Peace in Central America**, 8-9 May 1987, by Liisa North, December 1987, 76 pages.
6. **The International Trade in Arms: Problems and Prospects**, 21-22 October 1987, by Keith Krause, March 1988, 47 pages.

## NOTE FROM THE EDITOR

As *Peace&Security* goes to press this fourth week in February, international news is dominated by the escalating diplomatic struggle over Salman Rushdie's book, *The Satanic Verses*. And the affair is getting ever more bizarre: many Western countries, including Canada, are recalling their senior diplomats (to whom the government of Iran has essentially said "good riddance"); the press is asking anyone with the remotest connection to Islam for their opinion – the answers to Western ears seem to range from non-committal (King Hussein of Jordan) to hostile (70s soft-rock crooner and Moslem convert Cat Stevens says Rushdie should die for his writing); and bookstore chains are pulling the books from their shelves then selling copies out of the back room.

For the record, this editor expresses solidarity with Mr. Rushdie and the international writers organization, PEN, in condemning the actions of the government of Iran and denouncing the book burning and threats to life and property that have accompanied the publication of his book. But these words come very easily

to someone rooted in Western liberal, secular traditions. The drama we are watching unfold arises because such sentiments do not come easily, or do not come at all, to many whose roots lie elsewhere. Khomeini's assassination squads aside, many Moslems just don't buy the "free expression" argument when it comes to Salman Rushdie.

The controversy over *The Satanic Verses* is one of those little decisive moments in history that ripples down through months and years, altering perceptions, creating new opportunities, and changing the future. It forcefully demonstrates, in case we needed reminding, that the system of relations among different states and peoples is fragile and pitifully inadequate. Most of the countries of the West have frozen diplomatic contacts with a powerful and dynamic regional superpower over the reaction of that power's religious leaders to the contents of a novel. How can we expect to carry on civilized discourse among diverse cultures, with the goal of finding solutions to the problems that beset us all, when what minimal consensus there is about how to conduct the discourse is so easily undermined?

The most disquieting part of this affair is that it could make the finding of answers to this question much more difficult. The action of Iran against Rushdie is alarming not only because it menaces the life of an individual outside Iran, nor even because it sets a terrible new precedent for modern interstate behaviour, but also because it creates a chilling effect among the very people we need most. Whatever else happens to Rushdie, his creative life is permanently altered for the worse. He is now a symbol – a hero to some, a villain and defiler to others. He can never again be just an excellent writer. The best and the brightest thinkers in the world are on notice that their work could cost them their lives if it happens to cause "offense" to some group or other.

The world frequently seems to be heading straight to hell in a hand basket. This is hardly the time in human history for a new dark age; we need all the ideas we can get.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors were appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

**F**OR SO MANY, THE IMAGE ASSOCIATED WITH THE CUBAN REVOLUTION is still that wildly romantic portrait of Che Guevara, dark hair windblown under the guerrilla beret, smouldering eyes fixed on a shining vision of the Marxist future. Ah, Che. That photo became an icon of the 1960s counter-culture Che, a leftist's heart-throb, the romantic hero of the revolution that was going to work. In Cuba he still is; huge billboards of Che festoon the country, "*El Hombre Modelo*," they proclaim. "The model man. Be like him."

When thirty-three year old Fidel Castro finally overthrew Fulgencio Batista and took power on 1 January 1959, Che, the Marxist Argentine doctor and revolutionary, was with him. An oft-repeated story has it that as Fidel chose his cabinet he was at a loss who should run the economy, and asked his assembled cohorts, "Is anyone here an economist?" "I

am," said Che, thinking Fidel had asked if anyone was a communist. Che was made Minister of the Economy.

There is more than nastiness or nonsense to the story. Fidel vows that he himself was not a communist or a Marxist then. At his trial for his first failed attempt against Batista in 1953 (an assault on the Moncada barracks), the young middle class lawyer, Castro, talked of reinstating the constitution of 1940 and holding free elections. "I did not lie in the Moncada speech," he later told American journalist Lee Lockwood, author of the fascinating profile, *Castro's Cuba, Cuba's Fidel*. Fidel says he became a Marxist-Leninist later, out of necessity, the only way he saw to achieve everything from land reform to creating the *Hombre Modelo*.

Castro himself said it clearly in 1961. "Inside the revolution, everything; outside the revolution, nothing." When I visited last December, Karl Marx Theatre was presenting Snow White and the Seven Dwarfs for the kiddies. Even Disney and fairy tales were "inside," as are the lavish, erotic stage shows at that ultimate in night club decadence the Tropicana. Latino Marxism can live with it.

This kind of thing created for Che's supporters in North America a reassuring atmosphere of fun and freedom.

*Rejecting the Soviet  
model for economic  
and political reforms,  
Cuba struggles on ...  
almost alone.*

BY CAROL JEROME

Nicholas Vitaro

This wasn't drab and deadly Soviet-style socialist realism. But what Inside vs Outside meant was that *real* political dissent was to be crushed. And it was, as in all the other revolutions. Over 20,000 were put in prisons and re-education camps – often peasants who had said an unwise word or signed a paper in ignorance. When they began to question and oppose censorship, intellectuals and liberals of the middle class, who had first supported the revolution, were singled out for some of the most brutal prison treatment anywhere in the world.

The prison memoirs of Jorge Walls, a writer once sympathetic to Castroism, who tried to defend a friend from unfair imprisonment, are some of the most appalling and painful that I have read. In *Twenty Years and*

*Forty Days*, the time he served, Walls describes ghastly cruelties in a strangely objective manner. He was one of the *plantados* (well dug in) political prisoners who refused to give up a single principle. But the Sixties leftists knew nothing of all this or refused to know. To criticize was to play into the hands of Washington or the ex-Batista crowd in Miami. They saw only the literary crusade, the new schools, the bare-foot doctors, new rural medical clinics and hospitals. All of these were very real; illiteracy has been virtually wiped out. The six year-old Almajeiras hospital in Havana is a gleaming twenty-three story modernity with 950 beds. Wealthy Europeans pay to come here for heart surgery, but any Cuban citizen receives all medical treatment free.

All of this costs money Cuba doesn't have. The economy is a shambles largely attributable to declines in international markets for sugar and oil, Cuba's bread and butter. The US trade embargo imposed in 1962 and still in force, is not the only cause. The Cuban government admits that a lot of the problem is a result of the inefficiencies and irrationalities in its own system. Fidel has gone so far as to call his early Soviet planners "tribal witch doctors."

**S**O NOW CUBA HAS "RECTIFICATION," FIXING UP ITS OWN MISTAKES, in everything from factory management to bus schedules. The Cubans I met took great pride in blaming themselves for the mess, not the CIA or the Soviets, and they are rectifying all over the place. Still, the buses don't come. There are no eggs from the farms because the transport vehicles are broken down and there's no money to repair them. Ships wait hopelessly to be unloaded. In the shops people line up for scarce items.

Rectification has been dismissed by many foreign analysts and Western diplomats in Cuba as "tinkering" and even then, said one local journalist I met, "comfy officials resist the changes, even though the majority want them." Castro wants to tackle the inertia of an over-centralized system without decentralizing it. Experiments with free markets in the 1970s reduced shortages, but they also produced price gouging, hoarding, and entrepreneurs getting rich – creeping capitalism. So they were closed. An incipient business class would be an intolerable threat to Fidel's philosophy and ultimately his regime. *Perestroika* and *glasnost* open too many such Pandora's boxes for Fidel. While Gorbachev says reform and openness are all justified in Lenin, Fidel will stick to Che, thanks very much. But he has yet to find a spark to adequately replace human greed as a motivator.

In his speeches and on the omnipresent billboards, Fidel keeps calling for "sacrifice," for the people to give up frills like food and clothing to pay for education, hospitals and progress. The cost of the military is never mentioned, though. The faithful heed his call happily: "If it weren't for Fidel, we'd have nothing," said a hospital technician. But others are getting fed up with "Téqué" (literally blah, blah), their nickname for Fidel – making fun of his long-winded speeches and endless talk. "Basta de Téqué" is a phrase gaining popularity; enough talk, the government should fix things and not ask us for more sacrifice.

Cuba is desperate for foreign exchange. Tourist taxis deal in dollars. Tourist stores ring up prices in dollars, selling whisky and other goods Cubans can't hope to find anywhere. The result is a whole new class: people with dollars. I went to one of Havana's most famous watering holes, the Bodeguita del Medio, with an American friend. With our dollars we were jumped over the sizeable queue by the *maitre d'*, just as in the Soviet Union. The Bodeguita is an old Hemingway haunt, a fact used to entice the tourists. Hemingway is as much an industry as Che and ordinary Cubans are beginning to resent it all: we get Hemingway and the good life; they get Che and the sacrifice.

The situation is not good. And whether it gets worse depends in large measure on Moscow. The only reason Cuba is afloat at all is the \$5 billion a year the Kremlin pours in, for a Cuban population of ten million. Moscow pays an artificially high price for sugar as the main form of

subsidy. Gorbachev has made it clear that he wants Fidel to get with some *perestroika* and pull more economic weight. Fidel has replied, essentially, "take your *perestroika* and stuff it." In a December speech, Fidel pointedly stated that Cuba's errors originated "in the imitation of experiments of other socialist countries ... which now tell us these are no good. But we would not like them to tell us the same in twenty years."

The Soviets take this with great dignity. One look at the Soviet embassy in Havana tells you these folks are here to stay, regardless of insults from their host. The embassy is a huge white affair dominated by a tower with turrets and projections that scream electronics. The lobby is a cavern of dark green Cuban marble, furnished only with a bust of Lenin on a ten-foot pedestal. The first secretary, Gennadi Sizov, emerged from a heavy wooden door near Lenin and greeted me in affable Spanish. "We appreciate that Cuba has its own special problems and needs its own special solutions," he said, "and the Soviet Union will always support its friend and ally."

So that was the official line. But most seasoned observers believe Gorbachev is putting the screws on behind the scenes, trying to persuade Castro that economic failure is by far a greater threat in the long run than a few democratic adjustments. No one is sure, however, that he would not go further and use economic threats.

**C**UBA IS STILL THE *BÊTE NOIRE*, OR RATHER *ROUGE*, OF WASHINGTON. The ferocity of the US government's hostility is truly amazing, more even than I encountered in briefings on Iran at the State Department during the hostage crisis. When he was Secretary of State, George Shultz said there was no chance for normal relations in the foreseeable future, and that Fidel had "to cease acting against the US in this hemisphere." No one expects the Bush administration policy to be any different.

For Washington, the recent Angola agreement on the pullout of Cuban troops is not the "warming trend" hailed by so many. What matters is closer to home: Nicaragua, El Salvador and US-Cuban immigration talks. Washington also takes an extremely serious view of human rights in Cuba. Unfortunately, the recent State Department report on the subject is so exaggerated as to be, as one writer put it, "hallucinatory." This again gives Che's North American faithful an excuse to continue to ignore very real repression: the muzzling, arrest and exile of genuine human rights leaders and the people they defend – people like Ricardo Bofill and Elisardo Sanchez, and the Arcos brothers, of the two main Cuban human rights committees. These organizations are not "legal" but they are harassed rather than closed. Bofill and Sanchez have fled.

"Bofill is a liar and a fraud, just looking for power," Minister of Culture Armando Hart hissed at me when I interviewed him. "Valladares is a Batista criminal," he added, referring to the former prisoner now heading the US delegation to the UN Committee on Human Rights in Geneva. There are genuine questions about Valladares' credentials. But thus is all opposition dismissed and discredited. Cuba had released almost four hundred political prisoners by last summer, concurrent with unprecedented visits by Amnesty International, and other non-government human rights groups. But after they departed, arrests began again.

As I left one night to visit Dr. Samuel Martinez Lara, a psychiatrist who started the Party for Human Rights, a friend warned me not to go. The people the doctor was staying with, fellow human rights activists, had just been arrested: Tania Diaz Castro and her son Guillermo Vladimir Rivas, were sentenced overnight to a year each, allegedly for attacking police at a prison when they went to visit her husband, a prisoner for over twenty years. Subsequently, the husband and son were released after a visit from some US Congressmen.

Americas Watch, a US Human Rights group, says that their impression is that "the Cubans are concerned about their human rights image and are making significant concessions to the international community, but all the same laws are in place. There are no guarantees of freedom of expression and all the repressive machinery remains."

Nothing here is not political," asserted the Minister of Education José Fernandez Alvarez, the military hero who routed the Bay of Pigs invasion. "We are ninety miles from the USA." The American bogeyman is highly useful – all repression is ultimately justified by "Ninety miles ..." "The US boycott and isolation is a useful game for both sides," said Jorge Walls when I talked to him in Miami. "It leaves pro- or anti-Castro as the only choices." Many American analysts, including Wayne Smith, formerly chief of the US interest section in Havana, argue that ultimately this works against US interests, fortifying Castro, creating a false "emergency" he can use at will. They see Canada's policy as sane, pragmatic and practical; pursuing cordial relations and as much trade as possible, (especially since the US has left a vacuum) and pressuring for human rights behind closed doors.

In a Havana hotel bar, I met an Ontario government trade delegation in town to push everything from apples to greenhouses. Another was looking after a long-term project involving Canadian Holstein cattle. Canadian ambassador in Havana, Michael Kergin believes the Cubans care about what we think regarding Canada as a "barometer" of how far they can go. But he admits they have studiously ignored us on many human rights cases for years. And Canada does not apply any serious pressure or threats, only diplomatic noises.

Lee Lockwood, who knew Fidel well, has speculated that Castro's harsh treatment of his opponents is rooted in a kind of guilt at coming from the bourgeoisie himself, and in the fact that for all that he likes to claim his was an ideal peasant revolution, it owed its success to the liberal middle class fed up with Batista. Most of the *plantados* were of this group; the revolution, as usual, devoured its own. Fidel clings to an old and puritanical interpretation of Marx, the way he cultivates his image as just another peasant. But everyone I met says Fidel, at least, believes in it all. Fidel is not in it for power, as are some of the vindictive men around him. There is much of the macho swaggerer about him, the peremptory political road hog. But he believes in his mission for his people.

I'm tempted to compare him with other revolutionary leaders from Robespierre to Khomeini to Mao – all genuine believers who sacrificed many of those they claimed to be saving in relentless pursuit of their Grail. But it is worth saying that if monarchs of the past left palaces and cathedrals and legal codes, and Batista left casinos and prisons, Fidel Castro will leave schools and hospitals and his own prisons full of ghosts. □

# ALL IN FAVOUR, SAY AYE

*The lack of debate during last November's election about matters of national security is neither puzzling nor discouraging. Perhaps there is nothing to debate about.*

BY KIM RICHARD NOSSAL

**W**HILE MUCH EMOTIONAL heat was generated on the issue of the Canadian-American relationship during the 1988 Canadian general elections, other facets of foreign policy were virtually ignored in the long seven weeks of campaigning. This was particularly true of defence policy. To be sure, there were initial indications that national security issues would play a major role in the electoral contest. In 1987, the peace movement had chosen the 1988 election campaign to be the target of an extensive riding-by-riding public awareness effort – the so-called “Peace Pledge” campaign. The Progressive Conservative government under Brian Mulroney had brought out a White Paper on Defence in 1987 outlining a set of policy options that were both hawkish and expensive. In particular, the proposal to purchase nuclear-powered submarines promised to fuel debate. Finally, the New Democratic Party, the only political party in Canada to offer a genuinely alternative defence policy, had been surging in public opinion polls in the year prior to the elections.

In the event, however, defence policy did not become an important issue during the election; indeed it was hardly mentioned. The “Peace Pledge” campaign gained little support and collapsed. Protests by peace groups over the nuclear-powered submarines proved to be ragged and ineffectual. Neither of the opposition parties fixed their sights on the submarines in anything but a cursory fashion; the free trade agreement proved a more solid and rewarding target for criticism. Both the Liberal and Progressive

Conservative leaders did allow themselves the indulgence of a couple of snide digs at the NDP's defence platform. And for his part, the NDP leader, Ed Broadbent, made only a half-hearted effort to flog the party's 1969 promise to withdraw from the North Atlantic Treaty Organization and the North American Aerospace Defence command agreement; most of the time, one had the distinct sense that he wished that the promise, even as revised in April 1988 to make it more palatable, would just go away. In all, the political exchanges on security policy during the campaign were both vapid and superficial.

The superficiality of the discussions on defence in 1988 was by no means out of the ordinary. Not since the debate over the acceptance of nuclear weapons for the Canadian forces in 1962 and 1963 has defence been the subject of extended and spirited concern during an election. Indeed, in the last generation, election-time discussions of defence have, without exception, been lacking in depth and sophistication. Important technological developments, changes in defence doctrine, and shifts in Canada's strategic role in the Western alliance, have all emerged in the last twenty-five years without Canadians having been engaged in a discussion about these changes and their implications. Instead, what the electorate has been offered by both governors and would-be governors during election campaigns is little more than a periodic mumbling match posing as political debate.

AT FIRST BLUSH, ONE MIGHT BE both puzzled and concerned that

defence policy is not the subject of election debate. After all, defence policy – the security of the polity itself – cuts to the very heart of a political community's existence. Moreover, a great deal of treasure is invested annually in this element of public policy. Why does such a policy area, by its very importance, not foster more public discussion? There are also normative concerns raised by the absence of debate: is not the public discussion of issues of concern to the community as a whole the essence of a healthy and vibrant democratic polity? Could it not be suggested that election campaigns provide the most appropriate forum for the airing of a country's defence options, and an excellent opportunity to review and discuss aspects of national security? Indeed, could it not be argued further that politicians have a responsibility to encourage, not discourage, debate among an informed electorate on matters of such importance as a country's security policy and its general orientation to the international system? In short, is the failure of our governors to debate defence issues not an abdication of responsibility to the nation?

Let me propose another perspective: that the lack of debate on security matters in Canada is neither puzzling nor discouraging: we have no debate because there is nothing to debate. On defence policy, Canadians are in unusual agreement and that is not such a bad thing.

This argument rests on the assumption that serious political debate is not possible unless there is serious political conflict within a

community. And serious political conflict requires that at least two conditions be present. First, there must be a clash of opinion on an issue between significant numbers of individuals within the political community. Division on issues cannot be at the margins, involving but a few members of the political community. Second, clashes of opinion tend to be serious when they are deeply rooted in the concrete, rather than the symbolic, interests of the protagonists. In other words, when each side's position in a political conflict is grounded in a desire to protect its real interests against the directly harmful effects of the other side's policy preferences, that conflict tends to be more intractable. If these conditions are not present, one is unlikely to have serious political division. Instead, one has consensus, which hampers debate: for there can be no debate of any meaning when one fundamentally agrees with one's opponent.

IT CAN BE ARGUED THAT NEITHER of these conditions is present in the case of Canadian defence policy. First, there is no clash of opinion over defence priorities that involves significant numbers of Canadians. In effect, what some have called the “counter-consensus” in foreign policy is simply not there. For example, despite the proliferation of peace groups in Canada in the 1980s, the peace movement has been singularly unable to convince large numbers of Canadians that a firm attachment to NATO and NORAD – the traditional pillars of Canadian security – is sufficiently wrong-headed that they should do something concrete to change our defence posture.

Instead, the peace movement has encountered the inertia of a citizenry which has traditionally demonstrated a persistent and seemingly paradoxical ambivalence on the issues of "peace," as the results of the most recent CIIPS annual public opinion survey demonstrate so nicely. On the one hand, Canadians in large numbers are more than willing to support the good works of "peace." They will dutifully register their dislike of nuclear weapons with pollsters; they will show a disinclination to spend too much on defence during peacetime; they support their government in its peacekeeping missions and other good works internationally; they even acquiesce in the channelling of state funds to groups which are self-consciously devoted to altering current government defence policy.

On the other hand, Canadians in equally large numbers are as prone to support all of the *bêtes noires* of the peace movement: nuclear weapons (as long as they aren't Canadian) and nuclear deterrence, alignment with the West in international politics, membership in a military alliance, cooperation with the United States in air defence, and military spending. Their definition of "peace," in other words, does not involve a rejection of the tools for war.

More important, and no doubt much to the chagrin of the peace movement, Canadians show a stubborn consensus on such questions. One conspicuous measure of this consensus is that pollsters who plumb the depths of Canadian opinion always find in their representative samples hugely high levels of support for the North Atlantic alliance and the aerospace defence agreement with the United States. Whether it be the United States Information Agency (USIA), Gallup, Goldfarb, or CIIPS, the result is invariably the same: indeed, the USIA poll in 1984 uncovered an almost unbelievable level of support for NATO membership – eighty-nine percent – as close to political unanimity as one is likely to get. Likewise, the annual CIIPS public opinion surveys for 1987 and 1988, both confirm that widespread consensus.

Another measure of this consensus is to be found in the voting pattern of Canadians over the last three decades. To be sure, we have little direct evidence that most Canadians persistently consign the NDP to the margins of politics *because* it advocates abandoning an aligned defence posture. On the other hand, there can be little doubt that if Canadians had wanted an alternative defence policy seriously enough, they would not have allowed the NDP, as the only party which embraces a genuine alternative, to languish in political oblivion for so long. Likewise, if the attitudes of Canadians on defence had shifted significantly, it is likely that this shift would have been reflected in the policy platforms of one, or both, of the "major" parties.

BUT IT IS NOT SIMPLY THE ABSENCE of divergent opinion that dampens debate on defence. A second reason is that there is no clash of concrete interests. It is important to recognize that what opposition there is to Canada's present security posture stems from symbolic, as opposed to concrete, interests. The difference, it can be suggested, is significant for an understanding of why there is so little conflict in Canada over defence matters, for there are very few Canadians whose real interests are directly and negatively affected by the defence policies being pursued by the government in Ottawa. For example, the interests of a member of a peace group advocating non-alignment will not be directly and concretely affected by the Canadian government's maintenance of ties with the North Atlantic alliance – protestations to

the contrary notwithstanding. This is not to deny that peace activists may have a deeply-felt symbolic interest in having their country withdraw from military alliances; but their concrete interests will not be affected by a failure to achieve that goal. Such a perspective, for example, underlay the Supreme Court's response to Operation Dismantle's suit in 1984 that cruise missile testing violated Canadians' right to life under the Charter of Rights and Freedoms. In throwing out the suit, the Court argued that testing did not pose an imminent threat to the concrete interests of Canadians.

The symbolic nature of the interests of the opponents of Canada's current defence posture may be usefully contrasted with those whose concrete interests would be affected by a change in alignment. And there can be little doubt that a Canadian withdrawal from NATO or a renegotiation of NORAD would involve some considerable concrete, predominantly economic, costs. For example, a government which implemented the kind of policy embraced by the NDP – taking over all air surveillance and interception roles for the Arctic approaches to North America – would have to cover the costs of acquiring all of the North Warning System facilities, approximately ninety percent of the capital costs of which were paid for by the United States, and which would surely not be simply donated to Canada. Similarly, all of the costs of appropriate military hardware, infrastructure, and maintenance would have to be borne by Ottawa. And while the NDP has argued that what Canada spends now on maintaining troops

in Europe would be transferred to pay for a Canadianized air defence system, the figures make little sense. Not only would they not pay for it, but the resources cannot be transferred in such a simplistic manner in the first place. (Indeed, it is ironic that the NDP, whose opposition to NATO and NORAD is in large measure fuelled by antipathy towards military spending, would end up embracing the most militaristic peacetime defence budget in Canadian history.) Of course, to this burden one has to add the costs, economic and other, which would surely be imposed on Canada by our present allies, who, not unnaturally, would not be at all well disposed to a Canadian defection from the Western defence system. In short, the concrete interests of the vast majority of Canadians would be adversely affected by a shift in defence posture.

HOWEVER FASHIONABLE IT MAY BE in some quarters to characterize the average Canadian as one gulled into support for alignment by a system dutifully acting as a cat's paw for a continental capitalist class, in fact most Canadians have made a careful calculation about the consequences of embracing an alternative defence policy. They have consistently acted as though their concrete interests would be adversely affected by such a move. Moreover, they have exhibited in their political behaviour (that is, their periodic voting) a willingness to be more active in defence of those concrete interests than those individuals whose interests in an alternative defence policy are only symbolic.

Viewed from this perspective, it is little wonder that we have no real debate on security matters. There is too much agreement on the essentials, and too few divergent concrete interests to make a difference where they have the most impact in democratic politics: in the electoral arena. Likewise, it is not clear that one should be concerned about the implications of this for the vibrancy of politics in Canada; Canadians show far too much disposition to debate vigorously policy issues that genuinely do divide them for one to be too worried about the health of democratic debate. [

# BEST WEAPONS TO COMBAT A MILITARY ECONOMY

*The usefulness of investment in military production is increasingly in doubt – so what are the alternatives?*

BY YVES BÉLANGER AND PIERRE FOURNIER

IT IS DIFFICULT TO GAUGE PRECISELY the influence of the armaments industry on Canadian economic development. This is not because of a lack of information. Indeed, as far as the manufacture of arms is concerned the Canadian economy is one of the most open in the world. In 1988 the total value of arms production in Canada came to more than \$8 billion, and it is conceivable that production for export to world markets and for use at home could amount to between \$100 and \$120 billion over the next decade. This is not a sum to be sneezed at, and it is hard to imagine that such a windfall would not be of benefit to the economy.

Nonetheless, doubts are being expressed by various experts as to whether military investment is really beneficial. They argue that the cost of development is too high, the rate of productivity from the investments too low, and the spin-offs in industrial benefits increasingly marginal. The manufacture of arms is also seen as a major waste of resources. Add to this frequent and highly critical analyses of Canada's dependence on the US military-industrial complex and the unfortunate effects on regional development and industrial modernization, and the picture that emerges is much darker than one might expect.

Nevertheless, the Canadian trend towards continentalism, not only as far as the physical defence of the country is concerned but also in weapons procurement policy, seems to favour an industrial strategy geared towards the defence sector. It is likely that in the long term the Canadian government will adjust its economic policy to fit that of the United States,

where the defence sector is a key element in industrial strategy. We should be concerned about Canada's defence industrial base, not only because it has an impact on collective defence and national sovereignty – as the 1987 White Paper on Defence pointed out – but also because of its increasing influence on economic development. On this question, Canada has some important choices to make.

IT IS, THEREFORE, WORTH STUDYING in some detail the various strategies whose aim is to reduce military expenditures. Criticism of military expenditure in general, and of the development of nuclear weapons in particular, tends to gravitate towards three separate endeavours: the reduction of the national defence budgets, the creation of nuclear weapon-free zones (NWFZs) and the conversion of the armaments industry to civilian production. Although proposals concerning these separate issues usually give rise to complementary actions, proponents are sometimes at odds over the question of whether the focus of their efforts should be on the local rather than the national level.

Initially, those who promoted such actions were responding to moral and political imperatives. Recently, however, there has been more and more criticism of the sheer cost of defence to national economies. In the United States and elsewhere municipal authorities are becoming particularly severe in attacking the priority accorded defence in national budgets. For example, the United States Conference of Mayors, at its annual meeting in June 1987,

was preoccupied with cuts of more than US\$60 billion in federal funds for health, housing and education, and decided to commission a study of the social and economic effects of a reduction in the US defence budget.

The report – prepared by Employment Research Associates, independent consultants in Lansing, Michigan – was released in October 1988. It tried to estimate the effect of transferring \$30 billion a year for five years (\$150 billion from 1986 to 1990 or eleven percent of the defence budget) from defence purposes to various municipal programmes dealing with health, education, social services, employment, public transport, housing and community development.

The study came to the conclusion that this transfer would have a positive effect on the US economy. The Gross National Product would increase by \$3.5 billion per year; 197,500 new jobs would be created over the five-year period; total personal disposable income would increase by \$2.2 billion per year and revived investment in the construction industry (residential and non-residential) would amount to \$550 million per year. The additional \$30 billion which the municipalities would receive each year would enable them to hire 195,000 additional teachers; to spend an additional \$2.2 billion on infrastructure for public transport; to build 900,000 low-rental housing units; to treat 6.5 million people in community clinics; to immunize every child; and to provide an additional \$606 million for school equipment each year. All this, in the opinion of the

authors of the report, would greatly improve the quality of urban life in the United States.

In addition to emphasizing the economic advantages which would result from a such a cut in defence expenditures, this sort of approach has the additional advantage of dealing with the issue in a comprehensive way. Since defence policy is at the heart of the problem, supporters of this strategy would assert, it is the policy which must be modified. Other issues such as the need for conversion, the dangers associated with nuclear weapons, and the lack of money to meet peoples' socio-economic needs would automatically be resolved once the government changed its priorities. The defence industry would have to adapt, with or without governmental assistance.

It is far from certain, however, that the changeover from defence to civilian production could take place smoothly. Those who suggest that the transition should be the responsibility of the state overestimate the capacity of a government, whether in Canada or elsewhere, to draw up a national plan for industrial redeployment acceptable to the major participants in the economy.

DEMANDS FOR THE ESTABLISHMENT of nuclear weapon-free zones (NWFZs) and for industrial conversion are easily brought forward at the national level. In Canada, Project Ploughshares has been lobbying the federal government to enact a series of laws which would result in the whole country becoming a nuclear weapon-free zone. In the US, members of Congress have brought forward similar proposals in the hope of

inducing the federal government to play a more active role. In general, however, most initiatives in support of NWFZs and conversion have originated in factories or in regional and municipal governments. The time is not yet ripe for any major advance nationally. It is easier at present to arouse public opinion at the local level regarding the negative effects of military expenditures on jobs and social services.

At first, nuclear weapon-free zones were mainly symbolic, in that they were designed to make the public aware of the dangers of nuclear escalation and to put pressure on national governments to support disarmament. As time went on, however, municipal councils and local populations made greater efforts to set up practical obstacles to opening or developing factories making nuclear weapons or components. Certain American cities, such as Chicago and Oakland, have chosen to pass laws forbidding the production, stockpiling, development or deployment of nuclear weapons. Other cities have adopted purchasing and investment policies which exclude firms manufacturing nuclear weapons. They have also banned the transport of any nuclear weapons across city limits and laid down provisions for the eventual conversion of the firms which make such weapons. Despite many mistakes and some back-tracking, and regardless of the difficulty of putting such provisions into effect, the movement to establish NWFZs in the United States is growing rapidly. Several peace organizations have made this the central point of their platforms and are convinced that the pressure they are putting on both industry and government will eventually bear fruit.

Since 1982, about 175 Canadian municipalities, including most of the largest cities, have adopted resolutions in favour of NWFZs. As a result, almost two-thirds of the Canadian population now lives in nuclear weapon-free zones. Apart from Vancouver, however, which has taken a few timid steps, none of the municipalities concerned have introduced any detailed plans, so the

initiatives remain symbolic. Why is this the case? Part of the reason, no doubt, is that Canadian cities have much more limited powers than their American counterparts. It is also possible that the political groups in favour of disarmament are better represented at the national level in Canada and that individual Canadians feel less affected by rising military expenditures.

It is worth adding that since proposals for NWFZs focus on the abolition of nuclear weapons they are of limited use as far as general

obstacles in the way of disarmament and reduced military spending. Conversion is seen, therefore, as a way of bolstering workers' feeling of security by enabling them to participate in the plans for converting their factories, particularly those factories which are already in financial difficulty because of reduced demand or changed requirements for military goods.

Many workers are well aware that a cut in military spending would enable more money to be spent on social services but they

disarmament is concerned. Since, in the strict sense of the term – and putting cruise missile tests aside – there are no nuclear weapons in Canada, the whole question of NWFZs seems somewhat abstract. Moreover, a study of the various resolutions which have been adopted throughout North America leads to the conclusion that the more regulations a municipality imposes the narrower the area to which these apply. It is also possible that setting up NWFZs distracts attention from the need to reduce the manufacture of conventional arms, and yet the latter place the heaviest strain on resources and are hardly inoffensive from a military point of view.

THE MOVEMENT IN FAVOUR OF conversion has developed around the reality that fears about full employment and economic prosperity constitute some of the main

are nonetheless alarmed at the prospect of losing their jobs and being unable to find new ones. From the point of view of the trade unions, conversion achieves two objectives: keeping peace and maintaining full employment. The dilemma is how to reconcile cuts in the national defence budget with protecting jobs in the arms industry.

Experience in Europe demonstrates that conversion programmes are possible. On the other hand, several attempts have met with failure. Too often the firms concerned are already in economic difficulty; they have been abandoned by their owners and have little further potential. In several cases, owners have tried to unload their problems onto the state. For there to be any chance of success, conversion cannot rely on government intervention alone. It is essential to have the support of all those concerned in order to make full use of the resources of the

company. Conversion may well involve more than just a change in the type of goods being produced or in the customers who buy them. It may also require profound changes in the structure of the company and in the relationships among all those associated with it.

ONE OF THE MAIN DIFFICULTIES FOR conversion in Canada is the lack of practical experience – the whole notion engenders incredulity. It is largely to overcome this obstacle that several groups have suggested undertaking pilot projects in order to show that conversion is indeed feasible; however, dealing with individual cases has advantages and disadvantages. Limiting the procedure to a single firm greatly simplifies the problem and makes it easier to reach a consensus as to the economic principles involved. On the other hand, the infrastructure required for one successful experience involves setting up mechanisms to prevent the military production in question from being simply transferred to rival firms. This requires government assistance on a large scale and the high cost makes it unlikely that the process will spread to other firms in a given industrial sector.

One drawback to this whole approach is that it reduces issues of disarmament to purely economic questions rather than beginning with a clear political message. It is, therefore, just as difficult to formulate a strategy which copes with all the problems that arise from the arms industry as it is to get all those involved to agree on a solution. What is important, however, is to get the debate off the ground, and the best way of doing this is to put forward concrete proposals. The current discussions in Quebec, concerning Montreal's decision to ask its voters to support the establishment of a NWFZ, are relevant, as is growing interest in conversion on the part of trade unions, and will probably lead to some practical steps in the not too distant future. Such initiatives could imbue the disarmament movement with the energy it currently lacks. □

(Translation by Mary Taylor)

# BETTER LATE THAN NEVER, MOSCOW COURTS THE UN

*One of the reasons for the UN's new-found vigour is that the Soviets are now paying serious attention to the organization they helped to create.*

BY NANCY GORDON

IN THE PROCESS OF "NEW THINKING" about foreign policy the Soviet Union is giving more emphasis to the United Nations. The curtain on the world which is now being raised has revealed to the Soviet citizens a United Nations which is to be taken seriously, and at which they are prepared to risk being a player. The UN, unaccustomed in recent years to such approving glances from the Soviets, has shown itself willing and able to accommodate the increased responsibilities thrust upon it.

During 1988 we were witness to a number of demonstrations of this "new thinking" in New York and Geneva and the other centres where the UN gathers. There was Mikhail Gorbachev in early December, choosing the General Assembly as a forum for a major announcement of conventional force reductions. There was George Shultz, listening impassively, in the same building. There was Dan Rather and CBS news covering the event live.

In September at the opening of the Assembly, Eduard Shevardnadze, making the traditional foreign minister's speech, presented a long list of proposals both for UN action and for improvements to the UN structure. The rhetoric which had come to be associated with Soviet speeches at the UN wasn't there. One of his deputy foreign ministers, Vladimir Petrovski, spelled out in detail, for the Assembly's Special Political and Sixth Committees, Soviet views on "Comprehensive Security" and what the role of the UN should be. In Kingston, Ontario, in October, Mr. Petrovski gave the keynote address at a conference on war-

risk-reduction centres; he supported the concept and suggested ways and means of moving the process forward with UN participation.

The Soviets made use of the UN to help bring about a withdrawal of their troops from Afghanistan; along with the Americans, they engaged in discreet diplomacy to involve the UN in the settlement of conflict in the Namibia-Angola region; they supported the notion of an international conference on the Middle East under UN auspices; they began to pay their debts for past peacekeeping operations.

WHAT'S GOING ON HERE? AREN'T these the same people, who not so many years ago, paid only lip-service, if that, to the UN and other international organizations? Who objected to initiatives by the Secretary-General? Who wouldn't pay portions of their dues for undertakings they didn't support? And who, above all, were cautious about playing in any multilateral game in which they couldn't control the rules and the umpires?

Soviet reassessments of the state of the world, a process in which they have been engaged since Mr. Gorbachev took office in 1985, are based on a number of assumptions which lead naturally to an increased role for the UN. In his book, *Perestroika*, written in 1986, Gorbachev stressed the interdependent nature of the world in the 1980s, the futility of reliance on nuclear weapons for security, the recognition of a multipolar, as opposed to bipolar, balance of

power, the growing threats posed by environmental degradation.

In September 1987 he spelled out more details in a much-quoted article in *Pravda* and *Izvestia* entitled "Realities and Guarantees for a Secure World." Gorbachev listed the various components of a comprehensive security package which would involve the UN, and invited states to comment on it. These ideas evolved during 1987 and 1988, and recently he has emphasized the need for the development and primacy of international law. During a series of interviews conducted in Moscow in November 1988, Soviet officials and academics discussed their specific proposals for making the UN more effective. The list is extensive. Among the measures the Soviets have proposed are meetings of the Security Council, at the foreign minister level, for discussions of nuclear and naval disarmament, and at the head of government level, to examine all disarmament and development issues before the UN; expansion of the forty-nation Conference on Disarmament to one with universal membership, meeting year-round; a UN register of conventional arms sales and transfers; and UN mechanisms to monitor and verify arms control agreements and new technologies.

IN HIS SPEECH TO THE GENERAL Assembly in September, Mr. Shevardnadze supported and proposed measures which would give more power to the Secretary-General by increasing his access to information. Shevardnadze proposed a direct communications

link between UN headquarters, Security Council members, and the chairman of the non-aligned movement – such a link, he said, might help avert international crises and conflicts. Vladimir Petrovski, in an aide-memoire and in a speech to the Sixth Committee elaborated on these ideas: the Secretary-General, on his own initiative, should warn Security Council members of potential conflicts; UN military observers might engage in preventive diplomacy in a pro-active way; and the Security Council should have the power to authorize the sending of UN military observers to potential hot-spots. Such action would alter considerably the current practice of the UN sending peacekeepers or observers only when asked by both parties, and when a cease-fire is in effect.

During the summer of 1988 the Soviets proposed a UN Naval Force for patrol in the Gulf, a suggestion to which they returned in the fall. This thinking is in line with their support of war-risk-reduction centres within the UN secretariat which would deal with prevention of both nuclear and conventional wars. They have also made suggestions about UN peacekeeping forces, and have revived a proposal for permanent UN military observers and armed forces. They have also offered to participate in specific peacekeeping operations if the circumstances were appropriate, and if other states agreed. Such a move would be a departure from the current wisdom about peacekeeping which holds that superpowers should not be involved. Citing the expense involved in maintaining a peacekeeping force in Namibia

the Soviets have offered to contribute logistic or other support. However, they made it clear that if there were opposition to their participation, especially from the Americans, they would not press the issue.

OBSERVERS OF THE SOVIET UNION have noted that in domestic politics, the new leaders are moving towards the development of the rule of law, as opposed to rule by arbitrary decree enforced by the secret police. The process of restructuring and openness requires freedom of expression and dissent, and those freedoms require rules – the rules of civil society which govern our relationships with one another. Internationally, Soviet diplomats have stressed the same thing – they say that international law should serve as the cornerstone of their own and every other state's international relations. They have asked all states to recognize the mandatory jurisdiction of the International Court of Justice, and have offered to consider the possibility of the ICJ playing a greater role in the settlement of disputes which have political overtones – such as arms control.

The proposals on international law illustrate dramatically the changes in the Soviet approaches to the UN: Not many years ago they strongly resisted the measuring of any Soviet policy, whether foreign or domestic, by any international standards of behaviour which they associated with Western ideals and concepts. Indeed, as Edward Luck and Toby Gati of the US United Nations Association point out in an article in the *Washington Quarterly*, during 1988 Gorbachev called for the

harmonization of Soviet domestic law with international norms even in such traditionally sacrosanct areas as terrorism, humanitarian issues, and protection of the environment, seeing this trend as the harbinger of the new international order envisioned in his nuclear-free world of the twenty-first century.

The "new thinking" has not taken over completely, and it co-exists with some of the old

rhetorical support for perennial anti-Western resolutions. But an important element in the new policy is the recognition that the UN in the 1980s is not the confrontational arena it was in the 1970s and that Soviet support for anti-imperialist resolutions does not fill stomachs in the Third World. Indeed, leaders of many of the poorer countries have come to see cooperation with Northern governments as essential to both economic development and regional stability. And when they look for models of economic progress they do not wish to emulate, the traditional Soviet client states of Ethiopia, Vietnam and Cuba spring immediately to mind.

SOVIET SPOKESMEN, FROM Gorbachev on down, have made it clear that altruism is not a motive for their new proposals. Like every other nation state, the USSR is looking after its own interests. It is true that multilateralism through the UN is one way of containing US unilateralism, a motive which Canadian supporters of the UN will understand. It is also evident that the Soviets want to move towards a more open economic system in order to bring some vitality and growth to their declining economy; this will require cooperation with the UN and its members over trading rules and the myriad of commercial relationships which govern international economic life. But the overriding factor is that the Soviets now define their own interests

in terms of the interdependent nature of the planet, and thus wish to use the UN as an instrument of their foreign policy.

The Soviets are more willing to join in the international give and take, to risk losing face, to propose ideas that other states may not accept, and to go back to the drafting table and try again. Other governments have had some difficulty responding, partly because of suspicion about motives, partly because of the initial vagueness of some of the proposals such as the early versions of the comprehensive security resolution, and partly because they are simply not accustomed to positive and helpful behaviour by the Soviets at the UN.

But respond they should. The UN has not developed in the way its founders hoped for a variety of reasons, the most important of which is the failure of the permanent members of the Security Council to work together. For most of its forty-three year existence, the USSR did not cooperate in a serious way: as Mr. Shevardnadze said in his address to the General Assembly in September, 1988, "Let us say frankly that many of us, including particularly the permanent members of the Security Council, are to blame for the fact that at some point, certain fundamental values of our organization [the UN], embodied in its Charter, were diminished." It is ruefully ironic, that at a time when the Soviets begin to play a constructive role, the Americans are lukewarm, at best. However, mul-

tilateralism in the US reached its nadir earlier in the decade and, particularly with a new administration, opportunities for positive responses exist. President Bush was, after all, the American ambassador to the UN between 1970 and 1973, and is therefore aware of the potential as well as the limitations of the organization. The new US secretary of state, James Baker, was, as secretary of the treasury in the previous administration, involved in the multilateral economic system which operates under the aegis of the UN.

CANADA'S MEMBERSHIP ON THE Security Council for the next two years provides this country with a unique opportunity to contribute to the reassertion of the importance of the UN in international life: we have not been on the Council since the two-year term which ended in 1978, and this time around we are the only non-permanent member which is also a member of NATO. Successive Canadian ministers of external affairs have spoken earnestly about Canada's interest in and support of the UN. While we continue to pay our dues promptly and in full, it is necessary also for us to play a constructive part in the debates about strengthening the organization. We fought hard for a seat on the Council: now we should work just as hard at making it an important instrument of our foreign policy. Canadians have a reputation for taking an active role at the UN, and it has always been thought that a strong United Nations was in the Canadian interest. With the Soviets proposing a host of ideas, we should respond in a serious and constructive way to them, and urge our alliance partners to do likewise.

Many of the Soviet proposals have serious flaws and need debate and consideration. But what is interesting about the process is that the Soviets are taking initiatives to make the UN a more effective body. Joining a game whose outcome is in doubt is a departure for the Soviets, it may also be the mark of a country which is beginning to feel secure in its relationships with others. □

Bob Feller

# Is PEACE STILL AT WAR WITH SECURITY?

BY BERNARD WOOD

Bernard Wood is the  
Chief Executive Officer of CIIPS

**I** WAS IN AUSTRALIA LAST AUGUST WHEN MY appointment to head CIIPS was announced by Mr. Clark. It was striking to see the quizzical reaction of a diverse sample of Australians to the Institute's double-barrelled (forgive me) mandate. After nearly five years this odd coupling has become familiar to interested Canadians, but its comfort level is still low and, for many, its plausibility still in doubt. Perceptions, of course, are realities and if enough people insist on identifying themselves as part of a "peace" community or a "security" community and insist on seeing the other as a hostile camp, then they will be at odds.

For most people – voters, citizens and taxpayers – the roots of the dispute rapidly become arcane. Ordinary people ask themselves why, if a Reagan and a Gorbachev can start finding some common ground, the two domestic constituencies concerned with the same problem are still at each other's throats.

Practically no one denies any longer the reality or the historic significance of the new moderated rhetoric, a concrete if modest disarmament agreement on Intermediate-range Nuclear Forces, and serious prospects of reductions of strategic and conventional forces. Optimism is bolstered by the recognition of the economic constraints on both East and West. But there is still a long way to go, with differing interpretations of how much real progress has been achieved and how much trust can yet be afforded.

It is precisely in these diagnoses and prescriptions that basic disagreements arise. There are people whose roles and professional responsibilities require them to approach international security issues with a predominant concern to protect against worst-case possibilities, to ensure first, and foremost that any attack against the physical security of the state and its people is deterred or repelled. Others come at the problem from the opposite end: they look in every circumstance for the best-case possibilities of defusing hostility and diminishing confrontation.

As survey after survey of public opinion testifies, most Canadians share both sets of instincts about the current state of East-West confrontation. They are still persuaded of the need for strong defences and a posture of negotiating from strength, but they are impressed, too, by the tone and content in the Gorbachev campaign to de-escalate the Cold War, and they are ready to support vigorous Western initiatives towards the same end – even ones that involve prudent risktaking. Canada's decision-makers, too, are wrestling with the same instincts and judgments on East-West relations in their own work.

WHAT ARE REASONABLE OBJECTIVES AND EXPECTATIONS for advancing a productive discussion of "peace" and "security"? If the adherents of the two main rallying points are battling with each other, both sides will get a hearing from the interested public and from decision-makers, but their excesses will reduce the possibilities for creative democratic dialogue. On the other hand, if there are forums and habits for the civil exchange of views, there will still be wide areas of disagreement, but there may also be a better crystalization of a range of serious options for consideration by the public and policy-makers. In the process, the best analysts and ad-

vocates of both communities are likely to have more impact on the ultimate policy result than they would operating from splendid isolation.

A climate of improved East-West relations and serious prospects for arms control should increase the possibilities for such a constructive dialogue – although the present changing situation also throws up destabilizing new challenges. The forums are also better developed than ever; CIIPS is one and there are others. Thoughtful people in both communities have learned about the other's thought-patterns and language, and engaged in both technical and policy discussions. In addition, both sides of the debate now see it as useful and necessary to talk about new approaches to security – "common" or "mutual" security, and wider concepts of security. These approaches may help carry us toward a broader base of shared objectives.

MUCH CREATIVE WORK REMAINS TO BE DONE TO confront the wider set of challenges to security as the end of the 20th century approaches. The deep-rooted Canadian traditions of multilateral cooperation and functional participation are pathbreaking examples of the kind of order-building and maintenance which the age of global interdependence demands. So are Canada's leading efforts to combat Third World poverty and promote the respect of human rights around the world.

Canada has direct stakes in three of the world's dynamic ocean regions and many links and responsibilities elsewhere. Our territorial and maritime surveillance and defence will remain a huge challenge, our collective defence responsibilities taxing, and a plethora of new peacekeeping, conflict resolution and institution-building demands will call on all our diplomatic and military capabilities. Without diluting the concept of security, or underrating the role of military force which will be near its core for a long time to come, the new imperative is to create less competitive security relationships and to defuse underlying causes of international hostility.

In many of these other challenges to peace and security one quickly finds that the depth of polarization and mutual mistrust among interested Canadians is at least as great as it is on East-West relations. In regional conflicts such as the Middle East, Central America or Cyprus, Canadians seeking ways to help resolve conflict and reduce confrontation discover that some of their most even-handed efforts are greeted with suspicion or hostility by those with special sympathies to one party or another.

Some conflicts will be more amenable to Canadian assistance, some less, but there are few where Canada has no interest or stake, especially when serving on the UN Security Council. In general, Canada's claim to impartiality is one of the strongest in the world. In war, however, truth is the first casualty and anyone who seeks to get between combatants can expect some blows – deserved or not. These are sobering reminders that conflict is a serious business; the motivations of all who take an interest in a conflict will come under scrutiny and sometimes under fire.

"Peace" and "security" need not be at war and there are now many opportunities for advancing both goals on converging paths. We should never expect, however, that there will not be "conflict" about conflict. □

# REPORT FROM THE SECURITY COUNCIL

*Editor's Note: With the start of Canada's two-year term on the United Nations Security Council, Peace&Security begins a new regular column dealing with UN Security Council affairs. The author of Report From the Security Council, Trevor Rowe, is based in New York and has been a regular contributor to CBC Radio on UN matters for the last seven years. Mr. Rowe has also written for The Toronto Star, La Presse, The Independent (London), the Boston Globe, and Southam News, and is a frequent contributor to the Christian Science Monitor radio service.*

## Downing of Libyan Fighters

After waging an all-out campaign to secure a seat on the United Nations Security Council, Canada got off to an urgent start when the world organization's supreme body met in early January to deal with the tensions sparked by the US downing of two Libyan jets. "It's started with a bang, literally," noted Yves Fortier, Canada's newly appointed ambassador, as he left the Council chamber after a round of consultations with the fourteen other members.

The Council had to weigh two versions of events and to decide whether or not the US action was justified. Libya contended that its planes were unarmed and, while on a reconnaissance mission, the victims of an unprovoked attack. The US insisted the Libyan jets had acted with hostile intent, repeatedly tailing the US fighter planes even as they took evasive

action. The Libyans maintained throughout that the US evidence about the incident had been faked.

Canada's initial reaction was one of caution. From 4 January when the council began informal consultations, to the next evening, Mr. Fortier told reporters Canada intended to weigh all the evidence before reaching a decision. He added that Canada wanted to hear all the speakers in the debate. When pressed on the issue of whether the US attack was justified, Fortier told reporters, "let us hear all the speakers ... we're in mid-stream. It's not over till it's over and the fat lady hasn't sung as far as I'm concerned." But the next day, before all the speakers had addressed the council, Secretary of State for External Affairs Joe Clark declared in Paris that Canada accepted the US version of events.

The incident, although minor, raised the possibility that perhaps the Ambassador was not being kept as well informed as he could have been. Former Ambassador Stephen Lewis complained on his departure of friction with the upper echelons of External Affairs because he was an outsider. Mr. Fortier, a successful Montreal lawyer, is also a political appointee. But afterwards, he insisted repeatedly there were no problems with his department. "Communication with Ottawa as far as this ambassador is concerned is perfect," he said in an interview.

A resolution deploring the downing of the two Libyan planes was ultimately defeated by the triple veto of the US, Britain and France. Canada was the only other country to oppose the resolution while Brazil and Finland abstained.

## PLO Recognition

Before the Libyan issue could be voted on, a strictly procedural initiative by the Palestine Liberation Organization intruded on the

deliberations. Under the rules, the PLO, which has observer status, was unable to address the Security Council unless sponsored by a member state. But during the debate on Libya, the PLO demanded the state-like privilege of being able to speak in the Council without having to seek a sponsor.

It also wanted to be recognized as the Permanent Representative of the Bureau of Palestine rather than the Observer of the Palestine Liberation Organization. The changes had already been accorded in the General Assembly, but the US was opposed to a similar move by the Security Council. However, because the issue was deemed a procedural one, the US was unable to use its veto and could only vote against. Canada, the United Kingdom and France abstained. The rest of the Council voted in favour.

In an explanation of vote, Ambassador Fortier said Canada was not opposed to the Bureau of Palestine addressing the UN but was of the view that past procedure should be followed. He reiterated that Canada did not recognize the Palestinian State declared in Algiers. However, the ambiguity of the abstention seemed to indicate that while Canada did not favour a procedural change that enhanced the PLO status, it would not stand in the way.

## Namibian Independence

A lot of time was devoted to the implementation of Resolution 435, which paves the way for Namibian independence, a question on which Canada was active during its previous stint on the Council ten years ago and as a member of the Contact Group of Western nations. Under the original plan, the UN would deploy a force of as many as 7,500 military

personnel. Known as the United Nations Transition Assistance Group (UNTAG), its purpose is to ensure the peace and create the conditions for free elections. However, the five permanent members of the council – the US, USSR, UK, France and China – all favour a reduced force. The Secretary General has suggested 4,650 military personnel, of which Canada would provide several hundred.

The reduction was vigorously opposed by the African front-line states and the South West Africa Peoples Organization (SWAPO). Canada's position was that the force be as effective as possible and while it would like to see a reduced force, with the resulting reduced costs, it would support whatever levels were deemed necessary to ensure a smooth transition to independence.

## Other Issues

Among other issues before the Council was the renewal of the mandate for the United Nations Interim Forces in Lebanon (UNIFIL), and in Iran and Iraq (UNIMOG). The Council also held consultations on a draft statement critical of Israeli behaviour in the Occupied Territories as well as to decide on a date for elections to fill a vacancy on the International Court of Justice.

Rarely has the council been as active on the question of peace-keeping. Diplomatic initiatives in the Western Sahara and Kampuchea could also see the use of UN troops and these issues could well come before the Council as early as this year. □

– TREVOR ROWE

## ARMS CONTROL DIGEST

### Paris Conference on Chemical Weapons

An international conference on the prohibition of chemical weapons (CW), attended by delegates from 149 countries including eighty foreign ministers, met in Paris from 7 to 11 January. The purpose of the conference, proposed by President Reagan last September, was to reaffirm support for the 1925 Geneva Protocol banning the use of CW, and to add impetus to the effort at the Conference on Disarmament (CD) in Geneva to negotiate a global ban on the production and stockpiling of such weapons.

The conference met amidst high tension over US charges that Libya had built a huge chemical weapons plant at Rabta, southwest of Tripoli. The meeting itself was a rocky one. Iran and Iraq accused each other of violating the Geneva Protocol; many delegates boycotted speeches by the Israeli and South African foreign ministers; various Arab states, citing Israel's reported possession of nuclear weapons, insisted on linking progress in CW control to nuclear disarmament; and India and other Third World states argued against controls on the export of materials used in CW, on the grounds that they would hinder the development of peaceful chemical industries and discriminate in favour of states already possessing CW.

Of perhaps greatest interest, Soviet Foreign Minister Shevardnadze acknowledged on 8 January that his country had been "late" in stopping its production of CW and "taking other repressive measures against them." However, he declared that the USSR would soon complete an installation for the destruction of CW and immediately begin destroying its old stocks without waiting for a

new CW convention. American and other Western officials and observers welcomed the announcement, but noted that the installation in question was a small one which would take a great many years to make a dent in the enormous Soviet CW stockpile. They also pointed out that the US had been destroying its obsolete stocks for some years, although it began in December 1987 to produce an entirely new generation of such weapons.

In his speech, Shevardnadze also pledged his country's support for investigations by the UN Secretary-General of the alleged use of CW, "no matter where," with "no one ... hav[ing] the right to refuse the holding of such investigations on his territory."

In a speech the same day, Canada's Joe Clark stated that Canada had "already advised other nations of the destruction" of its own CW stockpiles dating from the Second World War; that it did not intend ever to initiate the use of CW, even against non-Parties to the Geneva Protocol; and would not "develop, produce, acquire or stockpile such weapons, unless these weapons are used against the military forces or the civil population of Canada or its allies." As for biological and toxin weapons, Canada had never possessed them and "does not intend to develop, produce, acquire, stockpile or use such weapons at any time in the future."

A number of other positive developments took place during the conference. Ten countries – including North and South Korea, Laos, and Bangladesh – announced that they would sign the Geneva Protocol. Iraq repeated a pledge to abide by the Protocol in the future (while admitting to having used CW in its war with Iran, Iraq maintains that Iran had used them first). It also promised that it would not make its new-found CW expertise available to other states. For its part, Iran said that it

would sign a global CW ban regardless of whether Iraq did so or not.

In the end, the conference adopted by consensus a six-point "Final Declaration" pledging not to use CW and to condemn its use by others; calling for additional states to join the Geneva Protocol; stressing the need to conclude a global ban on production and stockpiling "at the earliest date"; and supporting a UN role in ensuring compliance with CW controls, including investigations by the Secretary-General of alleged violations of the 1925 Protocol.

After the conference had ended, chief US delegate, Ambassador William Burns, declared that it had "forged a powerful global consensus" and "given significant political impetus" to the CD negotiations. He conceded that Washington would have preferred an explicit endorsement of new export controls and the use of sanctions against CW users. Joe Clark described the final declaration as "a major step on the road to banning these weapons," noting that "the international community, as never before, [had] resoundingly endorsed the objective of a total chemical weapons ban." Nevertheless, many outside observers were skeptical of the claims, criticizing the conference for having failed to condemn recent CW users by name (particularly Iraq). Some also feared that the meeting may have been counterproductive, by demonstrating the political value of having or threatening to acquire CW (as reflected in Third World demands for a linkage between chemical and nuclear disarmament).

### Conventional Arms Control in Europe

In a speech to the UN on 7 December, Soviet President Gorbachev announced that the USSR would take a number of unilateral steps, including:

- reducing its total armed forces by 500,000 men, including "sub-

stantial cuts ... in conventional armaments," over the next two years;

- withdrawing 50,000 men and 5,000 tanks, including six tank divisions and "landing-assault" and "landing-crossing" units, from East Germany, Czechoslovakia, and Hungary, also by 1991. Remaining Soviet divisions in these countries would be "restructured" and "become strictly defensive";

- reducing additional troops and armaments in the European part of the USSR, making total reductions within Europe of 10,000 tanks, 8,500 artillery systems, and 800 combat aircraft;

- making "considerable reductions" in forces stationed in Soviet Asia; and

- withdrawing a "large number" of Soviet troops from Mongolia.

By Western estimates, the reductions would amount to about ten percent of total Soviet military manpower; more than a quarter of its tanks in Europe, including about half of those in Eastern Europe; a quarter of its European-based artillery; and ten to thirteen percent of its European-based combat aircraft.

US Secretary of State Shultz welcomed the announced reductions as a "significant step in the right direction." However, he cautioned that even after they were completed in 1991, there still would be a "major asymmetry in important categories of force structure for the Soviet Union." Other Western officials noted the possibility that the cuts could come primarily in support troops (the Soviet armed forces include about 1.5 million men engaged in railroad work, construction, civil defence, and so on), and in older tanks and artillery pieces. This was denied by Maj. Gen. Yuri Lebedev of the Soviet General Staff during a press conference in Moscow on 22 December. He said that the tank divisions would be removed with all of their modern

equipment; the weapons dismantled, with their engines salvaged for civilian use; and foreign observers invited to watch the demobilization and destruction.

The day after Gorbachev's UN speech, the NATO foreign ministers meeting in Brussels revealed elements of a new Western proposal for reducing conventional forces in Europe. Focussing on weapons rather than manpower, these included:

- overall cuts of about fifty percent in various categories of armaments. For example, tanks would be limited to "about 40,000" in Europe as a whole. If equal levels on each side were envisaged, as suggested by various top officials, this would require cuts of at least 37,000 for the Warsaw Pact, as compared to just 2,000 for NATO. Similarly disproportionate reductions would be required in the case of artillery and armoured troop carriers, in order to achieve equality at a level slightly below what the West maintains now; and

- national sub-limits amounting to perhaps thirty percent of the total holdings in any category – for example, no more than 12,000 tanks. This would require the USSR to eliminate 15,000 tanks more than announced by Gorbachev in New York.

During December and January, Soviet allies Hungary, Poland, East Germany, Czechoslovakia, and Bulgaria all announced unilateral reductions of between ten and seventeen percent in their defence budgets, as well as cuts in manpower, tanks, and combat aircraft. East German leader Erich Honecker revealed that four of the six Soviet tank divisions to be withdrawn, as well as an air-assault brigade, would come from the front line in East Germany. Most Western military experts agreed that such withdrawals would be "militarily significant" and would greatly reduce the threat of surprise attack.

Finally, after more than two years, the Vienna review conference of the Conference on Security and Cooperation in Europe (CSCE) ended on 17 January, with the signing of a Concluding Document establishing two new sets of arms control negotiations begin-

ning in Vienna in March. The first of these, the "Negotiation on Conventional Armed Forces in Europe," will involve the twenty-three members of NATO and the Warsaw Pact. Replacing the fruit-

verification, arms transfers, the nuclear freeze, outer space, and the furnishing of objective information on military matters (the latter merging a UK draft with one sponsored by the Warsaw Pact

### Early Warning

9 March:	opening of Negotiations on Confidence- and Security-Building Measures and on Conventional Armed Forces in Europe, Vienna
April-May:	NATO Nuclear Planning Group meeting, Brussels
1-5 May:	first Preparatory Committee meeting for the 1990 Non-Proliferation Treaty Review Conference, New York

less fifteen-year-old MBFR talks, they will cover the whole of Europe, from the Atlantic to the Urals. A second forum, the "Negotiations on Confidence- and Security-Building Measures," is the successor to the Stockholm Conference successfully concluded in 1986, and will involve all thirty-five CSCE participants.

### Canada and Arms Control at the UN General Assembly

The 43rd General Assembly of the UN on 7 December considered seventy-two draft resolutions on disarmament and security issues recommended by its First Committee. Of forty-four resolutions put to a vote, Canada voted in favour of twenty-four, against five, and abstained on fifteen. Its position differed from that of the US on no fewer than thirty of the forty-four (sixty-eight percent). Canada introduced one resolution (43/75K), calling on the CD to consider the issue of prohibiting the production of fissionable material for weapons purposes. It passed by a vote of 144 to 1 (France), with seven abstentions. Canada co-sponsored sixteen other resolutions. Its five negative votes were cast against resolutions on the security of non-nuclear states (43/68); the nuclear freeze (43/76B); prohibiting the use of nuclear weapons (43/76E); the no-first-use of nuclear weapons (43/78B); and cessation of the nuclear arms race (43/78E).

Canadian Disarmament Ambassador Douglas Roche, who chaired the First Committee, identified its most significant achievements as being: the merging of competing draft resolutions on

states); three consensus resolutions on CW; a resolution on arms transfers, which Roche described as a "breakthrough"; and resolutions on the dumping of industrial and nuclear wastes in Africa. The two most difficult areas, according to Roche, were outer space and the comprehensive test ban (CTB). Canada abstained on resolutions 43/63A calling for the CD to begin negotiations on a CTB Treaty, and 43/63B welcoming the proposed conversion of the Partial Test Ban Treaty (PTBT) into a comprehensive ban. France, the UK, and US voted against both resolutions, with only the USSR, among the nuclear weapon states, voting in favour. Resolution 43/64, calling on the CD to "intensify" work on the subject and for wider adherence to the PTBT, was co-sponsored by Canada and passed by 146-2-6, with the US and France opposed. Canada also voted for Resolution 43/70, on the prevention of an arms race in outer space, which passed by 154 to 1 (the United States), with no abstentions.

### Brief Notes

On 31 December, India and Pakistan signed an agreement not to attack each other's nuclear installations, including nuclear power and research facilities and uranium enrichment plants. As part of the agreement, the two countries will notify each other annually of the exact location of such facilities.

On 25 October, during German Chancellor Kohl's visit to

Moscow, the USSR and West Germany signed a Treaty on the Prevention of Incidents on the High Seas. The agreement, similar to earlier ones the USSR has with the US and UK, provides for regulations governing manoeuvres by warships, the exchange of information on incidents, and regular consultations between the two navies.

As of 19 December, under the INF Treaty, the USSR had destroyed 84 SS-20, 248 SS-12, and 28 SS-4 intermediate-range ballistic missiles (IRBMs), and 80 SS-CX-4 ground-launched cruise missiles (GLCMs). The US had destroyed 70 Pershing 1A and 18 Pershing II IRBMs, and 84 GLCMs. Belgium became the first NATO country to be cleared of INF missiles with the withdrawal of 16 GLCMs on 13 December.

On 25 January, Canadian Defence Minister Perrin Beatty announced that Canada had invited Soviet officials to visit the chemical weapons research establishment at Suffield, Alberta, and to observe the destruction of old CW stocks. He disclosed that all but a small amount of the current Canadian stockpile of sixteen tons would be destroyed over a period of three years, following environmental impact hearings. A spokesman for the Soviet Embassy in Ottawa indicated the Canadian invitation would be accepted and thought it "quite likely we will invite Canadian officials to inspect our facilities."

In late December it was disclosed that the US would invite Israel and Egypt to separate talks in Washington on limiting the development and use of ballistic missiles in the Middle East. Proposed measures include advance notice of missile test launchings to reduce fears of surprise attack.

During the visit of Chinese Foreign Minister Qian Qichen to Moscow in early December, Soviet Foreign Minister Shevardnadze announced that the two countries had agreed to form a "military and diplomatic experts group" to discuss methods of force reduction along their common border. □

## DEFENCE NOTES

### Allied Burden Sharing

In December 1988 NATO's Defence Planning Committee unanimously approved a report on shared roles, risks and responsibilities in the alliance. Unlike the annual report to Congress submitted by the US secretary of defense, the NATO report took a broader approach to burden sharing, emphasizing contributions to "wider security responsibilities, interests and concerns" as well as contributions to the common defence of the NATO members.

In the context of wider security concerns, the report made reference to support for UN peace-keeping and foreign aid, as well as to "out-of-area" activities such as sending naval forces to the Persian Gulf. In peacekeeping, the contributions of Canada, Denmark, Norway and Italy were particularly noted. "Adequate funding" of UN activities was also recognized as "a further dimension of the overall effort in support of peace." When foreign aid is considered as a percentage of GNP, within the alliance Canada ranks behind Norway, the Netherlands, Denmark and Belgium.

In assessing contributions to the common defence of the NATO members, the report also departed from previous approaches by seeking to keep a balance between the traditional NATO emphasis on defence budgets and manpower, and other factors which help determine the defence burden. These include the social and economic costs borne by West Germany as a consequence of the large numbers of troops deployed there, and the damage caused by armoured exercises and low-level flying; the economic and political costs of conscription; and the problems associated with family separation

for those countries which base forces outside their national territory.

Of particular interest to Canada, the report recognized that Norway, Canada and the United States contribute to the collective effort through the surveillance and defence of their northern approaches. It was recognized that Canada is a significant contributor to the common and joint-funded activities of NATO (such as the NATO E-3A early warning aircraft and headquarters costs) from which it can expect to derive little or no direct economic benefit. The contribution of Canada, Turkey and Spain through the provision of training facilities was also noted.

### Canada's Report Card

On the basic indicators of money and people Canada's contribution to NATO continues to draw fire from its allies. Canada has less than one percent of its work-force employed in military activities, trailed only by Luxembourg among NATO military establishments.

Using the preferred NATO indicator of defence expenditures as a percentage of Gross Domestic Product (GDP) – defence expenditures per capita provides a more favorable indicator for Canada – Canada also trails all NATO countries except Luxembourg. In 1988, for example, the report indicates that Canada's defence expenditures were 2.08 percent of GDP, compared with 2.87 percent for Belgium, 2.98 percent for West Germany, 4.48 percent for Britain, and 6.07 percent for the United States. The 1987 NATO Ministerial Guidance policy requires members under the median spending level of around three percent to improve their performance. Canada, Denmark, Italy, Luxembourg and Spain are below

2.5 percent, and are singled out in the report.

The Canadian position is improved by reference to two other indicators: over the past ten years, Canada is one of a small NATO group which has approximated the NATO guideline to pursue real defence expenditure increases of about three percent per annum; and over the past five years Canada has spent an average of more than twenty percent of the defence budget on capital equipment. Only Britain and the United States have achieved significantly higher levels over the same period.

### Shift in Spending Priorities

Overshadowing the perennial issue of Canada's military contri-

bution, however, is a broader trend in military expenditures: as a percentage of GDP, the leading NATO countries, including the US, have started to spend less on defence. Britain and Germany peaked in 1984, and have dropped steadily since then. The US, under the impact of the Reagan military build-up, peaked in 1986, and has dropped since. Curiously, Canada's defence expenditures as a percentage of GDP peaked in the 1984 – the last year of the Trudeau government – and declined slowly through the first Mulroney government. Although it is likely that defence expenditures will continue to increase in real dollars while economies expand, it is evident that large

### CONVENTIONAL FORCES IN EUROPE: FACTS AND MORE FACTS

In November 1988 Secretary of State for External Affairs Joe Clark and then Minister of National Defence Perrin Beatty, released "a collective statistical assessment" by the member countries of NATO on the European force balance. Entitled "Conventional Forces in Europe: The Facts," the document was presented as a contribution to the initiation of new East-West talks on conventional forces in Europe. The force statistics are based on the area to be covered in the new talks – from the Atlantic to the Urals – and include Spanish and French forces not previously included in NATO force figures.

The figures released show overwhelming Warsaw Treaty Organization (WTO) superiority in key military forces, including main battle tanks, artillery, combat aircraft and military personnel. In main battle tanks, the WTO advantage was estimated to be over three-to-one (51,500 to 16,424); in artillery the advantage was also put at three-to-one (43,400 to 14,458); and in combat aircraft the WTO advantage was judged to be more than two-to-one (8,250 to 3,977). Where overall military personnel was concerned, the study estimated WTO strength at 3.1 million compared with 2.2 million for NATO.

In the accompanying comment on these figures, Clark and Beatty declared that the force imbalance "gives the East a capability for surprise attack and large-scale offensive action." Pointing to the urgent need for new negotiations on conventional forces, the study was described as a "contribution to military transparency" and an invitation to the WTO "similarly to provide figures for their forces."

The WTO countries apparently took up their invitation. On 30 January 1989 *Pravda* published, under the authority of the WTO defence ministers, a very different version of the force balance. Describing the NATO figures as "tendentious data based on a selective approach," the *Pravda* data showed the WTO a two-to-one advantage in tanks, a slight advantage in artillery, and rough parity in combat aircraft. Overall, *Pravda* gave NATO a slight advantage in the total number of military

deficits and competing claims for resources are problems common to all countries. In these circumstances, it seems likely that there will be a continuing trend in the NATO countries to allocate a proportionately smaller amount of their national wealth to military activities.

### US Nuclear Weapon Reactors

In the United States the plutonium and tritium used in the manufacture of nuclear warheads is produced at a large nuclear reactor complex at Savannah River in South Carolina. In the past a secondary supply was available from the Hanford reactor in Washington state. However, the Hanford "N" reactor, which is similar in design to the Chernobyl reactors, has been shut down for some time for safety reasons. In August the Savannah reactor complex was also closed for safety reasons, thus temporarily depriving the US of a

continuing supply of weapons fuel. The loss of supply is particularly important in the case of tritium, which must be periodically replaced in nuclear warheads. Reports in December suggested that the Savannah complex might remain closed until late 1989.

In October a leaked memorandum prepared for DuPont, the new operators of the Savannah complex, identified the thirty most significant accidents there for the period 1957-1988. The most serious was an incident in 1960 in which technicians accidentally allowed the reactor to increase power ten times faster than was considered safe, thus risking a runaway reaction. A similar incident in August 1988 led to the plant closing. Also in October, US Department of Energy officials testified that they had been aware for decades of significant radioactive emissions at other plants owned by the Department of

Energy in Ohio and Colorado, and used for weapon construction. The cost of the clean-up of these emissions is now estimated to be US \$1.7 billion.

For the long term, US Energy Secretary John S. Herrington has proposed building two new tritium producing reactors – one at the Savannah site, and another in Idaho – at a cost of US \$6.8 billion. In the short term, uncertainty continues as to the military consequences of the short supply of tritium. Proposals have ranged from decreasing the amount of tritium in nuclear warheads, thus shortening the time before they need to be replenished, to "cannibalizing" low priority warheads in the stockpile in order to maintain the most important ones.

The US debate is of some importance in Canada, since the absence of tritium for military purposes affects the market price – now reported to be approaching US \$30,000 per gram. Ontario Hydro has a large supply of tritium, and has requested a ruling from the Ontario government concerning international sales. Purchases from Canada, however, seem unlikely to appeal to US authorities. When asked about such a possibility, Assistant Energy Secretary Troy E. Wade is reported to have commented: "If I was Chairman of the Joint Chiefs, I do not think that I would feel terribly comfortable relying on Canada for an assured supply." (*New York Times*, 9 October 1988)

### Brief Notes

In his first overture to Congress on the military budget, in early February President Bush proposed to tie the Pentagon's 1990 budget to the rate of inflation, allowing a one percent increase in the following two fiscal years. If accepted, the severity of the budget restraint might force cancellation of major new weapons systems such as the B-2 "stealth" bomber or the Sea-wolf attack submarine, rather than merely imposing cutbacks on all programmes.

In mid-December 1988 the Soviet Minister of Defence announced a successor to Marshal Sergei Akhromeyev. In a surprise move, Colonel General Mikhail A. Moiseyev was named the new Chief of Staff. Previously commander of the Far Eastern Military District, the forty-nine year-old Moiseyev is largely unknown to Western observers. He will face the task of implementing the force withdrawals in Eastern Europe announced earlier by Gorbachev. The appointment of Moiseyev, the lowest ranking Chief of Staff since the beginning of World War II, is thought to signal the search for fresh approaches in the Soviet military leadership. Marshal Akhromeyev, who has played a prominent role in the Soviet arms negotiating team, will continue to serve as a special advisor to Gorbachev on the Soviet Defence Council.

In November President Bush announced the appointment of Brent Scowcroft as National Security Advisor. Mr. Scowcroft is on record as favouring a number of policies conflicting with the approach of the Reagan administration. He continues to support the development of the single-warhead Midgetman mobile missile, advocated in 1982 by a Presidential commission headed by Scowcroft, but afterwards spurned by the President and the Joint Chiefs. He has also suggested a ban on all sea-launched cruise missiles with nuclear warheads, believing that they would allow a serious Soviet threat to develop off the US coast. And he is skeptical of the near-term prospects for a comprehensive space-based missile defence, believing that Washington should restrict itself to SDI research. Unlike the position of secretary of defense, the appointment of the national security advisor does not require the approval of the US Senate. □

— DAVID COX

personnel, and concluded that the figures indicated "a rough parity which does not give either side the possibility to count on a decisive military advantage."

The considerable discrepancies in the figures are explained in large part by different counting rules. In tanks, for example, NATO excludes a large number – over 14,000 according to the WTO figures – because they do not qualify as "main battle tanks." In artillery, NATO counts only gun barrels more than 100 millimetres in diameter, thus excluding, according to the WTO, more than 42,000 artillery pieces. The WTO also claims that naval aircraft based on carriers and naval personnel should be included – a position which NATO has consistently rejected. Neither side sought to quantify two factors which are generally conceded to be critical to the force balance – the quality of equipment, and the morale and training of soldiers.

Preliminary response by NATO spokesmen to the WTO figures stressed the WTO departure from military secrecy rather than the debate about counting rules. However, ten days after the release of the NATO document, the NATO fear that the WTO has a capability for surprise attack was challenged from a more unexpected quarter. Early in December the US House Armed Services Committee released a report entitled *The Soviet Readiness for War*. After examining the "in-place forces" (forces ready to fight without mobilization) of NATO and the WTO, the Committee concluded that "the Warsaw Pact advantage in in-place forces does not appear large enough to give a Soviet political or military leader confidence in the capability of Warsaw Pact forces to conduct a surprise attack against NATO." The Committee concluded that the greatest danger to NATO lay in a fully mobilized attack, which would require up to three months of preparations by WTO forces. In turn, this emphasizes the need for Western governments to inform their publics of mobilization efforts, since an adequate response would require full public support. The Committee also underlined the importance of arms control measures designed to slow the momentum of mobilization.

## TESTING THE ADVANCED CRUISE MISSILE

*"Defence Notes" background on the decision of the government to permit testing on Canadian territory of the newest American air-launched cruise missile.*

### How does the new Advanced Cruise Missile (ACM) compare to the older air-launched cruise missile (ALCM)?

The ALCM was first deployed on B-52 bombers in 1981. Built by Boeing, it flies at subsonic speeds, and has a range of about 2,500 kilometres. Its effectiveness derives from its ability to fly at very low altitudes while providing a very small target to defending radars. The US Air Force planned to build about 4,000 ALCMs, but in 1983 curtailed production at around 1,500 after deciding to shift resources to the ACM then under production.

In 1983, General Dynamics was awarded the contract for the ACM which will be deployed, in the first instance, on B-52 and B-1B bombers. In contrast to the ALCM, the new missile is designed to incorporate critical new technologies, especially:

- a "regenerative" engine designed for greater fuel efficiency, thereby increasing the range of the missile and possibly decreasing the size;

- advanced composite materials, such as those used on parts of the space shuttle, designed to resist high temperatures and further reduce the ability of radars to detect and track the missile;

- new guidance systems which will increase the accuracy of the missile while detecting and evading defences.

In sum, the ACM is designed to fly higher than the ALCM, to allow the bomber from which it is launched to stand-off further from air defence interceptors, to penetrate deeper into the Soviet Union, and to hit targets with greater accuracy. The Canadian government has stated that the ACM will use the same nuclear warhead as the ALCM. Cruise missiles tested in Canada are not armed.

### What is the Canada-US Testing and Evaluation Programme?

On 10 February 1983 the Canadian and US governments ex-

changed notes confirming the Canada-US Testing and Evaluation Programme (CANUSTEP) agreement – frequently referred to as the "umbrella agreement." The thrust of the Agreement was to provide a framework within which specific weapons systems might be tested in Canada. An accompanying statement noted: "Systems to be tested under the agreement could include artillery equipment, helicopters, surveillance and identification systems, advanced non-nuclear munitions, and the guidance system for unarmed cruise missiles." Article 8 of the Agreement states that: "In no case shall nuclear, biological or chemical warfare materials be brought into Canada under this agreement. Cruise missiles shall be unarmed."

Although public attention has focussed almost entirely on the testing of cruise missiles, other systems have been tested under the umbrella agreement. According to DND, in 1988 these included night attack equipment for the USAF at CFB Cold Lake, sonobuoys off the Canadian West Coast, and vertical take-off-and-landing aircraft. The complete list of all tests under the agreement is not currently available, because the list is formulated by the Pentagon and subject to US security regulations. Article 17 of CANUSTEP requires "consultation and coordination" between the two parties prior to the release of information to the public.

The CANUSTEP Agreement allows the US to take the initiative in proposing weapons systems to be tested. The Agreement states that the proposals are for consideration by the Minister of National Defence or his representative, but it is evident that Canadian practice has been for the requests to be considered and approved by Cabinet. Canada may refuse any request, and both sides have the right to cancel, postpone or suspend tests. Agreement between DND and the Pentagon on the de-

tails of any specific proposal to test – a "project arrangement" – is required before actual tests can be carried out.

The Agreement states (article 14) that the Department of National Defence may review the data "expected to be acquired" from the tests and "may request" that data actually acquired be provided by the United States. Article 16 notes that tests involving US classified information will be carried out under US security control. It is apparent, therefore, that the Agreement does not obligate the US to provide such information. (This last provision may be of particular significance in testing the Advanced Cruise Missile – a "black," or completely secret, programme in the Pentagon budget.)

### Why does the US want to test cruise missiles in Canada?

Shortly after the umbrella agreement was signed in 1983, a project agreement to test the air-launched cruise missile was negotiated. The purpose of the test programme was to allow testing of the ALCM over Canadian terrain similar to that which the missile would encounter in the Soviet Union. Specifically, by launching the ALCM near the Mackenzie Delta it was possible to create a route of realistic length. The smooth terrain and ice conditions provide valuable tests for the guidance system and the radar altimeter.

To date the test programme of the Advanced Cruise Missile has been marked by failure. As a consequence it is now two years behind scheduled deployment with the prospect of further delays. In October 1988 the US Congress withheld production funding for the ACM, requiring as a precondition for future funding six successful tests before 31 March 1989. A third successful test was announced in February 1988. There have been no public announcements of successful tests since that date.

The project agreement permits up to seven tests per year. How-

ever, only about twelve tests have actually taken place to date. The ACM tests will be included in the annual quota.

### What was the public response to the 1983 decision to test?

The 1983 agreement was signed at the height of the public debate throughout Western Europe and Canada about the NATO decision to deploy intermediate-range nuclear forces (the ground-launched cruise missile and Pershing II ballistic missile) in Europe. In explaining its decision to test the ALCM, the Trudeau government placed great emphasis on the alleged link to NATO deployments in Europe even though the ALCM was part of the US strategic deterrent, under the control of the Strategic Air Command, and not subject to NATO discussions or approval.

In May 1983, then Prime Minister Trudeau wrote an open letter to the Canadian people in which he noted that "this whole question continues to weigh heavily on the consciences of those in government and the general public." Trudeau emphasized the Soviet nuclear build-up which particularly threatened Western Europe, and, "not without anguish," asserted the need for "solidarity with the other Western democracies, in a world which has turned a deaf ear to our suggested strategy of suffocation."

Since 1983 questions posed by various polling organizations suggest that Canadians remain divided on the merits of cooperation in the testing of cruise missiles. In May 1985 a Gallup poll found 45 percent in favour and 45 percent opposed. In March 1988 another Gallup poll found 54 percent opposed to testing and 38 percent in favour. Both the Liberal and New Democratic Parties have declared that they would end the cruise testing agreement.

— DAVID COX

## REPORT FROM THE HILL

*The 34th Parliament, elected on 21 November 1988, was called briefly into session to pass the required legislation to establish the Canada-United States Free Trade Agreement by 1 January 1989. It then recessed until the spring, to return either in March or April.*

### Policy toward the PLO

Canada was among the many nations which asked the United States to reconsider its late November decision to deny Palestine Liberation Organization (PLO) leader Yasser Arafat the visa he needed to speak to the United Nations in New York. In the end, Arafat was obliged to address the UN in Geneva on 13 December. External Affairs Minister Joe Clark welcomed Arafat's move toward explicit recognition of the right of Israel to exist, the rejection of terrorism, and the call for an international conference on peace in the Middle East.

The next day Clark also applauded the opening of talks between the US and the PLO as "an important step ... toward establishing the dialogue necessary for the successful resolution of the Middle East dispute." Since then, despite entreaties from PLO representatives, Canada has made no move to upgrade its own contacts with the organization.

### South Africa

Joe Clark's critical remarks about the treason conviction of four anti-apartheid activists by South African courts, in which he claimed the South African government was using the legal system to harass and suppress legitimate opposition to apartheid, drew a strong response from South African Foreign Minister Roelof Botha. On 15 December Botha called the Canadian government

"arrogant and meddlesome" and instructed its ambassador to lodge a strong protest with Canada.

The next month two visiting black South African leaders, whose travel had been subsidized by the Canadian government, reproved Canada for the "disappointing and failed expectations" created by Prime Minister Mulroney's 1985 promise to act decisively against the South African government.

The release of a Statistics Canada report in the last week of January evoked more criticism. Despite the government's initiation of voluntary restrictions on trade in 1985, the report showed imports from South Africa in 1988 increasing by 68 percent over 1987, while exports increased by 44 percent. In reaction, Joe Clark indicated on 30 January that the government would consider alternatives such as mandatory restrictions, if the voluntary sanctions were not working. At a meeting in Zimbabwe from 6 to 8 February, chaired by Mr. Clark, of the eight-member Commonwealth committee of foreign ministers on South Africa, both the increase in trade and the \$600 million loan from the Bank of Nova Scotia to Minnorco, a Luxembourg-based company controlled by major South African interests, came under close scrutiny.

### Chemical weapons

On the eve of an international conference on chemical weapons, Canada joined France and Egypt on 6 January in supporting US contentions that Libya is capable of manufacturing poison gas at a factory southwest of Tripoli. On 8 January Joe Clark addressed the 140-country Paris conference intended to reinforce efforts to halt the spread of chemical weapons, by appealing to all countries to "get rid of them everywhere and forever." He reaffirmed Canada's policy since 1970 of no production, stockpiling or use of chemical arms.

Two weeks later on 25 January, then Defence Minister Perrin Beatty accepted all sixteen recommendations of a report he had commissioned last August on research, development and training in chemical and biological weapons defence within Canada. The report, by CIIPS Board of Directors Chairman William Barton, largely supported DND's current programme, but called for stricter controls on testing; greater openness about activities at the defence research establishment at Suffield, Alberta; and an automatic annual review "to confirm that stocks of all toxic agents are being kept to the minimum level necessary for the efficient conduct of the research and development programme."

### Cabinet Changes

On 30 January Prime Minister Mulroney named his new cabinet, retaining Joe Clark as secretary of state for external affairs, and Monique Landry as minister for external relations with responsibility for CIDA. New appointments included that of former Ambassador to France Lucien Bouchard as minister of the environment and Bill McKnight as minister of national defence with cabinet newcomer Mary Collins from British Columbia as associate minister.

McKnight, 48, a wheat farmer and the first Saskatchewanian ever named to the defence portfolio, has been minister of labour (1984-86) and minister of Indian and northern affairs (1988-89). First elected to Parliament in 1979, he is regarded as a close associate of Deputy Prime Minister Don Mazankowski. In his new position, he will serve as vice-chairman of the ten-member Cabinet Committee on Foreign and Defence Policy (chaired by Joe Clark) and also joins the nineteen-member Priorities and Planning Committee (regarded as a kind of "inner cabinet") and the newly-created Expenditure Review Committee of Cabinet, which is chaired by the prime minister with a mandate "to

ensure that the Government's expenditures continue to be directed to its highest priorities, and that expenditure control continues to contribute to deficit reduction."

### Opposition Critics

Liberal Leader John Turner released a list of shadow cabinet roles for his caucus on 4 February. Veteran Quebec MP and former Cabinet Minister André Ouellet was retained as external affairs critic and Labrador MP William Rompkey was named defence critic while Hamilton MP Sheila Copps became the new environment critic.

The NDP list announced in mid-January retained Winnipeg MP Bill Blaikie as external affairs critic and Derek Blackburn as defence critic, with James Fulton as environment critic.

### Short Notes from the Hill

In December 1988 the Development Assistance Committee of the Organization for Economic Cooperation and Development noted "with appreciation" the aid policy report adopted by Canada in March 1988. It welcomed Canada's emphasis on cooperation with voluntary aid agencies outside government. Canada's aid disbursements rose to US \$1.89 billion in 1987 from \$1.7 billion in 1986, overtaking the amount of aid given by Britain. Canada's aid levels are above average, though falling slightly as a proportion of GNP to 0.47 percent in 1987.

The first meeting of the reshuffled inner cabinet on 31 January agreed to give the United States permission to test its latest generation of cruise missiles in northern Canada. The new missile, designated AGM-129A, incorporates "stealth" technology which makes it harder to spot with radar or infrared sensors.

*(For more on the decision to permit testing see page 16 of this issue of Peace&Security.)* □

## REVIEWS

### United Nations, Divided World: The UN's Roles in International Relations

Adam Roberts and Benedict  
Kingsbury (editors)

Oxford: Clarendon Press, 1988, 287  
pgs., \$82.50 cloth

This is an important book – written by a distinguished group of UN officials, including Secretary General Javier Pérez de Cuéllar, national delegates to the UN, scholars like the eminent British historian Sir Michael Howard – which analyses the dilemmas and demands facing the United Nations. The work is broader in scope than most comparable studies on the UN and, in addition to chapters on the UN's primary function in the field of international peace and security, it covers other important activities like economic development, international law and human rights. Despite the complexity of the subject, the themes are presented with admirable clarity and should thus appeal to an audience wider than the restricted circle of UN specialists.

Most contributors maintain a position of muted optimism which recognizes both the limitations and the services of the organization, while avoiding a utopian stand or seeking recourse in utter cynicism, as can so often be observed in the treatment of the subject. The general tone is set by Sir Michael Howard who reminds us that the UN has failed in its primary task to create a new world order where members derive their strength from the collective strength of the whole. Instead it reflects the disorders and rivalries of the world, "and does what it can to mitigate them." The question – what can be done by the UN, given the political realities, and what might be done more ef-

fectively – forms the essence of most chapters and is capably summarized in the form of a ten-point programme in Evan Luard's concluding chapter. If there are any reservations, it is that the proposals all stress good will and common sense in an organization not always noted for dispassionate discourse.

The reflective chapter by Secretary-General Pérez de Cuéllar, and the accompanying analysis of case studies by Thomas Franck, will be of particular interest to the student of international conflict. Both chapters discuss the Secretary-General's formal responsibility for international peace and security as established by the UN Charter, and contrast this with the private diplomacy that has emerged in practice which entails discreet inquiries, good offices and mediation efforts. As Pérez de Cuéllar notes, the UN Secretary-General served as the sole channel of communication between all parties involved in the wars in Afghanistan, the Gulf and southern Lebanon, and the tense situation in Cyprus. Under these circumstances, he was often forced to improvise and sometimes to suggest means which diverged from those initially envisaged by the Security Council. Even with such liberties, it is the Security Council, as he insists, which has the responsibility and the Secretary-General who exercises a supportive role. If one takes the case of the 1988 Iran-Iraq ceasefire agreement, which occurred after the publication of the book, the relationship may well be reserved, for here was an instance where the leadership was clearly provided by the Secretary-General, with the Security Council lending support.

The Secretary-General also justifies his reluctance to invoke Article 99 for fear that bringing an issue to the formal attention of the Security Council might escalate an international conflict. Evan

Luard and Sir Anthony Parsons argue the contrary point: by taking bolder action and invoking Article 99, the Secretary-General would enhance his authority and force the Council to take a more active stand. The argument is of particular interest, given that it is made by former senior officials of the British government which, like all other Permanent Members of the Council, has been reluctant to enhance the authority of the Secretary-General.

In contrast to the well-tempered optimism of most contributors, Maurice Bertrand strikes a distinctly more pessimistic note. He questions the ability of the UN to achieve any meaningful internal reform. In his view, the principal failure of the UN, and its growing marginalization, stems from its inability to develop a political framework capable of providing a global response to the problems of increased international interdependence. There is partial evidence of such frameworks emerging elsewhere, as for example the Economic Summit and the European Economic Community, but these developments have bypassed the UN. As a remedy, Bertrand suggests the creation of a UN Economic Security Council, which would duplicate in the economic sphere the formal authority and effective decision-making structure of the Security Council. It promises to be more successful than the latter because the economic sphere offers a greater potential for consensus.

### The Demilitarized Society: Disarmament and Conversion Seymour Melman

Montreal: Harvest House, 1988,  
120 pgs., \$9.95 paper

Columbia University professor and economist Seymour Melman argues that the United States economy is heavily militarized and

dominated by the arms procurement and defence contract bureaucrats of the Pentagon. The concentration of economic power and decision-making in the hands of the Pentagon, which began in the Kennedy administration, has resulted in unproductive state capitalism, the militarization of society and economic malaise and decline for the US.

Melman claims that the United States is already a second-rate industrial country because production has declined and incomes are no longer rising. He calls this situation "industrial depletion" and claims it is a direct consequence of the diversion of half the US industrial economy to military purposes. The production of guns, fighter planes and missiles makes no contribution to either ordinary consumption or to the means of economic production. At the same time that the US economy has been diverted to military production, the physical infrastructure has fallen into disrepair. Roads, railways and bridges are not being fixed; school, medical, public housing and other needs are not being met. "If the processes of depletion continue," writes Melman, "the United States could become a third-rate nation characterized by the pervasive inability to find and organize the resources necessary to restore economic competence."

The solution is economic conversion, says Melman. Conversion of military industries to civilian output would generate enough product and wealth to rebuild the entire physical infrastructure of the United States, he claims. In this 120-page essay, Melman sketches out the steps that could be taken to achieve this goal, and summarizes some of the political and economic obstacles that have so far prevented any serious effort in this direction.

What is lacking in polished writing is made up for in enthusiasm. Much of the value of this

book is the question and answer format through which Melman tries to answer opponents and skeptics.

For some, the work will be too Utopian and unrealistic. Melman expects that economic conversion can, at the same time, not only solve the problems of the US economy and the militarization of American society but can also create economic decentralization – the democratic control of economic planning and worker control of industry. The author also envisages the worker pension investment funds resulting from economic conversion, challenging the capital dominance of US corporations.

Although the book is entirely focussed on the US economy it will be of special interest to some Canadian readers. In Chapter three, Melman raises important questions about the peace movement, its goals and strategies. This decade has produced a peace movement that is in Melman's words a "political supermarket." Peace organizations have a long list of short-term objectives: the promotion of arms control measures or the banning of individual weapons. The Canadian peace movement's campaigns share these characteristics – Refuse the Cruise, Stop Star Wars, Make Canada a Nuclear Weapon-Free Zone. Melman argues that such actions do not affect, and cannot change, the "warfare state." Single-issue and single-weapon campaigns can at best only result in incremental changes to the tactical plans of those who create and supply the war-making capabilities of the state. The peace movement, Melman says, must recognize the economic imperatives of the militarized society and advocate complete and general disarmament and economic conversion.

This book will also be of interest to Canadians curious about Free Trade and the future of the North American economy. The Canadian government has taken a number of initiatives in recent years to promote and enlarge the

North American defence industrial base. Both inside and outside the terms of the Free Trade Agreement, Canada is likely to increase its military industrial production in cooperation with the United States.

Although Canada is not a militarized society and is unlikely to become one in the near future, Melman reminds us that we are keeping close company with one. He makes a good argument that the US economy must, and can, undergo radical transformation if it is to survive as a modern and prosperous nation. – *Steve Lee*

*Mr. Lee is a research associate at the Institute*

### **The Social Impact of the Chernobyl Disaster** David R. Marples

*Edmonton: The University of Alberta Press, 1988, 313 pgs., \$29.95 cloth, \$18.95 paper*

With this book, David Marples, a professor of Slavic and East European studies and research associate with the Canadian Institute for Ukrainian Studies at the University of Alberta, has produced his second in-depth look at the nuclear power plant disaster which took place at Chernobyl on 26 April 1986. While Marples' first book examined the immediate effects of the disaster, his second attempts to assess the longer-term and wider impact the accident had on the people of the Chernobyl region and on the Soviet Union in general. The author is largely successful. It is readily apparent that the book has been extremely well researched and documented, and most of the sources listed are Soviet.

Following an introductory chapter by Victor Snell, of Atomic Energy of Canada, outlining the causes of the accident, the book examines the health, environmental, economic, and political repercussions. In these pages the author describes the disaster as possibly the "pioneer of glasnost under General Secretary Mikhail Gorbachev and then subsequently its first casualty." Criticism is directed throughout the book toward the manner in which information on the accident was kept from the Soviet public, and particularly

from those directly affected by the disaster. For example, no announcements about the accident, and the potential dangers that accompanied it, were made until thirty-six hours after the mishap had occurred. At that point, a thirty kilometre radius "special zone" was created around the reactor and the evacuation of 162,000 people began. This last is a conservative estimate: Marples says as many as 500,000 were evacuated. Marples demonstrates that the overriding attitude of officials at the time of the accident and in its aftermath was that nothing particularly unusual had happened. Concerns over the effects of the accident have been dismissed by scientists and officials as scaremongering. They claim that this has raised the level of radiophobia, or "abnormal doubts" about the harmful effects of the accident. Nevertheless, the Soviet Union, the author states, remains a "fanatically pro-nuclear power" nation. The book is informative and provides many insights, especially on conditions within the special zone. At times, however, the reader is bogged down by the number of officials and organizations involved in the accident and its clean-up, their relationship to each other, and the geographical context in which events took place. Appropriate use of lists, organizational charts and maps would have been a welcome addition to the book. The Soviets have concluded that the Chernobyl disaster was the result of human error – that technology cannot be held responsible. The author notes that reverence for the machine is ingrained in the Soviet psyche, unlike in the West where it is assumed that machines can and will go wrong. This assertion seems entirely misplaced given the number of examples in the West and other regions of the world where belief in the inherent good and infallibility of technology has led to tragic results. Chernobyl and its aftermath provide a clear illustration that the dangers that result from this belief have no boundaries. – *Michael Holmes*

*Mr. Holmes is a research assistant at the Institute*

### **BRIEFLY NOTED**

#### **New Weapon Technologies and the ABM Treaty**

Herbert Lin

*London: Pergamon-Brassey's, 1988, 92 pgs., US \$12.95 paper*

If you spend more than a little time with people knowledgeable about the Anti-ballistic Missile Treaty and its implications it is not long before they start talking about lasers in terms of watts/steradian and quoting bits of obscure treaty language like "in an ABM mode" and "based on other physical principles." They are not being deliberately cryptic; much of the future of the arms control process, as we have come to know it over the last three years, depends on the outcome of negotiations between the US and USSR over just such details.

This little book by physicist Herbert Lin is a guide through the technical labyrinth. It contains clear definitions of scientific terms, an overview of the problems and controversies created for the existing Treaty by the advance of technology, and a set of alternative political and technical solutions to the apparent superpower impasse.

#### **Canada, NATO and the Bomb: The Western Alliance in Crisis**

Tom Keating and Larry Pratt

*Edmonton, Alberta: Hurtig, 1988, 246 pgs., \$14.95 paper*

Pratt and Keating discuss the role of the North Atlantic alliance and Canada's place in it. The authors conclude that leaving NATO would not be in Canada's interest and make a case for increased Canadian contribution to the alliance – which they see as vital in "making it possible to pursue a mutually advantageous relationship with the Soviet Union." They also believe the proposal to purchase nuclear-powered submarines to be strategically unsound and state that a mixed fleet of surface ships and diesel subs would make a "more cost effective contribution to collective defence."

(This book was produced with the financial assistance of CIIPS.) □

## LETTERS TO THE EDITOR

### Low-level flying good for caribou?

We would like to respond to several points made by Jocelyn Coulon ("This Labrador Business," *Peace&Security*, Autumn 1988); points that are either misleading or erroneous, and which are the standard lines given by the military in any discussion of the [low-level air training] issue. The military is very fond of citing the growth of the George River Caribou herd as proof low-level flying is compatible with caribou, if not good for them. The interesting thing is that the military continues to use the old estimates of the herd size despite concern on the part of some biologists for the past year that the size may be considerably less than the 600,000 cited in Coulon's article. The military knows about the discrepancy but cites the larger figure because it is to its advantage to cloud the issue. We realize that there were problems with the census that revealed a smaller herd; however, the constant use of the larger number is misleading. A census taken in fall 1988, should give a more accurate figure.

Furthermore, the emphasis on the number of the George River caribou herd is misleading. For the past three years, individual caribou from the George River herd have been monitored by satellite. The movements of these collared animals show that the herd appears to avoid the low-level flying zones during the time training is conducted. Scientists don't know why. The ironic aspect of all this is that the George River herd is not subject to a great deal of low-level flying. So for the military to hold this herd up as an example of the caribou's compati-

bility with low-level flying is again misleading. However, any change in migratory routes greatly affects our people's access to caribou during the hunting season, and the caribou is central to our culture and way-of-life.

It is also interesting that the military does not mention the Red Wine herd – the woodland caribou herd situated between the two flying zones and most frequently overflowed. This herd has a very low reproductive rate and has been hovering between 800 to 1,000 animals for years. It has been studied for the past three years to ascertain the effects of low-level flying. The results of this study are not in; it had to be extended for an additional year due to the lack of cooperation by pilots in the first year. The military also does not advertise that as of 1 February 1989, they will be introducing high-level combat training over this herd, thus introducing large numbers of sonic booms to the area. We also fear that the military will gradually lower the present height restrictions for supersonic flight in those zones – prime land-use areas for our people.

The second major issue is that the military likes to suggest that the Innu are divided on the issue of militarization. This is false. In May 1985, a meeting was held at Northwest Point in Labrador, where the Innu of communities in Quebec and Labrador declared: "We, the Innu people of Nitessin, from St. Augustin, La Romaine, Natasliquin, Mingan, Davis Inlet and Sheshatshiu unanimously oppose the use of our territory by the military and we will use any peaceful means at our disposal to put an end to the flights and their abuse to our people and our land." On three different occasions during our recent protest against the military occupation of our land, representatives from the

Innu communities of Quebec travelled to Goose Bay to sit in our tents of protest at the end of the runway.

The military also frequently talks about its cooperation with the hunting camps, by ceasing or diminishing flights "in an area as soon as natives are observed." We have documented three occasions when we did give the coordinates of camps to the military, but this did not keep the military from overflying the camps. Furthermore, the coordinates of all our camps are readily available from the company that transports us to the camps. For the military, this information is just a phone call away. This proves that the prime areas for low-level flying, (the river valleys and lake areas), are also the prime hunting areas of our people.

Avoidance of the camps is not the only issue. To have the jets avoid the camps does not lessen the negative impact on the wildlife, on which we depend. Furthermore, regular notification to the military of the location of the camps might legitimize Canada's theft of our land. We have never signed a treaty with Canada. The land is legally ours. The military should be seeking permission from us for any flights over our land. Yet we are not consulted on any flight paths or any escalation of military activities on our land. The military is intent on having its own way.

Daniel Ashini,  
Chief – Sheshatshiu Band  
Council, Labrador

### "Two-track" article on the wrong track

In "Dilemma for the Canadian Peace Movement," (*Peace&Security*, Spring 1988), Tony Rogers, in discussing the original political issue of cruise missile testing in Canada, refers to "the NATO two-track decision to deploy ground-launched cruise missiles and Pershing II missiles in Europe..."

In fact, the "two-track" decision in 1979, in which the Allies made a collective commitment of a strategic response to the Soviet deployment of SS-20 missiles, was an agreement to deploy *and* negotiate a joint end to both NATO and Warsaw Pact deployments.

The high point of this period of negotiation was the 1981 "zero option" disarmament proposal by US President Reagan, that was ultimately adopted on the basis of "mutual benefit," in 1987, at the culmination of the INF talks. The low point was the one-sided mass protest against the NATO response to a clear Soviet strategic challenge, in which the Soviets were able to pass off mobile, multi-warhead, accurate, long-range missiles as merely the technical product of a "modernization" policy.

R.G. Fulton, Vancouver

### Military mind at work

I mean no personal disrespect to its author, but the piece "What to do About the Submarines," (by Sharon Hobson, *Peace&Security* Winter 1988–1989) looked like a "plant" from the Department of National Defence: "why we have to go ahead with this purchase even though we now know it's a bad deal." The single item in the article which most strongly suggested this was the repetition of the sum "\$8 billion." Nobody outside DND thinks that Canada is going to get a fleet of nuclear-powered submarines for that price. The theme, insistently repeated, that the country must carry on with plans once made, also suggested to me the operation of the military mind – evinced, for example, in the descent into war in 1914 described by Barbara Tuchman in *The Guns of August*. A. Frank Thompson, Kitchener □

## NEWS FROM THE INSTITUTE

**Geoffrey Pearson**, first Executive Director of the Institute, retired at the end of December. **Bernard Wood** succeeded him on 1 February. Since 1976 Mr. Wood had been the Chief Executive Officer of the North-South Institute, an independent research organization concerned with relationships between industrialized and developing countries. During that period he also held a number of special appointments. In 1985 and 1986 he was the Personal Representative of the Prime Minister to leaders of Commonwealth states and in 1980 to 1982 he was a member of the UN Secretary-General's expert group on the relationship between disarmament and development. **William Barton**, Chairman of the Board of Directors, hosted a reception for Mr. Wood at the Institute in January.

**Johanne Di Donato**, joined the staff of the Institute in December as a research assistant, following studies at Concordia University, Leningrad State University and the Paterson School at Carleton University. **Gabrielle Mathieu**, is the new media relations officer. She studied at Laval University, the University of Ottawa, the University of Paris, and worked for several years as a journalist with Radio-Canada.

**John Toogood** spoke on superpower intervention to a conference of high school students organized by the international relations club at Martingrove High School in Toronto.

**Nancy Gordon** and **Brad Feasey** gave workshops at a conference in Brandon organized by the Marquis Project. The meetings brought together teachers, parents and school administrators from

Western Manitoba to discuss global conflict resolution. Mr. Feasey also led workshops at professional development days for teachers in Kitchener and Belleville.

**Katherine Laundy** participated in a workshop on peace education and the library, sponsored by the Greater Edmonton Library Association. She and **Susan Connell** organized and spoke at half-day conferences for librarians, academics and members of non-governmental organizations on information resources in peace and security. The mini-conferences were held in Victoria, Vancouver and Whitehorse.

**Roger Hill** was a discussant for two papers on Verification and

Confidence-Building Measures in Europe at a conference on Conventional Arms Control in Geneva. The conference was organized by the United Nation Institute for Disarmament Research in cooperation with the French Institute for International Relations. Mr. Hill also made a presentation on the implications of a conventional force reductions agreement for the future of Europe to a CIIPS sponsored discussion group on conventional arms control.

The third workshop on "Managing Regional Conflict: Regimes and Third-Party Mediators" was held in February in Ottawa. Organized by **Fen Hampson** of the Institute and **Brian Mandell** of Carleton University, the workshop

brought together specialists in area studies and in conflict resolution. Papers were given by **Liisa North**, on Central America; **Ashok Kapur** on Indo-Pakistan conflicts; **Robert Matthews** on Zimbabwe; **Christopher Brown** on Southern Africa; **Douglas Anglin** on sanctions; **G  rard Hervouet** on Indochina; and **Keith Krause** on arms transfers. **Ron Fisher** and **Loraleigh Keashly** along with the two organizers gave papers on theories of regimes and the social psychology of third-party mediation. With the resolution of some of the more intractable regional conflicts, the establishment and maintenance of new regimes are of prime importance; the necessity for institutionalization of such arrangements makes the results of the workshops relevant to the ongoing policy debate.

In mid-December the Institute sponsored and hosted another seminar in its regional conflict series, this time on the Middle East. Participants included academics and others with experience in the region. The workshop focussed on: the current situation in the area; policies of the US and USSR; the role of the United Nations; and Canadian policies in the area.

Cyprus is the site of another regional conflict the Institute is studying. Two workshops have taken place, and another is planned for the spring. A larger seminar will conclude the study which is being organized by CIIPS Research Associate **Norma Salem**.

**Malcolm Dando**, a professor at Bradford University in the United Kingdom gave a lecture at the Institute in February on the latest developments in alternative defence strategies in Europe. **Russell Trood** of the Asian and International Studies Division of Griffith University in Queensland, Australia led a discussion on recent trends in Australian defence policy. □

## LETTER FROM SOVIET UZBEKISTAN BY STEPHEN HANDELMAN

**A young man in trousers and open-necked shirt walks across the sunny courtyard of a sixteenth-century Muslim seminary.**

Stopping just beyond the volleyball net and the hanging lines of student laundry, he positions himself in the direction of Mecca, raises his hands, palms facing inwards, and begins to chant the afternoon prayer. Standing in the shade are two young Soviet Red Army officers, looking on with friendly curiosity.

A few years ago, such a scene would have been hard to imagine in the Soviet Union. The peaceful tableau in the Mir-Arab *medresse* (school) of Bukhara in Soviet Uzbekistan, with the Red Army men present as mere tourists, ought to be the perfect symbol of the new liberal age of Gorbachev. All the same, the scene contains other, darker, implications.

If Communist power and Islam have reached a kind of truce after some seventy years of open hostility, it is not out of any particular humanitarian impulse. By displaying greater tolerance for Muslim sensitivities, Moscow is playing practical politics. At current birth rates in Central Asia, by the year 2000 one in every three Soviet citizens will be of Muslim origin. Ethnic assertiveness and the revival of religious fervour already represent a potential for trouble that would make the current unrest in the Baltics and Caucasus look tame. It is reasonable to assume that one factor in Gorbachev's refusal to grant many of the most radical demands of Estonians, Armenians and their comrades-in-spirit is the explosive effect such a decision would have on the peoples and nationalities in the most unsimulated part of the Soviet empire.

Even a brief journey across the flat, arid plain that stretches from the Aral Sea to the mountains of Afghanistan turns up horrified comments from the local officials about what would happen if things

were allowed to get as far as they have in Tallinn and Yerevan. Not surprisingly, political leaders in this part of the country were among the most vociferous opponents of Baltic nationalism when new amendments to the Soviet constitution were debated last November.

"We just don't need that sort of thing here," Alla Lavrushko, third secretary in charge of ideology at the Samarkand communist party

**The ancient cities of Bukhara and Samarkand still operate according to political imperatives much older than those brought by the Soviet revolution.**

headquarters, told me one afternoon during what became a tense encounter at her office. Lavrushko was referring to popular fronts, unofficial groups and the panoply of new political structures which have been allowed to flourish in other parts of the country. Lavrushko, an ambitious young woman assigned here three years ago from Moscow, was evidently responding to signals very different from the ones most Western observers have been getting from the Kremlin. While the Gorbachev reform group outlines far-reaching plans for democratic elections this spring, Moscow's representatives in Central Asia know their job is to prevent democracy from getting out of hand.

After agreeing to meet with a few Western journalists, she appeared to regret it five minutes into the conversation. Our first question cut short what was about to be a long paean to the region's cultural and economic achievements. "How have you begun preparing for the new election

law?" We asked. "Will there be several candidates nominated?"

"Why do you ask that?" she responded suspiciously.

"Because that's what Mr. Gorbachev said was going to happen."

"Why should there be two candidates for the same post – the best person will always be chosen anyway," came the snappish reply.

"Okay, what about popular fronts?"

"What about them?"

"We've heard one has been formed here – are you supporting it, as party officials are doing in Estonia?"

"You have been misinformed," said Lavrushko.

It seemed futile to go on.

Lavrushko is not to be blamed for her testiness. In this part of the world, idealistic notions of greater democracy have to be balanced with local realities, and Moscow is very far away.

The ancient cities of Bukhara and Samarkand still operate according to political imperatives much older than those brought by the Soviet revolution. In a region whose leaders until recently ran fiefdoms oiled by family ties and widespread bribery, the heritage of Alexander the Great and Tamurlaine seems more relevant than that of Lenin. In the *chai-khanas* (tea houses) of Bukhara local merchants and political bosses, wreathed in the smoke from shashlik broiling on open stoves, intrigue and gossip as they have for centuries. The ferocious-looking men with drooping moustaches who stalk the streets in quilted coats could have come straight out of the Bible. It is no surprise to learn that ethnic consciousness is alive and growing.

Local newspapers have started to publish complaints about early Bolshevik and Stalinist policies

which disrupted tribal and clan ties in the region. Under *glasnost*, long-buried language and territorial problems have emerged as a source of ethnic friction. Tadjiks recall that they were forced to change their alphabet from Arabic to Latin script and then to Cyrillic. "Now some of our young people cannot read the inscriptions on their grandparents' graves," wrote one young student.

Another factor in the discontent is Moscow's recent attempt to clean up political corruption in Central Asia. Some of the most important figures in Uzbekistan are now facing charges in connection with an eight billion dollar scandal involving the falsification of cotton production figures. The sensational coverage of the affair in the Moscow press has angered Uzbeks and Tadjiks alike. They detect in the tones of official self-righteousness a hint of racism and paternalism.

Which brings us back to religion. One recent article by a communist party member noted with alarm the rise of Islamic fundamentalism. Young men were refusing to take the oath of military service, and babies were being given the name of "Ayatollah," he claimed.

At the Mir-Arab *medresse*, the Soviet Union's only Muslim school, hundreds of applications for the eighty available spots are arriving monthly. Abdurachim Tadjekhatmatov, the school's deputy director, offers one reason for the Islamic revival that is sure to disturb loyal *apparatchiks* like Alla Lavrushko. "There's no doubt that more young people are turning back to religion because they just don't believe in the communist party," he said. "They feel betrayed by our leaders." Indeed, the afternoon prayers in Bukhara contain an ominous message for Moscow itself. □

naire musulman datant du seizième siècle.

## LETTRE DE L'OUBÉKISTAN SOVIÉTIQUE

PAR S. HANDELMAN

sur les élections ?», demandons-nous. «Y aura-t-il plusieurs mises en candidature ?» — «Pourquoi me demandez-vous cela ?», répond-elle avec suspicion. «Parce que c'est la ce que M. Gorbatchev a annoncé.» — «Pourquoi y aurait-il deux candidats ? Pourquoi j'aurais-je choisi de toute ma vie pour un même poste ? Le meilleur sera toujours choisi, de toute manière, nous fait-elle d'un ton cas-sant. — «Très bien ! Que dire des populations ?» — «Les fronts populaires ?» — «Nous avons en-tendu dire qu'un tel front avait été formé ici; est-ce que vous l'ap-puyez, comme le font les dirigeants du parti en Estonie ?» — «Vous avez été mal informés», de répliquer notre interlocutrice.

Il nous parut futile de continuer. Il ne faut pas en vouloir à Mme La-Allia Lavroushko, troisième secrétaire chargée de l'idéologie au siège du parti communiste de Samarkand, un après-midi où j'ai eu avec elle un entretien assez tendu dans son bu-reau. Allia Lavroushko faisait allu-sion aux fronts populaires, aux groupes officiels et à la panoplie de nouvelles structures politiques dont on a permis l'épanouissement dans d'autres parties du pays. C'est une jeune femme ambitieuse qui a été affectée ici, depuis Moscou, il y a trois ans, et elle réagissait de toute évidence à des signaux fort dif-férents de ceux que les observateurs occidentaux recevaient du Kremlin. Tandis que le groupe de réforma-teurs mis en place par M. Gorbat-chev dressé des plans d'une portée considérable pour la tenue d'élec-tions démocratiques au printemps, les représentants de Moscou en Asie centrale savent que leur rôle con-siste à empêcher une croissance débridée de la démocratie.

Après avoir accepté d'accueillir quelques journalistes occidentaux, Mme Lavroushko donne aussitôt l'impression de regretter sa déci-sion. Notre première question inter-rompt brusquement ce qui promet d'être un long panegyrique sur les réalisations culturelles et écono-miques de la région. «Avez-vous commencé à vous préparer pour la mise en oeuvre de la nouvelle loi

S'arrêtant juste un peu plus loin que le filet de volley-ball et les cordes à linge des étudiants, il s'oriente vers la Mecque, lève les mains les paumes tournées vers lui, et com-mence à réciter la prière de l'après-midi. Debout dans l'ombre, deux jeunes officiers soviétiques de l'Armée rouge l'observent d'un oeil curieux mais amical.

Il y a quelques années, il aurait été difficile d'imaginer une telle scène en Union soviétique. Le la-béau paisible observé dans la cour de Boukhara, en Ouzbékistan sovié-tique, est sans aucun doute le symbole parfait de la nouvelle ère libérale de M. Gorbatchev. Malgré tout, il y a derrière cela des aspects plus sombres.

Si le pouvoir communiste et l'Islam en sont venus à une sorte de trêve après quelque soixante-dix ans d'hostilités ouvertes, ce n'est pas dû à un accord soudain d'humanité. En affichant une plus grande tolérance pour les susceptibilités musulmanes, Moscou fait preuve d'un sens poli-tique pratique. Avec les laux de na-tionalité acquis en Asie centrale, un citoyen soviétique sur trois sera d'origine musulmane d'ici l'an 2000. La hardiesse à caractériser ethniquement la région revient rel-que et le réveil de la fervente reli-gieuse représentée déjà des motifs potentiels de soulèvement risquant de faire paraître bien anodin l'agré-Batliques et le Caucase. Il est raison-nable de supposer que M. Gorbat-chev refuse d'accéder à bon nombre des demandes les plus radicales des Estoniens, des Arméniens et de leurs frères spirituels, car il craint l'effet explosif qu'une décision inversive aurait sur les peuples et les milles de l'empire soviétique.

La plaine aride et plate qui s'étend de la mer d'Aral aux montagnes d'Afghanistan pour entendre les propos des autorités locales horri-ffées au sujet de ce qui arriverait si l'on autorisait ici l'évolution qu'on

## Les hommes au regard féroce et aux moustaches tombantes qui déambulent dans les rues, vêtus de manteaux matelassés, semblent sortir directement de la Bible.

Les anciennes cités de Boukhara et de Samarkand fonctionnent en-core selon des impératifs politiques beaucoup plus vieux que ceux amenés par la révolution soviétique. Dans une région où les chefs fiers privés régis par les liens fami-liaux et la corruption généralisée, Grand et Tambourinaire paraissent plus à propos que celles de Lénine. Dans les *ichai-khanas* (salle de thé) de Boukhara, les marchands et les chefs politiques de l'endroit, bai-gnant dans la fumée des *shashlik* cuisant sur des poêles, complètent et croient tout simplement plus au regard féroce et aux moustaches tombantes qui déambulent dans les rues, vêtus de manteaux matelassés, semblent sortir directement de la Bible.

Les journaux locaux ont com-mencé à publier des plaintes au sujet des anciennes politiques bolche-viques et stalinistes qui ont boule-versé les rapports tribaux et les clans dans la région. Sous le régime cyrillique. «Aujourd'hui, certains de nos jeunes gens sont incapables de lire les inscriptions figurant sur les tombes de leurs grands-pères», écrivait un jeune étudiant.

Autre facteur de mécontentement, Moscou a récemment tenté d'élimi-ner la corruption politique en Asie centrale. Certaines des personnalités les plus importantes de l'Ouzbékis-tan font maintenant face à des accusations relativement faibles. La production de coton, le scandale concerne des sommes de 8 milliards de dollars. Le bagage de l'affaire de la presse de Moscou a mis en rogne Ouzbeks et Tadjiks. Ils perçoivent dans le pharisme officiel un soupçon de racisme et de paternalisme.

Voilà qui nous ramène à la reli-gion ! Dans un article récent, un membre du parti communiste s'alar-mait de la montée de l'intégrisme musulman. Des jeunes gens refu-saient de servir dans les forces armées, et l'on donnait même à des bébés le nom d'«ayattollah», s'exclamait-il.

Chaque mois, la *madressah* Mir-Abab, seule école musulmane de l'Union soviétique, reçoit des cen-taines de demandes d'admission, même s'il n'y a que quatre-vingt places. Abdourachim Tadjeckhama-rov, directeur adjoint de l'école, fournit, pour expliquer le réveil de l'Islam, une raison qui va certaine-ment troubler les loyaux *appa-trachis* tels qu'Allia Lavroushko. «Il n'y a pas à douter que plus de jeunes gens et de jeunes filles re-viennent à la religion, car ils ne croient tout simplement plus au

part communiste», déclare-t-il. «Ils se sentent trahis par nos dirigeants.» De toute évidence, les prières de l'après-midi à Boukhara continuent un inquietant message pour le Kremlin lui-même. □

un marché d'États, ce qui veut dire

égalité d'armes par l'État. L'aide étrangère, rappelle l'auteur, adopte parfois des détours sinués qui font perdre de vue que sans support gouvernemental le commerce des armes perdrait une grande partie de son attrait.

Ce raisonnement amène la question qui est à la base de la troisième partie de l'ouvrage : l'exportation apporte-t-elle une aide directe à l'État ? La multitude de problèmes que se confronte l'industrie de l'armement atténue l'impact potentiellement positif des exportations et fait en sorte qu'il serait probablement plus sage de fabriquer les siens.

C'est tout cela qui amène Jean-Paul Hébert à la conclusion que le débat sur le rendement de l'industrie de l'armement est un faux débat. La vraie question interpelle les intérêts stratégiques des États. Or, pour défendre ces intérêts, nul besoin de maintenir une infrastructure militaire-industrielle aussi élaborée, pourait-on ajouter. Le maintien de la paix réclame autant d'éducation et de culture que de canons.

L'intérêt du livre réside dans son approche nuancée du rôle des armes et de leur fabrication. L'auteur est un réaliste et son objectif est de dénoncer le recours à une armementation économique fallacieuse afin de justifier la croissance des investissements en équipement militaire. Dans cette perspective, son livre est un instrument précieux axé sur la compréhension du système économique rattaché aux ventes d'armes. — Yves Bélanger

*Yves Bélanger est professeur au département de science politique de l'Université du Québec à Montréal.* □

*Voici l'analyse sommaire d'ouvrages publiés en anglais dans la rubrique Reviews de Peace&Security.*

**Les ventes d'armes**  
Jean-Paul Hébert  
Editions Syros, Paris, 1988.  
166 pages, 19,25 \$

La croissance récente des bud-  
gets de défense des pays de l'OTAN a fait s'élever de nombreuses voix partant dans le monde pour dénoncer la progression des investissements militaires. Avec la publication du livre *Les ventes d'armes*, celle de l'économiste français Jean-Paul Hébert vient de s'ajouter au nombre.

Situons immédiatement le propos de l'auteur. Selon l'auteur, l'argument selon lequel les ventes d'armes sont justifiées par leur profitabilité est inacceptable, autant d'ailleurs que ne l'est le raisonnement opposé. Il ne serait en effet pas admissible de mettre fin à la fabrication d'armement sous prétexte qu'il s'agit d'investissement non rentables. « Les ventes d'armes sont un fait politique majeur dont l'État doit assurer le contrôle et la responsabilité en ayant pesé les conséquences », écrit l'auteur. Le commerce militaire doit donc être soumis à des impératifs strictement politiques, ce qui n'est pas le cas en France, présente-ment pas le cas en France, s'attaque dans son livre.

Le livre comporte trois parties. Dans la première, l'auteur y discute de la thèse de la dérive des prix. Comment se fait-il qu'un matériel puisse se vendre 435 \$ lorsqu'il est destiné aux forces armées alors qu'il n'en coûte que 20 \$ sur le marché commercial ? La réponse à cette question réside dans l'incapacité de contrôler les coûts à cause de l'adaptation des instruments dont disposent les entreprises face aux besoins des militaires et de l'énorme production. Bref, le problème relève de la gestion du progrès militaire et les coûts exorbitants sont souvent à l'origine d'une fuite en avant vers les exportations, sujet de la deuxième partie du livre.

La France présenterait un solide positif de sa balance commerciale militaire évalué à 31 milliards de dollars. Jean-Paul Hébert conteste cet aspect bénéficiaire du négocié français. Il est vrai que les exportations jouent souvent un rôle crucial pour les fabricants d'armes. Pour plusieurs entreprises, les ventes internationales permettent d'atteindre le niveau critique du seuil de rentabilité. Le marché des armes est

gais fuyaient Luanda. «Nulle part au

monde, je n'avais vu une ville pareille», soulignent l'auteur. Non vraiment, ça n'a rien du grand reportage écrit sous une pluie de balles par un journaliste fraîchement débarqué, qui, après s'être inscrit à l'hôtel, est sorti voir cette guerre de plus près pour rapporter chez lui, le lendemain. Le récit de ce journaliste est celui d'un homme qui se perd dans une guerre sale. Dans une guerre où le front est partout et nul part et qu'il a soudainement repéré par «l'odeur inhumaine des corps en décomposition».

«Le monde contemple le grand spectacle du combat et de la mort qui lui est finalement difficile d'imaginer car l'image de la guerre n'est pas communicable, ni par la plume, ni par la voix, ni par la caméra. La guerre n'est une réalité que pour ceux qui la vivent de l'intérieur et ne voient l'aspect sanglant, effroyable. Pour les autres, c'est les pages d'un livre, des images sur un écran, rien de plus», écrit-il.

Pendant les années de guerre qui ont suivies, l'Angola n'a plus fait les manchettes des médias. Cette guerre misérable s'est «normalisée». En fait, Cuba s'est depuis rallié, affirme Kapuscinski.

avec une expertise militaire non négigeable, aux côtés du Mouvement populaire pour la libération de l'Angola (au pouvoir) tandis que les deux groupes d'opposition, le Front national de libération de l'Angola et l'Union nationale pour l'indépendance totale de l'Angola, sont soudés par le Zaïre et l'Afrique du Sud. Une conjoncture qui a permis au conflit de s'enliser et de perdurer jusqu'à tout récemment.

Ce n'est que le 10 août dernier, à la faveur de négociations incluant l'Afrique du Sud qu'un cessez-le-feu était annoncé. Les troupes sud-africaines ont ainsi été rapatriées à la fin août et La Havane devrait en faire autant bientôt avec ses 50 000 soldats stationnés sur le territoire. On reforme le livre de Kapuscinski avec la sensation d'être désorienté par cet épisode de l'histoire angolaise. Un témoignage ému sur la fuite des guerres et la folie des hommes. — Raymond Lemieux

*Raymond Lemieux est journaliste-pigiste à Montréal.*

Le bilan du développement

économique et social est aussi peu concluant, selon l'auteur. Bien que les deux tiers du budget de l'ONU y soient consacrés, les ressources affectées au développement économique et social représentent moins de 7 p. 100 du montant total de l'aide mondiale. De plus, il semble qu'il y ait entre les diverses institutions spécialisées un manque de coopération double d'un esprit de

compétition. Parmi les diverses propositions pour une ONU de «troisième génération», l'auteur privilégie celle de la commande à formule européenne du Conseil de l'Organisation, une réorganisation des secrétariats internationaux et de la Commission de sécurité économique, une réduction des dépenses militaires et de ses institutions spécialisées sur le plan du fonctionnement mais elle est peut-être trop sévère en ce qui concerne la réalisation des objectifs de l'Organisation. Les lecteurs y trouveront un bon exposé des difficultés rencontrées par cette dernière depuis

1970. — Annie Bourrier

**D'une guerre à l'autre**  
Ryszard Kapuscinski  
Editions Flammarion, Paris, 1988.  
164 pages, 21,50 \$.

Ryszard Kapuscinski est un cas d'espèce parmi les journalistes. Ce reporter polonais a été témoin de vingt-sept révolutions au fil de sa carrière. En 1975, il était en Angola au moment de la décolonisation portugaise. Un événement qui devait malheureusement conduire le pays vers la guerre.

Kapuscinski ne fait nullement abstraction de la peur qui l'a tenu au fur et à mesure que cette guerre approchait et que les colons portaient la guerre.

**Iran-Irak : une guerre de 5000 ans**

Paul Balta  
Éditions Antropos, Paris, 1988.  
315 pages, 29,90 \$.

M. Paul Balta est bien connu des lecteurs du *Monde* et du *Monde diplomatique*, par ses articles sur les différents problèmes du Moyen-Orient et particulièrement du monde arabe. Excellent analyste, il démontre une connaissance détaillée et approfondie de ces problèmes. Dans le conflit Iran-Irak, il distingue trois thèmes principaux :

par les Iraniens et l'utilisation de nouvelles tactiques. Comme le livre prend fin en septembre 1987, l'auteur ne mentionne pas les armes chimiques et leur rôle crucial durant les phases terminales de la guerre. Dans le chapitre sur les grandes puissances, Paul Balta trace avec brio les engagerments américains, soviétiques, chinois, français et juifs d'Israël.

Le chapitre suivant sur les enjeux arabes dans le conflit dénote une analyse de la question bien plus valable que celle qu'on retrouve couramment dans la littérature spécialisée américaine qui laisse de côté le Maghreb et le Mashrek. L'auteur n'hésite pas à considérer le rôle du Maroc autant que celui du Yémen du Sud en passant par Damas, La Mecque et la Libye, dans le conflit Iran-Irak.

Paul Balta remarque qu'ils sont très nombreux «ceux qui avaient prévu sa durée et sa dureté (de la guerre)». Le résultat premier de cette guerre est qu'elle «a raffermi le pouvoir des ayatollahs et celui-ci est solidement structuré». Les opposants sont pour la plupart en exil, divisés et inefficaces. En fait, la révolution islamique n'a pas réussi à s'exporter sans parmi les groupes cules de Chittes au Liban. La question qui se pose alors est «Quelle est la vision du monde qui prévaudra à longue échéance? Celle, possible en Irak, d'une société agressive, intégrée, équilibrée entre une centralisation nécessaire et le respect des différentes composantes de la nation, offrant une place de marque à l'émancipation de la femme et au processus de démocratisation et de de Dieu», qui cherchent la symbiose moderne? Le n'ai trouvé qu'un reproche à faire à Paul Balta. Un reproche qu'il aurait dû éviter suite aux critiques faites par Edward Saïd dans son livre *Orientalisme*, sur le manque de le double emploi et le manque de performance du personnel (surtout

– les «trois niveaux», national, régional et idéologique qui forment la base du processus de construction de l'État-nation;

– les enjeux régionaux, c'est-à-dire la volonté de chacun des deux pays de devenir la puissance régionale dans cette partie du monde;

– les intérêts des grandes puissances.

**La crise du système des Nations-Unies**  
Victor-Yves Ghébal  
La Documentation Française, Paris, 1988, n° 4854  
136 pages, 10 \$.

On évoque souvent la plus récente crise des Nations-Unies (ONU) en se référant à la réduction de la contribution financière des États-Unis en 1985. Selon Victor-Yves Ghébal, auteur spécialisé dans le domaine du contrôle des armements, cette crise a en fait connu quatre dimensions importantes : politique et budgétaire.

L'auteur divise son analyse en trois sections. Dans la première, il rappelle l'évolution de l'ONU depuis sa fondation et campe les grandes lignes de son «vieillessement naturel» : accroissement du nombre des États-membres, qui fait passer au banc de l'opposition les pays fondateurs; alourdissement bureaucratique, dû à la prolifération des structures. La mauvaise gestion, le double emploi et le manque de performance du personnel (surtout

La deuxième section présente deux études de cas d'institutions spécialisées : l'Organisation internationale du travail (OIT) et l'UNESCO. La dernière section est consacrée à l'examen des problèmes budgétaires et politiques du système de l'ONU. On y trouve également les conclusions du Groupe des 18 experts formé en 1986, qui avait pour mandat de formuler des recommandations pour réformer le fonctionnement administratif et budgétaire de l'ONU.

Les griefs des pays occidentaux envers les institutions spécialisées de l'ONU concernent leur philosophie constitutionnelle (surtout les Droits de l'Homme), les procédures, les programmes, la prise de décision et la gestion (budgétaire et administrative).

La réduction de la contribution américaine en 1985 a obligé l'Assemblée générale de l'ONU à prendre des mesures d'urgence pour régler son problème d'insolvabilité ainsi qu'à former le «Groupe des 18» dont le rapport, franc et sévère, a été vivement critiqué à l'Assemblée générale. L'adoption de certaines des recommandations a permis de la reprise graduelle de sa contribution à l'initiative des États-Unis, entre-temps, l'effet non-négligeable d'accélérer le paiement de certains arriérés, notamment celui de l'URSS.

Selon Ghébal, les objectifs fondamentaux de sécurité collective et de développement économique et social n'ont pas été atteints. Dans le premier cas, l'auteur rappelle que les activités de l'ONU incluent les opérations du maintien de la paix. Toutefois, depuis 1945 le recours à la violence dans les conflits s'est accru, et la zone belliqueuse s'est déplacée de l'Europe vers le tiers-monde. Quant au contrôle des armements, les superpuissances ont constitué leurs propres mécanismes de négociations, en faisant fi des Nations-Unies.

Balta divise le déroulement même de la guerre en sept phases : l'arabique et la vision cartennement religieuse de la révolution islamique plurié laïcisme du nationalisme concentrant sur la vision du monde dans la partie navigable du Golfe, et des frontières entre les deux pays guerre, particulièrement la question de l'ingue les causes «réalistes» de la et qui a duré plus de huit ans. Il décrit en détails la guerre meurtrière les plus intéressants car Paul Balta Les chapitres IV, V et VI sont mourabi à Saddam Hussein.

– les intérêts des grandes puissances.

# CHRONIQUE DE LA DÉFENSE

## Le partage du fardeau au sein de l'Alliance

En décembre 1988, les membres du Comité des plans de défense de l'OTAN ont approuvé à l'unanimité un rapport sur le partage des rôles, des tâches et des responsabilités au sein de l'Alliance. Contrairement au rapport annuel soumis au Congrès par le secrétaire à la Défense des États-Unis, le document de l'OTAN a adopté une perspective plus large face au partage du fardeau, en soulignant que les membres de l'Alliance se devaient d'assumer des responsabilités plus vastes en matière de sécurité, de nourrir des intérêts plus profonds à cet égard et de contribuer ensemble à la défense commune. Relativement aux intérêts plus considérables au chapitre de la sécurité, le rapport évoque l'aide extérieure et le soutien des missions onusiennes de maintien de la paix, ainsi que la participation à des activités en dehors de la zone d'influence de l'Alliance (par exemple, envoyer des forces navales dans le golfe Persique). Quant au maintien de la paix, le rapport cite tout particulièrement les contributions du Canada, du Danemark, de la Norvège et de l'Italie. Il souligne aussi que l'Alliance pourrait fournir des fonds raisonnables pour soutenir les activités de l'ONU et ajouter ainsi une autre dimension à ses efforts en faveur de la paix. Pour ce qui est de l'aide extérieure exprimée en pourcentage du produit national brut, le Canada se classe derrière la Norvège, les Pays-Bas, le Danemark et la Belgique, au sein de l'OTAN. Lorsqu'il s'agit d'évaluer les contributions à la défense commune, le rapport s'éloigne aussi du format traditionnel mis en œuvre par l'OTAN sur les budgets et les effectifs militaires, d'autre part, les effectifs militaires, les effectifs militaires qui aident à définir ce qu'est le fardeau de défense. Parmi ces derniers, citons le coût socio-économique que suppose l'Allemagne de l'Ouest, vu les troupes nombreuses déployées sur son territoire et les dommages causés par les manœuvres des blindés et les vols à basse altitude; le coût socio-politique de la conscription, et les problèmes allant de pair avec la séparation des familles dans le cas des pays qui basent des unités militaires en dehors de leur territoire national.

Fait particulièrement digne d'intérêt pour notre pays, le rapport reconnaît que la Norvège, le Canada et les États-Unis contribuent à l'effort collectif en surveillant et en défendant les approches septentrionales de leur territoire. Le document souligne que le Canada participe beaucoup aux activités communes et finance conjointement (par exemple, l'utilisation des avions E-3A d'alerte lointaine et le fonctionnement du quartier général de l'OTAN), même s'il ne peut espérer en retirer des avantages économiques directs dignes de mention. Le rapport mentionne également la contribution que le Canada, la Turquie et l'Espagne font en fournissant des installations d'entraînement.

En ce qui concerne le critère fondamental qu'est la contribution en argent et en main-d'œuvre, le Canada continue de s'attirer les critiques de ses alliés. Chez nous, moins de 1 p. cent de la main-d'œuvre travaille dans le secteur militaire, de sorte que le Canada ne devance plus que le Luxembourg à l'avant-dernier rang de l'Alliance, devant le Luxembourg. D'après le rapport, les budgets militaires du Canada équivalent en 1988 à 2,08 p. 100 du PIB, comparativement à 2,87 p. 100 pour la Belgique, l'Allemagne de l'Ouest, la Grande-Bretagne et les États-Unis respectivement. La Directive ministérielle de l'OTAN établie en 1987 exige des membres consacrant moins de 3 p. cent de leur PIB à la défense d'accroître leurs budgets sur ce plan. Le Canada, le Danemark, l'Italie, le Luxembourg et l'Espagne

## Les forces classiques en Europe : des faits et encore des faits

En novembre 1988, le secrétaire d'État aux Affaires extérieures, M. Joe Clark, et M. Perrin Beatty, alors ministre de la Défense nationale, ont diffusé une «évaluation statistique collective» faite par les membres de l'OTAN sur l'équilibre des forces en Europe. Le document s'intitule *Forces classiques en Europe : les faits et il a été présenté en tant que contribution de l'Alliance, à l'approche des nouveaux pourparlers Est-Ouest sur les forces classiques en Europe. Les statistiques en question visent la zone qui fera l'objet des nouveaux entretiens (de l'Atlantique à l'Oural) et elles prennent en compte les forces espagnoles et françaises qui, jusqu'ici, avaient été exclues des calculs.*

Les chiffres révèlent l'existence d'une supériorité écrasante de l'Organisation du Traité de Varsovie (OTV) dans des domaines clés, tels que les chars de combat, l'artillerie, les avions de combat et le personnel militaire. En ce qui concerne les chars, on a estimé que l'OTV possédait plus de trois fois le nombre d'unités dont l'OTAN dispose (51 500 contre 16 424), et la même proportion a été établie dans le cas des pièces d'artillerie (43 400 contre 14 458); quant aux avions de combat, on pense que l'inventaire de l'OTV équivaut à plus du double des ressources de l'OTAN (8 250 contre 3 977). Les effectifs militaires de l'OTV se situaient à 3,1 millions, comparativement à 2,2 millions dans le cas de l'OTAN.

Dans les observations qu'ils ont fournies avec ces chiffres, MM. Clark et Beatty ont déclaré que le déséquilibre des forces confère à l'Est la capacité de déclencher une attaque-surprise et de vastes manœuvres offensives. L'étude de l'OTAN souligne que de nouvelles négociations sur les forces classiques s'imposent d'urgence, et elle est décrite comme une «contribution à la transparence militaire» et un document par lequel l'Alliance atlantique invite l'OTV à fournir de la même manière des données sur ses propres forces.

Les pays de l'OTV ont apparemment répondu à l'invitation. Le 30 janvier 1989, la *Pravda* a publié, avec l'assentiment des ministres de la Défense du Pacte de Varsovie, un document très différent sur l'équilibre des forces. Qualifiant les chiffres de l'OTAN de «données tendancieuses de couloir», d'une perspective sélective», le journal soviétique affirme que l'OTV a deux fois plus de chars que l'OTAN, un léger avantage au chapitre de l'artillerie, et un nombre d'avions de combat à peu près identique à celui de l'Alliance atlantique. Comme toute la *Pravda* accorde un faible avantage à l'OTAN quant aux effectifs militaires et elle conclut que les chiffres révèlent une

se situent sous le niveau de 2,5 p. 100, et le rapport ne manque pas de le signaler. Le Canada a cependant fait mieux sur deux autres plans : au cours des dix dernières années, avec quelques autres membres de l'OTAN, il a consacré un budget de défense à l'achat de gros équipements. Seuls les États-Unis et la Grande-Bretagne ont atteint des niveaux sensiblement supérieurs pendant la même période.

**Dépenses : l'ordre des priorités**  
La tendance générale que suivent les budgets de défense a échappé en quelque mesure à l'ordre des priorités change.

Le gouvernement Mulroney. Il est probable que les budgets de défense continueront d'augmenter en dollars

continueront d'augmenter en dollars

continueront d'augmenter en dollars

continueront d'augmenter en dollars

continueront d'augmenter en dollars

M. Roche, ce furent les débats sur l'espace extra-atmosphérique et l'interdiction complète des essais

## CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

### La Conférence de Paris sur les armes chimiques

Une conférence internationale sur l'interdiction des armes chimiques (AC), à laquelle ont assisté des délégués de 149 pays, dont quatre-vingt ministres des Affaires étrangères, a eu lieu à Paris du 7 au 11 janvier. La Conférence, dont le président Reagan avait proposé l'organisation en septembre dernier, avait pour objet de réaffirmer l'absence de la Convention de Genève (1925) qui défend l'emploi des AC, et de l'ajout de la vigueur aux efforts que la Conférence du désarmement (CD) déploie à Genève pour négocier l'interdiction totale de fabriquer et de stocker de tels engins.

De vives tensions régnaient au moment de la Conférence, car les États-Unis avaient accusé la Libye d'avoir construit une immense usine d'armes chimiques à Rabia, au sud-ouest de Tripoli. La Conférence elle-même s'est déroulée dans un climat orageux. L'Iran et l'Irak se sont mutuellement accusés d'avoir violé le Protocole de Genève; de nombreux délégués n'ont pas assisté aux allocations des ministres des Affaires étrangères d'Israël et d'Afrique du Sud; divers États arabes, alléguant qu'Israël possédait des armes nucléaires, ont insisté pour lier au désarmement nucléaire la fabrication des AC, en faisant valoir que de tels contrôles gêneraient le développement d'industries chimiques à buts pacifiques et qu'ils instauraient une discrimination favorable aux pays déjà munis d'AC.

Fait pressant peut-être plus d'intérêt, le ministre soviétique des Affaires étrangères, M. Chevardnadze, a reconnu le 8 janvier que son pays avait tardé à mettre un terme à la production d'AC et à ce sens. Il a cependant déclaré que

L'URSS terminerait bientôt la construction d'un centre de destruction des AC et qu'elle amorcerait immédiatement l'élimination de ses anciens stocks sans attendre l'adoption d'une nouvelle convention sur les AC. Des porte-parole et observateurs des États-Unis et d'autres pays occidentaux ont accueilli la nouvelle favorablement, mais ils ont signalé que le centre en question était petit et que, même après de très nombreuses années, on n'y aura détruit qu'une infime partie de l'énorme arsenal chimique soviétique. Ils ont également fait observer que les États-Unis s'adonnaient depuis quelques années à la destruction de leurs stocks vétustes, bien que ce pays eût commencé en décembre 1987 à produire une génération endépendante de l'ONU pour l'exécution d'enquêtes en cas d'emploi présumé d'AC, peu poursuivi; aucun pays, d'ailleurs, n'aurait le droit de s'opposer à la tenue de telles enquêtes.

Le même jour, M. Joe Clark a affirmé dans son discours que le Canada avait déjà fait savoir aux autres pays qu'il avait détruit ses propres stocks d'AC datant de la Seconde Guerre mondiale, qu'il ne comptait même contre des États non parties au Protocole de Genève, et qu'il ne mettrait pas au point, ne produirait pas, n'acquiescerait pas ni ne stockerait de telles armes, à moins qu'elles soient employées contre ses forces armées ou sa population civile, ou encore contre celles de ses alliés.

Parlant des armes biologiques et toxiques, M. Clark a rappelé que le Canada n'en avait jamais possédé et qu'il n'avait aucunement l'intention d'en mettre au point, d'en fabriquer, d'en acquiescer, d'en stocker ou d'en utiliser dans l'avenir.

D'autres événements encouragèrent les pays à se réunir pendant la Conférence. Dix pays, dont les deux Corées, le Laos et le Bangladesh, ont annoncé qu'ils signeraient le Protocole de Genève. L'Irak a

réitéré sa volonté de se conformer au Protocole dans l'avenir (tout en admettant avoir employé des AC dans sa guerre contre l'Iran, l'Irak a reconnu en premier). L'Irak a par ailleurs promis de ne pas mettre à la disposition d'autres pays les nouvelles connaissances qu'il avait acquises sur les AC. Quant à elle, l'Iran a déclaré qu'elle signerait une entente sur l'interdiction totale des AC, peu importe que l'Irak la parache ou non.

À la fin, les participants à la Conférence ont adopté par consensus une «Déclaration finale» en six points par laquelle ils promettent de ne pas utiliser les AC et de continuer leur emploi par d'autres, ils exhortent les États ne l'ayant pas encore fait à signer le Protocole de Genève, ils soulignent la nécessité d'intervenir à l'échelle mondiale la production et le stockage des AC, et ce, de que possible, et ils recommandent que l'ONU joue un rôle pour garantir le respect des mesures restrictives visant les AC, y compris les enquêtes que le Secrétaire général mènerait en cas de violations présumées du Protocole de 1925.

Après la Conférence, le chef de la délégation américaine, l'ambassadeur William Burns, a affirmé que la Déclaration exprimait un puissant consensus mondial et qu'elle allait donner un élan politique considérable aux négociations de la CD. Il a cependant avoué que Washington aurait préféré voir les délégués accepter explicitement la nouvelle réglementation des exportations et adopter des sanctions contre les utilisateurs de l'interdiction de ces armes; il a fait observer que la col-lectivité internationale n'avait jamais auparavant favorisé aussi clairement l'objectif que représente l'interdiction complète des armes chimiques. Malgré tout, de nombreux observateurs de l'extérieur ont affirmé un certain scepticisme, en disant des participants à la Conférence qu'ils n'avaient pas su condamner nommément les pays qui s'étaient servis d'AC peu de temps auparavant (l'Irak en particulier).

D'autres ont exprimé la crainte que la Conférence ait été nuisible en un certain sens, du fait qu'elle ait montré l'intérêt politique qu'il y a à posséder des AC ou à menacer d'en acquiescer (comme l'ont attesté les pays du tiers-monde qui ont exigé la signature d'un lien entre l'établissement d'un lien entre les désarmements chimique et nucléaire).

### La limitation des armements classiques en Europe

Dans un discours prononcé devant l'ONU le 7 décembre, le président soviétique, M. Gorbatchev, a annoncé que son pays prendrait une série de mesures unilatérales, dont les suivantes :

- au cours des deux prochaines années, l'URSS réduira de 500 000 membres les effectifs de ses forces armées et elle éliminera aussi une partie importante de ses armements classiques;
- d'ici 1991 également, elle retirera de l'Allemagne de l'Est, de la Tchecoslovaquie et de la Hongrie 50 000 militaires et 5 000 chars, dont six divisions de chars ainsi que des unités de débarquement et d'assaut; les divisions soviétiques qui resteront dans ces pays seront «restreintes»;
- Moscou réduira davantage ses troupes et ses armements dans la partie européenne de l'URSS, ce qui portera l'ensemble des réductions en Europe à 10 000 chars, 8 500 systèmes d'artillerie et 800 aéronavals de combat;
- l'URSS réduira considérablement ses forces basées en Asie soviétique; et
- elle retirera une «grande partie» de ses troupes déployées en Mongolie.

Selon les estimations occidentales, ces réductions équivalaient à environ 10 p. 100 de toutes les troupes soviétiques, à plus du quart des chars de l'URSS déployés en Europe, dont à peu près la moitié de ceux présents en Europe de l'Est, au quart de ses pièces d'artillerie

# À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

En vertu d'un plan original, l'ONU déploierait un contingent de 7 500 militaires, les cinq membres permanents du Conseil, à savoir la Chine, les États-Unis, la France, le Royaume-Uni et l'URSS, pensent tous que ce chiffre est trop élevé. Le Secrétaire général a proposé de consacrer une force de 4 650 militaires, dont plusieurs centaines seraient fournis par le Canada. Les pays africains de la ligne de front et la South West Africa Peoples Organization (SWAPO) se sont vivement opposés à toute réduction des effectifs de la force proposée. Le Canada soutient que celle-ci devrait être le plus efficace possible; il aimerait en réduire les effectifs, car cela entraînerait des économies, mais il se dirait en faveur de tout niveau jugé nécessaire pour garantir un passage en douceur à l'indépendance.

## Autres questions

Parmi les autres questions examinées par le Conseil, citons le renouveau de la Force internationale des Nations-Unies au Liban (FINUL) et du GOMNUII (Iran-Irak). Le Conseil a par ailleurs tenu des consultations sur un projet de déclaration critiquant le comportement des Israéliens dans les Territoires occupés, ainsi que sur la date où devraient avoir lieu les élections pour remplir un poste vacant à la Cour internationale de justice.

Le Conseil a rarement accordé autant d'attention au maintien de la paix. En raison des démarches diplomatiques entreprises dans le Sahara occidental et au Kampuchea, il se pourrait que des troupes onusiennes soient aussi déployées dans ces régions et que le Conseil soit appelé à se pencher sur ces questions dès cette année. □

- TREVOR ROWE

d'ordre strictement procédural involsans avoir à obtenir la caution d'un membre. Mais pendant le débat sur la Libye, l'OLP a exigé de pouvoir prendre la parole devant le Conseil sans avoir à obtenir la caution d'un

répondant.

L'OLP voulait aussi être reconnue comme le Représentant permanent du Bureau de la Palestine, au lieu d'avoir simplement le titre d'Observateur. L'Assemblée générale avait déjà acquisé à ces changements, mais les États-Unis en contestaient la mise en oeuvre au Conseil de sécurité. Cependant, comme il s'agissait d'une question de procédure, les États-Unis n'ont pas pu faire usage de leur droit de veto et ont dû se contenter de voter contre. Le Canada, la France et le Royaume-Uni se sont

abstenus. Les autres membres du Conseil ont voté pour.

Afin d'expliquer la position du Canada, l'ambassadeur Fortier a déclaré que son pays n'était pas opposé à ce que le Bureau de la Palestine prenne la parole à l'ONU, mais qu'il fallait, selon lui, suivre la procédure établie. M. Fortier a répété que le Canada ne recommandait pas l'État palestinien créé à Aïge.

Cependant, l'ambiguïté de l'abstention semble indiquer que, même si le Canada n'appuie pas un Management de l'OLP, il ne s'y opposerait pas, en fin de compte.

## L'indépendance de la Namibie

Les États membres ont consacré beaucoup de temps à la mise en application de la résolution 435 qui prépare l'accession de la Namibie à l'indépendance; c'est là une question dont le Canada a activement poursuivi l'étude quand il siégeait au Conseil il y a dix ans et en tant que membre du Groupe des Cinq. Par ailleurs, le Groupe d'assistance des Nations-Unies pour la période de transition (GANUT) a pour objectif de garantir la paix et de créer les conditions nécessaires à la tenue d'élections libres.

américains, même quand ceux-ci exécutaient des manoeuvres de désengagement. Pendant tout le débat, les Libyens ont maintenu que les preuves avancées par Washington au sujet de l'incident étaient fabriquées de toutes pièces.

Le Canada a d'abord réagi avec prudence. Du 4 janvier, date où le Conseil a commencé ses consultations officielles, jusqu'à la prochaine réunion, M. Fortier a déclaré aux journalistes que le Canada continuait d'examiner tous les faits avant de prendre une décision. Il a ajouté que notre pays voulait entendre tous les intervenants dans le débat. Quand les reporters l'ont pressé de dire s'il estimait l'attaque américaine justifiée, M. Fortier a affirmé: «Écoutons d'abord tous les intervenants... nous sommes encore en plein milieu du débat et, ce que je sache, rien n'a encore été tranché.» Mais le lendemain, avant que tous les intervenants se fussent effectivement faits entendre par le Conseil, le secrétaire d'État aux Affaires étrangères, M. Joe Clark, a déclaré à Paris que le Canada acceptait la version américaine des faits. Bien que sans grande importance, l'incident a fait penser que l'ambassadeur n'avait peut-être pas été aussi bien informé qu'il aurait dû l'être. Quand il a quitté son poste à New York, l'ancien ambassadeur Stephen Lewis s'était plaint d'accrochages avec les autorités supérieures des Affaires étrangères, qui le traitaient comme quelqu'un n'étant pas des leurs. M. Fortier, avocat montalais prospère, a lui aussi été nommé pour des raisons politiques. Par la suite, cependant, il a répété à maintes reprises qu'il s'entendait bien avec son ministre. «En ce qui me concerne, mes rapports avec Ottawa sont excellents,» a-t-il précisé pendant une entrevue.

Une résolution qui déplorait la mise hors de combat des deux chasseurs libyens a finalement été rejetée. Les États-Unis, la France et la Grande-Bretagne ayant opposé leur veto. Le Canada a été le seul autre pays à s'opposer à la résolution; quant à eux, le Brésil et la Finlande se sont abstenus.

## La reconnaissance de l'OLP

Avant que le vote ait pu avoir lieu sur la question libyenne, un détail

Note de la Rédaction: Avec l'élection du Canada au Conseil de sécurité des Nations-Unies pour une période de deux ans, nous instituons une nouvelle rubrique qui portera sur les affaires de cet organe de l'ONU. L'auteur, M. Trevor Rowe, est basé à New York et fait régulièrement, depuis sept ans, des reportages sur l'ONU pour le compte de la presse de dire s'il estimait l'attaque américaine justifiée, M. Fortier a affirmé: «Écoutons d'abord tous les intervenants... nous sommes encore en plein milieu du débat et, ce que je sache, rien n'a encore été tranché.» Mais le lendemain, avant que tous les intervenants se fussent effectivement faits entendre par le Conseil, le secrétaire d'État aux Affaires étrangères, M. Joe Clark, a déclaré à Paris que le Canada acceptait la version américaine des faits. Bien que sans grande importance, l'incident a fait penser que l'ambassadeur n'avait peut-être pas été aussi bien informé qu'il aurait dû l'être. Quand il a quitté son poste à New York, l'ancien ambassadeur Stephen Lewis s'était plaint d'accrochages avec les autorités supérieures des Affaires étrangères, qui le traitaient comme quelqu'un n'étant pas des leurs. M. Fortier, avocat montalais prospère, a lui aussi été nommé pour des raisons politiques. Par la suite, cependant, il a répété à maintes reprises qu'il s'entendait bien avec son ministre. «En ce qui me concerne, mes rapports avec Ottawa sont excellents,» a-t-il précisé pendant une entrevue.

## Mise hors de combat de chasseurs libyens

Après avoir mené une vigoureuse campagne pour obtenir un siège au Conseil de sécurité des Nations-Unies, le Canada s'est immédiatement retrouvé au coeur de l'action quand l'organe suprême de l'ONU s'est réuni au début de janvier pour calmer les tensions engendrées par la mise hors de combat de deux chasseurs libyens par des avions américains. «C'est ce qu'on appelle entrer dans le feu de l'action, littéralement,» a déclaré M. Yves Fortier, nouvellement nommé ambassadeur du Canada à l'ONU, au moment où il quittait la chambre du Conseil après une ronde de consultation avec les quatre autres membres.

Le Conseil a dû évaluer deux versions des faits et décider si l'action des États-Unis avait été justifiée. La Libye a soutenu que ses avions n'étaient pas armés et qu'ils avaient été victimes d'une attaque non provoquée pendant une mission de reconnaissance. Les États-Unis ont fait valoir avec insistance que les appareils libyens avaient affiché des intentions hostiles en talonnant plusieurs chasseurs repris les chasseurs

# PAIX ET SÉCURITÉ : DEUX CONCEPTS ANTAGONISTES ?

PAR BERNARD WOOD

Bernard Wood est Directeur général de l'ICPSI.

J'ÉTAIS EN AUSTRALIE EN AOÛT DERNIER QUAND M. Clark a annoncé mon affectation au poste de Directeur général de l'ICPSI. La réaction perplexe d'un échantillon diversifié d'Australiens face au mandat ambivalent de l'Institut m'a frappé.

Après presque cinq ans, cette association singulière de concepts est devenue familière à la partie de la population canadienne que la chose intéresse, mais elle gêne encore énormément, pour beaucoup, sa plausibilité est encore douteuse. Les perceptions, bien sûr, sont des réalités, et si suffisamment de gens insistent pour s'identifier à une collectivité «pour la paix» ou à un groupe «pour la sécurité», l'activité «pour la paix» persiste à se voir comme l'ennemie d'une de l'autre, alors elles seront en conflit.

Pour la plupart des gens (électeurs, citoyens et contrabables), les origines du différend deviennent rapidement mystérieuses. En effet, l'homme de la rue se demande pourquoi, si M.L. Reagan et Gorbatchev peuvent commencer à trouver des terrains d'entente, les deux groupes intéressés par le même problème au Canada sont encore à court-circuits.

Il n'y a presque plus personne pour nier la réalité ou l'importance historique du nouveau dialogue soviéto-américain, de l'accord modeste mais bien concret de désarmement conclu sur les forces nucléaires à portée inter-médiaire, et des perspectives sérieuses de réduction des arsenaux stratégiques et classiques. Et il y a d'autant plus lieu d'être optimiste que l'Est et l'Ouest ont tous deux reconnu le fardeau économique que ces derniers représentent. Mais on est encore loin du but.

Il existe des personnes qui, en raison de leurs responsabilités, de leurs fonctions et de leur formation, doivent aborder les questions de sécurité internationale en se préoccupant principalement de protéger l'État contre les pires perspectives et de garantir d'abord et avant tout que le pays pourra déjouer ou repousser toute attaque susceptible de menacer sa sécurité physique et ses habitants. D'autres abordent le problème à l'inverse : ils recherchent, dans toutes les circonstances, les meilleures perspectives pour désamorcer l'hostilité et réduire les affrontements.

Comme les sondages d'opinion successifs l'ont attesté, la majorité des Canadiens et Canadiennes éprouvent des sentiments ambivalents face à l'état actuel des relations Est-Ouest. Ils sont encore persuadés de la nécessité de posséder des défenses puissantes et de négocier depuis une position de force, mais le ton et la teneur de la campagne que M. Gorbatchev mène pour modifier la Guerre froide les impressionnent également; ils sont disposés à appuyer de vigoureux initiatives occidentales qui traitent dans le même sens (même celles qui comporteraient certains risques). Les décideurs canadiens sont tiraillés eux aussi, dans leur propre travail, par ces perceptions ambivalentes au sujet des relations Est-Ouest.

QUE PEUT-ON RAISONNABLEMENT ESPÉRER FAIRE POUR FAVERORISER une discussion productive sur la «paix» et la «sécurité»? S'il y a un conflit entre les deux points de vue opposés, et entre les partisans des deux camps, le public averti et les décideurs les écouteront, mais les excès commis de part et d'autre réduiront les chances pour que s'instaure un dialogue démocratique créateur. En revanche, si l'on prend l'habitude de tenir des échanges polis dans le cadre de tribunes appropriées, le désaccord subsistera à bien des égards, mais on réussira aussi sans doute à définir beaucoup mieux toute une gamme d'options valables à l'intention du public et des décideurs. À la faveur du processus, les milieux analytiques et avocats des deux groupes antagonistes mettront probablement davantage sur la politique adoptée en fin de compte que s'ils se cantonnent dans l'isolement le plus parfait.

Des ouvertures intéressantes en matière de limitation des armements et l'amélioration des relations Est-Ouest devaient favoriser l'amorce d'un tel dialogue constructif, bien que l'évolution actuelle de la conjoncture engendre aussi de nouveaux défis déséquilibrés. Les tribunes sont par ailleurs plus développées que jamais (l'ICPSI est un bon exemple à citer, mais il y en a d'autres). Des membres réfléchis des deux groupes ont appris à connaître les modes de pensée et le langage les uns des autres, et ils ont entrepris des débats techniques et des discussions sur des questions de fond. En outre, les deux collectivités croient désormais utile et nécessaire de parler de concepts de sécurité plus vastes et des nouvelles voies à suivre pour parvenir à la sécurité (la sécurité «commune» ou «mutuelle»).

Il reste encore beaucoup de travail novateur à accomplir pour relever les multiples défis qui concerneront la sécurité Canada est un fervent partisan de la coopération multilatérale et de la participation fonctionnelle, et il montre par là le type d'ordre et de structures que nécessite l'être de l'interdépendance mondiale. Les efforts exemplaires qu'il déploie pour combattre la pauvreté dans le tiers-monde et promouvoir le respect des droits de la personne à l'échelle de la planète sont tout aussi élogieux.

La surveillance et la défense de notre territoire et de nos zones maritimes continueront de représenter un immense défi, nos responsabilités en matière de défense collective demeureront épuisantes, et toutes ces ressources diplomatiques et militaires seront sollicitées pour répondre à une pléthore de nouveaux besoins intéressant le maintien de la paix, le règlement des conflits et la mise en place d'institutions. Sans diluer le concept de sécurité ni sous-estimer le rôle des forces armées, qui demeureront quasi indissociables de ce concept pendant longtemps encore, il s'agira de satisfaire à un nouvel impératif : créer des rapports de sécurité moins antagonistes et éliminer les causes sous-jacentes (politiques, économiques, socio-culturelles et environnementales) de l'hostilité entre les peuples.

AU SUJET DE BON NOMBRE DE CES AUTRES OBSTACLES À LA PAIX et à la sécurité, on constate rapidement que la polarisation et la méfiance existant chez les Canadiens et Canadiennes intéressés par le débat sont au moins aussi prononcées que quand il s'agit des relations Est-Ouest. Relativement à des conflits régionaux tels que ceux sévissant au Moyen-Orient, en Amérique centrale et à Chypre, les Canadiens cherchant des moyens d'aider à régler les différences et à réduire les tensions découvrent que certains de leurs efforts les plus importants sont accueillis avec suspicion ou hostilité par ceux et celles favorisant une participation ou hostilité plus active. Certains conflits se prêtent plus à l'intervention canadienne, d'autres moins; il en existe peu, cependant, dans lesquels notre pays n'ait aucun intérêt, surtout maintenant que le siège au Conseil de sécurité de l'ONU. En général, le Canada est l'un des pays du monde qui puissent le mieux prétendre à l'impartialité. La vérité est toutefois la première victime de la guerre, et quiconque tente de s'interposer entre les combattants peut s'attendre à recevoir de coups, peu importe qu'ils soient mérités ou non. Voilà qui nous rappelle toutefois que les conflits ne sont pas des parties de plaisir; les motifs de tous ceux qui s'intéressent à un conflit doivent être minutieusement examinés, et l'on ira même jusqu'à les critiquer verbalement.

Il n'est pas nécessaire qu'il y ait antagonisme entre les concepts de «paix» et de «sécurité»; de nombreuses occasions se présentent maintenant d'en poursuivre la réalisation sur des voies convergentes. Mais attention ! Il ne faut jamais espérer éviter tout différend quand on parle de conflits. □

Bob Roney

Evolution des dépenses que sup-  
posait à leur participation, ils  
cependant précisé que, si diverses  
parties, notamment les États-Unis,  
contribuer à la justice qu'on a ni  
les Soviétiques se sont dits prêts à  
de maintien de la paix en Namibie,  
caractériste cependant la nouvelle  
politique : l'URSS reconnaît que les  
résolutions anti-impérialistes sovié-  
tiques n'aident en rien à nourrir le  
tiers-monde et que l'ONU des  
années 1980 n'est plus la tribune an-  
tagoniste qu'elle était dans la décen-  
nie précédente. En fait, les chefs  
d'un bon nombre des pays les plus  
pauvres en sont venus à voir la  
coopération avec des gouverne-  
ments du Nord comme un élément  
essentiel au développement éco-  
nomique et à la stabilité régionale.  
Et quand ils cherchent des modèles  
soutenables pour imiter les États-  
Unis traditionnels de l'URSS, et à  
l'Éthiopie, au Vietnam et à Cuba.  
Les porte-parole soviétiques, à  
tous les niveaux, ont bien précisé  
que les nouvelles propositions de  
Moscou ne sont pas motivées par  
l'altruisme. Comme tout autre État-  
nation, l'URSS cherche à protéger  
ses intérêts. Il est vrai que le multi-  
latéralisme de l'ONU représente un  
moyen de contenir l'unilatéralisme  
américain, et c'est là un motif que  
les partisans canadiens de l'ONU  
comprendront. Il est de plus évident  
que les Soviétiques veulent adopter  
un système économique plus ouvert  
afin de revitaliser leur économie  
pour cela coopérer avec  
l'ONU et ses membres en ce qui  
concerne les règles commerciales et  
les multiples relations d'affaires qui  
régissent la vie économique interna-  
tionale. Le facteur prédominant,  
toutefois, est que l'URSS définit  
maintenant ses propres intérêts en  
fonction de la nature interdépen-  
dante de la planète et qu'elle veut  
donc se servir de l'ONU comme  
d'un instrument de sa politique  
étrangère.

Les Soviétiques sont plus dis-  
posés à prendre part aux échanges  
internationaux, à risque de perdre  
la face, à proposer des idées suscep-  
tibles de ne pas plaire à d'autres  
États, et au besoin, à remettre leur  
ouvrage vingt fois sur le métier.  
D'autres gouvernements ont eu du  
mal à réagir, en partie parce qu'ils  
doutaient des motifs de Moscou, en  
partie à cause de l'imprécision ini-  
tiée de certaines de ses propositions  
(par exemple, les premières versions  
de la résolution sur la sécurité glo-  
bale), et en partie parce qu'ils ne  
sont tout simplement pas habitués à  
observer chez les Soviétiques à  
l'ONU un comportement positif et  
obligatoire.

Mais ces mêmes gouvernements  
doivent pourtant réagir. L'ONU n'a  
pas évolué comme ses fondateurs  
l'avaient espéré, et ce pour diverses  
raisons, dont la plus importante est  
que les membres permanents du  
Conseil de sécurité n'ont pas su tra-  
vailler ensemble. Pendant la ma-  
jorité de son existence, l'Assemblée  
générale, en septembre 1988, «di-  
sons franchement que beaucoup  
parmi nous, y compris notamment  
les membres permanents du Conseil  
de sécurité, sont responsables du fait  
qu'à un moment donné, certaines  
valeurs fondamentales énoncées ex-  
pressément dans la Charte ont été  
diluées». Il est tristement  
ironique qu'au moment où les So-  
viétiques commencent à assumer un  
rôle constructif, les Américains se  
fassent tirer l'oreille. Cependant, le  
multilatéralisme aux États-Unis a at-  
teint le creux de la vague plus tôt  
dans la décennie ci, avec l'arrivée  
d'un nouveau gouvernement, des  
réactions positives sont bel et bien  
possibles. Le président Bush était.

Après tout, ambassadeur de son pays  
aux Nations-Unies de 1970 à 1973.  
était Secrétaire du Trésor dans le  
gouvernement précédent et il a donc  
participé aux travaux du système  
économique multilatéral qui fonc-  
tionne sous la coupe de l'ONU.  
Comme le CANADA SIEGIRA AU  
Conseil de sécurité au cours des  
deux prochaines années, il aura une  
occasion unique d'aider l'ONU à  
réaffirmer son importance dans la  
vie internationale : notre pays n'a  
pas fait partie du Conseil depuis la  
fin de son mandat de deux ans en  
1978 et, cette fois-ci, il est le seul  
membre non permanent qui soit  
aussi membre de l'OTAN. Les mi-  
nistres canadiens des Affaires ex-  
trangères ont, chacun à leur tour,  
évoqué avec conviction l'intérêt  
manifesté par le pays à l'égard de  
l'ONU et l'appui qu'il lui accorde.  
Nous continuons de payer rapidé-  
ment et au complet nos contribu-  
tions, mais il nous faut aussi jouer  
un rôle constructif dans les débats  
sur le renforcement de l'Organisa-  
tion. Le Canada a lutté durement  
pour gagner son siège au Conseil; il  
lui incombe maintenant de travailler  
avec tout autant d'acharnement pour  
faire de ce siège un instrument clef  
de sa politique étrangère. Notre pays  
est resté pour le rôle actif qu'il as-  
sume à l'ONU, et il a toujours pensé  
qu'il était dans son intérêt que l'Or-  
ganisation soit forte. Maintenant  
que les Soviétiques proposent toute  
une panoplie d'idées, nous nous de-  
vons de répondre avec sérieux et ex-  
horter nos partenaires de l'Alliance  
à faire de même.

Bon nombre des propositions so-  
viétiques comportent de graves la-  
cunes et nécessitent discussion et  
analyse. Ce qui est intéressant au  
sujet de ce processus, cependant,  
c'est que les Soviétiques prennent  
des mesures pour accroître l'effica-  
cité de l'ONU. L'URSS entre dans  
une «jouite» dont l'issue est incer-  
taine, et c'est peut-être là le com-  
portement d'un pays qui commence  
à se sentir à l'aise dans ses rapports  
avec les autres.

Pour en savoir plus:

E. Luck et T. Gait, «Gorbachev, the  
United Nations, and US Policy», *The  
Washington Quarterly*, automne 1988,  
pages 19-35.

aux éternelles résolutions anti-  
occidentales. Un élément important  
caractériste cependant la nouvelle  
politique : l'URSS reconnaît que les  
résolutions anti-impérialistes sovié-  
tiques n'aident en rien à nourrir le  
tiers-monde et que l'ONU des  
années 1980 n'est plus la tribune an-  
tagoniste qu'elle était dans la décen-  
nie précédente. En fait, les chefs  
d'un bon nombre des pays les plus  
pauvres en sont venus à voir la  
coopération avec des gouverne-  
ments du Nord comme un élément  
essentiel au développement éco-  
nomique et à la stabilité régionale.  
Et quand ils cherchent des modèles  
soutenables pour imiter les États-  
Unis traditionnels de l'URSS, et à  
l'Éthiopie, au Vietnam et à Cuba.  
Les porte-parole soviétiques, à  
tous les niveaux, ont bien précisé  
que les nouvelles propositions de  
Moscou ne sont pas motivées par  
l'altruisme. Comme tout autre État-  
nation, l'URSS cherche à protéger  
ses intérêts. Il est vrai que le multi-  
latéralisme de l'ONU représente un  
moyen de contenir l'unilatéralisme  
américain, et c'est là un motif que  
les partisans canadiens de l'ONU  
comprendront. Il est de plus évident  
que les Soviétiques veulent adopter  
un système économique plus ouvert  
afin de revitaliser leur économie  
pour cela coopérer avec  
l'ONU et ses membres en ce qui  
concerne les règles commerciales et  
les multiples relations d'affaires qui  
régissent la vie économique interna-  
tionale. Le facteur prédominant,  
toutefois, est que l'URSS définit  
maintenant ses propres intérêts en  
fonction de la nature interdépen-  
dante de la planète et qu'elle veut  
donc se servir de l'ONU comme  
d'un instrument de sa politique  
étrangère.

Les propositions concernant le  
droit international traduisent de  
manière frappante les changements  
dans la façon dont les Soviétiques  
perçoivent l'ONU : il n'y a pas si  
longtemps, ils s'opposaient vigo-  
reusement à ce que l'on évalue  
l'une ou l'autre de leurs politiques,  
qu'elle fut étrangère ou intérieure,  
par rapport à des normes interna-  
tionales de conduite qu'ils asso-  
ciaient à des idéaux et des concepts  
occidentaux. En fait, comme Ed-  
ward Luck and Toby Gait de la US  
United Nations Association le signa-  
lent dans un article paru dans le  
*Washington Quarterly*, M. Gor-  
batchev a réclamé, en 1988, l'har-  
monisation du droit intérieur  
soviétique avec les normes interna-  
tionales, même dans des domaines  
sacro-saints depuis toujours, tels  
que le terrorisme, les questions hu-  
manitaires et la protection de l'envi-  
ronnement, car il voyait là le stade  
précurseur du nouvel ordre interna-  
tional qui régirait son monde dénu-  
cléant du vingt-et-unième siècle.

Le «nouveau mode de pensée»  
n'est pas encore omniprésent et  
il coexiste avec certains aspects  
de l'ancienne rhétorique propre

# L'ONU TROUVE GRÂCE DEVANT

**L'URSS**

La vigneur retrouvée de l'ONU s'explique notamment par le fait que les Soviétiques s'intéressent maintenant avec sérieux à l'organisation qu'ils ont aidé à créer.

PAR NANCY GORDON

**D**ANS LE CADRE DE SON «nouveau mode de pensée» au sujet de la politique étrangère, l'URSS accorde

En 1988, nous avons été témoins de diverses manifestations de cette nouvelle «pensée» à New York, à

en direct.  
à l'ouverture de l'Assemblée, en septembre, M. Edouard Chevardenadze, ministre soviétique des Affaires étrangères, a présenté, dans le cadre du discours inaugurant traditionnellement au titulaire de son poste, une longue liste de propositions sur l'action de l'ONU et sur les améliorations à apporter à sa structure. Le discours était dénué de toute référence caractéristique à l'ONU. Un de ses sous-ministres, M. Vladimir Petrovski, a énoncé en détail, devant la Commission politique spéciale et la Sixième Commission, les points de vue soviétiques sur la «sécurité globale» et sur ce que le rôle de l'ONU devrait être, à Kingston (Omaria), en octobre, M. Petrovski a prononcé le

discours-thème à une conférence sur les centres pour la réduction des risques de guerre; il a appuyé le concept et il a proposé des moyens de faire progresser le processus avec la participation de l'ONU.

Les Soviétiques ont eu recours à l'ONU pour préparer un retrait de leurs troupes présentes en Afghanistan; de concert avec les Américains, ils ont entrepris des démarches diverses pour faire jouer à l'Organisation un rôle dans le règlement du conflit déchirant la Namibie et l'Angola. Ils se sont aussi dits en faveur du Moyen-Orient qui se tiendrait sous l'égide de l'ONU; et ils ont commencé à payer leurs dettes relatives à d'anciennes opérations de maintien de la paix.

QUE SE PASSE-T-IL AU JUSTE ? EST-CE bien là le même pays qui, il n'y a pas si longtemps, ne s'intéressait que pour la forme à l'ONU, et à d'autres organismes internationaux ? Le même pays qui s'opposait aux initiatives du Secrétaire général et qui refusait de payer une partie de ses cotisations pour des contreparties qu'il n'appuyait pas ? Et le même pays qui, d'abord et avant tout, paraît bien garder de ne participer à aucun jeu multilatéral dont les règles et les arbitres échappaient à sa maîtrise ?

non bipolaire du pouvoir, et les menaces grandissantes que la dégradation de l'environnement représente.

En septembre 1987, M. Gor-

article qu'on a beaucoup cité et qui initiait « Réalités et garanties pour un monde sûr ». Il énumère des divers éléments d'un programme complet de sécurité qui ferait appel à l'ONU, et il a invité les États à analyser. Ces idées ont évolué en 1987 et 1988, et M. Gorbatchev a souvent souligné la nécessité de réviser l'épandissement et la prépondérance du droit international. Pendant des entrevues accordées à Moscou en novembre 1988, des porte-parole et des universitaires

Dans son discours prononcé de-  
vant l'Assemblée générale, en  
septembre, M. Chevaradnadze a ap-  
puyé et proposé des mesures qui  
renforceront les pouvoirs du Se-  
crétaire général en lui donnant  
un meilleur accès à l'information. Il a  
également promis d'établir une liaison di-  
recte entre les sièges sociaux de  
technologies.

l'ONU, les membres du Conseil de sécurité et le président du groupe des pays non alignés; une telle liaison, a-t-il précisé, aiderait sans doute à éviter des crises et des conflits internationaux. Dans un aide-mémoire et un discours prononcé devant la Sixième Commission, M. Vladimir Petrovski a approfondi ces idées : le Secrétaire général de l'ONU, de son propre chef, signaler tout conflit potentiel aux membres du Conseil de sécurité; les observateurs militaires de l'ONU pourraient mener activement des démarches diplomatiques préventives, et le Conseil de sécurité devrait avoir le pouvoir de dépêcher des observateurs militaires de l'ONU dans les lieux de vives tensions. Cela modifierait considérablement la méthode

L'ONU, qui envoie des observateurs seulement si les deux adversaires le demandent et si un cessez-le-feu est en vigueur pendant l'été 1988, les Soviétiques ont proposé d'envoyer dans le Golfe persique une force navale de l'ONU, et ils ont repris cette idée à l'automne. Cette ligne de pensée va de pair avec la faveur qu'ils accordent aux centres pour la réduction des risques de guerre, lesquels seraient créés au sein du Secrétariat de l'ONU et se soucieraient de prévenir tant les conflits nucléaires que classiques. L'URSS a aussi émis des idées au sujet des casques bleus et elle a remis sur le tapis une proposition qui portait sur la création d'un corps onusien permanent d'observateurs militaires et de troupes. Elle a aussi offert de participer à certaines opérations de maintien de la paix, si la conjoncture s'y prêtait et si les autres États étaient d'accord. Pareille évolution des choses contrasterait avec la doctrine actuelle voulant que les superpuissances s'abstiennent d'intervenir dans de telles opérations.

L'absence de débat sur les questions de sécurité nationale (comme

PAR KIM RICHARD NOSSAL

ins a suscité des discussions, mais d'autres aspects de la étrangère ont été passés en revue, à toutes fins utiles, les sept longues semaines campagne. Ce fut notamment la politique de défense. Au divers éléments portaient à

discussions ayant porté sur la défense en 1988 n'a rien d'extraordinaire. Depuis le débat sur l'acquisition d'armes nucléaires pour les forces armées canadiennes en 1962 et 1963, la défense n'a jamais suscité de discours soutenus et fougueux en période d'élections. Au cours de

l'Alliance occidentale se sont produits au cours des vingt-cinq derniers années sans que les Canadiens et Canadiennes se soucient d'amorcer des discussions sur ces transformations et leurs conséquences. Au contraire, pendant les

ne fait pas l'objet de débats en période d'élections et s'inquiéter de

lectivité politique. Qui plus est, le pays investit chaque année des fonds considérables dans ce volet du programme politique public. Pourquoi cette dimension de la politique nationale ne génère-t-elle pas, de par son importance même, plus de discussions publiques ? L'absence

offrent la meilleure occasion qui soit d'énoncer les options d'un pays en matière de défense, ainsi que d'examiner et de discuter divers aspects de la sécurité nationale ? Ne peut-on pas effectivement soutenir qu'il incombe aux hommes et aux femmes politiques d'encourager, et

Permettez-moi d'avancer une autre hypothèse : l'absence de débat au Canada sur les questions de sécurité n'est ni troublant, ni décourageant, il n'y a aucun débat parce

qu'il existe dans une collectivité un conflit politique digne de mention. Et pour qu'il y ait un tel conflit,

breux d'une collectivité politique. Les divergences ne doivent pas se situer à la périphérie, laquelle inclut seulement quelques membres de ladite collectivité. En deuxième lieu, les discordances deviennent sérieuses quand elles touchent les intérêts concrets, plutôt que

plus insoluble. Si toutes ces conditions ne sont pas réunies, une division politique digne de ce nom est peu probable. On observe plutôt un consensus, ce qui empêche tout débat de nature, car aucun débat véritable n'est possible si tout le monde s'entend au départ.

certains ont appelé le « contre-consensus » en politique étrangère n'existe tout simplement pas. Par exemple, en dépit de la multiplication de ses cellules au Canada dans les années 1980, le mouvement pacifiste a été singulièrement in-

fier notre « posture » de défense. Le mouvement pacifiste s'est en fait heurté à l'inertie d'une population qui a toujours affiché une

OMBRÉUX SONT CEUX POUR QUI LA RÉVOLUTION CUBAINE ÉVOQUE  
 vers les lendemains brillants d'un monde marxiste. Ah, «Che» !  
 à Cuba; d'immenses panneaux à l'enseigne de «Che» marquent encore le  
 pays, avec comme légende : «*El Hombre Modelo*» ou «l'homme modèle.  
 Suivez son exemple».  
 Quand, à l'âge de trente-trois ans, Fidel Castro a finalement réussi, le  
 1<sup>er</sup> janvier 1959, à renverser Fulgencio Batista et à prendre le pouvoir, il  
 avait à ses côtés «Che» Guevara, ce docteur argentin, marxiste et révolution-  
 naire. Une anecdote souvent rebattue veut qu'au moment de choisir les  
 membres de son cabinet et ne sachant pas trop à qui confier la gestion de  
 l'économie, Fidel aurait demandé à ses fidèles réunis : «Y'a-t-il un  
 économiste dans la salle ?» C'est alors que «Che» s'est levé en disant :

Fidel cherchait un commu-  
 niste. Voilà comment «Che» est  
 devenu ministre de l'Économie.  
 Il n'y a pas dans cette histoire  
 que malice ou idiotie. En effet,  
 Fidel jure qu'à l'époque, il n'était  
 lui-même ni communiste ni  
 marxiste. En 1953, au procès intenté  
 contre lui après l'échec de sa première  
 tentative contre Batista (il avait pris  
 d'assaut les casernes de la Moncada),  
 Fidel Castro, alors jeune avocat mem-  
 bre de la classe moyenne, avait parlé  
 de relabler la constitution de 1940 et  
 d'organiser des élections libres. «Je  
 n'ai pas menti pendant mon discours  
 de la Moncada», devait-il dire plus  
 tard à Lee Lockwood, journaliste  
 américain auteur de la fascinant  
 biographie intitulée *Castro's Cuba*,  
*Cuba's Fidel*. Fidel prétend n'être  
 devenu marxiste-léniniste que plus  
 tard, par pure nécessité.

Tous ces éléments ont con-  
 tribué à créer pour les parti-  
 sans de «Che» en Amérique  
 du Nord une atmosphère ras-  
 surante où règnent le plaisir et la  
 liberté. De quoi se démar-  
 quer nettement de la grisaille et de la monotonie du réalisme socialiste  
 à la soviétique. Mais l'opposition entre ce qui était «adans» la révolution et  
 ce qui ne l'était pas allait en fait signifier pour Cuba la nécessité de réprimer  
 les autres révolutions d'ailleurs. Plus de 20 000 personnes ont été enfermées  
 dans des prisons et des camps de ré-éducation; souvent, c'était des paysans  
 qui avaient prononcé une parole malheureuse ou signé un document par  
 ignorance. Quand ils se sont mis à remettre en question la censure et à s'y  
 opposer, les intellectuels et les libéraux de la classe moyenne, qui avaient  
 appuyé la révolution à l'origine, ont subi les traitements les plus cruels ja-

Après avoir été à une certaine époque favorable aux thèses castrites,  
 Jorge Walla a été emprisonné pour avoir essayé de défendre un ami injuste-  
 ment enfermé. Il fait dans ses mémoires de prison l'un des récits les plus  
 pénibles que j'ai jamais lus. Dans *Twenty Years and Forty Days* (il a purgé  
 une peine de vingt ans et quarante jours). Walla décrit les atrocités dont il a  
 été victime sur un ton étrangement objectif. Il a fait partie de ceux qu'on a  
 appelés les *plantados* (leurs idées étaient profondément enracinées, d'où  
 l'image), ces prisonniers politiques qui ont refusé de renoncer à l'un quel-  
 conque de leurs principes. Mais les gaudicheries des années 1960 ignoraient  
 tout cela ou n'ont rien voulu en savoir. Pour ceux, ceux qui formulaient une  
 critique jouaument en fait le jeu de Washington ou celui des amis de Batista,  
 Miami. Ils n'ont vu que la croisade littéraire, les nouvelles écoles, les doc-  
 teurs aux pieds nus, les cliniques et hôpitaux construits dans les régions ru-  
 rales. Ce sont là des réalisations tout à fait indéniables; l'analphabétisme,  
 par exemple, a presque complètement disparu. Avec ses vingt-trois étages et  
 ses 950 lits, l'hôpital d'Almajar, construit à la Havane il y a six ans, est  
 un véritable symbole de modernité. De riches Européens paient pour venir y  
 subir des interventions chirurgicales cardiaques, mais tous les soins médi-  
 caux sont gratuits pour les citoyens cubains.  
 Tout cela coûte cher, et Cuba n'a pas d'argent pour payer. L'économie est  
 dans la pagaille la plus complète, en raison essentiellement des baisses, sur  
 dans les marchés internationaux, du prix du sucre et du pétrole, les deux produits  
 de base de l'économie cubaine. L'embargo commercial imposé par les  
 États-Unis en 1962, et toujours en vigueur à l'heure actuelle, n'est pas la  
 seule cause de la situation. Le gouvernement cubain reconnaît lui-même  
 qu'une grande partie du problème tient à l'inefficacité et à l'absurdité de son  
 propre système.

UBA PRATIQUE DONC AUJOURD'HUI LA «RECTIFICATION», S'EMPLOYANT À  
 corriger ses propres erreurs, que ce soit dans la gestion des usines ou  
 dans les horaires d'autobus. Les Cubains que j'ai rencontrés n'étaient  
 pas peu fiers de se déclarer eux-mêmes responsables du désordre actuel, et  
 de dire que la *Central Intelligence Agency* (CIA) ou les Soviétiques n'y  
 étaient pour rien. Et maintenant, les voilà qui «recroquent» dans tous les sens  
 Mais les autobus n'arrivent toujours pas. Les curés résistent à la ferme, car les  
 véhicules de transport sont en panne, et il n'y a pas d'argent pour les répa-  
 rer. Les bateaux attendent désespérément d'être déchargés. Dans les maga-  
 sins, on fait la queue pour quelques rares produits.  
 De nombreux analystes étrangers et diplomates occidentaux en poste à  
 Cuba accordent peu d'importance au phénomène de la «rectification», la  
 qualifiant de simple «tricotage». Castro veut remédier à l'incertitude d'un sys-  
 tème trop centralisé, sans passer par une véritable décentralisation. Dans les  
 années 1970, les quelques expériences de libéralisation des marchés ont  
 certes atténué le problème des pénuries, mais elles ont aussi débouché sur  
 des prix excessifs et favorisé la constitution de stocks, tandis que s'enrichis-  
 saient les entrepreneurs. Devant la menace d'un capitalisme rampant, on a  
 décidé de mettre fin à ces initiatives. La montée d'une classe d'industriels  
 aurait constitué une menace intolérable pour la philosophie de Fidel et, en  
 définitive, pour son régime. La *perestroïka* et la *glasnost* ouvrent pour Cas-  
 tro trop de boîtes de Pandore. Si M. Gorbatchev prétend que la réforme et la  
 transparence sont toutes deux légitimes en vertu de la philosophie de Lé-  
 nine, Fidel préfère, merci beaucoup, s'en tenir à «Che».

Que ce soit dans ses discours ou sur les omniprésentes affiches, Fidel ne  
 cesse de demander des «sacrifices», d'exhorter ses partisans à renoncer aux  
 futilités que sont l'habillement et la nourriture pour payer plutôt l'éducation  
 les hôpitaux et le progrès. On ne parle jamais toutefois des dépenses mili-  
 taires. Les croyants accueillent cet appel avec joie : «Sans Fidel, nous n'au-  
 rions rien», avance un technicien d'hôpital. Mais les autres commencent à  
 qu'il ont donné à Fidel pour se moquer de ses interminables discours et de  
 ses intarissables palabres. On entend de plus en plus la population dire :  
 «Basta de Tégé». Assez parlé ! Que le gouvernement se mette au travail  
 pour régler les problèmes et qu'il cesse de nous demander des sacrifices.  
 Cuba a absolument besoin de devises. Les touristes paient les taxis en  
 dollars. Dans les magasins qui leur sont destinés, les prix à la caisse sont af-  
 fichés en dollars. On y vend du whisky et d'autres denrées que les Cubains  
 ne peuvent espérer trouver ailleurs. Ce phénomène a donné naissance à  
 toute une nouvelle catégorie de personnes : les gens qui ont des dollars. La  
*Bodega del Medio*, l'un des bars les plus fameux de la Havane était l'un  
 des lieux favoris d'Hemingway, et l'on se sert de ce détail historique pour  
 attirer les touristes. À l'instar de «Che», Hemingway est devenu une vérité  
 ble industrie, et les Cubains de la rue commencent à en avoir assez de tout

## NOTE FROM THE EDITOR

In late April, the Federal government brought down a budget which will have profound effects upon our foreign and defence policy. The steep reduction in spending levels adds yet another wrinkle to an international agenda for Canada that is undergoing rapid and unprecedented change. For one thing, we have a new and unsettling problem: the enemy refuses to cooperate, as it has unfailingly for forty years, in being menacing and warlike, thus making much more complex the business of formulating a coherent defence and national security policy. For another, it is dawning on just about everybody interested in the subject, that the need to raise living standards in poor countries, the economic and political choices that are made to achieve this goal, and humankind's ability to avoid widespread (perhaps global) ecological disaster, are interconnected in ways we have only just begun to comprehend.

Different parts of all these questions are dealt with in three articles in this issue: **Gregory Wirick** visited several countries in Central America this spring and brings back a fresh perspective on the

problems faced by this war-torn region; **Roger Hill** sheds light on some not very well-known but potentially very important proposals to further integrate Canada's defence industries with those of the US; and a **CIIPS Roundtable** features vigorous discussion of our foreign and defence policy in the wake of the April budget.

In addition, **Julie Morin** takes a look at North Africa's latest experiment in political and economic union; **Ted Hopf** offers a warning about the Western world's attitude to Gorbachev's overtures; and **Clyde Sanger** remembers an old friend and eminent Canadian. While **Leonard Zamor's** letter from Beijing came to us before the beginning of April's momentous events in Tiananmen Square, the political and economic tension which caused the crisis are evident in his acute observations of daily life in the Chinese capital.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus.

The Institute is a Crown Corporation. Members of its Board of Directors were appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

**T**O THE PERCEPTIVE OBSERVER, THE SIGNS OF ENVIRONMENTAL catastrophe in Central America abound: decimated forests, soil erosion, slash and burn agriculture, the sad shantytowns that surround the cities, the stench of untreated sewage, the sting of pesticides blown from the cotton fields – a litany of disaster that threatens the beleaguered isthmus no less than the current political turmoil.

So intricate are the interconnections between land and people and resources, it is difficult to separate one issue from another. Jeffrey Leonard, who has written the definitive work on natural resources in Central America, emphasizes the interrelationships:

Political instability undermines economic development; stagnating economic development in the face of rapid population growth adds to the numbers of people living in absolute poverty; extreme poverty coexisting alongside wealth and resources concentrated in the hands of a small percentage of the total population provides fertile ground for still further political chaos.

IT IS EASIER TO DESCRIBE A VICIOUS circle, however, than to prescribe for one. One brave attempt at a breakthrough has been the Central American peace process which, after a long gestation, was born at the town of Esquipulas in eastern Guatemala on 7 August 1987. There the presidents of five countries – Cerezo of Guatemala, Duarte of El Salvador, Azcona of Honduras, Ortega of Nicaragua and Arias of Costa Rica – agreed on a variety of interlocking procedures in an effort to achieve “a firm and lasting peace in Central America.” Since then there have been a flurry of meetings of officials, foreign ministers and, after months of diplomatic manoeuvring, of the five presidents again, in February of this year at Costa del Sol, El Salvador.

This incremental growth of cooperation has survived setbacks. What impelled the presidents to go even this far, despite substantial opposition was, in the analysis of one interested observer, a common perception of economic malaise. President Daniel Ortega of Nicaragua said to a Canadian parliamentary committee last May, “One point unites us and that is our economic problems. [They] allowed us to speak to each other.”

It was a good thing – for their economies are burdened with debt loads higher in proportion to gross domestic product than those of most of their neighbours in Latin America, by declining prices for basic exports, by widespread unemployment and under-employment, by grossly inadequate infrastructure such as roads, water treatment facilities and electrification which, in Nicaragua and El Salvador, have actually been disintegrating because of their internal insurgencies. Moreover, the negative effect of all of these factors is exacerbated by rapidly-expanding populations, under-paid and ill-trained public servants, and a brain drain that accelerates as the crises mount.

At the heart of these economic problems are the use of land and renewable resources: forests, soils, water and fisheries. Natural resources account for more than half of the region’s economic production, half of all employment, and most exports. The economic crisis is thus, fundamentally, an environmental crisis – the degradation of natural resources – which, in turn, is at bottom a question of power-relationships and of politics.

THERE ARE THREE BASIC PROBLEMS: TOO MANY PEOPLE, TOO LITTLE LAND, and patterns of land use that can only be described as perverse. Land distribution began to be skewed in the last century with the gradual introduction of export crops. Coffee farming led to the expulsion from communal lands of many thousands of peasants who had grown corn,

beans and other basic foods to feed their families. Later, wealthy sugar and cotton planters accumulated vast tracts by ousting still more peasants. The most dramatic change occurred in the 1950s when the US market was opened to Central American beef, and huge areas of farmland were converted to cattle grazing, requiring plenty of land and very little labour.

Today, typically, the richest farmland in the river valleys is used as pasture for cattle – land much more suited to basic crops for domestic consumption. For the production of cotton, Central America has engaged in one of the world’s highest rates of pesticide application and suffered the consequences of widespread pollution and poisonings. Virtually all of the flat, fertile soils of the region are used by large landowners for commercial crops and cattle-ranching, and are often underutilized.

Meanwhile, small farmers are pushed onto more marginal land.

Throughout Central America land-poor farmers are driven either to cultivate hillsides or to colonize the pristine forests of the rapidly receding frontier. According to the UN Food and Agriculture Organization, in 1960 about 61 percent of the region was in forest and woodland and about one quarter was devoted to agriculture. By 1980, only 40 percent remained forested while 35 percent was in agriculture – two-thirds of which was pasture. These same trends continue despite the small amount that the beef cattle industry contributes to export receipts in relation to the vast amounts of land in pasture. In 1980, for example, export receipts were between US \$18 and \$47 per square kilometre of pasture compared to coffee’s contribution of between US \$1,500 and \$1,800 per square kilometre of land.

Unfortunately for land-poor farmers both hillsides and frontier settlement are rarely sustainable: the hillsides erode within a few years, while the soils of most frontier areas are quickly exhausted by intensive farming and usually abandoned to cattle ranchers after two or three seasons. Then the small farmers are obliged once again to pull up stakes in a vain search for land that will permit them to feed their families.

Rapidly-growing populations make the search ever more doubtful. According to the Latin American Demographic Centre, a unit of the United Nations, the population of the five Central American countries today exceeds twenty-seven million, more than double the figure of twenty-five years ago. In 1986, the annual rates of population increase were 3.1, 3.2 and 3.4 percent respectively for Guatemala, Honduras and Nicaragua and 2.8 percent for the region as a whole. The regional rate will see Central America’s population double again in the next quarter century.

These figures translate into relentless pressure on a limited and deteriorating natural resource base. El Salvador has been especially besieged. The most densely populated country in the continental Americas, El Salvador is unique in the region for its lack of an eastern frontier on the Atlantic coast to which people can be encouraged to migrate. For many years, a flow of Salvadorans to neighbouring Honduras, where work and land were more readily available, acted as a “safety valve.” But by 1969 resentments over this immigration erupted in the so-called Soccer War between the two countries and the virtual collapse of the Central American Common Market, one of the most promising attempts of the 1960s at regional integration.

In the ensuing decade, despite a continuing flow of migrants abroad, El Salvador exploded into violent civil war. Jorge Villacorta, who served briefly as the country’s deputy agriculture minister before joining

# ENVIRONMENT AND SECURITY

## THE CASE OF CENTRAL AMERICA

*How is land used, what land, by and for whom?  
Fundamental political questions  
for this war-torn isthmus are also  
key environmental issues.*

BY GREGORY WIRICK

the rebel coalition, has remarked, "The rebel fighters in El Salvador today are drawn mainly from families that have lost land or who never had land." An estimated ninety-two percent of El Salvador's farms are unable to sustain even a single family's needs. This has already led to the country's complete deforestation; no forestry industry exists because there are no forests left. Some environmentalists refer to the conflict as the western hemisphere's first "ecological war."

THE RESULT HAS BEEN INCREASING PREOCCUPATION WITH SHORT-TERM SECURITY, both on the part of the Salvadoran and the US governments – and at tremendous cost. In 1986 the Salvadoran government spent US \$211 million on military activities; the number of military personnel had climbed from 10,000 in 1978 to 47,000 by 1987 – a total that does not include an additional 12,000 in the paramilitary security force.

The trend has been similar in the other countries. Guatemala's army numbered 14,270 in 1978 and is now at 38,000. Nicaragua's armed forces of 77,000 are the largest in the region, growing from 14,000 in 1981. Even Costa Rica, which boasts of its lack of an army, almost doubled its paramilitary security forces between 1980 and 1987. According to the Stockholm International Peace Research Institute, military spending in the region increased by fifty percent in real terms between 1979 and 1983.

These figures don't include all of the vast expenditures by both the US and the Eastern bloc in support of regimes they consider sympathetic. The United States became obsessed with security during the Reagan years. Former Secretary of State Henry Kissinger observed, "if we cannot manage in Central America, it will be impossible to convince threatened nations in the Persian Gulf and in other places that we know how to manage the global equilibrium." Yet the 1984 Bipartisan National Commission on Central America that Kissinger headed, while identifying poverty and inequality as two of the forces driving destabilization in the region, passed over the environmental linkages almost without mention.

THE HUMAN AND FINANCIAL COSTS OF THE INTERLOCKING CRISES IN CENTRAL America are clearly enormous. But no accounting can estimate the effect that fears about security have had in shifting the entire psychology and priorities of governments. Democratic governments are notorious for being obsessed with the short term; their horizons rarely extend beyond the next election. In countries where crises predominate – either military or economic – the reaction of governments can be even more short-sighted; they respond with crisis management to deal with the worst cases first, and environmental and natural resource issues do not qualify as worst cases until the disasters brought on by short-sighted planning are at hand. Only then do they generate the headlines which evoke an immediate response.

Yet these issues are central to the viability of national economies throughout Central America. The environment is not something that can be dealt with after peace is achieved; nor is it simply a matter of parks and conservation. Its full reach is both broad and profound, for it embraces fundamental questions: what land is used, by and for whom. The significance of these questions is magnified with the squeeze of population, land, and natural resources. If measured over available arable land, the population densities of the other countries of Central America are close to that of El Salvador.

The way the natural resource base is used or abused is, to a large extent, a function of decisions taken in capital cities. These decisions in-

volve land distribution questions, but they also include issues of land tax, farm credit, the control of prices and subsidies for various types of crops or inputs such as pesticides or fertilizers, entitlements and concessions to exploit resources, export promotion incentives, building and maintaining roads, and the coordination and funding of public agencies responsible for implementing policy.

The new and still fragile civilian government in Guatemala, for example, is currently planning a comprehensive survey in order to reveal the quantity, value and ownership of property. At the moment, this information is simply not known. The government is even seeking to include in its survey the vast northern frontier area of the Peten which for years has been under the control of the repressive Guatemalan army. The region is regularly shaded over on maps in Guatemala as if in recognition, whether conscious or not, of some dark spirit hovering over that part of the country. A survey of this scope promises to be political

dynamite in a country with among the most inequitable land distribution and regressive taxation systems in Latin America.

IDEOLOGY DOES NOT APPEAR TO BE AS decisive a factor as might be thought in determining resource use. Revolutionary Nicaragua, which has come closer to solving the problem of land distribution than any of its neighbours, is poised in the post-war period to decimate its eastern frontier with settlement plans and export dreams for beef and cotton that rival any ambitions that Honduras or Guatemala might harbour – and with equal unconcern for, or innocence of, the long-term consequences.

The destruction of natural resources is not the root cause of political disruption in Central America. The reality is much more clouded and complex: there are many causes and many effects, with no single source. Less obscure is the correlation between economic development and social and political stability, and the specific connection between natural resources and economic growth. To turn the equation around, what seems clear is that social and political strains emerge when economic growth is halted or reversed. Since Central America is highly dependent on natural resources for its economic livelihood, it follows that only policies which stress the sustainable development of these resources are likely to have much success in achieving long-term economic growth and social peace.

Unfortunately, there is little evidence in the region that the idea of linkages between macro-economic decision-making and resource use – not to mention their connection with long-term security – has yet been grasped by people in a position of power. Nor have the international donors been noticeably far-sighted: both multilateral agencies like the World Bank and the aid agencies of most developed countries have tended to invest heavily in big agricultural operations and have neglected the ten million small farmers of Central America – despite the perversity of land use patterns. This is hardly surprising since the same implications – the interrelatedness of the economy and the environment – are only beginning to dawn on politicians and policymakers in Western Europe and North America.

The problems are the same everywhere, but their acuteness in Central America adds to the urgency of needed changes. Only when the linkages are appreciated and acted upon, will the triad of hope – peace, democracy and development – proffered by the five Central American Presidents at Esquipulas be sustainable. □

# UNIFIED CANADA-US DEFENCE PRODUCTION: A HAZARDOUS ROAD

*We should take care that a common market with the US in defence products does not erode Canada's ability to make an independent defence policy.*

BY ROGER HILL

LAST YEAR IN THE RUN-UP TO THE FEDERAL election, an intriguing story about defence production appeared briefly in the national press. It was reported that a task force of senior officials from National Defence, as well as External Affairs and other government departments (the Defence Industrial Preparedness Task Force, constituted in 1985 by the Defence Management Committee of the Department of National Defence) had recommended that Canada and the United States create a common defence economic market, by moving to greater continental integration of defence production; and that the existing cooperative foundation in this area be expanded to make joint industrial planning by National Defence and the Pentagon an integral part of continental defence. Twenty specific recommendations intended to promote greater integration and institutionalization had apparently been made, and the group had also called on decision-makers in both countries to become "continental" in their orientation rather than "state-centric."<sup>1</sup>

In the middle of an election focussed on free trade and the question of Canada's future as a country, this story had obvious political connotations. But did it really mean that a group of powerful senior officials was already planning the next steps on the road to integration, even before free trade had gone through? The report of the task force "has been suppressed," one journalist commented, implying that it was too hot to handle for the time being. Not so, Associate Defence Minister Paul Dick told the House of Commons: "The report summary has been known to the public for about six months," i.e., since about June, 1988.<sup>2</sup>

In fact the strongly integrationist tone of the report could have made it a political embarrassment if its contents had become widely known. Completed one year earlier, in June 1987, at a time when Canada was deeply engaged in the negotiations on free trade, it blamed "a strong nationalistic, protectionist, domestic and political orientation" for restricting the free flow of defence goods between Canada and the United States, and argued that a common defence economic market and joint planning for defence industries would bring

dramatic gains in North American security, strengthen the defence industrial base in both countries, and boost the credibility of North America's deterrent contribution to NATO. It recommended a series of specific measures: more joint studies on new weapons systems; a "Buy North American" policy for military goods; creation of a North American support base to cover joint Canada-United States repair and spare parts sources, as well as common supply and transportation systems; stronger institutional linkages between the Department of National Defence and US agencies in the field of defence production; and minimizing trade barriers having an impact on defence industrial preparedness. The report noted the importance of the North American defence industrial base and stressed that its further integration was both essential and desirable.

The implications for Canada's defences were also spelled out quite clearly. "If these gains are to be maintained and potential future benefits realized," the task force argued, "both nations have to seek further improvements that will, in the area of defence, eliminate national boundaries."

The task force claimed that increased integration was necessary in order to follow up on the pledge of greater cooperation made by Prime Minister Mulroney and President Reagan at the Shamrock Summit in Quebec City in 1985. Doubtless it also felt that its recommendations were in line with a little-noticed section of the June 1987 Defence White Paper, which stated:

Through participation in Canada-United States Defence Development and Defence Production-Sharing Arrangements, Canada cooperates with the United States in the development and production of defence equipment.... We will continue to work closely with the United States in an effort to foster the common use of this base.

WITHIN A FEW MONTHS OF COMPLETING ITS FIRST report in June 1987, the task force had changed its tune somewhat. Its final report, issued in November 1987, no longer spoke of a "common market" for defence products or of eliminating boundaries in the area of national

defence, but recommended instead a step-by-step process starting with such practical measures as reduction of legislative and administrative barriers to trade and the launching of an educational programme to develop knowledge and perception of existing procedures, agreements and practices in the defence production field.<sup>3</sup>

Nonetheless, the goal of eventual total integration of the Canadian and United States defence industrial bases was upheld. This would be pursued through an evolutionary process, where all the barriers and impediments to the free flow of defence articles and defence services between the two countries would be progressively reduced.

From an economic point of view, such a change would probably have only a limited impact on Canada as a whole (even though the defence industry or certain firms or communities might experience significant benefits or losses). This country has been cooperating with the United States in the defence production field since the Ogdensburg Declaration of August 1940, which recognized a need to consider "in the broad sense the defence of the north half of the Western Hemisphere," and which set up a Permanent Joint Board on Defence with the task of examining "sea, land and air problems, including personnel and material." A whole panoply of linkages and agreements has grown up in the defence production field since the Second World War, grouped together under the Defence Development and Defence Production Sharing Arrangements. Most of the \$3 billion per year of bilateral trade already proceeds without tariff barriers.

Moreover, defence production accounts for less than one percent of Canada's gross national product. Aircraft and parts, motor vehicles, communications equipment, naval shipbuilding and repairs, and chemical products, accounted for most of an estimated \$3.5 billion of military goods produced in 1986-1987. Total exports of these products were about \$2 billion that year, which amounted to less than one percent of total merchandise exports. Only one-half of one percent of Canada's labour force is employed in defence industries.

However, from a political point of view, a common market in defence products may be more problematical. Even if completely free trade in this area gave rise to an overall expansion in Canadian defence production, it could lead Canada into a subordinate position to the US unless measures were taken to maintain this country's role as an equal in some critical defence and defence production areas.

Space surveillance may be especially important in this respect. In the next twenty to twenty-five years, the surveillance of North American airspace will be carried out largely by satellite, and Canada will need to be an active participant in joint US-Canada space surveillance systems or arrangements if it wishes to remain as aware of developments in its own airspace, territories, and maritime approaches, as others are. Failure to do so could jeopardize Canada's ability to react effectively to events occurring in its Northern and frontier regions, and thus place in doubt the country's ability to uphold its sovereignty in these areas.

That means that Canada will have to play a full role in the collective space surveillance effort, and not allow itself to be relegated to peripheral or supporting functions. A central role in operations is the only way of ensuring access, as a matter of right, to a real role in decision-making and to day-by-day flows of information.

Canada will need to keep abreast of technological developments in this field as space surveillance systems evolve, otherwise this country will be perceived as lacking serious interest in a field that is vital to it. Canadian industry will have to be involved in research, development, and supply of satellites and related systems, and should remain in the front and centre of activity. It will not be enough for Canadian companies to serve as suppliers of parts or as beneficiaries of offset arrangements in other industrial areas.

A FREE, OPEN COMMON MARKET IS NOT LIKELY to be the best answer to this problem. It would only result in the major, American aerospace companies taking over most or all of the leading-edge work, and pushing the smaller Canadian firms aside. The Canadian government must ensure that Canadian corporations obtain a fair share of the most important contracts in key areas. This can be done by deploying some Canadian surveillance satellites as part of a NORAD space programme, for example, or by joint Canada-US purchasing arrangements, or by requiring Canadian involvement in industrial consortia.

In continental defence as a whole, Canada always needs to take care to maintain its own national sovereignty while joining in effective partnership arrangements with the United States. That means, at a minimum, doing enough to ensure that the Americans do not feel impelled to take over the whole responsibility, or major segments of it, for the sake of

their own protection. This has long been understood in the air defence field, where Canada contributes enough forces to claim a central role in command arrangements, decision-making and information gathering. Probably it was also a major impulse behind the earlier decision to acquire nuclear submarines. Their direct military tasks were to have been anti-submarine warfare work in support of the Alliance and sovereignty patrols in the Arctic, but in addition to that there may have been a determination to oblige the United States to take Canadian needs into account as regards naval operations in Arctic waters. If the US Navy needed to know where Canadian submarines were, it might have been argued, it would have had to agree to some cooperative planning and certain exchanges of information. Canadian knowledge of developments in the region would thus have been strengthened, and our claims to sovereignty in the Arctic enhanced.

The closer Canada moves into a continental defence partnership with the United States, the more it will have to pay attention to the requirements of its own sovereignty. And that may require a range of defence and defence production policies tailored to particular environments rather than the sweeping approach to integration reflected in the reports of the Defence Industrial Preparedness Task Force.

THE PROBLEM ARISES IN A RATHER DIFFERENT way in relation to the commitments to NATO. Here the goal is to enhance the readiness and sustainability of Alliance defences by developing the North American defence industrial base and making sure that it is organized to provide a steady flow of forces and supplies in the event of a major conflict. This is seen as vital to deterrence, especially in relation to the danger of prolonged warfare between East and West.

The final report of the task force argued that integrated defence industrial preparedness planning with the US Department of Defense is the most viable way of enhancing Canada's sus-

tainment capability. "Where practicable," it stated, "the program requirements of the two countries should be considered jointly and include production, procurement and coordinated surge planning, in order to provide Assured Sources for critical items." In other words, Canada and the United States would have a common system for tapping the industrial power of North America and for transporting its products to Europe or elsewhere in a crisis or wartime.

Even in the era of *perestroika* and *glasnost*, the aim of enhancing the readiness and sustainability of NATO defences is still a valid one. Major agreements on conventional force reductions in Europe may still take years to work out. And even if they are established, they will still need to be underpinned by a sound military balance based partly on effective Western reinforcement capabilities.

However, Canada should not become preoccupied with NATO defence; its willingness to intensify integration of the North American defence industrial base as a means of contributing to the readiness and sustainability of Allied forces should be tempered by recognition that the same base is used for continental defence, where the imperatives are somewhat different. The requirements of Canadian sovereignty have to be kept in mind in all cases, and thus there are probably limits to how far integration should be pushed.

Going back to the beginnings of this discussion, what one saw in the press stories last year was the spectre of Canada slipping, sector by sector, into increasing integration with the United States. First free trade, then a common market in defence products, then common defence policies, then other areas of national life, until little true independence was left.

That does not have to be the outcome if Canadians display the skill in managing their relationship with the United States they have generally shown in the past. Canada can have a true partnership with the United States with high levels of cooperation in many sectors and freedom to pursue its own objectives in other areas such as peacekeeping, conflict resolution, arms control, relations with the Pacific Rim, and foreign aid. But to achieve this it must be careful to maintain national sovereignty where necessary. It must continue to deal selectively and carefully with the whole field of continental defence including its technological and industrial dimensions. The active pursuit of Canada's own defence and defence production objectives is essential to this country's sovereignty and, indeed, to the hopes for a true, lasting partnership with the United States. □

# THE FEDERAL BUDGET: DEFENCE AND FOREIGN POLICY

## A MEDIA ROUNDTABLE

*On 2 May 1989 CIIPS sponsored a roundtable discussion on the implications for foreign and defence policy of the sharp reductions in federal spending announced in the 27 April budget. Members of a panel of experts assembled by CIIPS made short presentations; these were followed by questions from representatives of the print and electronic media. Interested journalists from across Canada participated by means of an audio hook-up. The following is excerpted from the discussion.*

### BERNARD WOOD

WHEN WE PLANNED this roundtable on the topic of the Budget – Defence and Foreign Policy, we had no idea just how much impact the budget would have in this area of national policy. We asked the question: what does the budget tell us about the Government's priorities in the coming years? We see, in fact, that foreign aid and defence, which together account for fourteen percent of federal spending, have taken sixty percent of the cut-backs in planned spending next year and nearly fifty percent the year after.

I mentioned foreign aid first because proportionately it has been cut back by far the most harshly. It will be cut by twelve percent. Defence spending will still grow slightly in absolute dollars although the pledge to stay two percent ahead of inflation is obviously gone.

Foreign aid's constituents will not be heard from in the same way as Canadians affected by the Budget. The half million people in Bangladesh who lost their homes in the [tornado] last week don't, I regret to say, see your reporting and will have no vote in Canada. But they will surely feel the impact of the cuts in ways that most of us cannot imagine.

On the defence side, nobody has won in the cut-backs. It seems to me quite clear that it was the deficit that won, but we will all be the losers if this dramatic change is not taken as the opportunity for solid, serious re-thinking of our defence commitments and capabilities, and our whole security policy in today's dynamic international environment. In Canada, much of the political debate will certainly centre around the closure of bases. While assisting the communities and workers affected is a legitimate priority for all of us, it is not, in the 1990s, going to be able to determine our defence policies.

Internationally, what is the impact? Our cuts will certainly not go unnoticed, but even after these reductions, by our Institute's count, Canada will still be the sixth largest military spender in NATO and the sixth largest aid donor in the world. For a country in our position we have nothing to be ashamed of around the table in NATO. Apart from the US, which is after all a global power, we are the only NATO country to keep thousands of our troops stationed thousands of miles from our shores. We have pledged to keep them there while arms negotiations proceed.... Because of our record in peacekeeping, which is second to none, and because of our highly respected aid programme, which is now larger than that of Britain, Canadian peacekeepers and peacemakers are going to be more and more in demand in many parts of the world where new moves to peace may now be possible.

### THE PANELISTS

#### KENNETH CALDER

*Director General for Policy Planning,  
Department of National Defence*

#### FEN OSLER HAMPSON

*CIIPS research associate;  
Associate Professor at Carleton University*

#### HAROLD KLEPAK

*Professor of Strategic Studies,  
Collège militaire royal de Saint-Jean*

#### DOUGLAS ROSS

*Professor of International  
Relations at Simon Fraser University*

#### LOIS WILSON

*President of the World Council of Churches;  
former member of the board of directors of CIIPS*

#### BERNARD WOOD

*Chief Executive Officer of CIIPS*

This, it seems to me, is the context for our security policy and foreign policy now: how do we make the absolutely best use of the resources we will have, for the objectives Canadians support?

### KENNETH CALDER

I THOUGHT I SHOULD take a few moments

to make sure that we all have basically all of the information that we can put out on the table, so that we have covered the full spectrum of implications as we have been able to identify them so far.

As a result of the Budget the Department of National Defence will receive, over the next five years, \$2.74 billion less than we had anticipated. Even with that cut there will be real growth in the defence budget over that period of time. That real growth, however, will not be sufficient to allow us to implement the White Paper as fully or as quickly as we had anticipated. The achievement of some defence policy goals will be delayed, some programmes will be cancelled, others will be reduced in size, others will be put on hold....

We all know, of course, the government does not intend to proceed with the nuclear-propelled submarine. In addition to that our projects for additional long-range patrol aircraft, for additional night observation devices, for additional CF-18 aircraft and for the unmanned airborne surveillance and target acquisition system, will be cancelled. Projects for northern terrain vehicles, for equipment outfit electronic countermeasure training aircraft, land force radios and CF-5 avionics will be reduced in size. The acquisition of light armoured vehicles for the militia will be delayed and our project for the main battle tank will be put on hold. Nevertheless, we will continue in Canada with the implementation of the North American air defence modernization programme as currently planned and funded.

The two phases of the frigate replacement programme and the modernization of the Tribal class destroyers will continue. We will also acquire new helicopters for the navy ... and mine-sweepers for the Naval Reserve.... the government will not proceed with nuclear-propelled submarines. In the immediate future, however, the department will examine alternatives for the continued rebuilding of an effective navy.

Canadian forces will stay in Europe and the current level of stationed forces will be maintained. We will not, however, build up our military strength in Europe as had been envisaged in the White Paper. Our pol-

icy, in the short term, will be to pause in the development of our forces in Europe. In addition to putting the main battle tank on hold that also means that other major items of equipment, for both land and air forces in Europe, will be put on hold. With respect to the NATO Northern Region we will maintain our commitment to an infantry battalion in North Norway.

As for peacekeeping, we will ensure that we have the resources to respond to appropriate requests for peacekeeping forces whenever they arise and wherever they may be needed. With respect to the strength of the primary reserve in Canada, we will fall short of achieving the White Paper target of 65,000. We will construct fewer militia training centres and we will cancel some planned acquisition of new equipment for the reserves. We will, however, continue to develop and implement the total force concept and we do anticipate that in spite of all of this the reserves will expand.

In the face of fiscal restraint – our contribution to the reduction of the deficit – we will have to find, out of our personnel costs in the department, money to pay our other bills and to generate enough money to continue with some of our re-equipment programmes. We will, therefore, abandon the plans outlined in the White Paper to expand the regular force to 90,000 and we will move toward a somewhat smaller force than that of today.

We will, and this of course is an issue which is getting great public attention, close a number of Canadian forces bases and stations in Canada and we will re-organize the functions of some others.... The government however remains committed to an improved rate of real growth in defence expenditures over the longer term which should enable the department to move in the direction of fulfilling the objectives of the White Paper.

#### LOIS WILSON

THE FIRST THING I would like to say is that Canadian foreign aid has declined annually since 1984. Not in great numbers – we have had a relatively good record – but in 1984 it was 0.5 [percent] of the GNP, in 1988 0.46 [percent], and the budget calls for 0.43 [percent]. Our prime minister has promised that by 1995 it will be 0.6 percent of the GNP and [it] remains to be seen whether the government is able to stand by that pledge.

Canada is the only country, besides the US, to have decreased aid in that way over those years. The more troublesome thing is that most of the reduction in foreign aid will be reduction of food aid. For example, \$66 million will be cut from food aid whereas \$67 million will be allocated to move the offices and personnel overseas to decentralize CIDA, which is an administrative matter.

Secondly, I would like to say that, of all these seven departments where cuts were made, I understand that only foreign aid will actually have less dollars.

Thirdly, ... there is a sense in which one could say that Canada can be seen to be abandoning the "two-thirds world" [the two-thirds of the world with the most people and the least resources] just as they are starting to deal with their own debt crisis and trying to repay the debts. With the increased interest rates I think it is going to be increasingly difficult. One has to ask what responsibility does Canada have toward that matter....

Fourthly ... I find the cuts in foreign aid morally offensive when set in the certainly comparative affluence of Canada but as has been mentioned by the Chair, unfortunately the victims are very distant. Indonesians don't get a vote and they will be the ones to feel the effect of those

cuts. So that I see the focus very much on the domestic scene and not in terms of the international context of Canada's responsibilities.

#### DOUGLAS ROSS

I THINK THAT THERE HAS BEEN FAR TOO much attention paid to the outcry about the impact of the tax increases. This rhetoric about a tax tidal wave and that we now have an accumulated mountain of debt which is turning us into, as Peter Newman said, a Zaire with polar bears, is really overblown. I think there has been in some respects a collapse of political vision in this country, certainly by all of our major federal parties, and this budget really reflects it.

... There are a lot of opportunities for closing the deficit gap which were not taken.... Generally profits have not been gone after, wealth has not been conscripted in the service of making a reasonable contribution to international order and maintaining our capacity to deploy an effective foreign and defence policy. I think these cuts are totally inappropriate, badly timed. Certainly I would echo Lois Wilson's comments that, on the aid side, I think they are a major mistake.

Now, in terms of aggregate capacity to pay and to contribute, when one looks at Canada's contribution over the past twenty years we see a steady decline in our contribution to both defence policy plus international development assistance. Back in the late 1960s we were well over 3.0 percent of GNP; we are now down towards 2.7 percent....

... If we compare our record with the Netherlands, with Norway or with Denmark we come off very, very badly. For example, the Netherlands, between 1967 and 1987, consistently spent an aggregate of about 4.4 percent and 4.3 percent of GNP on what you might call its contributions to international order. Now over those twenty years there was a re-allocation: as their defence spending decreased from 3.8 percent down to 3 percent, their international development assistance correspondingly rose. The same is true for Norway. Its defence spending declined from 3.5 percent to 3.1 percent, its development assistance went from .17 percent to 1.09 percent. Yes, there are even NATO members who spend more than 1 percent of GNP on development assistance.

What does the impact on defence mean? What I see in broad brush is the continued marginalization of Canadian defence policy and therefore foreign policy. We are not speaking on major international

issues and that is not coincidental. When you pay little, when you have marginalized yourself ... You don't take the kind of dynamic initiatives that a country with our incredibly positive and fortunate security situation should be taking.

Do we have a developing direct military threat? The 1987 White Paper has been criticized time and again for being too much of a Cold War document, ... The nuclear submarines created a huge target which has now been savaged. Is there no threat? I think this is an absolutely incorrect perception. Modern technology, the developing technology in strategic weapon systems, is such that there is a developing threat. The reason that we are going through NORAD modernization, the reason why we should be moving toward an extensive build-up of our coastal defence capabilities is precisely because of the advent of hard target kill-capable SLBMs [submarine launched ballistic missiles] and new advanced cruise missiles ...

We have quite rightly accepted an historical obligation to do our part in trying to stabilize deterrence. Are we doing that in this budget? No, we are turning away from it, we are simply saying to the US: sorry, you are going to have to do it for us ... ►

*"... the half million people in Bangladesh who lost their homes in the [tornado] ... have no vote ... but will surely feel the impact of the cuts in ways most of us cannot imagine."*

*"If we were in a position where the world had changed sufficiently since 1987 to justify a totally new strategic analysis we might think in terms of a new White Paper. We don't believe that has yet happened."*

## HAROLD KLEPAK

BASED ON THE SPENDING PLANS, WHAT can one deduce about the government's priorities for the country's foreign policy during the 1990s? With little doubt, the priority is the budget. And in this, I share Mr. Ross' opinion somewhat. The impact will be limited; the change in priorities observed here is not extraordinary. I think that the fundamentals of Canada's foreign policy have not changed.

In broad outline, the government wants the opportunity to "multilateralize" our relations with the United States. As far as Europe is concerned, the advantages of these links have been quite obvious since the 1970s. But we must be very frank about all this: it is much easier this year to talk about budget cuts because we can do it without attracting too much attention on the international scene.

In 1987, Australia published a White Paper on Defence that promised a much stronger policy and additional moneys. Nevertheless, two years later, for budgetary reasons, there has been a retrenchment. In New Zealand, the same thing happened, but drew much more attention because New Zealand came close to withdrawing from its alliance with the United States. In the eyes of Washington there are countries that undermine the global situation much more than Canada. It is, therefore, much easier for us to make cuts while remaining a US ally in good standing. In fact, Canada is not that far behind other countries of same or comparable size, either within NATO or in other alliances of which the US is a member.

The UN and peacekeeping: here we have an issue of increasing importance. Peacekeeping operations are sprouting up ... literally everywhere ... many more are under consideration ... Canada is asked to take part in almost each and every one of them, and every time we have been asked, we have accepted. Of course, we have established criteria for participation, but if we are asked to participate and if the operation is conducted in a proper manner, we do it. So cuts in the defence budget, such as the ones we know about now, could have an impact on operations of this kind.

In my opinion, peacekeeping issues and the link between defence and international aid – our commitment towards the outside world, towards the Third World – are the ones that worry me the most. I think that Canada enjoys a very special status; our country is very active within the Commonwealth, La Francophonie, the UN, peacekeeping operations, NATO, NORAD, and so on. It is very much part of the international system; it is a committed country. Therefore, I think that peacekeeping operations guarantee the maintenance of our armed forces' ability to act, not only to provide logistic support, but also in the task of providing infantry. We must keep a close watch on this.

Of course, Northern and sovereignty issues are, for many, linked to the nuclear-powered submarines. In my opinion, this is one of the main issues now before us: how do we go about meeting our commitments and maintaining our sovereignty in the North?

*"What I see in broad brush is the continued marginalization of Canadian defence policy and therefore foreign policy."*

*"It is simply ludicrous to undertake a major re-evaluation of defence posture every fifteen years ... as if the world and our defence needs only changed every fifteen years."*

This is really quite extraordinary. The purpose of the White Paper was to look ahead to Canadian defence requirements into the next century and provide steady and predictable funding programmes. Barely two years later Canadians are being told that the money is not there by the same government that wrote that document.

... I would suggest that right now we do not have a coherent method of planning for establishing our national defence requirements. Defence planning takes place in a vacuum without any consideration of budgetary limits or fiscal realities. The White Paper was a wish list and right now we are in danger of having our defence posture dictated to us by the Department of Finance if that wish list is chopped to accommodate new fiscal realities.

There is obviously a need for the government to undertake a fundamental re-evaluation of Canada's defence requirements and commitments, not only in the light of new fiscal realities and the resources available for defence, but also changing strategic and geostrategic trends. Moreover, I would argue this evaluation should become part of a regular, on-going, routinized process. It is simply ludicrous to undertake a major re-evaluation of our defence posture every fifteen years as has been done in previous White Papers, as if the world and our defence needs only changed every fifteen years....

Second, fiscal and budgetary considerations must be brought into defence planning much earlier in the game than they are now. Defence spending is too important to be left to the Department of National Defence and by the same token it is too important to be left to the Minister of Finance and Treasury Board ...

Third, accounting and budgeting methods for costing all major programmes should be made public. I think that there is far too much secrecy that plagues the weapons acquisition and budgeting process today. I think that the Department of National Defence hurt its own case for nuclear-powered submarines by not making its accounting methods and assumptions public.

Fourth, we need a much better basis for strategic assessment in how the changing strategic landscape will affect Canadian defence commitments and priorities in the years ahead. The critics justifiably attacked the 1960s Cold War rhetoric of the White Paper. Much of that criticism could have been anticipated before the White Paper was written. Such an assessment would involve the solicitation of views from the broader community of intelligence analysts not limited to the Department of National Defence ...

Fifth, there is an obvious and growing need to integrate strategic threat assessments with the functional requirements of Canadian security policy understood in the broadest sense. What sorts of roles in missions is Canada best suited for in preserving and maintaining international security? Are there certain kinds of missions which are more compatible with our foreign policy goals and objectives? ...

There are some that argue that the major challenges to our future security will increasingly come from drug smugglers, the illegal flow of immigrants across our borders and shores, oil spills and pollution, and the plundering of natural resources within our coastal waters. Does the military have a role to play in these sorts of non-traditional security operations, or do we need to create special forces to deal with these new and emerging challenges to our security? ...

... There are some important lessons that came out of the events of this past week. Lessons which have to do with the way we plan for our national security and defence. It will be extremely unfortunate if these lessons are ignored and the bureaucratic response is business as usual.

## FEN HAMPSON

THE EVENTS OF THE PAST FEW DAYS HAVE been truly remarkable. The scaling down of the defence procurement programmes and objectives of the government's White Paper on defence released barely two years ago, in my opinion, represents a significant turn in government policy. The subs have gone, other major programmes cancelled or deferred. To be sure not everything has been gutted, but the government's commitment to the basic parameters of the White Paper are just that: a set of paper commitments without an explanation as to the means available to achieve them.

**Mario Proulx (Radio-Canada)** [question to Kenneth Calder]: One got the impression, when the news came out, that the abandonment of nuclear-powered submarines was in some ways a political decision, but that it was also symbolic, in the sense that it was impossible to cut funds for foreign aid and child care, and build nuclear submarines at the same time. Was this really a financial matter, or was it a symbolic question?

**Kenneth Calder:** The reason for the cancellation of the submarine was essentially fiscal and one has to be careful here because it is not a question of saving money in the first five years of the defence budget because, of course, we all know that we were not committed to significant funding in the first five years. The problem with the submarines from the fiscal point of view was the magnitude of the total purchase over the longer period of time. The government was not prepared, in light of fiscal uncertainty over the longer term, to essentially sign up to an obligation of that magnitude in the outer ten years of the defence programme.

**Jack Spearman (Calgary Herald)** [by audio hook-up from Calgary]: Could the panelists give me their assessment on what impact the cancellation of the submarine programme will have on Canada's credibility to make future equipment purchases? Quite frankly why should anyone bother bidding on anything anymore after this? The French and British invested a lot of time and money only to be told at the last minute: cancel the order; we've changed our minds.

**Bernard Wood:** That is really, probably, the least interesting question that has emerged in this whole exercise. I'm not saying that to you Mr. Spearman, but it is the question that is around and on a lot of peoples' minds. And it seems to me very interesting that when the submarine idea was first raised pretty much all of our allies said that they thought it was a silly idea. But a couple of them, once they saw the commercial possibilities, seemed to change their appraisals in a massive way and say that our total credibility now hangs on it.... I have talked to NATO planners who have said that in terms of the total military posture, Canada's decision on the submarines means practically nothing at all. There are probably dissenting views on the panel ... [pause] ... it turns out there aren't.

**John Marteinson (Canadian Defence Quarterly):** I am a little surprised about the continued insistence from you [Kenneth Calder] and frankly from a lot of other people representing the Department of National Defence that the White Paper remains government policy. In reality, as a result of the budget, there has been a de facto disavowal of virtually every major aspect of the White Paper ... can we expect a coherent restatement of what we really are about by the Minister of National Defence and if so, when?

**Kenneth Calder:** What the government has said is that the parameters of the White Paper remain intact, the parameters still represent the policy of the government. What you have been focussing on are the programmes laid out in the White Paper to achieve those objectives. What the government is saying is: the objectives remain valid. What do I mean by that? In spite of these budget cuts the Canadian security policy will continue to rest upon the three pillars of defence and collective security, arms control and disarmament, and the peaceful settlement of disputes.... Programmes have been delayed and cut not for policy reasons, not because the objectives have changed, but because the money is not there – simple as that, the money is not there.

If we were in a position where the world had changed sufficiently since 1987 to justify a totally new strategic analysis, then we might think in terms of a new White Paper. We don't believe that has yet happened. Contrary to many of our critics the Department of National Defence does acknowledge that things have changed since 1987 and that

we acknowledge that things have changed in East/West relations and the Soviet Union and so forth.... But they have not in our opinion changed sufficiently significantly to justify a new White Paper at this time.

**Paul Mooney (Canadian Press):** Dr. Hampson, you mentioned peacekeeping and the role in Europe. I wonder if you see a way of streamlining the mission that the Canadian forces have been given? How too thinly spread do you think they are now and how do you think we could go about changing that?

**Fen Hampson:** I would agree that they are pretty thinly spread and they are going to be spread even more thinly in the future. I guess I would take issue with Dr. Ross. I don't think one's influence in the international community is a function of how much one pays in dollar terms. Whether it is to NATO defence or to peacekeeping or what have you. That is an accountant's mentality of influence ...

I think that the greatest challenge to international security, right now, is not in the East/West conflict. There are opportunities there, but the challenge in the sense of the threats to international security do come from regional conflict, that is to say conflicts, most of which are in the third world ... Many of these conflicts are rooted in economic and social problems and, therefore, it is important for us not to be cutting back on development assistance and aid precisely at a time when many of these problems are getting worse; not getting better.

**Marc Clark (Maclean's):** It strikes me that the Canadian military has always tried to maintain a miniature example of the great militaries of the world with a reasonably complete army, navy and air force.... I am just wondering if it is time to forget this fiction and perhaps throw somebody out of the tent, to agree that we cannot be all things and have this glass-case miniature of the great militaries of the world.

**Douglas Ross:** I think that is absolutely correct – somebody will be kicked out of the tent and maybe land forces will be reduced to international peacekeeping capabilities only. But are we going to get the transports so that we can move our forces to Europe? No, we are not going to do that, not under any foreseeable budget from this government. Have the direct military threats to North America been increasing? Yes, they have. Basically air defence is going to be a black hole that has a very strong prospect of eating the defence budget entirely by the end of the century. Particularly as cruise missile development goes ahead dramatically.... Then we are going to have an incredible requirement for what is the prudent minimum for air defence ... The alternative, of course, will be having a much expanded American presence on our territory to fulfill that minimum requirement.

**Kenneth Calder:** I don't think that we are in a position to throw anything overboard. I think we have to probably do everything a little less well than we had hoped. How does a country facing on three oceans, with the longest coastline in the world, do without a navy for example. As Doug was pointing out we do have a threat from the Soviet Union in terms of bombers and cruise missiles – how do we do without aerospace defence and some sort of air capability in this country.... Probably if we had nothing else in the world we would want to have an air force simply so that we would know what is going on inside of the country ... How do we reduce in Europe when we belong to a collective alliance where the primary conventional threat is still in the European theatre ... and particularly in the context of arms control negotiations going on in Europe. Even the arms controllers in Canada are recognizing the importance of us maintaining our forces in Europe and remaining part of the European equation. □

# A GREATER ARAB MAGHREB – MYTH BECOMES REALITY?

*Five North African countries take a tentative step towards political and economic union.*

BY JULIE MORIN

**I**BN KHALDOUN, THE FAMOUS FOURTEENTH century Tunisian historian and sociologist, reminds readers in his masterly work *The History of the Berbers*, that the Arabs called all the land west of the Gulf of Sirte, the “Maghreb” – the West – and all the territory to the east of the Gulf, the “Machreq” or the East. Today the Greater Arab Maghreb contains five countries: Libya, Tunisia, Algeria, Morocco and Mauritania. Their heads of state are, respectively, Colonel Mouammar Qaddafi, President Ben Ali, President Chadli Bendjedid, King Hassan II and Colonel Ould Taya.

Ibn Khaldoun writes of a rich and tumultuous past which has made itself felt throughout the region: the same language, Arabic, is spoken everywhere, though with certain differences of accent and dialect. All these countries are deeply Muslim; from the shores of the Mediterranean to the heart of the desert, the faithful heed the calls to prayer that come from minarets at the centre of each village. Despite many quarrels these countries see themselves as brothers and have long dreamt of being united. It was not, however, until their leaders met at the Marrakech Summit in February 1989, that the idea of a union became a reality. And the path which led to the creation of the Arab Maghreb Union – *l'Union du Maghreb arabe* (UMA) – had indeed been fraught with difficulty.

In December 1988, a year after Tunisia and Libya resumed diplomatic relations, Tunis welcomed the leader of the Libyan revolution. It was Qaddafi's most important official visit to Tunisia since Ben Ali succeeded Habib Bourguiba in November 1987. By the time the Libyan head of state left three days later he had succeeded in shocking people by attacking the West, particularly the United States, and condemning Yasser Arafat for recognizing the state of Israel. Qaddafi's visit proved beneficial, however, for he offered Tunisia a significant amount of economic aid. The two heads of state reached agreement on a variety of projects which had been in abeyance because of earlier disputes.

Tunisia could not have asked for more. Like other countries in the Maghreb it is in the

throes of a serious economic crisis; there is high unemployment especially among young people just out of school. Relations between Bourguiba and Qaddafi had always been bad and had worsened steadily until in September 1985 diplomatic relations were severed. Ben Ali's new regime is anxious, therefore, to put aside previous disputes, despite the fact that the two governments continue to differ on various issues. And in Tunis as elsewhere Qaddafi's reckless outbursts give rise to a good deal of mistrust.

TUNISIA AND LIBYA ARE NOT THE ONLY COUNTRIES to be reconciled. In order for the UMA to come into being, Algeria and Morocco have also had to resolve their differences. This they accomplished after many years of disagreement over the Western Sahara. In March 1976 the Polisario Front, an organization which had been demanding the independence of this old Spanish colony, proclaimed the Democratic Sahrawi Arab Republic under Mohammed Abdelaziz. Algeria recognized the new state immediately, but this did not please Morocco, which itself laid claim to the territory. Morocco then severed diplomatic relations with Algeria.

The first attempts at reconciliation occurred in May 1987 when President Chadli Bendjedid met King Hassan II at Akid Lofti on the Algeria-Morocco frontier. A year later, in May 1988, Algeria and Morocco resumed diplomatic contacts, and last February just before the 1989 summit, King Hassan II received the Algerian President. In March the two heads of state settled a longstanding border dispute by ratifying the 1972 Convention which defined hundreds of kilometres of border between their two countries. This about-face in Morocco-Algerian relations had one unfortunate result – the isolation of the Polisario Front. Article 15 of the UMA constitution stipulates that the member states – in this case Algeria – will tolerate on their territory no activity which might threaten the security or frontiers of another member state; Polisario can no longer count on aid from Algeria.

As for Mauritania – to which Spain had ceded the southern part of the Western Sahara – it signed a peace treaty with Polisario in 1979 thus withdrawing from a conflict that had proved disastrous for its economy. It is only natural that Mauritania be part of the AMU, given the historical and cultural links it has with the other countries, and as the poorest of the five members it has the most to gain.

ANOTHER IMPORTANT FACTOR MAKING THE UMA possible was that some of the governments concerned have succeeded in bringing greater social and political stability to their countries and are now pursuing a more democratic course. This is definitely the case with Tunisia where the date 7 November 1987 has taken on a certain magical connotation. It is the day when a new president, the second in Tunisia's history, was inaugurated – a moment long awaited by a people worried about rising social instability and tired of Habib Bourguiba.

On the night of 6 November 1987, after forty-one years as head of state, Habib Bourguiba, the founder of the New Destourien Party and father of independence, was removed from office. Zine El Abidine Ben Ali, then prime minister, took control of the country. Tunisians welcomed Ben Ali's regime and its democratic aspirations; various influential groups, such as the Tunisian League for Human Rights, were delighted with the new approach. Ben Ali's first year in office was uneventful; the majority of Tunisians felt it was too early for criticism. However, there were worrying developments which some felt should not go unnoticed.

One incident was the government's confiscation of the 16 December 1988 issue of *Réalités*, an independent weekly that had suffered greatly from censorship under Bourguiba. The reason given for the seizure was that an editorial by a well-known Tunisian intellectual, Hichem Djait, contained defamatory remarks. This action by the government created a great stir among the journalists, several of whom asked, with some justification, whether the independent press was only “provisionally” free.

Later on, in April, Tunisians were called upon for the first time in their history to elect a

president. President Ben Ali was the only candidate and received more than ninety-nine percent of the vote. The Legislative Assembly remained unchanged – all 141 seats went to the party in power, the Democratic Constitutional Assembly (*Rassemblement constitutionnel démocratique*). The opposition parties criticized the way the elections were conducted and although these organizations are now legal, until they can elect representatives to the Chamber, Tunisia will be a multi-party state in name only.

WHILE TUNISIA SUCCEEDED IN CHANGING ITS political structure without bloodshed, the same cannot be said for Algeria. Algerians did indeed get a new constitution in February 1989, but at considerable cost. They will not soon forget the riots of October 1988, nor the violence with which the government tried to suppress these demonstrations; there were arbitrary arrests, beatings, and torture. The reaction both inside and outside the country was one of stupefaction. How could the Front de libération nationale (FLN), the party which had led the nation to independence, act in such a repressive fashion?

The riots could have been foreseen; the Soviet-style one party state was going nowhere. By concentrating on heavy industry, based on hydrocarbon production, and making this sector the state's major source of income (ninety-five percent) the FLN had done the country more harm than good; when the price of crude oil fell in 1986 economic chaos was inevitable. The law reforms the government introduced proved useless. Algerians, two-thirds of whom were born since independence in 1962, were going hungry and were desperate for a change; they gave vent to a deep-seated anger that went well beyond mere discontent with the economic troubles.

In the face of this, President Chadli made a prudent choice: he promised to listen to the voices of discontent and the population re-elected him as president of the country in December 1988. A new constitution was drawn up and adopted by referendum in February 1989. Responding to the widespread desire for change and renewal,

references to socialism were deleted, the monopoly of the FLN gave way to a multi-party system, and the role of the army was reduced. Many observers have suggested, however, that the Algerian government has so much to do solving its own internal problems that it will neglect the Maghreb Union.

In Tunisia, the birth of the Union was greeted on 18 February 1989 with a huge headline in the Tunis *La Presse* proclaiming: "A United Maghreb." For President Ben Ali it was "a political choice of the utmost importance." But what had the heads of state agreed to? First of all, the act of Union strengthens the desire of the leaders to cooperate and gives concrete expression to longstanding diplomatic initiatives. The official declaration describes the Union as "welded together" in a way which will "contribute positively to international dialogue." The UMA will, according to the declaration, help to "protect the independence of the Maghreb countries and to safeguard what they have acquired." It should also "help the international community to promote a world order in which justice, dignity, freedom and respect for human rights predominate and where there is genuine cooperation and mutual respect."

The Union has been given a mandate to pursue joint policies in various areas in order to enhance industrial, agricultural, commercial, and social development in its member countries. The Union is a real organization, with its own structures, committees and councils. The presidency of the Union will be filled by each of the five heads of state in turn, for six-month periods; King Hassan II is the first president.

DESPITE THEIR ENTHUSIASM, HOWEVER, THE Maghreb leaders have not yet accomplished very much. Many problems remain unresolved, some of which could threaten the survival of the new organization.

First, the major conflict over the Western Sahara continues. Morocco laid claim to the territory in 1976 and has been engaged in a war with the Polisario Front ever since then. Recently Morocco's King Hassan agreed to

meet the Polisario leaders, and has endorsed the holding of a referendum, first proposed by the United Nations in 1976, which would allow the people of the Sahara to decide their own fate. When asked by the French weekly *Le Point* (30 January 1989) what he would do if he lost the referendum, the President of the Polisario's Sahrawi Arab Democratic Republic, Mohammed Abdelaziz, replied, "If the vote is conducted freely we will accept the verdict of the people of the Sahara and we will go to the Moroccan authorities and say to them: 'We are Moroccans, do with us what you will.'"

However, even if this is a step in the right direction, the dispute in the Sahara is not over. Polisario will accept the results of the referendum only if it feels it has been conducted fairly.

At the time of writing there has been no further negotiations between the two and the date of the referendum has not been announced.

Second, if the member governments were to find themselves unable to maintain social stability in their respective countries, they might then be obliged to concentrate on internal problems and neglect the UMA.

Finally there is the danger that the Union will not succeed in "putting couscous on every table," to use the words of *The Economist*. Unless the Union manages to improve the living standards of the people of the Maghreb, it will be regarded as a failure. One of the factors which persuaded the Maghreb leaders to unite was the threat to their economies which they will face when the European Common Market becomes fully effective in 1992. The Union needs to show that it can operate as a viable economic partner with the EC and with other economic groupings. On a promising note for commercial relations: the members of the Arab Cooperative Council, an organization formed this year in Baghdad and which includes Iraq, Egypt, Jordan and North Yemen, expressed its intention to work cooperatively with the UMA.

The Arab Maghreb Union embodies great hopes for peace, harmony and cooperation in the area – and many promises have been made. In view of the increasing poverty, unemployment and hunger in all these countries, this new organization is indeed fragile and keeping it afloat will be a formidable challenge. □

# J. KING GORDON 1900-1989

*On 24 February 1989  
J. King Gordon –  
distinguished journalist,  
teacher, and internation-  
alist – died at the age of  
eighty-nine.*

## AN APPRECIATION BY CLYDE SANGER

*Clyde Sanger was King Gordon's  
friend and colleague.*

**W**HEN AN EXTRAORDINARY PERSON DIES, ONE is tempted to echo the words Hamlet used about his father to his friend Horatio: "He was a man, take him for all in all. I shall not look upon his like again." The temptation here is even stronger, because Horatio had just said: "I saw him once. He was a goodly King." But it would be a really sad prospect for Canada if we did not see the likes of King Gordon or Frank Scott and others of their generation again. Oh, how we need them!

What made King Gordon so special to so many people? A number of good thoughts were expressed at the memorial service to him in Ottawa. David MacDonald MP picked out the phrase "delighting in the truth" to describe "a life committed to exploring and confronting and revealing the truth." Precise, but never pedantic, a professor of ethics and a United Church minister who moved on to journalism, there was certainly joy and delight with him in clearly expressing important new ideas, and a rolling chuckle as he recalled tales of fine men from Father Jimmy Tompkins of Antigonish to Cookie Lavagetto and Dag Hammarskjöld – especially Hammarskjöld and Tommy Burns and all those UN peacekeeping men. King Gordon was the only person I have known who always carried a copy of the United Nations Charter in the pocket of his jacket. It seemed as important to him as the New Testament must have been to his famous father.

His brother-in-law, Humphrey Carver, spoke of the remarkable Gordon family – of King and his six sisters and his parents, and of his wife, Ruth, and their two children – and their "glowing and powerful bonds of affection." In this special kind of family love, he suggested, were the roots of all the friendships King made in many parts of the world. "For King, the distinguished internationalist, the expression 'The Family of Man' was not just a cliché."

And there was also the sense of belonging to a special place. His Gaelic-speaking grandfather, Daniel Gordon, came out from the Highlands as a Presbyterian minister to Glengarry in eastern Ontario and King wrote in 1984 that he had never quite lost the feeling that this was his native heath. But really his heart's home was in northwestern Ontario's Lake of the Woods, on their island called Birkencraig. It was there that his father, a moderator who led his Presbyterian church towards church union in 1925, did much of his writing under the pen-name of Ralph Connor; and it was there that King himself had what he called "a slight brush with the RCMP." In the summer of 1960 a police launch arrived (at a time when everyone was worrying about fishing licences) bearing a message that King was to get in touch with the UN. Three days later, instead of paddling his canoe on a tranquil Canadian lake, he was crossing the Congo River on a ferryboat on his way to grim adventures as a senior UN information officer.

IT ALL SOUNDS, DOESN'T IT, LIKE AN EXCITING LIFE lived from a privileged and secure base? So it was, to a degree; and, no doubt, these connections were often

helpful. But the point is that King Gordon used them to spread the seed of progressive ideas and to influence the thinking of policy-makers, rather than to gain some pinnacle of influence for himself. Nor can it be just coincidence that he was there at the creation of half a dozen political movements and international initiatives. When he received the Pearson Peace Medal in 1980, he told the folks in Rideau Hall, "I was just a witness and a reporter," and we all smiled at his modesty.

As a Rhodes Scholar at Oxford in the 1920s, he did not belong to the Raleigh Club that listened to Lord Lugard and wondered how to patch up the Empire; instead he, Graham Spry, George Ferguson and others formed the "Oh Canada! Group" whose ideas were more in line with the future Statute of Westminster. His part in helping Frank Underhill draft the Regina Manifesto for the first convention of the CCF has been mentioned most hilariously in a memoir "Fifty Years On" by Eugene Forsey (*Saturday Night*, July 1983). And of course he was in at the birth of the United Nations, as managing editor of *The Nation* and then the CBC's first correspondent, until he joined the UN Secretariat in 1950. The Universal Declaration of Human Rights, the repatriation of 60,000 prisoners-of-war from the Soviet Union, the rehabilitation of Korea after a devastating war, peacekeeping in the Sinai, civil operations in the Congo – King had a hand (and more than just a scribe's hand) in them all.

PEEL OFF A LAYER OF HIS ABIDING FAITH IN THE WORTH of the United Nations and you come to the core of his conviction that, if they only combine their efforts, the middle powers can do so much to lead the world to sanity. They had combined at San Francisco to modify the draft of a Charter which the big powers had put together at Dumbarton Oaks, and King had seen them in action in the Sinai and in the Congo. Mike Pearson and Dag Hammarskjöld, reasonable but risk-taking men from middle powers, were his heroes. The Law of the Sea Conference was steered by lawyers from such middle-sized countries. King wrote often of Canada's role as a middle power and, a latter-day Ulysses, he set off across the oceans to add wise words to several *Pacem in Maribus* (Peace at Sea) conferences. "Come, my friends, 'tis not too late to seek a newer world."

At a Group of 78 gathering at Stoney Lake in 1985 he recalled a morning in wartime in the New York publishing house where he worked alongside the poet Stephen Vincent Benét, who came in exclaiming, "We must tear up all these flat maps." He also quoted Sonny Ramphal's comment, about the first photograph of Earth from space, that "The world is not only round, but whole." King talked on about the linkages, South and North, peacekeeping and the New International Order, human rights. But to him they were not linkages, they were parts of the whole. And King Gordon was, in every sense, a whole man. □

**A**T A RECENT CONFERENCE IN NAKHODKA in the Soviet Far East, a number of Soviet academics and policy-makers expressed the fear that their country's foreign policy might fail. Their anxiety is based on the belief that the West is in danger of missing a unique opportunity to completely restructure its relationship with the Soviet Union. In fact, western missteps at this critical stage could very well reverse the current policy of Soviet retrenchment and cause Gorbachev's removal from power. An adept Western approach, however, could simultaneously advance Western interests and reinforce the present healthy tendencies in Soviet policy.

If Gorbachev continues to adhere to his present course, we are likely to see a string of Soviet withdrawals from the Third World. Western leaders can only welcome such events and indeed have expressed guarded optimism about the withdrawal from Afghanistan, and Soviet contributions to a Cuban withdrawal from Angola and a Vietnamese departure from Kampuchea. However, there is a serious question of how much longer Soviet leaders can endure this ongoing series of unilateral retreats with its attendant costs for Soviet prestige in the world.

American leaders faced a similar problem after the fall of Saigon. They worried that a defeat in Vietnam would cause Soviet leaders to doubt American resolve and ability to resist future Soviet expansionism. They assumed that their NATO allies and Japan would doubt American security guarantees and predicted that allies around the globe would sense American impotence and accommodate themselves to the Soviet threat, rather than join with the US against it.

IT IS ONLY REASONABLE TO ASSUME THAT SOVIET leaders have similar anxieties about the unravelling of their global alliances. Soviet pressure on Vietnam over Kampuchea will not increase its chances of maintaining a military presence at Cam Ranh Bay. Its efforts to promote a Namibia-Angola settlement will not demonstrate steadfastness in the eyes of the Mozambican government fighting against South African-backed RENAMO insurgents, or convince ANC fighters in South Africa that the USSR is committed to their cause. When the US was faced with this image problem, it chose a unilateral approach. Its most effective device was to support countries naturally inclined to resist the Soviets, such as China – an alliance which helped shatter any Soviet illusions that the US was relinquishing its position in Asia.

In other parts of the world the US found regional powers, such as Iran, to assume the

# IS THE WEST MISSING THE SOVIET BOAT?

*A chilly response by Western countries to Gorbachev's new foreign policy is not in anyone's interest.*

BY TED HOPF

burden of countering any Soviet encroachments. Though reliance on such regional strong points proved ultimately ineffective, at the time these alliances were formed the Soviets perceived them as evidence of renewed American commitment in the wake of its humiliation in Southeast Asia. Last, and often too casually dismissed, American leaders continually stated that the withdrawal from Vietnam did not signal any loss of power or the resolve to use it.

Judging from the statements of Gorbachev, Shevardnadze and other Soviet foreign policy-makers, as well as recent Soviet behaviour, the Soviet Union has opted for a different antidote to its credibility problem. This has happy consequences for the West, but only if the latter responds in a way that lets the Soviets withdraw from their positions without having to admit total defeat. Gorbachev asserts that the days of unilateralism in international politics are past and that the only solution to regional conflicts must be at the negotiating table. One could dismiss such statements as mere rhetorical boilerplate, but for the fact that the Soviets are engaged in a flurry of diplomatic activity.

While the US tried to restore its credibility by sending arms to its friends, the Soviet Union, in some cases at least, has cut its allies adrift. Mozambique has been left virtually defenceless against continual attacks by RENAMO guerrillas. Moscow has denied Syria advanced missiles capable of reaching Israel. In both cases, the Soviets have ignored military obligations under Treaties of Friendship and Cooperation.

DIPLOMATICALLY, THE SOVIETS SUPPORT THE resolution of regional conflicts in ways which contribute to the interests of the West. American policy-makers praised the Soviets for their role in softening the negotiating positions of Cuba and Angola in talks with South Africa.

Foreign Minister Shevardnadze and Gorbachev's putative rival, Politburo member Igor Ligachev both pressed Vietnamese leaders to moderate their negotiating postures with the guerrilla coalition opposing the Kampuchean government. The PLO's decision to recognize Israel was probably due, in part, to Gorbachev's personal rebuke to Yasser Arafat that the PLO's previous position was "only an obstacle ... to a just resolution of the Middle East conflict."

Given this welcome trend, how can the West, and the US in particular, increase the chances that such a tendency will continue? The West should do everything possible to involve the Soviets in talks on the Middle East, Southern Africa, the Persian Gulf, Southeast Asia and Central America. In the latter case, future Soviet policy regarding military aid to Nicaragua is a litmus test for judging Gorbachev's commitment to negotiated settlements of such conflicts.

THERE ARE THREE REASONS WHY THE WEST should encourage Gorbachev's preference for multilateral solutions to the Soviet credibility problem. First, a responsive Western attitude channels Soviet energies away from searching for new foreign policy adventures to strengthen its image. Instead, the West will give Gorbachev a graceful way out of commitments, while ensuring that any settlement preserves Western interests.

Second, the resolution of these conflicts removes a major obstacle to the further development of detente. It may very well be that Gorbachev's priority of controlling military spending through arms control is precisely what dictates Soviet moderation in the Third World. The West should use Gorbachev's priorities to its advantage.

Last, if one believes that Gorbachev's domestic reform package of *perestroika*, *glasnost* and *demokratizatsiya* is in Western interests, then it is critical that the West help him stave off attacks from his more orthodox colleagues. Conservatives on the Politburo undoubtedly raise serious concerns about a foreign policy that seems to do nothing but make one unilateral concession after another. The orthodox alternative is most likely a hardening of Soviet positions not only in the Middle East or Southern Africa, but also on the central issues of arms control and human rights. A constructive Western response to Gorbachev's foreign policy not only can reduce Soviet activism in areas of importance to the West, but it can also help protect Gorbachev from the attacks of those who would like to return to the days of Brezhnevite stagnation at home and adventurism abroad. □

## REPORT FROM THE SECURITY COUNCIL

### Namibia

The agreement to implement Security Council resolution 435 which paves the road to Namibian independence, was widely hailed as a reflection of the new world order and the enhanced role of the United Nations. But the resolution, a product of nearly a quarter century of diplomacy, had proven far more difficult and embarrassing to execute than initially anticipated by the Council.

No sooner had resolution 435 gone into effect on 1 April, than over 1,500 SWAPO guerrillas crossed the border into Namibia in apparent violation of the US-brokered agreement between South Africa, Cuba and Angola. As South African troops engaged and killed close to two hundred guerrillas, the independence plan began to look as if it might be falling apart. As members of the Security Council met during a series of informal consultations, criticism of the UN role mounted. The Secretary-General, virtually powerless to stop South African forces from engaging SWAPO, reluctantly endorsed Pretoria's action. The UN suddenly found itself in the embarrassing situation of countenancing the military activities of what until then had been the "illegal occupier."

The powerlessness of the UN to prevent South Africa from acting was mirrored in the Council where no formal debate was scheduled out of concern that it could quickly degenerate into an exercise in finger-pointing that would further imperil the independence plan. "Everybody is conscious of the fact the UN was criticized, that the UN image was tarnished," a Canadian diplomat observed at the time, "but the question is how to

deal with that and how to restore the lustre."

Behind the scenes, both at the UN and in capitals, intense pressure was brought to bear on the parties, particularly SWAPO and South Africa, in an attempt to secure the rebels' return to Angola. In the meantime, diplomats began to ponder what had gone wrong. While resolution 435 originally called for the deployment of 7,500 UN troops, this was reduced to 4,650 at the insistence of the US and the USSR who argued that the original number was not needed and constituted an unnecessary expense. Approval of the budget became bogged down in wrangling, leaving little time to dispatch UN troops. As of 1 April, there were only 900 members of the United Nations Transition Assistance Group (UNTAG) in Namibia, and virtually none of them in northern Namibia where SWAPO rebels crossed the border.

"The six to eight weeks lead time which I had reiterated on many occasions as being the absolute minimum necessary to be fully effective, was instead reduced to four weeks," Secretary-General Javier Pérez de Cuéllar complained to the Council.

In theory, the Council could have delayed the implementation of resolution 435 until preparations were complete, but diplomats feared that any postponement threatened the integrity of the independence plan and would have led to demands for other changes. "Everybody knew UNTAG wouldn't be fully in place by April 1, we also knew that in the course of the months there'd be violations, but nobody expected them so quickly," a Western diplomat said.

### Afghanistan

While Namibia dominated the attention of the Council in recent months, it did focus its attention on other matters. In mid-April it

met at the request of Afghanistan which charged neighbouring Pakistan with political interference and military aggression. Afghanistan also accused the US of being a "tool" for the implementation of Pakistani expansionism.

The charges of interference came amidst news reports of US aid to the Afghan Mujahideen and as plane-loads of Soviet war materiel were arriving in Kabul on an almost daily basis. Pakistan denied the charges and accused Afghanistan of refusing to bow to political reality and to recognize that the Kabul regime was unacceptable to the Afghan people. Peace and stability in Afghanistan, it added, could only be restored if power was transferred from the present regime to a broad-based government.

In a speech, Canadian ambassador to the UN Yves Fortier, said that in the absence of a request from "all the Afghan people" there was little the Council could do to help Afghanistan establish representative government and ensure a return of the millions of refugees. "My government believes that it is for the Afghan people to determine their common future without interference from outside parties," Fortier told the Council. Afterwards, when asked if by "interference" he meant not just the Soviet Union but the US and Pakistan, he replied: "definitely." What was left unclear is how vigorously Canada intends to pursue this objective, particularly in Washington and Islamabad.

### The Middle East

In February, the Council met informally to discuss the situation in the occupied territories as the PLO pressed an initiative to have Israel condemned. When it became clear that an attempt to obtain a statement from the President of the Council on the matter would be vetoed by the US, the initiative was taken to the General Assembly where, following a debate, Israel was condemned by an overwhelming majority including

Canada. Only Israel and the US opposed the resolution. Liberia abstained.

### Other Issues Before the Council

The Council also dealt with the ongoing civil war in Lebanon. Once again, it issued an appeal for a ceasefire in the conflict. After a brief lull, the fighting resumed between Syrian troops and their allies, and Christian forces. The statement also endorsed the efforts of the Arab League in seeking to resolve the conflict.

On 28 April, the Council heard a complaint from Panama that there had been "flagrant intervention" by the US in its economy and its political system. The complaint followed news reports that the US administration had approved a secret fund to channel \$10 million to Panamanian opposition candidates in the 7 May elections.

During a debate, the US denied there was any plot against Panama. It countered that Panamanian strongman General Manuel Antonio Noriega was intent on subverting the elections in that country. The US delegate added that the Panamanian foreign minister, who had travelled to New York to address the Council, would be wiser to return home and debate the issues with his political opposition. "The election can't be won in Panama through a debate in the Security Council," the US delegate said.

The Council took no immediate action on the complaint which, in the event a resolution was introduced, faced an almost certain US veto.

The Council also faced some routine business – the renewal of mandates to various peacekeeping forces is coming under closer scrutiny in the wake of events in Namibia. With the possibility that UN troops could eventually be sent to Central America, Kampuchea and Western Sahara, there is a keen awareness that future operations must be better coordinated. □

– TREVOR ROWE

## ARMS CONTROL DIGEST

*Editor's Note: A major item on the arms control agenda this past quarter was the dispute between the United States and the Federal Republic of Germany over the German government's desire to see early superpower negotiations on short-range nuclear forces in Central Europe. As Peace&Security went to press, parties to the on-going discussions hoped to reach a compromise in time for the 29 and 30 May NATO summit meeting in Brussels.*

### Conventional Arms Control

The first round of two new sets of European arms control talks – the Conventional Forces in Europe (CFE) and the Confidence- and Security-Building Measures (CSBM) talks – took place in Vienna from 9 to 23 March. NATO's opening proposals were tabled officially by the chief Canadian delegate, David Peel, on 9 March. They call for four types of limits:

- deep cuts in the overall numbers of certain weapons in Europe, to a level of 40,000 tanks, 33,000 artillery pieces, and 56,000 armoured troop-carriers, evenly divided between the two sides. Involving reductions of about fifty percent in tanks and artillery, this would leave each side with five to ten percent below the current NATO level;

- a national sub-limit of about thirty percent in each of these categories, meaning that no single country could hold more than 12,000 tanks, 10,000 artillery pieces, and 16,800 armoured troop-carriers. This would require reductions of two-thirds in Soviet tanks and artillery, and over half of their armoured troop-carriers, based in Europe;

- limits on forces stationed outside their own countries of 3,200 tanks, 1,700 artillery pieces, and 6,000 armoured troop-carriers, for each side; and

a series of geographical sub-limits, to "prevent undue concentration of forces."

The Warsaw Pact's CFE proposal, introduced formally by the chief Soviet delegate, Oleg Grinevsky, on 9 March, calls for a three-stage reduction process. During the first stage, 1991–1994, "forces and armaments" on each side would be reduced to an equal level, ten to fifteen percent below the lowest level currently possessed by either side. Attention would be "focussed" on reducing attack combat aircraft, tanks, combat helicopters, combat armoured vehicles and armoured personnel carriers, and artillery including multiple-launch rocket systems and mortars. The first stage would also see the establishment of partially-demilitarized zones or "strips" along the East-West frontier.

During the second stage (1994–1997), each side would further reduce its forces by approximately twenty-five percent (or about 500,000 men, together with their weapons). Finally, during the third stage (1997–2000), further reductions would be made, armed forces would be "given a strictly defensive character," and ceilings would be imposed on all other categories of arms. Verification measures would include mandatory on-site inspections, entry/exit checkpoints, and aerial monitoring.

As the talks got underway, independent observers differed about the prospects for agreement, although official representatives expressed considerable optimism. The two sides agreed on the desirability of equal limits, the approximate scale of first-stage reductions, and the need for intensive verification measures. However, they disagreed on which particular types of weapons should be singled out for reduction (especially on whether tactical aircraft should be included); their estimates of each other's holdings; the East's emphasis on personnel, as well as equipment, reductions; the Eastern proposal for demilitarized frontier

zones; and the NATO proposal for limits on "stationed forces" (outside their own countries).

In addition, the Soviets, while acknowledging that neither tactical nuclear weapons nor naval forces are included in the mandate of the talks, have called for separate negotiations (opposed by NATO) on each of these. Finally, NATO remains uneasy about reductions beyond the first stage, offering only to "contemplate" further reductions "in the longer term, and in the light of the implementation of" its current proposal.

Detailed proposals have also been made in the CSBM talks, although they have received much less publicity. NATO has called for improvements on the confidence- and security-building measures adopted in Stockholm in 1986, but without extending them to so-called "constraint" measures (i.e., actual limits on military activity). The Warsaw Pact, on the other hand, has proposed an ambitious array of new CSBMs, including constraints and other measures affecting independent naval and air exercises (successfully resisted by the West in the past).

### Fissionable Materials Restrictions

In a speech in London on 7 April, Soviet President Gorbachev announced that the USSR would end its production of enriched, weapons-grade uranium this year, and close two of its weapons-grade plutonium-producing plants this year and next. He described the move as "yet another major step towards the complete cessation of the production of fissionable materials for use in weapons."

The Bush Administration replied that the measures would have little military significance, since Moscow has stockpiled enriched uranium and possesses about ten military reactors producing plutonium and tritium for nuclear weapons. However, US Congressman Edward Markey welcomed the Soviet announcement as "a major new opportunity for the US to

begin a dialogue on ways to end fissile materials production."

Over the past year, several American public interest groups have called for such limits, to take advantage of a lull in US production and to spur progress in strategic arms control. Canada has long sponsored a resolution in the UN General Assembly calling on the Conference on Disarmament to consider prohibiting the production of fissionable material for weapons purposes. Last year the resolution passed by a vote of 144 to 1 (France), with seven abstentions.

### Brief Notes

By 28 March, a total of forty states had formally requested the convening of an amendment conference to convert the 1963 Partial Test Ban Treaty (PTBT) into a comprehensive test ban. Representing over one-third of the 116 parties to the PTBT, this ensures that the conference will take place. Any actual amendment, however, requires the agreement of all three original "depository" states. Two of these – the US and United Kingdom – have stated that they would not support any change in the existing Treaty whose prohibition on nuclear testing is limited to the atmosphere, outer space, and under water.

Thirty-one Soviet T-64 tanks left Hungary on 25 April, in the first of the unilateral withdrawals from Eastern Europe announced by President Gorbachev last December. A further 419 tanks and ten thousand men are to be withdrawn from Hungary over the next year. The Soviets had earlier announced that over 1,000 tanks and ten thousand personnel would be withdrawn from East Germany by 15 August of this year. According to the commander-in-chief of Soviet troops in Germany, all of the tanks will be sent beyond the Urals, where some will be mothballed and others converted to civilian uses. □

– RONALD PURVER

## DEFENCE NOTES

### United States – Deficit Blues

US defence officials expressed regret at Canada's abandonment of the White Paper proposals for increased defence spending; Washington, however, is preoccupied with its own continuing struggle to find ways to curtail the US defence budget, now over US \$300 billion. Without waiting for the Bush administration's long-delayed review of US military strategy, in April the new Secretary of Defense Richard Cheney announced a series of measures intended to cut US \$10 billion from the Pentagon's budget. The cuts included:

- decommissioning of the carrier *USS Coral Sea*, which would effectively end the long-cherished quest for the six-hundred ship navy, and the commitment to a fifteen carrier fleet;

- a long-term slowdown of the recently revealed B-2 bomber programme;

- a reduction by 7,900 in the number of army troops;

- cancellation of the V-22 Osprey, a combination helicopter-aircraft with a US \$22 billion price tag intended for the Marines, and the slowdown or cancellation of a variety of other tactical aircraft including helicopters, and new versions of the F-14 and F-15.

In another important spending decision – the future of land-based strategic missiles – Cheney proposes to take the fifty ten-warhead MX missiles from their present silo deployments, and make them rail mobile. At the same time, the administration will continue limited funding for the single-warhead Midgetman missile, a

weapon favoured by new National Security Advisor Brent Scowcroft, but unpopular with the US Air Force, who see Midgetman as too expensive for its small payload. According to the *New York Times* (26 April) the proposed rate of funding for Midgetman would delay deployment until 1997 or 1998.

The cuts (almost equal to the annual defence budget of Canada) mark a continued struggle to reduce US defence expenditures. In February, President Bush proposed a freeze on defence spending for FY 1990, with a one percent increase in 1991 and two percent in 1992. In mid-April Cheney and the Congress reached agreement on a further reduction for 1990 to conform to Congressional legislation holding the annual deficit to about US \$100 billion. The 1990 defence budget now represents a real decrease in defence spending of about one percent, with little prospect that future years will reverse the trend.

In these circumstances the Bush-Cheney approach has been criticized for failing to address fundamental restructuring in US defence policy. The Pentagon now faces a situation in which many expensive weapons programmes initiated during the euphoria of the Reagan years need to be paid for in the lean years of the 1990s. Faced with painful choices, the first response of the administration has been to prune rather than to slash. Now underlying the debate in the United States is the emerging view that only significant reductions in active troop strength will meet the budgetary constraints. As this view gathers support, attention has begun to focus on the two large overseas commitments of US ground forces: Europe and South Korea.

### SDI – Brilliant Pebbles

The Pentagon is approaching the decision on full-scale development of the Boost Surveillance

and Tracking System (BSTS). Designed to give early warning of missile attack and to provide a tracking capability to allow interception of enemy missiles, the BSTS development decision will take place against the backdrop of continued debate within the administration about the SDI budget. Both the Joint Chiefs and the State Department are said to favour a lower level of SDI funding in the future, thereby possibly delaying the full-scale development of the BSTS tracking system. Despite his April announcement which restricts SDI funding, Cheney and other agencies support the higher levels originally proposed by President Reagan and necessary if

there is to be an early deployment of missile defences.

While the debate continues, a new favourite has emerged in the SDI sweepstakes. Brilliant Pebbles is a scheme to deploy tens (possibly hundreds) of thousands of small (one metre) rockets in space. They would have on-board computing power contained in small silicon chips, and revolutionary wide-angle optical sensors. The little rocket with the big brain could function without the supporting satellite sensors and communications systems which greatly compound the cost and complexity of currently planned space-based systems, and would be less vulnerable to counter-

### CANADA – DEFICIT DISARMAMENT

In 1987 the Conservative government issued "Challenge and Commitment," the defence White Paper intended to guide Canadian defence policy for the rest of the century. Echoing earlier statements both private and public by senior officials, the White Paper warned that the armed forces faced a dire future unless there was a significant and sustained increase in defence expenditures. It described a "commitment-credibility" gap which affected every major commitment of the forces. Despite the improvements achieved in the 1980s, the White Paper predicted that without a major infusion of funds, "rust-out" would occur in the early 1990s.

This meant that the forces stationed in Europe would cease to be effective and would need to be withdrawn by the mid-1990s. Without replacement aircraft, there would not be sufficient CF-18s to maintain commitments both to Europe and North America beyond the late 1990s. Most operational ships would be retired by the mid-1990s, leaving only four twenty-year-old destroyers and six new frigates as combat ships.

The White Paper proposed an ambitious programme to acquire new weapons systems, at the centre of which was the decision to acquire a new fleet of ten to twelve nuclear-powered submarines. These were considered to be the only way that Canada could develop a "three-ocean Navy" which would permit, among other things, the underwater patrol and surveillance of Canadian Arctic waters. To finance this rebuilding programme, the White Paper announced a formula whereby defence spending would increase at a rate of two percent real growth per year for fifteen years, with additional "bumps" to pay for capital procurement programmes as they came on stream. However, private calculations of the cost of the rebuilding programme suggested that four to five percent real growth per annum for fifteen years would be required to pay for the White Paper programme.

measures. As they picked up missile launches, the rockets would swarm to their targets and destroy enemy missiles in the slow, boost phase of flight. According to retiring SDI chief, James Abrahamson, Brilliant Pebbles would cost about US \$25 billion – significantly less than any other major SDI system discussed to date.

Critics, however, have raised familiar objections and one new one. The high IQ rockets might be fast enough to catch current Soviet missiles in the boost phase, but according to some scientists, would be easily defeated if the Soviets built fast-burn boosters which would need to fire their engines for only sixty seconds or less. The new objection is the pollution of space: tens of thousands of new objects in space would significantly add to the danger of collisions, and the accidental destruction of satellites would

produce even more space junk which might start a further round of collisions.

### ASATS – the Country Cousins

In his last Report to Congress, outgoing Defense Secretary Frank Carlucci made a determined pitch for anti-satellite (ASAT) weapons. "...a comprehensive ASAT capability," he said, "is an absolute necessity to prevent the Soviets from using hostile space systems to the detriment of our forces." ASAT weapons would provide an early pay-off to SDI research, since many weapons now under development as possible ABM systems would be effective against satellites where they might not be against missiles. The US depends heavily on satellites for military communications, early warning, and navigation, as well as for civilian uses.

For this reason an ASAT race

with the Soviet Union would bring mixed blessings. While Carlucci and the Pentagon emphasize the need to transform some Star Wars projects into ASAT capabilities, others argue that the best protection would be to negotiate a ban on ASATs. Most US satellites are in high orbit, and currently out of the range of the elementary Soviet ASAT system. In the middle of this debate is new National Security Advisor Brent Scowcroft, the co-author of a recent report recommending a ban on high altitude ASATS on the grounds that this would preserve for both sides a warning and communication capability in a time of nuclear alert.

### NATO's Mid-Life Crisis

NATO's fortieth birthday party in May will be mainly remembered for the family squabble over short-range nuclear forces (SNF). The controversy over these weapons has been slowly building since the signing of the Intermediate-range Nuclear Forces (INF) Treaty, which eliminated missiles with ranges between 500 and 5,000 kilometres. For NATO this left in place a variety of nuclear weapons deliverable by aircraft, sea-based cruise missiles, and Lance, a short-range, land-based missile. In the aftermath of INF, the United States, strongly supported by Prime Minister Thatcher, is committed to a follow-on to Lance which would produce a warhead with a longer range – about 450 kilometres – and improved accuracy. The new missile would be phased in around 1995 as Lance reaches the end of its effective life.

Washington, however, wants West German support for the programme before proceeding with the development. Faced with an electorate well aware that SNF are intended for use on German soil, West German Chancellor Kohl has declined any such commitment. Increasing West German sentiment supports negotiations

with the Soviets on SNF, and Kohl hopes to postpone the decision until after the 1990 election in order to limit the electoral damage which would result from support of the US position. Many of the European NATO countries, including Norway, Denmark, Belgium, Italy and Spain, appear to side with the Federal Republic in seeking a delay in the decision.

### New European Visions

While efforts were made to paper over the differences, however, influential politicians were raising more fundamental questions. Echoing Soviet calls for a "European House," West German Foreign Minister Hans-Dietrich Genscher appeared to lead the new thinking. In an April speech he described his vision of a new Europe:

The object is to demilitarize and de-ideologize East-West relations, and at the same time to expand and strengthen the co-operative elements. A peaceful order in Europe ... in which nations can live without fear of one another, and in which they can choose their own political and social system, is no longer merely a vision...

Meanwhile, in the country which gives its name to the Warsaw Treaty, Polish political leaders of all groups took part in a historic "Roundtable" at the beginning of April. The resulting agreement calls for elections in Poland in June. Thirty-five percent of the lower house is open to contest (the ruling Communist party has first claim on the rest), and all of the upper house will be contested. While the government cannot lose power, it is expected to suffer severe setbacks in the elections. Poland intends to remain in the Warsaw Pact, but it seeks stronger participation in pan-European discussions on security. In particular, the Government wants to make Poland the home of a European war-risk-reduction centre which would be a clearing house for all information on troop strengths and movements in Europe. □

– DAVID COX

The 1989 budget announced by Michael Wilson in late April has overturned or delayed all the main proposals of the White Paper. The 1989–1990 defence estimates provide for an increase of \$95.6 million, or 0.9 percent over the 1988 forecast expenditures. This represents a reduction of \$575 million from the anticipated 1989–1990 budget, which, following the White Paper, was intended to provide a 3.3 percent increase to compensate for inflation, and two percent growth. The Government has stated that \$2.74 billion will be stripped from defence expenditures over the next five years, but claims that in 1993–1994, at the end of the deficit-reduction period, the base of defence funding will be restored to the level that would have been achieved under the White Paper formula of two percent real growth per year.

Most of the major planned weapons programmes are affected by this reversal of policy. The nuclear submarine programme has been scrapped, leaving uncertain the question of a replacement programme for the three aging Oberon-class submarines now approaching the end of their useful life. Replacement CF-18 aircraft have been cancelled, as have additional long-range maritime patrol aircraft. The purchase of new tanks for Canada's European forces has been reduced by half, and delayed past the time when, according to the White Paper, the forces would need to be withdrawn from Europe for lack of equipment. The purchase of 820 all-terrain vehicles for the militia has been reduced by more than half, implying that the planned large increases in the militia will probably also be abandoned or reduced. While 1988 saw an increase in military personnel of 1,174 in accordance with the government's promise to increase the size of the armed forces, the new measures call for a reduction of 2,500 personnel. Finally, fourteen military bases in Canada will be closed or reduced in size.

The defence estimates note that despite the "short term" funding reductions, "the White Paper remains an accurate statement of Canadian defence policy and the objective which the Government intends to pursue." There will be no formal revision of the White Paper, therefore, even though its central proposals have been shaken by the budget cuts.

## REPORT FROM THE HILL

*The 34th Parliament resumed in second session on 3 April with the reading of the Speech from the Throne by the Governor-General. The emphasis was on the economy and trade, but a lengthy section discussed the environment and a smaller one, Canada's international role.*

### Middle East Changes

On 30 March just prior to Parliament's reactivation, the government upgraded its level of contact with the Palestine Liberation Organization (PLO), repeating its support for Palestinian self-determination without recognizing the PLO itself. The decision permits higher-level Canadian diplomats (to the ambassadorial level) to meet PLO representatives. According to Secretary of State for External Affairs Joe Clark, it will allow Canada to press the PLO to follow a moderate path and to foster peace negotiations. Mr. Clark noted: "There can be a difference between the right to participate in negotiations [about the future of Palestinians] and the right to have a separate, independent state.... We do not prejudice the results of those negotiations."

### Parliamentary Committees

Parliamentary Committees were also reformed in April. The total number of committees was reduced, but those pertaining to peace and security issues were largely unaffected. The House Standing Committee on External Affairs and International Trade (SCEAIT) – its membership expanded by one to a total of fourteen (8 Conservatives, 4 Liberals, 2 NDP) – elected former House Speaker John Bosley (Don Valley West) as chairman. The House Standing Committee on National Defence also gained another

member to total eight and will now also cover veterans affairs issues. Alberta farmer and veteran MP, Arnold Malone (Crowfoot), was named chairman. During May both committees examined the government's spending estimates for 1989–1990 while preparing plans for more extensive studies later in the year.

The Senate Special Committee on National Defence also renewed its study of Canada's land forces, and is expected to conclude its work some time during the summer. The Senate Foreign Affairs Committee is pursuing extensive investigations of specific aspects of the Canada-US Free Trade Agreement.

Patrick Boyer (Etobicoke-Lakeshore) and Jean-Guy Hudon (Beauharnois-Salaberry) were named Parliamentary Secretaries to the Secretary of State for External Affairs and the Minister of National Defence respectively.

### Peacekeeping Activity

Three distant parts of the world were the subject of peacekeeping news early in April, all involving Canadian participation. It was announced that Canadian peacekeepers would fill the gap following the 4 April agreement between the governments of the Greek- and Turkish-Cypriot communities to withdraw their soldiers from three observation posts in Nicosia, the most tense part of the buffer zone dividing Cyprus. The agreement marked the first military withdrawal by the two sides since the Turkish intervention on the Mediterranean island in 1974. The latest effort to reunify the island and end the impasse that has divided the communities since 1962 remains deadlocked.

On 5 April the governments of Vietnam and Cambodia invited Canada, Poland and India to form a monitoring commission to verify the withdrawal of the 50,000 to 70,000 Vietnamese troops remaining in Cambodia – troops Vietnam

claimed would be removed by the end of September – fifteen months earlier than previously promised. Vietnam's occupation of Cambodia began in December 1978 when its forces toppled the Khmer Rouge government and installed the present regime. Joe Clark said that Canada will consider participating only if several conditions are met, including confirmation by all parties to the dispute of their full support for an international peacekeeping force with a clearly-expressed mandate and a limited time of operation.

The most dramatic events concerned Namibia and the initial collapse of the ceasefire, between South Africa and the South West Africa People's Organization (SWAPO), which came into effect on 1 April. The government had agreed to send almost 250 Canadians in support of the one-year, 4,650 person UNTAG operation to supervise the withdrawal of South African troops from, and the independence process in, Namibia. Following the SWAPO incursion that set off the fighting, the Canadian government agreed to a UN request to hasten its troop deployment and provide additional air support for the entire UNTAG force.

On 12 April Defence Minister Bill McKnight rose in the House to deposit an Order in Council approving the deployment of the Canadian troops. Liberal External Affairs critic André Ouellet, while supporting the Order, criticized the Minister's silence about the actual situation in Namibia as well as the inadequate strength and tardy deployment of the UN force. External Affairs Minister Joe Clark had himself been critical both of SWAPO and of the UN for its lengthy debate over the costs and size of UNTAG, which, he said, had delayed the force from establishing a presence in Namibia before the transition to independence began.

(For more on the Namibia peacekeeping operation, see Report from the Security Council, page 14.)

### Lebanon

On 20 April External Relations Minister Monique Landry addressed the House about the latest round of violence in the fourteen-year civil war in Lebanon. Joe Clark had already made a statement on 30 March calling on all parties to redouble their efforts to achieve national reconciliation, but Landry fleshed out the general expressions of concern with specific Canadian actions to assist in the emergency: continuing support for the mediation efforts of the Arab League Ministerial Committee, the UN Security Council, and President Mitterrand of France; a special \$500,000 grant to the Red Cross for humanitarian assistance; temporary suspension of the deportation of unsuccessful refugee claimants back to Lebanon; and the dispatch of an immigration officer to Cyprus to handle additional cases.

### Federal Budget

The government opted for fiscal restraint in a deficit-cutting exercise that had a major impact both on the Department of National Defence, which suffered a variety of cuts to defence programmes and to the Canadian International Development Agency which saw funds for foreign aid substantially reduced.

Previously, the government had set a target of 0.5% of GNP for official development assistance (ODA) and had promised to attain a goal of 0.6% by 1995. The budget reductions will mean that ODA will drop to 0.43% in 1989–1990, with the ratio increasing to 0.45% the next year. It also postponed the achievement of the 0.6% target indefinitely. The effect of these cuts on actual programmes will take several months to work their way through the system. □

— GREGORY WIRICK

## LETTERS TO THE EDITOR

### Rampant orientalist stereotypes

Your editorial note on the Rushdie imbroglio and Stephen Handelman's "Letter from Soviet Uzbekistan" (*Peace & Security*, Spring 1989) both play on simplistic images of Islam and its political dimensions. While the editorial note apparently does so unconsciously and even benignly, Handelman forthrightly wields an axe.

On the one hand, you judiciously question the logic of severing diplomatic relations with Iran and undermining "civilized discourse among diverse cultures" over an issue immersed in ethnocentric as well as religious complexity. Whatever the literary merits of *The Satanic Verses* (and there is no consensus among the book's reviewers that Rushdie is "among the very people we need most"), it has given profound offense to millions, a fact that should be kept in perspective despite the melodramatic execution order from Teheran.

But you fall into the familiar trap of reducing the debate to an easy dichotomy between absolute free expression in the West and absolute communal conformity in the Muslim world. Individual freedom of expression is as *relative* under the Canadian Criminal Code and the 1982 Charter of Rights, as is the priority accorded to communal rights under Islamic legal doctrine. If many Muslims "don't buy" the free expression argument when it comes to Rushdie, Canadians also seem to have trou-

ble acknowledging that there is a legitimate argument involved over the scope of free speech in this matter, under our own legal precepts.

After all, such arguments occur daily over the language issue in Quebec and over granting public platforms to "experts" who are anti-semitic or otherwise racist. Why do we abruptly develop an absolutist paralysis when it comes to Muslim sensibilities?

The answer lies partly in the legacy of orientalist discourse in the West, predicated on stereotypes of an irrational and exotic Muslim East contrasted with a rational and orderly Judeo-Christian West. Instead of being exposed and replaced by a more meaningful discourse, orientalism threatens to gain new ground for reasons evident in Handelman's report on Soviet Muslims.

Somehow the nationalism of Estonians, Latvians and Armenians against Moscow's overreaching authority is deemed perfectly reasonable, but that of Uzbeks, Tadzhiks or Kazakhs is portrayed as some dark fundamentalist prospect. Never mind that the churches have played a prominent role in rallying nationalist sentiment from the Baltic to the Caucasus. The slightest hint of Muslim fervour conjures up images of militancy on the march. For Handelman, even "afternoon prayers in Bukhara contain an ominous message for Moscow itself."

By comparison, Richard N. Ostling's essay on the same subject in *Time* ("Islam Regains its Voice," 10 April 1989) observes: "In Azerbaidzhan, a few Muslims have been waving photos of the Ayatollah Khomeini or sprouting Iranian-style beards. However, there is sparse evidence of religious fanaticism, either inspired by neighboring Iran and Afghan-

istan or encouraged by the Soviets' own tolerance."

Now that even *The New York Times* has proclaimed the Cold War to be dead, are we going to see a new bogeyman in Islam? To paraphrase von Clausewitz, prejudice is the conduct of war by other means.

Dr. Amyn B. Sajoo  
Ottawa

### Low-level flying issue not going away

In "This Labrador Business" (*Peace & Security*, Autumn 1988), Jocelyn Coulon's observation that the Montagnais Indians in Quebec appear to view the militarization of their lands as secondary to their land claims, deserves some clarification, lest readers go away with the impression that the Montagnais are just a few more red-skinned opportunists.

European pilots have been training in the hunting and trapping grounds of the Montagnais along the north shore of the St. Lawrence rivers since the summer of 1983. The hunters and their families from La Romaine have suffered most from the exercises in this area; only on occasion have band members from other communities been overflown. As military conquest has played an important role in the colonization of native people in North America and elsewhere, Montagnais leaders at La Romaine and at the offices of the Conseil Attikamek-Montagnais (CAM) were quick to react. They denounced the intrusions and spent approximately \$100,000 of council money on field studies and literature surveys in order to give their complaints

some credibility. (Native peoples are painfully aware that their opinions have not historically been held in very high esteem.)

La Romaine band, however, is only one among ten member bands of the CAM; the vast majority of the council members live far away from the training area. Naturally, they do not share the same concern over low-level military flight training as their La Romaine brothers and sisters. An all-out campaign centred on military flight training, along with categorical opposition to the training, is therefore out of the question. Furthermore, the Montagnais believe that through land claim negotiations they will be able, if not to eliminate the undesirable flights, at least to reduce the negative impact to their satisfaction. This process of negotiated mitigation of the impact of the flights would stand in stark contrast to the unilaterally imposed measures that the Department of National Defence has taken to reduce overflights of native encampments.

The CAM is now well on the way to land claims agreement after the signing of a framework accord with the two levels of government on 16 September. It is most likely that they will approach military flights in a less salient fashion, preferring to negotiate in private.

But the Innu in Labrador are a long way from negotiating any kind of agreement; they, in fact, produced a document in the 1970s that called for the virtual separation of the Innu nation from the rest of Canada. As their recent occupations of the runway in Goose Bay and the ensuing arrests attest, this issue is not about to go away.

## REVIEWS

### Israel's Fateful Hour

Yehoshafat Harkabi

New York: Harper and Row, 1988,  
236 pgs., US \$22.50 cloth

Yehoshafat Harkabi is a former chief of military intelligence in the Israeli Defence Forces. For many years Harkabi was widely acknowledged to be the most authoritative proponent of the view that Arab and Palestinian hostility to Israel's existence was so intransigent as to preclude any resolution of the conflict.

Today Harkabi presents a very different outlook – not so much because his own orientation has changed but because he has noticed a significant change in the politics throughout much of the Arab world. It is this change – what he refers to as an increasing separation of grand design and policy – that Harkabi maintains Israel “must exploit for the sake of its security and the peace of future generations, especially today, when moderates still occupy important positions among the Arab states and the Palestinians.”

This book, first published in Hebrew almost three years ago and now in its fourth printing in Israel, presents a challenge to Israelis and friends of Israel throughout the world. Harkabi – currently professor of International Relations and Middle East Studies at the Hebrew University in Jerusalem – is a tough-minded realist who discerns that the Arab-Palestinian position has grudgingly and equivocally been evolving in a more moderate direction and that Israel must take advantage of this shift now or else the opportunity will probably be lost as Arab-Palestinian attitudes harden in the face of Israeli intransigence.

Harkabi believes that Israel stands at a crossroads and the course chosen will determine “whether it can continue to exist.” His fundamental argument is that Israeli occupation of the West Bank and Gaza is untenable, and that unless Israel negotiates with the Palestinians and their leaders, the PLO, the region will move down the road to war: a dangerous dynamic that could, in an era of ever more destructive weapons, end in Israel's “national suicide.” He convincingly argues that the alternatives facing Israel are either a Palestinian state alongside Israel or continuing violence in response to the occupation.

No naive visionary, Harkabi presents himself as a “Machiavellian” dove. His positions are based on the view that Israel's security is best protected by a peace settlement with its neighbours which guarantees Israel's security needs through early warning installations and partial demilitarization of the new Palestinian state.

When Harkabi says “today, any demand for a settlement without the PLO is equivalent to demanding no settlement,” he is not alone. A large number of Israeli officers recently formed the Military Council on Peace and Security in support of the policy of trading territory for peace. Harkabi's successors as chiefs of military intelligence have also been critical of their government for not actively pursuing a peace settlement. A secret Israeli military intelligence report prepared last December noted that the PLO is truly ready to accept a two-state solution and that it is an illusion for the Israeli government to believe it can avoid negotiating with the PLO. A similar report written by the current head of military intelligence was leaked to the press in March. Not surprisingly, the government led by Prime Minister Shamir quickly rejected the document.

It is not only the ruling Likud party that comes in for Harkabi's harsh criticism. He is strongly opposed to the Labour party joining national unity governments and declares: “What we need in Israel is not a united front behind a wrong policy but searching self-criticism and a careful examination of our goals and means, so that we can differentiate between realistic vision and adventurist fantasy.” Similarly, he has no patience for the view that non-Israelis should refrain from criticizing Israel and argues that “allowing Israel to maintain its wrong policy is incomparably worse.”

Machiavellian or not, Yehoshafat Harkabi has written – and well before the Palestinian intifada – the most persuasive work on why Israel, and indeed all parties to the dispute, desperately need a peace based upon the principle of mutual recognition and self-determination. Turning the conflict into a zero-sum game, he continually reminds us, is fraught with danger: “There must be a realistic and humane understanding that the conflict is a tragedy for both sides, and while Israel's adversaries are indeed enemies, they are also allies in the struggle to end the conflict.” What Harkabi calls self-interest, others understand to be Common Security.

### Our Man in Moscow: A Diplomat's Reflections on the Soviet Union R.A.D. Ford

Toronto: University of Toronto Press,  
1989, 356 pgs., \$29.95 cloth

Robert Ford is a scholar of Russian history and Soviet government and a connoisseur of Russian literature, poetry and fine arts. In his twenty-one years of diplomatic service for Canada in the Soviet Union his sympathy for the country and its intellectual life never interfered with his profes-

sionalism as a diplomat. Nor did his understanding of the Soviet system soften his resolve in dealing with it.

In 1979 Ford foresaw Gorbachev's rise to leadership. He also predicted the systemic contradictions of implementing *glasnost* and *perestroika* within the Soviet system. According to the author, fundamental economic reform is not compatible with Soviet ideology. He argues that the Soviets would moderate their ideological objectives only in times of desperation or crisis. A declining Russian population, the emergence of an explosive nationalism among the Soviet Union's many minorities, Islamic irredentism and a growing restlessness within the Warsaw Pact, may signal the beginnings of such a crisis.

The author provides interesting glimpses of differing Soviet policies towards each Warsaw Pact state. He is also informative and accurate about how and why the Soviets became entangled in Afghanistan. The key objective in Soviet foreign policy, according to Ford, is international recognition of Soviet parity with the United States. The vagaries of Soviet-American relations over the years are briefly but brilliantly analyzed, focussing on human rights, strategic arms talks, and trade issues.

Ironically, the achievement of “peaceful coexistence” led to profound misunderstandings between the superpowers. Neither the Soviets or the Americans could agree on a mutually acceptable definition of the policy which in theory defined what was acceptable and prohibited international behaviour. For example, the Soviets believed their military involvement in Afghanistan was acceptable under the terms of the agreement. This was not the opinion of the Americans. Canada was wary of the ambiguities of “peaceful coexistence” and, on Ford's

recommendation, refused to endorse it.

The author claims that Canadian-Soviet relations are governed by four imperatives: national security, trade, Canada-US relations and consular cum human rights issues engendered by Canada's significant Jewish, Ukrainian and East European populations. He emphasizes that in Soviet eyes, Canadian relations are secondary to Soviet-US relations. During his service in Moscow, Ford was concerned about Prime Minister Trudeau's "fascination" with and unpredictable reactions to the Soviets. From time to time, Trudeau would stroll over to the Soviet residence in Rockcliffe in the evenings for private conversations with the Soviet Ambassador.

This book is well organized: five major headings cover Stalin and his successors; the Soviets' view of the West; domestic and frontier problems; detente and the Gorbachev generation. Unfortunately, what is missing is a synopsis of government structure in the context of the interplay of the party bosses, the KGB, the military and GRU within the military. The author could have better described and evaluated the significance of Andropov's role in setting up the Gorbachev succession. In addition, the huge Soviet military establishment might have been described and evaluated as a political force. Nonetheless, the book is a valuable contribution to Kremlin lore, and contains important warnings about handling the Soviets on both national and individual levels. — *George Hampson*

### **Minds at War: Nuclear Reality and the Inner Conflicts of Defense Policymakers** Steven Kull

*New York: Basic Books Ltd., 1988, 341 pgs., US \$ 19.95 cloth*

Why have US defence decision makers pursued policies and capabilities for fighting and winning a nuclear war despite the existence of considerable commentary suggesting that victory is unattainable? Why have they displayed continual concern with maintaining the strategic balance when

possession of secure second-strike capabilities by both superpowers affords each the ability to destroy the other regardless of the weapons each possesses beyond that point? Why do they develop nuclear systems capable of destroying hardened targets when technology now affords the Soviet Union the ability to launch their land-based missiles "out from under" an incoming attack? These and related questions lie at the heart of this original and well-written study of the thinking of defence policy makers.

Relying upon interviews with eighty-four past and present members of the US defence community, Kull launches into a detailed exploration of the rationales offered for the character of US nuclear policy. At times, the justifications are military in nature, with respondents arguing that only by possessing effective war-fighting, war-winning capabilities can the US deter Soviet aggression, or terminate a nuclear conflict on terms favourable to the US should deterrence fail. However, Kull notes that more often US policy is justified on the basis of a need to manipulate the peacetime perceptions of allies and adversaries about US resolve and the credibility of its nuclear threats. Indeed, the author's depiction of the various twists and turns official rationalizations can take is exceedingly rich in detail and a valuable reference source for anyone interested in the psychology of nuclear threats.

Kull also provides interpretations of the rationalizations he so effectively depicts. A psychologist and clinical therapist, the author's principal concern lies in how defence policy makers cope with the reality of mutual vulnerability that nuclear weapons impose upon them. Here, Kull offers an explanation for the behaviour of his subjects.

On the one hand, he observes that they often engage in a process of "denial" — ignoring nuclear reality and treating nuclear weapons much like conventional ones. On the other hand, the denial is rarely constant. At times, respondents

seem fully aware of the fundamental changes nuclear weapons imply for strategy. This leads Kull to view defence decision makers as torn by an inner conflict resulting from their adherence to two contradictory lines of reasoning, one denying nuclear reality, the other seeking to adapt to it. Moreover, when Kull confronts his subjects with this contradiction, he finds that they offer different justifications for US policy. More precisely, they put forth justifications based on a desire to gratify certain collective psychological needs. Kull contends that these desires and the need to satisfy them underlie the more common, security-oriented rationalizations for nuclear policy which defence decision makers offer, and may in fact constitute that policy's motivating force.

Kull's explanations for nuclear rationalization are intriguing, however, but his study contains problems which tend to weaken the argument. It is difficult to establish the extent to which the responses obtained reflect the true beliefs of his subjects. When Kull confronts them with the contradictions inherent in their arguments, it is hard to know whether their new rationalizations are fulfilling deep-seated psychological needs, or are employed as a means of bringing the interview to a speedy conclusion.

There are also questions regarding Kull's views of nuclear reality. While the author contends that his respondents sometimes seemed aware of the revolutionary impact of nuclear weapons on strategy, military officials are under-represented in his sample. Yet it is these individuals who are most likely to present the strongest case for the acquisition of nuclear war-fighting capabilities, and most likely to resist the reality Kull claims is so pervasive.

While Kull's arguments may not be fully convincing, he does succeed in demonstrating the potential that inter-disciplinary approaches hold for the development of novel insights into defence decision-making. — *Peter Gizewski*

*Mr. Gizewski is a doctoral candidate at Columbia University and a research assistant at the Institute.*

## **BRIEFLY NOTED**

### **Middle Powers in the International System**

This is a series of five policy studies from a research project jointly funded by CIIPS and the Donner Canadian Foundation. Four of the titles are published by the North-South Institute; the fifth is published by CIIPS. Please note that the titles are available only from their respective publishers.

*The Middle Powers and the General Interest*  
Bernard Wood

*Limits on Middle Power Diplomacy: The Case of Commodities*  
Jock Finlayson

*The United Nations and Its Finances: A Test for Middle Powers*  
David Protheroe

*Middle Powers and Technical Multilateralism: The International Telecommunications Union*  
Janis Doran

The above titles are published by the North-South Institute, the price of the first title is \$7.50, the others cost \$10.50.

*Non-Nuclear Powers and the Geneva Conference on Disarmament: A Study in Multilateral Arms Control*  
Michael Tucker

CIIPS Occasional Paper Number 7, free (également disponible en français)

### **The Genetic Seeds of Warfare: Evolution, Nationalism and Patriotism**

R. Paul Shaw and Yuwa Wong  
*Wichester, Mass.: Unwin Hyman, 1989, 274 pgs., US \$24.95 cloth*

An examination of the origins of war in light of the authors' assessment of the human "propensity" for warfare. The book challenges contemporary theories of warfare and shows why "existing peace initiatives are inept."

(The study on which this book is based was financed in part by a grant from CIIPS) □

Reviews of French language publications can be found in the *Paix et Sécurité* "Livres" section.

## NEWS FROM THE INSTITUTE

**Bernard Wood**, newly appointed Chief Executive Officer of CIIPS, undertook a familiarization and dialogue tour during the late winter and early spring, in order to engage groups of Canadians in discussion about Institute activities and areas of future focus. Travelling to Vancouver, Victoria, Edmonton, Yellowknife, Halifax and Quebec City; Mr. Wood spoke to editorial boards, academics, members of non-governmental organizations, and others interested in the work of the Institute. During the same period, he addressed a joint Queen's University/CIIA session in Kingston and the Law Faculty at the University of Windsor. In early May he spoke to the Annual Meeting of the Toronto Branch of the CIIA on the role of a middle power in the 1990s.

The effects of the budget on defence and foreign policy was the subject of a media roundtable organized and held at the Institute five days after Michael Wilson presented his budget to the House of Commons. Addressing approximately twenty-five journalists were **Lois Wilson**, **Fen Hampson**, **Doug Ross**, **Harold Klepak** and **Kenneth Calder**. A number of journalists from outside of Ottawa participated by means of an audio feed. The subjects addressed included the ramifications of the budget on the spending priorities in the 1987 White Paper, and the changing international security context.

**Yevgeni Golovko** and **Nikolai Smirnov** of the Soviet Foreign Ministry led a seminar at the Institute in April on Soviet views of arms control. Emphasizing the need for serious negotiations on

all aspects of arms control, they paid special attention to the START talks, the conventional forces negotiations in Vienna, a ban on chemical weapons and a comprehensive test ban. During the question period, Mr. Golovko said that all aspects of Arctic arms control, including the military bases in the Kola Peninsula, were open to discussion. Several weeks earlier, two Arctic specialists from the Soviet Union spoke at the Institute: **J. Kazmin** and **A. Granovski** led a discussion on arctic security and naval arms control.

**Johan Holst**, the Norwegian Minister of Defence, visited the Institute to exchange views with staff members. He spoke of the Canadian and Norwegian shared experience in peacekeeping and the need for more conceptual thinking about this "international growth industry." Mr. Holst raised the question of the role of nuclear weapons in the decades ahead, and of the necessity for a reexamination in the West of the configuration of ground forces in Europe. He spoke of the forthcoming review conference for the non-proliferation treaty, the link between proliferation of nuclear and chemical weapons and the problems associated with ballistic missiles for both. In terms of naval arms control, Mr. Holst supported restraints on attack submarines and submarine-launched cruise missiles; the latter, he said, were particularly destabilizing.

Together with the Institute for International Development and Cooperation at the University of Ottawa, CIIPS co-sponsored a public lecture by **Oscar Arias Sanchez**, President of Costa Rica, during his recent visit to Canada. President Arias spoke of the prospects for the Esquipulas II peace plan, and fielded a wide range of questions from the audience. He was moderately optimistic that the

plan would come into effect, and urged all governments to support the development of democratic regimes in Central America. With the exception of Costa Rica, he said, the tradition of democracy was under-developed in Latin America. **Georges Hénault** chaired the session, and **Bernard Wood** thanked the President. Following the meeting the two Institutes hosted a reception.

The United Nations Association in Canada and CIIPS co-sponsored a series of seminars in Vancouver, Winnipeg, Toronto, Montreal and Halifax on the UN Security Council and the opportunities and challenges to Canada for the two-year term which began in January. Participants examined the importance of Security Council membership for Canada, and the implications for Canadian foreign policy of current and future issues facing the Council, such as the Middle East, Southern Africa and peacekeeping operations. Addressing the seminars were officials from the UN and the Canadian government, as well as former Canadian ambassadors.

Another in the series of workshops on the situation in Cyprus took place at the Institute in mid-April. The series will conclude with a seminar in the late spring or early summer organized by CIIPS Research Associate **Norma Salem**.

**Bernard Wood** and **Roy McMurtry**, former Canadian High Commissioner to the United Kingdom, were the Canadian participants at a recent Carnegie Conference in New York on the policies of democratic nations towards Southern Africa. Mr. Wood met in Ottawa with **Toivo ya Toivo**, Secretary General of SWAPO just prior to the launching of the independence plan for Namibia. In late May, he participated in a conference sponsored by the International Peace Academy on peace, development and

security in Central America, and attended special sessions of the Caribbean Studies Association.

**Fen Hampson** and **Katherine Laundry** gave presentations at the annual meeting of the International Studies Association in London in March. Mr. Hampson also presented a paper on NATO at Forty to a conference in Liechtenstein organized by Princeton University. **Ron Purver** attended the ISA as well as conferences on NATO in Halifax and Winnipeg.

In late April the Conseil de développement du loisir scientifique, in cooperation with CIIPS and a number of other organizations, sponsored the Expo-sciences pan-qubécoise 1989 in Rivière-du-Loup, where the winners of regional science fairs throughout Quebec exhibited their projects. The theme was science and peace. **Bernard Wood** addressed the opening ceremonies; **Roger Hill** was a judge and presented a number of prizes.

In early May CIIPS and Henson College of Public Affairs and Continuing Education at Dalhousie University, sponsored a conference for teachers and students on peace and security education. Keynote speakers were **Shelley Berman**, President of Educators for Social Responsibility in the US, and **Maxime Faille**, one of four members of the Youth Nuclear Disarmament Tour in 1986-87. **Nancy Gordon**, **Brad Feasey** and **Margaret Bourgault** spoke and led workshops.

**Leon Bagramov** of the Institute of the USA and Canada in Moscow was a guest of CIIPS during May as part of the exchange agreement between the two Institutes. During the winter **Jacques Lévesque** of the University of Montréal, visited the Moscow Institute to undertake research on the nationalities questions in the Soviet Union. □

## PUBLIC PROGRAMMES GRANTS – Preliminary List, Second Half 1988–1989

<b>Les Ami-e-s de la Terre de Montréal</b> , Montréal, Québec Une seule terre, un seul monde (cahier de fiches pédagogiques)	\$ 8,750

<b>TOTAL</b>	<b>\$71,650</b>

## AMENDMENTS TO THE CRITERIA FOR GRANT PROGRAMMES

The CIIPS Board of Directors decided at their meeting in April to amend certain grants criteria. The first two items below apply to both Research and Public Programmes.

### 1. Overhead and Administrative Costs

The Institute will continue its policy of not funding indirect costs or overhead, but may be asked to make an exception to this rule in special circumstances. CIIPS may then contribute up to fifteen percent of the proposed project budget towards the overhead costs of non-governmental organizations or of an independent researcher.

Please note that neither governmental organizations (municipal, provincial or federal) nor universities are eligible under this clause.

### 2. Frequency of Applications

Previously, applicants could not hold more than one grant in each programme at a time. Also,

when an organization or individual had received funds from the Institute and wished to make a new application, the Institute would consider the request **only** if final reports had been satisfactorily reviewed and remaining funds disbursed for the prior grant.

From now on, an organization or an individual may submit **one** application per programme per six-month period.

In all cases, the Institute will require all the information (including progress reports on any earlier grant) necessary to determine whether in its sole judgement the organization can carry out the projects for which funding is sought.

### 3. Labour Costs: Public Programmes

Formerly, the Institute provided partial salaries to organizers of conferences, editors of publica-

tions, organizers of special projects, etc. if the individual was not a regular employee of the sponsoring organization.

From now on, labour costs will not normally be considered. However, in special circumstances where such project-related costs cannot be covered from other sources the Institute may be asked to make an exception to this rule.

### 4. Labour Costs: Research

Formerly, the Institute did not provide funds for sabbatical supplements, part or supplemental salaries of grant applicants or principal researchers, or the salaries of individuals applying as private scholars.

From now on, an independent researcher may request remuneration (based on a university pay scale in the region where the researcher is working) for the time spent on the research project.

A non-governmental organization may include in its application the remuneration of any researcher assigned to the proposed research; costs of social benefits are not admissible.

In the case of a researcher on sabbatical leave, a sum based on the loss to be recovered may be included in the application. This sum must be proportional to the rate of pay and to the amount of time spent exclusively on the proposed research project.

In all cases, including applicants on the faculty of universities, out-of-pocket labour costs for research assistants may be included in the application but not the costs of full-time, paid, principal researchers in universities or governmental organizations.

For more information please contact the Institute Grants Secretariat at (613) 990-1593.

## LETTER FROM BEIJING BY LEONARD ZAMOR

**People get up early in Beijing;\* as soon as dawn breaks the city begins to stir. In the chill mist of early morning the main roads into the city are choked with a continuous stream of bicycles, cars and buses crammed to bursting.**

On the sidewalks the vendors begin to set up their stalls. Life gets going once again. I landed on the planet China only a little while ago, so all the look out for what is exotic and different. Already I have a tale to tell which no doubt reveals my naivete and my preconceptions.

My early morning wanderings take me to Tiantan in the park of the Temple of Heaven. This huge park, which dates from the Ming period, is one of the best places in the capital to relax. Once the day begins people gather there to play cards, practice Tai Chi, listen to music. My presence attracts a certain amount of attention – surprise rather than curiosity and a few incredulous smiles. But soon everyone turns back to whatever he or she is doing. In one of the galleries in the park – and this is a sign of the times – a group of men and women of a “certain age” are learning to dance rock and roll to the strains of an old French hit “Promenez-vous sur la Costa del Sol.” It is ten below zero.

Mrs. Deng, a healthy, smiling sixty-year old, teaches nutrition. She tells me that for the last year disco has replaced Tai Chi as the morning exercise for members of her institute. She thinks this is all to the good. “It stirs the blood,” she says, as she goes back to the dance. “It stirs the blood,” could equally well describe the effects on China of the political reforms which Deng Xiaoping introduced ten years ago. After thirty years of Maoist sclerosis, China decided to open its doors to the outside world and modernize itself internally in order to become “richer and stronger.”

*\*Editor's note: this story was filed from China before the beginning of student demonstrations in late April.*

In the course of an ordinary walk in Beijing one comes across a great number of private businesses run by individuals or collectives, and one sees well-stocked free market stores and all sorts of peddlars. Certainly one of the success stories of the economic reform is the rekindling of the traditional Chinese talent for free enterprise – an object of con-

**... an increasing number of young people are “waiting for a job,” to use the accepted euphemism.**

tempt under Mao. The numbers speak for themselves. According to the English-language newspaper, *China Daily*, more than 24,000 new businesses were established in Beijing in 1988, bringing the total to 106,000. These enterprises are mainly in the service sector – small stores, transport, restaurants.

On Wangfujing, one of the main shopping streets in Beijing, there are hectic preparations for the “spring festival” – Chinese New Year. A brightly dressed crowd is milling around, anxious to buy food and gifts and, of course, fireworks. Many shops display goods that most Chinese can only dream about: Swiss watches, micro-computers, washing machines and so on. One often has the impression wandering the shopping streets of Beijing that this array of consumer goods is just a flashy facade. China is trying to look modern without spending too much money.

An opening to the outside world? Yes, that is happening. But most of all, that means a fascination with everything American, whether it be the English language, disco music, or the dollar.

Not far from Beijing's Buddhist monastery, young Chinese line up to taste a slice of America from the recently opened Kentucky Fried Chicken outlet. So, as often happens in Third World countries, a desire to copy America leads people to adopt the worst side of US life. Nevertheless, Chinese society does seem a bit more open, a bit more varied and also a bit more individualistic, now that a certain amount of originality is no longer treated as reprehensible behaviour to be discouraged.

Reform has not been without problems: already there are signs of the economy skidding out of control and of social instability.

First of all there is inflation, and while it is true that initially economic reform led to an increase in the average income, this has not kept pace with the dizzy rise in prices. Since 1984 the government has introduced free pricing for various goods in order to stimulate productivity. As a result, the rate of inflation which was three percent in 1984, is now more than twenty-five percent and has even reached sixty percent for certain items such as fruit and meat. There is growing discontent, particularly among the workers, and so the government has decided to postpone any further freeing of prices for at least two years. Businesses now have to make a profit and they cannot retain workers who are not productive. This means an increasing number of young people are “waiting for a job,” to use the accepted euphemism. Thus the two capitalist evils of unemployment and inflation have appeared in China and this has soured morale generally.

Reform has also produced a new privileged class of technocrats, entrepreneurs and traders. Take for example the case of a small-time trader who sells shirts on the sidewalks of Beijing. He may earn up to 200 yuan (about

\$60) a day, more than twice the monthly salary of a worker or even a university professor. After thirty years of relative economic equality these differences are difficult to accept, particularly since times are hard. Despite improvements over the last ten years, daily life is still hard for the great majority of the Chinese, and is fraught with all kinds of miseries, major and minor: extremely bad housing, harsh treatment by a contemptuous bureaucracy, difficulty in moving about and an overburdened railway system. To succeed in leaving Beijing by train is like winning a lottery. I had to wait three days before I could go on to my next destination.

The government speaks to the people, which took its promises of democracy literally, of a “democratic, popular dictatorship.” This somewhat surreal notion is used to justify and perpetuate the existence of the one-party state under Communist control. Its leaders, while preaching the cause of liberalization, have not hesitated to launch numerous attacks on “bourgeois liberalism” and on “spiritual pollution” in the cultural sphere. Add to this the sometimes violent repression of ethnic minority nationalist movements, most notably in Tibet, and we are left with the image of a government which fears that the reforms it has launched are a threat to its legitimacy, and which is determined to ensure its own survival at any cost.

There is a Chinese proverb, “When one lives in honey one doesn't know the taste of sugar.” Thanks to an open-door policy which has facilitated commercial and cultural exchanges with the outside world, and also to the availability of a much wider range of information, the Chinese have become more aware of their country's backwardness. They now know “the taste of sugar” and they want more. □

*Leonard Zamor is a free-lance writer and professional traveller based in Ottawa.*

On se lève tôt à Beijing. \* Des l'aube, la ville s'ébranle. Dans la brume frieuse du petit matin, un flot ininterrompu de bicyclettes, d'autobus bondés à craquer et de voitures engorgent les artères de la ville.

engorgent les artères de la ville.

sortes. La grande réussite de la réforme est sans doute d'avoir réengendré l'esprit d'entreprise traditionnelle des Chinois qui, sous Mao Zedong était voué aux géométries. Les chiffres à cet égard sont eloquents. Selon le quotidien de langue anglaise *China Daily*, plus de 24 000 nouvelles entreprises ont été créées à Beijing en 1988, ce qui porte le total à plus de 106 000, principalement dans le secteur tertiaire (services, boutiques, transport, restauration). À Wangjing, l'une des principales artères commerciales de Beijing, le gouvernement a libéré les prix de nombreux produits afin d'encourager la production.

... le nombre de jeunes « en attente d'un emploi », selon l'euphémisme consacré, augmente. Le chômage et l'inflation, deux plaies capitalistes ont donc fait leur apparition en Chine, et cela déconcerte les esprits.

ont donc fait leur apparition en Chine et cela déconcerte les esprits.

peut gagner jusqu'à 200 yuan (environ 60 \$) par jour, soit deux fois plus que le salaire ... mensuel d'un ouvrier ou même d'un professeur d'université. Après trente ans d'un relatif égalitarisme, les inégalités sont alors difficiles à accepter. Surtout lorsque les temps sont durs. Car la vie quotidienne de la grande majorité des Chinois, malgré les améliorations survenues au cours des dix dernières années, continue d'être ponctué de petites et grandes misères : conditions de logement particulièrement mauvaises, journaux d'un peu bureaucratique méprisants, difficultés des déplacements, sursaturation du réseau ferroviaire (nécessité à sortir de Beijing en train est une véritable loterie). En ce qui me concerne, j'ai dû attendre trois jours pour obtenir une place vers ma prochaine destination. À la population qui avait pris au pied de la lettre les promesses de

posent une alternative démocratique  
populaire». Concept hautement sur-  
réaliste dont l'objet est de justifier et  
de perpétuer l'hégémonie du Parti  
Communiste sur la vie politique du  
pays. Par ailleurs, les dirigeants,  
tout en prêchant la libéralisation,  
n'ont pas hésité à lancer de multi-  
ples campagnes contre «le libéra-  
lisme bourgeois» et, sur le plan  
culturel, à lutter contre la «population spiri-  
tuelle». Ajoutons à cela la ré-  
pression parfois violente des  
mouvements de libération de mi-  
norités ethniques, notamment au  
Tibet, et nous avons l'image d'un  
gouvernement qui craint que ses  
propres réformes remettent en ques-  
tion sa légitimité et qui est prêt à  
tout pour assurer sa survie.

Un proverbe chinois ait :

« Lorsque l'on vit dans le sucre, on ne connaît pas le goût du sucre. »

Mais grâce à une politique d'ouverture qui a favorisé les échanges commerciaux et culturels avec l'étranger, et grâce aussi à une plus libre circulation de l'information, de plus en plus de Chinois se rendent compte du retard qu'ils ont accumulé ; ils connaissent le « goût du sucre » et en redemandent.

□

À Wangfujing, l'une des principales artères commerciales de Bei-

la «fête du printemps», le Nouvel An chinois. La route se presse, multicolore, impatiente pour acheter des vicinales, des cadeaux et, bien entendu, des feux d'artifice. De nombreux magasins offrent des produits auxquels la plupart des Chinois ne pourraient que rêver : des montres suisses, des micro-ordinateurs, des machines à laver, etc. C'est pour cela que lorsque l'on promène dans les artères commerciales de Beijing, on a souvent l'impression que toute cette exhibition de consommation tient avant tout de la façade, du tape-à-l'oeil. La Chine cherche à se donner une image moderne à peu de frais. Mais surtout une fascination devant tout ce qui est américain : le dollar, l'anglais, le dollar.... Non loin de la lamasserie de Beijing, des jeunes Chinois font la queue

\*Note de la rédaction : l'article nous a été envoyé de la Chine, avant que commencent les démonstrations étudiantes vers la fin d'avril.

SUBVENTIONS AUX PROGRAMMES PUBLICS -  
Liste préliminaire, Deuxième semestre 1988-1989

## SUBVENTIONS AUX PROGRAMMES PUBLICS -

## NOUVELLES DE L'INSTITUT

Les aspects de la limitation des armements, ils ont accordé une at-

STAR, aux négociations sur les forces conventionnelles se déroulant à Vienne, à l'interdiction des armes chimiques et à une interdiction com-

plète des essais nucléaires. Pendant la période de questions, M. Golovko a également parlé de l'Arctique, et il a déclaré que tout ce qui a trait à la

limitation des armements dans cette région du globe, y compris les bases militaires de la péninsule de Kola,

pouvaient faire l'objet de discussions. Quelques semaines plus tard, deux spécialistes soviétiques de l'Arctique ont pris la parole à l'In-

stitut : en effet, **J. Kazmin** et **A. Granovski** ont dirigé des entretiens sur les affaires de l'Arctique et la

limitation des armements navals. **Johan Holst**, ministre norvégien de la Défense, a rendu visite à l'Ins-

titut et y a échangé des points de vue avec les membres du personnel. Il a

parlé de l'expérience commune de part et des pays au chapitre du main-

tien de la paix, et il a souligné la nécessité de réfléchir plus en profon-

deur à cette activité internationale qui prend de plus en plus d'import-

tance. M. Holst a soulevé la ques- tion du rôle des armes nucléaires dans les décennies à venir, affirmant

rapport existant entre la prolifération du traité sur la non-prolifération, le

De concert avec l'Institut de développement international et de coopération (Université d'Ottawa), l'ICPSI a parrainé une conférence

Le nouveau directeur général de

l'ICPSI, M. Bernard Wood, a ef-

fectué à la fin de l'hiver et au début

au travail de l'Institut. Pendant la

même période, il a pris la parole au

cours d'une séance organisée con-

jointement à Kingston par l'Univer-

sité Queen's et le CIIA, et il a fait de

même à la faculté de droit de l'Un-

versité de Windsor. Au début de mai,

il a participé à l'Assemblée annuelle de la succursale torontoise du CIIA

et a parlé du rôle des puissances moyennes dans les années 1990.

Les effets du budget sur la poli-

tique de défense et la politique étrangère ont constitué le thème d'une table ronde organisée par l'In-

stitut, dans ses locaux, cinq jours après que Michael Wilson eut pré-

senté son budget à la Chambre des communes. Lois Wilson, Pen

Hampson, Doug Ross, Harold Klapak et Kenneth Calder ont

ainsi prononcé leurs points de vue devant environ vingt-cinq journa-

listes. Un certain nombre de re-

porters de l'extérieur d'Ottawa ont

pu participer à la séance grâce à un

relais audio. Les orateurs se sont

alors penchés, entre autres choses,

sur les conséquences qu'aura le

budget pour les priorités énoncées

dans le Livre blanc de 1987 et sur

l'évolution de la conjoncture inter-

nationale au chapitre de la sécurité.

**Yevgeni Golovko** et **Nikolai Smirnov**, du ministère soviétique

des Affaires étrangères, ont dirigé à

l'Institut en avril un colloque sur les

positions de l'URSS en matière de

limitation des armements. Mettant

l'accent sur la nécessité de mener

M. Arias a parlé des perspectives de

l'Esquipulas et il a répondu à un

large éventail de questions de la part

d'auditoire. Il a affiché un opti-

misme modéré quant aux chances

de voir le plan entrer en vigueur, et

il a exhorté tous les gouvernements

à appuyer l'implantation de régimes

démocratiques en Amérique cen-

trale. Si l'on exclut le Costa Rica,

pas aussi forte qu'elle devrait l'être

en Amérique latine. **Georges Hénault** a présidé la séance, et

**Bernard Wood** a exprimé les re-

mercements de l'assistance à M. Arias. Les deux instituts ont of-

fert une réception après la séance. L'Association canadienne pour les Nations-Unies et l'ICPSI ont co-

parrainé une série de colloques sur le Conseil de sécurité de l'ONU

ainsi que sur les occasions qui s'of-

frirent au Canada de faire sa marque

pendant les deux ans où il siègera au

Conseil, cette période ayant com-

mencé en janvier 1989, les colloques

ont eu lieu à Vancouver, Winnipeg,

Toronto, Montréal et Halifax. Les

participants se sont interrogés sur

l'importance de ce rôle pour le Ca-

nada et sur les conséquences qu'au-

ront pour sa politique étrangère les

questions qui figurent et figureront à

l'ordre du jour du Conseil : citons le

Moyen-Orient, l'Afrique australe et

les opérations de maintien de la

paix. Ont alors pris la parole des

ambassadeurs du Canada. Un autre atelier sur la situation

existait à Chypre à eu lieu à l'In-

stitut à la mi-avril. La série se ter-

minera par un colloque qui se

tiendra tard au printemps ou au

début de l'été, sous la gouverne de

**Norma Saleem**, chargée de re-

cherche à l'ICPSI. **Bernard Wood** et **Roy McMurtry**, ancien Haut Commis-

saire du Canada à Londres, ont

représenté notre pays à une con-

férence organisée récemment à New

York par la Fondation Carnegie sur

les politiques des pays démocra-

tiques face à l'Afrique australe. **Totouya Totou**, secrétaire général

de la SWAPO, juste avant le lance-

ment du plan d'indépendance pour

la Namibie. À la fin de mai, il a par-

tiépé à une conférence parrainée

## Les défis de Gorbatchev

Lilly Marcou  
Editions Pion, Paris, 1988.  
273 pages, 24 \$.

Lilly Marcou fait preuve d'optimisme quant aux chances de Mikhail Gorbatchev de réussir sa *perestroïka* en politique extérieure. Les défis de Gorbatchev est écrit par une femme qui n'est pas reconnue pour ses jugements biaisés et péremptores et qui, de surcroît, est spécialiste du mouvement communiste européen.

La section qui traite des conflits soviétiques et Israël est remarquable. Je n'en dirais pas autant de sujets tels les relations entre Mossad et Pékin ou l'Afrique. Il faut aussi regretter que fort peu d'attention soit consacrée à l'Europe de l'Est. Voilà pourtant une région stratégique, riche en changements profonds et fort susceptible d'augmenter la bonne réputation de l'URSS en Occident. Dans le passé, les réformateurs ont vu leurs projets échouer en Europe de l'Est. Rapetons les événements de Budapest en 1956 qui ont été provoqués en bonne partie par la désalinisation opérée au XX<sup>e</sup> Congrès du Parti communiste soviétique tenu plus tôt la même année.

La politique extérieure est aussi une affaire de gros sous, surtout maintenant que Gorbatchev veut tout rentabiliser. L'attitude du secrétaire général a beaucoup à voir avec les difficultés que son pays éprouve avec le commerce extérieur. Ce défi peut-être le plus important que le leader soviétique doit affronter, n'est pourtant pas étudié dans l'ouvrage. La réalité internationale ne sert guère les intérêts de l'URSS : la chute des prix pétroliers, l'incapacité d'exporter des produits manufacturiers et l'imposition de

paix de l'OTAN. Pourtant, depuis plusieurs années, elle chemine lentement, comme l'a montré le sommet franco-britannique du 27 février dernier, où, malgré un différentiel sur la modernisation des missiles *Lance* en Allemagne de l'Ouest, les deux États ont profité de l'occasion pour relancer les négociations sur le développement d'un nouveau type d'arme nucléaire tactique et sur la coordination éventuelle de leur flotte sous-marine stratégique. On est encore loin de l'axe Londres-Washington mais les nécessités économiques et les impératifs géopolitiques rendent la collaboration incontournable.

Pour expliquer cette nouvelle donnée de la politique internationale, quinze diplomates, militaires, chercheurs et journalistes français et du *Royal Institute of International Affairs*, ont produit le présent ouvrage sur la coopération franco-britannique en matière de sécurité. Ils abordent toutes les facettes des relations militaires, telles que l'échange d'informations sur les politiques de défenses, la coopération en matière de recherche militaire et de développement conjoint, les achats d'armes et les problèmes liés à la sécurité en Europe et dans le tiers-monde.

S'il est possible à ces deux puissances moyennes de trouver un terrain d'entente sur certains aspects de la sécurité internationale, deux problèmes fondamentaux empêchent l'harmonisation complète de leurs relations : la politique en matière d'armes nucléaires et la coopération industrielle.

John Roper et Yves Boyer soulignent les différences entre les doctrines nucléaires des deux pays. Paris tient fermement à son autonomie décisionnelle alors que Londres accepte un certain partage de souveraineté au sein de l'OTAN, légitime avec Washington. Le rapprochement entre ces deux pôles semble impossible mais, soulignent les auteurs, devant les offres soviétiques de désarmement et un certain désengagement américain « la Grande-Bretagne et la France doivent maintenant accélérer leur coopération, d'abord pour renforcer leur sécurité, mais aussi pour contribuer à l'avènement de la sécurité de l'Europe dans son ensemble ».

La coopération militaire entre la France et la Grande-Bretagne n'a jamais été chose facile tant à l'intérieur qu'à l'extérieur des structures. La coopération militaire entre la France et la Grande-Bretagne n'a jamais été chose facile tant à l'intérieur qu'à l'extérieur des structures. La coopération militaire entre la France et la Grande-Bretagne n'a jamais été chose facile tant à l'intérieur qu'à l'extérieur des structures.

Luc Duhamel est professeur de science politique à l'Université de Montréal.

— Luc Duhamel

Le livre de Lilly Marcou, malgré toutes ses insuffisances, a le grand mérite de sortir la soviétologie française de la stagnation. Elle a été soutenue jusqu'à maintenant par l'ouverture des États-Unis qui a aussi incité à mettre fin à certains conflits régionaux et à la poursuite aux armements. Le redéploiement de la diplomatie soviétique prend de cours beaucoup de géologues, en particulier en France, où de grands noms ont nié que le régime soviétique puisse être réformable et qui lui ont prêté les intentions dans l'arène internationale. Hélène Carrière d'Encasse et Cornélius Castoradis, pour ne nommer que ceux-là, se sont distingués. Le livre de Lilly Marcou, malgré toutes ses insuffisances, a le grand mérite de sortir la soviétologie française de la stagnation.

## Pour une nouvelle entente cordiale

Sous la direction de Yves Boyer, Pierre Lellouche et John Roper  
Editions Masson, Paris, 1988.  
220 pages, 45,50 \$.

La coopération militaire entre la France et la Grande-Bretagne n'a jamais été chose facile tant à l'intérieur qu'à l'extérieur des structures.

Sur le plan industriel, Farouk Hussain écrit que la coopération est indispensable à cause du coût astronomique des programmes militaires. Toutefois, il admet que les deux pays « ont des capacités industrielles trop semblables en matière de défense pour que la coopération puisse prendre la forme qu'imposerait le sens commun ». La seule solution demeure dans « la volonté tactique et sur la coordination d'un nouveau type d'arme nucléaire

La France face aux nouveaux enjeux stratégiques  
Charles-Philippe David  
Métivien, Montréal, 1988.  
168 pages, 24,95 \$

M. David fait un tour d'horizon des questions fondamentales relatives à la modernisation de la force de dissuasion, les défenses antimissiles, les nouveaux projets technologiques, l'espace, la position de la France vis-à-vis le démantèlement des euro-missiles, le couple franco-allemand et la sécurité européenne.

Le livre est un compte rendu de la conférence sur « le Canada et la neutralité militaire », qui s'est tenue en avril 1987 au Collège militaire royal de Saint-Jean. Il permet de rapporter à d'autres choix politiques, comme le maintien du statu quo ou encore une politique de défense plus indépendante.

(Ouvrages publiés avec l'aide financière de l'ICPSI). □

Voilà l'analyse sommaire d'ouvrages publiés en anglais dans la rubrique Reviews de Peace&Security.

## La nouvelle question

L'ère du conflit sino-soviétique

François Joyaux

Éditions Payot, Paris, 1988.  
493 pages, 67 \$.

Décrite l'histoire moderne de

passé. Les poussées vers une plus grande multipolarisation régionale se sont faites plus intenses. Enfin, devant les difficultés croissantes des États-Unis à contrôler la situation, la deuxième guerre d'Indochine a imposé une consolidation du camp pro-occidental. L'auteur, devant les États limitrophes à chercher plus de cohésion entre eux. Dans le camp adverse, le conflit sino-soviétique a interdit une approche commune, et cette guerre a cristallisé les divergences. L'année 1969 constitue pour l'auteur une période charnière, les événements préfigurant un profond «réaménagement des équilibres». La crise entre la Chine et l'URSS était à son paroxysme, à cause notamment des affrontements frontaliers au printemps, et la Chine s'inquiétait de la faiblesse de sa sécurité nationale et de son isolement diplomatique. Alors que les États-Unis lançaient la doctrine Nixon, annonçant un désengagement militaire partiel en Extrême-Orient, et qu'au même moment Moscou cherchait à étendre son influence aux dépens de Beijing, en mettant de l'avant un système de sécurité collective (doctrine Brejnev), le rapprochement sino-occidental apparaissait invivable. Celui-ci s'est concrétisé par l'adhésion de la Chine à l'ONU, par la visite du président Nixon à Beijing, et par la normalisation des relations avec plusieurs États occidentaux et pro-occidentaux, incluant le Japon.

Le présent ouvrage, qui s'inscrit dans une suite de trois volumes, est consacré à la période faisant suite à la guerre froide, et que certains ont qualifié de détente. Cependant, pour ce qui a trait à l'Extrême-Orient, l'auteur préfère désigner cette époque (1959-1978) comme l'ère du conflit sino-soviétique (même si celui-ci dépasse les dates retenues). tant il est vrai que l'affrontement entre les deux géants communistes a marqué l'histoire de cette partie du monde.

Le conflit sino-soviétique a mis un terme au monolithisme du bloc communiste, en brisant l'alliance Moscou-Beijing et en forçant les autres États socialistes de la région à s'allier sur l'un ou l'autre des deux protagonistes. Le rapprochement entre la Nouvelle-Delhi et Moscou, à la suite du conflit sino-vietnamien, a contribué lui aussi à modifier l'équilibre régional. Si le camp pro-occidental quant à lui est resté beaucoup plus uni, les volontés d'affirmation économiques et politiques de ses composantes ont empêché les États-Unis de maintenir une cohésion aussi forte que par le

la Chine. La chute des régimes non communistes indochinois a approfondi les équilibres» dont les principales manifestations ont été le renforcement de l'Association des Nations de l'Asie du Sud-Est et de l'axe Beijing-Tokyo-Washington, et,

## Sociétés et terrorisme

Michel Wievorka

Éditions Fayard, Paris, 1988.  
565 pages, 55 \$.

Michel Wievorka nous livre ici

une relecture de sa volumineuse thèse d'État. L'ouvrage fera probablement date dans l'analyse du terrorisme. Surtout parce qu'il s'agit d'une véritable sociologie de la violence politique, articulée autour de quatre études de cas : le Sentier lumineux au Pérou, les Brigades rouges en Italie, l'ETA basque et les Pales-Unités associées à la montée du terrorisme international. Cas assez hétérogènes, à première vue, que Wievorka réussit à lier sous le dénominateur commun de l'analyse sociale.

Le terrorisme surgit au cœur de ce que l'auteur appelle un antimodernisme social. La trajectoire vers le terrorisme présente la particularité d'isoler de plus en plus l'acteur de ses référents sociaux, à travers un jeu de scissions en chaîne dans les groupes de protestation. Pour Wievorka, c'est là l'essence du terrorisme : il est dérivé de sens, et il y a une séparation entre le militant armé et le groupe élargi au nom duquel il se bat. Il ne peut pourtant être compris qu'à partir de ses origines sociales : mouvements étudiants, nationalistes, révolutionnaires ou religieux. Malgré cet enracinement social originel, il n'y a plus, à la fin du processus, que vide, absence de re-

processus, que vide, absence de re-

lation, repli sur soi sectaire. Ainsi s'explique l'apparence souvent absurde que prennent les actes de terrorisme. L'acteur n'agit plus au sein de la société mais dans un groupe totalement déconnecté qui sécrète sa propre logique.

Cette logique adopte – et c'est là la thèse de l'auteur – une spirale ascendante. À partir de références à des figures sociales ou communautaires l'acteur devient terroriste en s'en prenant à l'État et, finalement, il entre dans le jeu international où il devient instrument des politiques de puissance. À l'arrivée, le terroriste a entièrement abandonné les significations de sa lutte initiale. Le mérite de l'ouvrage de Wievorka est d'établir les liens et les distinctions entre les trois niveaux de manifestation du terrorisme qui, du politique, «s'élève toujours vers l'État puis se diffuse au sein du système international». Le passage au niveau international présente deux caractéristiques : 1) dérive par rapport au mouvement initial dont il se réclame encore mais avec lequel il n'a plus grand chose à voir ; 2) absence d'autonomie pratique et idéologique face aux puissances qui l'instrumentalisent.

Fidèle à l'école tourraine, Wievorka a réalisé des interventions sociologiques (ensemble de rencontres, d'entrevues et de discussions proches de la dynamique de groupe) avec des Italiens et des Basques engagés dans la violence politique. C'est ici que l'étude pose problème. Sans pour quelques moments forts de l'intervention – exemple, l'irruption soudaine d'un défilé totalitaire chez le groupe italien qui éclaire remarquablement les oppositions idéologiques géant l'émergence de la violence – on a l'impression que l'argumentation pourrait se passer facilement de cet appareil. Peu de démonstrations centrales à la thèse s'appuient directement sur ces interventions. La méthode documentaire et historique sied mieux à la problématique du terrorisme.

Le livre de Wievorka demeure une oeuvre importante pour la compréhension de la violence politique. Il pose une question centrale à laquelle il ne peut y avoir de réponse simple : pourquoi et comment devient-on terroriste ? Le mérite de ce livre est de faire un dépoussiérage méticuleux des innom-

## TRIBUNE

### Des clichés insistants

Voire note éditoriale sur l'affaire Rushdie et la « Lettre de l'Ouzbékistan soviétique » de Stephen Handelman (*Paix et Sécurité*, printemps 1989) jouent toutes deux sur des images simplistes de l'Islam et de ses dimensions politiques. Si cela même sans voir à mal dans la note éditoriale, Handelman, lui, ne mêche pas ses mots.

En revanche, vous vous demandez judicieusement s'il est logique de rompre les relations diplomatiques avec l'Iran et de saper le « discours civilisé entre diverses cultures » à cause d'un problème complexe d'un point de vue tant ethnique que religieux. Quels que soient les mérites littéraires des *Sept saintes* (et il n'y a pas consensus parmi les critiques littéraires pour classer Rushdie « parmi ces écrivains dont nous avons le plus besoin »), ils offensent profondément la liberté d'expression absolue en Occident et la conformité communautaire absolue dans le monde musulman. La liberté d'expression est aussi relative dans le Code criminel du Canada et dans la Charte des Droits de 1982 que l'est la communauté dans la doctrine légale islamique. Si nombre de musulmans ne « gobent » pas l'argument de la libre expression à propos de Rushdie, les Canadiens et Canadiennes semblent aussi avoir du mal à recon-

naître qu'en vertu de nos propres préceptes légaux, il y a ici un argument de légitimité qui intéresse la portée de la liberté de parole. Après tout, de tels différends surviennent quotidiennement sur le problème de la langue au Québec ou quand il s'agit de laisser s'exprimer en public des « experts » connus pour leur antisémitisme ou tout simplement leur racisme. Pourquoi sommes-nous brusquement frappés d'une paralysie totale dès qu'il est question de la susceptibilité musulmane ?

La réponse se trouve en partie dans le discours orientaliste hérité par l'Occident qui se fonde sur le cliché d'un Orient musulman irracionnel et exotique en contraste avec un Occident judéo-chrétien rationnel et ordonné. Au lieu d'être dénoncé et remplacé par un discours sur sensé, l'orientalisme menace de gagner davantage encore de terrain pour des raisons évidentes dans l'article de Handelman sur les musulmans soviétiques.

On ne sait trop pourquoi, le nationalisme qu'Estoniens, Lettons et Arméniens brandissent contre l'autorité omniprésente de Moscou est considéré comme parfaitement raisonnable, alors que celui des Ouzbèks, des Tadjiks ou des Cosaques est décrit comme quelque somme mouvement fondamentaliste. Peu importe que les églises aient joué un rôle prédominant dans le renforcement du sentiment nationaliste de la Balétique au Caucase ! Le moins étonnant est que le même sujet parue dans le *Time* (1989) fait remarquer : « En Azerbaïdjan, quelques musulmans exhibent la photo de l'ayatollah Khomeiny ou arborent des barbes à de signes d'un fanatisme religieux, il y a peu d'islamisme. Néanmoins, il y a peu de signes d'un fanatisme religieux, qu'il s'inspire de l'Iran et de l'Afghanistan voisins ou qu'il soit

encouragé par la tolérance même des Soviétiques. »

### La question des vols à basse altitude n'est pas close

Dans « Le dossier du Labrador » (*Paix et Sécurité*, automne 1988), la remarque selon laquelle les Indiens montagnais du Québec feraient passer la militarisation de leurs terres après leurs revendications territoriales mérite quelques éclaircissements, sinon les lecteurs garderaient l'impression que les Montagnais ne sont qu'une autre poignée de ces Peaux-rouges opportunistes.

Des pilotes européens s'entraînent au-dessus des terrains de chasse et de trappe des Montagnais sur la rive nord du St-Laurent depuis l'été 1983. Ce sont les chasseurs et leurs familles de La-Romaine qui pâtissent le plus des exercices dans cette région. En effet, les autres collectivités et leurs membres ne sont survolés que de temps à autre. Étant donné que la conquête militaire a joué un rôle important dans la colonisation des populations autochtones en Amérique du Nord et ailleurs, les chefs montagnais à La-Romaine et dans les bureaux du Conseil Atikamek-Montagnais (CAM) ont été prompts à réagir. Ils ont dénoncé les intrusions et dépensé environ 100 000 \$ à même les fonds du Conseil pour mener des enquêtes sur le terrain et des recherches bibliographiques afin

de confirmer leur suspicion que les vols à basse altitude sont une menace pour la zone d'entraînement. Naturellement, ils ne partagent pas la même inquiétude que leurs frères et sœurs de La-Romaine en ce qui concerne les vols d'entraînement à basse altitude. Une campagne collective axée sur les vols militaires, en même temps que sur une opposition catégorique à l'entraînement, est donc hors de question. En outre, les Montagnais pensent qu'à la faveur des négociations sur les revendications territoriales, ils pourront sinon éliminer les vols indésirés, du moins en réduire les effets négatifs à un seuil acceptable. Ce processus de réduction négociée trancherait certainement avec les mesures que le ministère de la Défense nationale a imposées unilatéralement pour limiter les survols des campements autochtones.

Après la signature, le 16 septembre, d'un accord-cadre avec les autorités fédérales et provinciales, le CAM est maintenant en bonne voie d'obtenir un accord sur les revendications territoriales. Il est fort probable qu'il discutera des vols militaires d'une manière moins salissante et qu'il préférera négocier en privé.

En revanche, les Innus du Labrador sont loin de négocier un accord quelconque. En fait, dans les années 1970, ils ont publié un document dans lequel il demandait quasiment la séparation de la nation innue du reste du Canada. Ainsi que l'attestent leur récente occupation de la piste d'envol à Goose Bay et les arrestations qui ont suivi, le dossier n'est pas près d'être clos.

*Erik Poole*  
Québec

## EN DIRECT DE LA COLLINE PARLEMENTAIRE

en compte maintenant huit au total; les questions des anciens combattants ont été ajoutées à son mandat. Agriculteur albertain et député depuis longtemps, M. Arnold Malone (député de Crowfoot), a été nommé président de cette dernière

instance. Le Comité spécial du Sénat sur la Défense nationale a repris, quant à lui, son étude sur les forces terrestres du Canada, et il devrait achever ses travaux au cours de l'été. Le Comité sénatorial des Affaires étrangères continue son analyse approfondie de certains aspects de l'Accord canado-américain de libre-échange. Patrick Boyer (Étobicoke-Lakeshore) et Jean-Guy Hudon (Beauharnois-Salaberry) ont été nommés secrétaires parlementaires, respectivement auprès du secrétaire d'État aux Affaires extérieures et au ministre de la Défense nationale.

### Opérations de maintien de la paix

Au début d'avril, trois événements se sont produits dans le domaine du maintien de la paix, dans les régions du monde éloignées: les gouvernements des communautés grecque et turque à Chypre sur le retrait des soldats de trois postes d'observation à Nicosie, la zone-tampon divisant Chypre. C'est la première fois que les deux parties en présence acceptent de retirer des forces militaires depuis que la Turquie est intervenue dans l'île méditerranéenne en 1974.

Le 5 avril dernier, les gouvernements du Vietnam et du Cambodge ont invité le Canada, la Pologne et l'Inde à former une commission de surveillance qui serait chargée de superviser le retrait des 50 à 70 000 soldats vietnamiens encore présents au Cambodge. Le Vietnam prétend qu'il aura retiré ces hommes d'ici la fin de septembre, soit quinze mois plus tôt que promis à l'origine. Les troupes de Hanoi occupent le Cambodge depuis décembre 1978, date où elles ont renversé le gouvernement.

Le Comité a élu son président en la personne de John Bosley (Don Valley West), ancien président de la Chambre. Le Comité permanent de la Défense nationale a, lui aussi, un nouveau membre: il

### Les changements survenus au Moyen-Orient

C'est avec la lecture du discours du trône par le gouverneur général que s'est ouverte, le 3 avril dernier, la deuxième session de la 34<sup>e</sup> Législature. Si le texte mettait essentiellement l'accent sur l'économie et le commerce, il y a aussi été longuement question de l'environnement et, plus brièvement, du rôle du Canada sur la scène internationale.

Le 30 mars, juste à la veille de la reprise des travaux du Parlement, le gouvernement canadien a décidé de relever le niveau de ses relations avec l'Organisation de libération de la Palestine (OLP), retirant son adhésion à la cause de l'autodétermination palestinienne sans pour autant reconnaître l'OLP en tant que telle. En vertu de cette décision, les diplomates canadiens des niveaux plus élevés (jusqu'aux ambassadeurs) pourront désormais se réunir avec des représentants de l'OLP. Si l'on en croit le secrétaire d'État aux Affaires extérieures, M. Joe Clark, le Canada va maintenant pouvoir faire pression sur l'organisation dirigée par M. Arafat pour qu'elle adopte la voie de la modération et oeuvre en faveur de négociations de paix.

Les comités parlementaires ont, eux aussi, repris leurs travaux en avril. Leur nombre a été réduit, mais les comités étudiant les questions de paix et de sécurité n'ont, pour l'essentiel, subi aucune modification. Le Comité permanent des Affaires étrangères et du commerce extérieur compte désormais un membre de plus, ce qui porte ses effectifs au nombre total de quatorze (8 Conserveurs, 4 Libéraux et 2 Néo-démocrates). Le Comité a élu son président en la personne de John Bosley (Don Valley West), ancien président de la Chambre. Le Comité permanent de la Défense nationale a, lui aussi, un nouveau membre: il

ment des Khmers rouges pour y ins-taller le régime actuel. Joe Clark a précisé que le Canada n'enviagerait de participer à l'opération qu'à plusieurs conditions. L'une d'entre elles étant que toutes les parties au litige confirment qu'elles s'engagent à donner leur appui total à une force internationale de maintien de la paix, investie d'un mandat clair-ement défini et mise sur pied pour une durée déterminée.

C'est en Namibie que se sont produits les événements les plus dramatiques, avec l'échec initial du cessez-le-feu intervenu le 1<sup>er</sup> avril dernier entre l'Afrique du Sud et la SWAPO (South West Africa People's Organization). Le gouvernement canadien avait consenti à détacher près de 250 hommes auprès du groupe d'assistance des Nations-Unies pour la période de transition (GANUPT), qui doit compter 4 650 militaires et super-viser pendant un an le retrait des troupes sud-africaines de la Namibie et l'accession de ce pays à l'indépendance. Après l'incursion de la SWAPO qui a déclenché les combats, le gouvernement canadien s'est plié à la requête des Nations-Unies en accélérant le déploiement de ses troupes et en fournissant un appui aérien supplémentaire pour l'ensemble des forces du GANUPT.

Le 12 avril dernier, le ministre de la Défense, M. Bill McKnight, s'est levé à la Chambre des communes pour déposer un décret autorisant le déploiement des troupes canadiennes. Le critique libéral aux Affaires extérieures, M. André Ouellet, tout en se déclarant favorable au décret, a tout de même reproché au Ministre d'avoir gardé le silence sur la situation existant en Namibie, sur l'insuffisance des effectifs de la force des Nations-Unies et, enfin, sur la lenteur de leur déploiement.

Namibie avant le début du processus de transition devant mener à l'indépendance. (Pour de plus amples informations sur les opérations de maintien de la paix en Namibie, voir la rubrique «A l'ordre du jour du Conseil de sécurité», page 14).

### Le Liban

Le 20 avril, la ministre des Relations extérieures, Mme Monique Landry, a évoqué devant la Chambre la dernière vague de violence survenue dans la guerre civile qui déchire le Liban depuis quatorze ans. Le 30 mars déjà, M. Joe Clark avait fait une déclaration et invité toutes les parties en présence à redoubler d'efforts pour parvenir à la réconciliation nationale, mais Mme Landry a renchérit sur les inquiétudes générales exprimées et elle a décrit certaines mesures prises par le Canada pour prêter main-forte dans ce dossier: notre pays continue d'appuyer les efforts de médiation du Comité ministériel de la Ligue arabe, et ceux du Conseil de sécurité des Nations-Unies et du président français Mitterrand; il a versé à la Croix-Rouge une subvention spéciale de 500 000 \$ pour financer des secours d'ordre humanitaire; il a suspendu temporairement la déportation de ceux à qui l'on avait refusé le statut de réfugié; et il a envoyé à Chypre un agent de l'immigration chargé de traiter des cas additionnels.

### Le budget du gouvernement fédéral

Le gouvernement a choisi la voie des restrictions budgétaires dans le cadre d'une opération de résorption du déficit qui a eu de sévères répercussions, tant sur le ministère de la Défense nationale, victime de multiples coupures dans ses programmes, que sur l'Agence canadienne de développement international, dont les crédits d'aide extérieure ont été considérablement réduits.

Jusqu'à présent, le gouvernement s'était fixé comme objectif de consacrer 0,5 p. 100 du produit national brut (PNB) à l'aide publique au développement (APD), et il avait promis d'atteindre 0,6 p. 100 d'ici 1995. Avec les réductions budgétaires, l'APD va tomber à 0,43 p. 100 en 1989-1990, pour remonter à 0,45 p. 100 l'an prochain. Autre conséquence, l'objectif de 0,6 p. 100 est reporté indéfiniment. □

— DAVID COX

Toutefois, avant de donner le feu vert aux recherches, les États-Unis veulent obtenir l'appui de l'Allemagne fédérale. Confronté à un des FNC sont destinées à servir en les FNC sont destinées à servir en Kohl s'est refusé à tout engagement en ce sens. Face à des favorables à l'Quest de plus en plus favorables à des négociations sur les FNC avec les Soviétiques, M. Kohl espère remettre la décision jusqu'après l'élection de 1990 afin de limiter les dégâts électoraux qu'il subirait en appuyant la position américaine.

**Nouvelles visions européennes**

Faisant écho à l'URSS qui appelle de ses vœux une « maison européenne », le ministre ouest-allemand des Affaires étrangères, M. Hans-Dietrich Genscher, se positionne en premier partisan de cette nouvelle philosophie. En avril, il a décrit dans une allocution sa vision d'un objet est de démythifier et de désidéologiser les relations Est-Ouest et, en même temps, de multiplier et de renforcer les éléments de coopération. Un ordre pacifique en Europe... dans lequel les nations peuvent vivre sans se craindre les unes les autres, et où elles peuvent choisir leur propre régime politique et social, n'est plus une simple vision...

Pendant ce temps, au début du mois d'avril, dans le pays qui donne son nom au Traité de Varsovie, les dirigeants politiques polonais de toutes tendances se retrouvaient pour une « table ronde » historique. Aux termes de l'accord qui en a résulté, les Polonais seront appelés aux urnes au mois de juin. Trente-cinq pour cent des sièges de la Chambre basse sont ouverts aux suffrages (le parti communiste au pouvoir a la mainmise sur le reste) ainsi que tous ceux de la Chambre haute. Le gouvernement, même s'il ne peut perdre le pouvoir, devrait essayer de séduire revêts au cours de ces élections. Bien qu'elle tende à rester dans le Pacte de Varsovie, la Pologne cherche à participer davantage aux discussions paneuropéennes sur la sécurité. En particulier, le gouvernement souhaite que soit établi en Pologne un centre de guerre où seraient centralisées toutes les informations sur les forces présentes en Europe et sur leurs mouvements. □

en tant que systèmes ABM potentiels seraient efficaces contre les satellites, alors qu'elles risqueraient de ne pas l'être contre des missiles. Les États-Unis dépendent grandement de satellites pour les communications militaires. L'alerte rapide et la navigation, ainsi que pour les utilisations civiles.

Pour cette raison, les avantages d'une course aux systèmes ASAT avec l'Union soviétique seraient mitigés. Alors que M. Carlucci et le Pentagone insistent sur la nécessité de réorienter certains projets de la Guerre des étoiles pour construire de nouveaux systèmes anti-satellites, d'autres font valoir que la meilleure protection serait de négocier une interdiction de ces derniers. La plupart des satellites américains sont placés en orbite haute et, pour le moment, hors de portée des systèmes ASAT soviétiques élémentaires. Au centre du débat se trouve le nouveau système ASAT déployé en haute altitude, afin d'assurer aux deux camps une capacité d'alerte et de communication en cas de conflit nucléaire.

**L'OTAN : la crise de la quarantaine**

On se rappellera le quarantième anniversaire de l'OTAN en mai 1993. La controverse ne sur les forces nucléaires à courte portée (FNC). La controverse ne cesse de s'amplifier depuis la signature du Traité sur les forces nucléaires intermédiaires (FNI) qui supprime les missiles ayant une portée de 500 à 5 000 km. Pour l'OTAN, cela laisse en place diverses armes nucléaires pouvant être montées sur des avions, des missiles de croisière mer-sol, ou des missiles sol-sol *Lance* (engins de courte portée). Après la signature du Traité sur les FNI, les États-Unis, avec le ferme soutien du premier ministre britannique, Mme Margaret Thatcher, entendent donner au missile *Lance* un successeur qui serait doté d'une ogive plus précise et à plus longue portée, soit environ 450 km. Ce nouveau missile serait déployé graduellement, vers 1995, quand le missile *Lance* arrivera à la fin de sa vie utile.

facilement déjouées si les Soviétiques fabriquent des propulseurs à combustion rapide dont les moteurs n'auraient besoin de tourner que pendant quelques secondes, voire moins. Le nouvel argument est la pollution de l'espace. Des dizaines de milliers de nouveaux objets accroîtraient énormément les risques de collision et la destruction accidentelle de satellites ajouterait à la ferraille déjà présente là-haut.

**Les systèmes anti-satellites (ASAT) – Les cousins de province**

Dans son dernier rapport au Congrès, le secrétaire d'État sortant à la Défense, M. Frank Carlucci, fait grés, le secrétaire d'Etat sortant à la Défense, M. Frank Carlucci, fait l'apologie des armes anti-satellites. «... une gamme complète de moyens ASAT est essentielle, a-t-il déclaré, si nous voulons empêcher les Soviétiques d'employer au détriment de nos forces des systèmes spatiaux hostiles. » Les armes anti-satellites paieraient rapidement de retour les recherches menées dans le cadre de l'IDS, puisque beaucoup d'armes actuellement mises au point

révolutionnaires à grand angle. Ces petites fusées pourraient fonctionner sans l'aide de capteurs et des systèmes de communications montés sur satellite qui ajoutent au coût et à la complexité de systèmes spatiaux actuellement à l'étude. En outre, elles seraient moins à la merci des contre-mesures. Dès qu'elles reprennent un tir de missiles ennemis, les fusées se mettraient sur leurs cibles pour les détruire pendant la phase lente du vol, à savoir celle de la propulsion. Selon le chet sortant du programme IDS, M. James Abrahamson, le programme «*brillant* *Fehibles*» coûterait environ 25 milliards de dollars US, soit l'équivalent de tout autre système importé tant ayant été mentionné jusqu'ici dans le cadre de l'IDS.

Cependant, hormis les objections familières, les critiques ont présenté un argument nouveau. Il se peut que ces fusées «*au QI élevé*» soient assez rapides pour intercepter les missiles soviétiques actuels pendant la phase de propulsion, mais selon certains scientifiques, elles seraient

95,6 millions de dollars, ou 0,9 p. 100, par rapport aux prévisions de dépenses de 1988. Cela représente une réduction de 575 millions par rapport au budget attendu pour 1989-1990, lequel devait, aux termes du Livre blanc, accorder une augmentation de 3,3 p. 100 pour compenser l'inflation, en plus des 2 p. 100 annuels. Le gouvernement a déclaré que le budget de défense baserait de 2,74 milliards de dollars au cours des cinq ans à venir, mais que pour l'exercice 1993-1994, soit à la fin de la période de réduction du déficit, il retrouvera le niveau de financement auquel il serait parvenu en vertu de la formule énoncée dans le Livre blanc (taux de croissance réelle de 2 p. 100 par an).

Ce revirement politique bouleverse la plupart des principaux programmes d'armement. Le programme des sous-marins nucléaires a été abandonné, ce qui met en suspens le programme de remplacement des trois sous-marins de la classe *Oberon* qui arrivent à la fin de leur vie utile. L'achat d'avions supplémentaires de patrouille maritime à grande autonomie. Le nombre des nouveaux chars pour les Forces canadiennes en Europe est réduit de moitié, et leur acquisition reportée au-delà de la date où, selon le Livre blanc, il faudrait rapatrier nos troupes, l'acte d'équipement approprié. L'achat de 820 véhicules tous terrains pour la Milice est coupé de moitié au moins, ce qui laisse supposer que les renforcements importants qu'il était prévu de fournir à cette dernière seront probablement moindres eux aussi, de 1 174 personnes, conformément à la promesse que le gouvernement avait faite de les augmenter, les nouvelles mesures préconisent une réduction de 2 500 personnes. Enfin, quatre bases militaires seront fermées ou ramenées à des tailles moins considérables au Canada.

Dans les prévisions budgétaires de la Défense, on peut lire que, malgré les baisses du financement à court terme, le Livre blanc reste un exposé précis de la politique de défense canadienne et de l'objectif que le gouvernement compte atteindre. Il n'y aura donc pas de révision officielle du Livre blanc, même si les réductions budgétaires en ont miné les principales propositions.

# A L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

## La Namibie

L'accord portant sur la mise en application de la résolution 435 du Conseil de sécurité, qui prépare l'accession de la Namibie à l'indépendance, a été unanimement salué comme témoignage de l'instauration d'un nouvel ordre mondial et d'un renforcement du rôle des Nations-Unies. Mais la résolution, qui est le fruit de près d'un quart de siècle d'efforts diplomatiques, s'est révélée plus difficile et plus embarrassante à mettre en oeuvre que ne l'avait d'abord prévu le Conseil. À peine la résolution 435 était-elle entrée en vigueur le 1<sup>er</sup> avril dernier que plus de 1 500 guérilleros de la SWAPO (*South West Africa People's Organization*) faisaient une incursion en territoire namibien, commettant ainsi ce qui semblait être une violation de l'entente négociée entre l'Afrique du Sud, Cuba et l'Angola, par l'intermédiaire des Etats-Unis. Par la suite, lorsque les troupes sud-africaines ont lancé leur attaque et abattu près de 200 guérilleros, on a bien cru que c'en était fini du plan d'indépendance. Pendant que les membres du Conseil de sécurité tenaient une série de consultations officieuses, le rôle des Nations-Unies faisait l'objet de critiques de plus en plus vives. Incapable pour ainsi dire de faire quoi que ce soit pour empêcher les forces sud-africaines de s'en prendre à la SWAPO, le Secrétaire général n'a eu d'autre choix que d'entériner, à contrecoeur, le geste d'apartheid que l'ONU a déclaré de l'application de la résolution 435 jusqu'à la fin des préparatifs, mais les diplomates redoutaient que le moindre report menaçât l'intégrité du plan d'indépendance et donne à certains l'idée d'exiger d'autres changements. «Tout le monde savait que l'installation du GANUPT ne serait pas achevée le 1<sup>er</sup> avril; nous savions aussi, qu'au fil des mois, il y aurait des violations, mais personne ne les

prévoyait. C'est pourquoi nous sommes tous conscients du fait que l'ONU a été critiquée, que la réputation de l'Organisation a été ternie», a fait remarquer à l'époque un diplomate canadien. «Mais la question est de savoir ce que nous allons faire à présent et comment nous allons rétablir sa crédibilité». Pendant ce temps, aux Nations-Unies comme dans les capitales indépendantes, des pressions étaient exercées dans les coulisses sur les différentes parties au différend, notamment sur la SWAPO et l'Afrique du Sud, en vue de permettre le retour des rebelles en Angola. Parallèlement, les diplomates se sont mis à réfléchir et à s'interroger sur ce qui avait bien pu se passer. La résolution 435 prévoyait à l'origine le déploiement de 7 500 militaires suisses, mais ce nombre a par la suite été ramené à 4 650, à la demande pressante des Etats-Unis et de l'URSS, qui jugeaient inutile d'envoyer un contingent aussi important et y voyaient une dépense superflue. Après les querelles dans lesquelles s'est embourbé le processus d'autorisation budgétaire, il ne restait plus grand temps pour ex-pédier des militaires onusiens. Au 1<sup>er</sup> avril, il n'y avait en Namibie que 900 membres du Groupe d'assistance des Nations-Unies pour ce

période de transition (GANUPT), et pratiquement aucun dans le nord du pays, à l'endroit où les rebelles de la SWAPO avaient franchi la frontière. «J'ai répété à maintes reprises qu'il fallait au minimum six à huit semaines pour garantir le succès absolu de l'opération, or, ce délai a été ramené à quatre semaines», a déclaré le Secrétaire général Javier Pérez de Cuéllar devant le Conseil. En théorie, le Conseil aurait pu différer l'application de la résolution 435 jusqu'à la fin des préparatifs, mais les diplomates redoutaient que le moindre report menaçât l'intégrité du plan d'indépendance et donne à certains l'idée d'exiger d'autres changements. «Tout le monde savait que l'installation du GANUPT ne serait pas achevée le 1<sup>er</sup> avril; nous savions aussi, qu'au fil des mois, il y aurait des violations, mais personne ne les

prévoyait. C'est pourquoi nous sommes tous conscients du fait que l'ONU a été critiquée, que la réputation de l'Organisation a été ternie», a fait remarquer à l'époque un diplomate canadien. «Mais la question est de savoir ce que nous allons faire à présent et comment nous allons rétablir sa crédibilité». Pendant ce temps, aux Nations-Unies comme dans les capitales indépendantes, des pressions étaient exercées dans les coulisses sur les différentes parties au différend, notamment sur la SWAPO et l'Afrique du Sud, en vue de permettre le retour des rebelles en Angola. Parallèlement, les diplomates se sont mis à réfléchir et à s'interroger sur ce qui avait bien pu se passer. La résolution 435 prévoyait à l'origine le déploiement de 7 500 militaires suisses, mais ce nombre a par la suite été ramené à 4 650, à la demande pressante des Etats-Unis et de l'URSS, qui jugeaient inutile d'envoyer un contingent aussi important et y voyaient une dépense superflue. Au 1<sup>er</sup> avril, il n'y avait en Namibie que 900 membres du Groupe d'assistance des Nations-Unies pour ce

## L'Afghanistan

Si au cours des derniers mois, le Conseil a porté l'essentiel de son attention sur la situation en Namibie, il s'est aussi penché sur d'autres questions. Vers la mi-avril, il s'est réuni à la demande de l'Afghanistan, qui accusait le Pakistan d'ingérence dans sa politique et d'agression militaire. L'Afghanistan a en outre reproché aux Etats-Unis d'avoir été l'instrument de l'expansionnisme pakistanais. Les accusations d'ingérence ont été prononcées au moment où l'on rapportait que les Etats-Unis venaient en aide aux moudjahidins afghans et que des avions chargés de matériel de guerre soviétique arrivaient presque quotidiennement à Kaboul. Le Pakistan a rejeté les imputations, accusant à son tour l'Afghanistan de ne pas vouloir admettre la réalité politique ni reconnaître le régime de Kaboul était inacceptable pour le peuple afghan. Le Pakistan a ajouté qu'il n'y aurait ni paix ni stabilité en Afghanistan tant que le régime en place ne céderait pas le pouvoir à un gouvernement élu démocratiquement. L'ambassadeur du Canada auprès des Nations-Unies, M. Yves Fortier, a déclaré dans une allocution que, sans une requête émanant de l'ensemble du peuple afghan, le Conseil ne pourrait pas faire grand-chose pour aider l'Afghanistan à se doter d'un gouvernement représentatif et à répartir ses millions de réfugiés. «Mon gouvernement est persuadé que c'est au peuple afghan qu'il appartient de décider de son avenir collectif, sans intervenants de l'extérieur», a déclaré M. Fortier devant le Conseil. Interrogé ensuite sur la question de savoir s'il entendait par «intervenant» l'Union soviétique, non seulement le Pakistan a refusé de reconnaître l'existence de la situation, mais il a déclaré que le Pakistan n'avait aucune mesure immédiate relativement à la plainte du Panama; si une résolution ou autre avait été présentée, il est presque certain, de toute façon, que les Etats-Unis y auraient opposé leur veto. □

## Autres questions

Le Conseil a également abordé la question de la guerre civile qui continue de faire rage au Liban. Une fois de plus, il a lancé un appel au cessez-le-feu. Après une courte accalmie, les combats ont repris entre les troupes syriennes et leurs alliés, d'une part, et les forces chrétiennes, d'autre part. Dans sa déclaration, le Conseil a par ailleurs souscrit aux efforts de la Ligue arabe pour tenter de résoudre le conflit. Le 28 avril, le Conseil a été saisi d'une plainte déposée par le Panama, qui accusait les Etats-Unis d'ingérence flagrante dans son économie et dans son système politique. Il avait été rapporté que le gouvernement américain avait autorisé la constitution d'un fonds secret pour acheter 10 millions de dollars aux candidats de l'opposition panaméenne aux élections du 7 mai. Au cours d'un débat, les Etats-Unis ont nié l'existence d'un quelconque complot contre Panama. Ils se sont défendus en affirmant que l'homme fort du régime, le général Manuel Antonio Noriega, était librement résolu à fausser les élections dans son pays. Le Conseil n'a pris aucune mesure immédiate relativement à la plainte du Panama; si une résolution ou autre avait été présentée, il est presque certain, de toute façon, que les Etats-Unis y auraient opposé leur veto. □

## Le Moyen-Orient

En février, le Conseil s'est réuni officieusement pour débattre de la situation dans les territoires oc-

ORS D'UNE RÉCENTE CONFÉRENCE TENUE À

Nakhodka, en Sibirie extrême-orientale, un certain nombre d'universitaires et de de-

clureurs soviétiques ont exprimé la crainte que la politique étrangère de leur pays échoue. Ils

sont en effet persuadés que l'Occident risque de

laisser passer une occasion unique de redéfinir

entièrement ses relations avec leur pays. En fait, à

l'Occident risquerait fort d'entraîner un renver-

sement de la politique qu'accueille de

batchev au pouvoir. Néanmoins, une approche

occidentale écartée pourrait en même temps faire

avancer les intérêts occidentaux et renforcer les

tendances saines de la politique du Kremlin.

Si M. Gorbatchev maintient le même cap, nous

assisterons probablement à une succession de

désengagements au tiers-monde. Les dirigeants

occidentaux, qui ne peuvent que se rejouer de tels

événements, ont, de fait, manifesté un optimisme

puident face au retrait d'Afghanistan et aux inter-

ventions soviétiques pour que les Cubains quit-

tent l'Angola, et les Vietnamiens, le Kampuchéa.

Cependant, la question cruciale est de savoir com-

bien de temps encore Moscou endurera cette série

de retraites unilatérales et les coups qu'ils portent

au prestige de l'Union soviétique dans le monde.

Washington s'est trouvé confronté à un pro-

blème similaire après la chute de Saïgon. Les

Etats-Unis s'agitaient qu'une défaite au Vietnam conduise l'URSS à douter de la résolution et de la capacité américaines à résister dans l'avenir à l'expansionnisme soviétique. Partant du principe que leurs alliés de l'OTAN et le Japon doute- raient des garanties de sécurité qu'ils offraient, ils avaient prédit que leurs alliés autour du globe, sentant l'impuissance américaine, s'accommoder- raient de la menace soviétique au lieu de s'y opposer aux côtés de Washington.

IL N'EST QUE RAISONNABLE DE SUPPOSER QUE Moscou éprouve les mêmes inquiétudes à mesure que ses alliances se défont dans le monde. Les pressions que le Kremlin exerce sur le Vietnam au sujet du Kampuchéa n'accroîtront pas ses chances de maintenir une présence militaire dans la baie de Cam Ranh. Ses efforts pour favoriser un règlement du conflit entre la Namibie et l'An- gola n'apparaîtront pas comme une preuve de fer- meté aux yeux du gouvernement mozambicain luttant contre les insurgés de la RENAMO (mou- vement de résistance du Mozambique) appuyés par l'Afrique du Sud, pas plus qu'ils ne convain- cront les combattants de l'ANC (African National Congress) en Afrique du Sud que l'URSS sou- tient leur cause. Quand les Etats-Unis ont connu ce problème d'image, ils ont choisi une approche unilatérale. Leur méthode la plus efficace a été de soutenir des pays naturellement enclins à résister à l'URSS, comme la Chine, par exemple (cette alliance a aidé à détruire chez les Soviétiques toute illusion que les Américains renouaient à leur position en Asie).

Dans d'autres parties du monde, la Maison-Blanche a trouvé des puissances régionales, comme l'Iran, disposées à contre tout empiète- ment soviétique. Bien que la politique des «places fortes» régionales se soit finalement révé- lée inefficace, à l'époque où ces alliances se sont

# L'OUEST EST-IL EN TRAIN DE

## RATER

### LE COCHE ?

En affaiblissant trop de réserve face

à la nouvelle politique étrangère

de M. Gorbatchev, les pays

occidentaux n'aideront la cause

de personne.

PAR TED HOPF

Formées, l'URSS y a vu la preuve que les Etats-

Unis souhaitaient réaffirmer leur engagement

après avoir été humiliés dans le Sud-Est asiatique.

Enfin, et c'est un point trop souvent écarté à la

légère, les dirigeants américains n'ont pas cessé

de répéter que le retrait du Vietnam n'avait mar-

qué aucune perte de puissance ni aucune diminu-

tion de la détermination à utiliser cette dernière.

À en juger par les déclarations de M. Gor-

batchev et Chevardnadze et d'autres décideurs

soviétiques en matière de politique étrangère,

celle-ci a opté pour un antidote différent pour ré-

gler son problème de crédibilité, ce qui a des con-

séquences heureuses pour l'Occident, à condition

encore que ce dernier réponde d'une manière

autorisant les Soviétiques à abandonner leurs po- sitions sans trop avoir à perdre la face. M. Gor- batchev affirme que les jours de l'unilatéralisme en politique internationale sont révolus et que les conflits régionaux ne se résoudront qu'à la table

parellel affirmation en la taxant de simple bla-bla dans un soudain accès d'activité diplomatique. Les Etats-Unis avaient tenté de rétablir leur crédibilité en envoyant des armes à leurs amis, mais l'Union soviétique, dans certains cas du moins, a laissé ses alliés se débrouiller seuls. Le Mozambique est resté virtuellement sans défen- ses face aux attaques répétées des guérilleros de la RENAMO. Moscou a refusé à la Syrie des missiles perfectionnés capables d'atteindre Israël. Dans les deux cas, Moscou n'a pas tenu compte des obligations militaires que lui imposaient les traités d'amitié et de coopération.

Sur le plan diplomatique, l'URSS préconise, pour régler les conflits régionaux une démarche

gocitations avec l'Afrique du Sud. M. Chevard-

nadze et M. Igor Ligatchev, membre du Politburo

et principal rival de M. Gorbatchev, ont tous deux

pressé les dirigeants vietnamiens de modérer

leurs positions dans leurs pourparlers avec les

guérillas opposées au gouvernement kampou-

chéen. La décision de l'Organisation de la libéra-

tion de la Palestine (OLP) de reconnaître Israël

tient probablement, en partie, au fait que M. Gor-

batchev a personnellement reproché à Yassor

Arafat d'avoir fait obstacle, par la position an-

tiérieure de l'Organisation, à un juste règlement

du conflit au Moyen-Orient.

Comment l'Occident, et les Etats-Unis en par-

ticulier, peut-il accroître les chances pour que

cette tendance bienvenue se poursuive ? L'Occi-

dent devrait tout mettre en oeuvre pour amener

l'URSS à participer à des négociations sur le

Moyen-Orient, l'Afrique australe, le Golfe per-

sique, l'Asie du Sud-Est et l'Amérique centrale.

Dans ce dernier cas, la future politique du Krem-

lin en ce qui concerne l'aide militaire au Nicara-

gua servira de test révélateur pour juger de la

volonté de M. Gorbatchev de favoriser le régle-

ment négocié de ces conflits.

L'Occident devrait encourager la préférence

de M. Gorbatchev pour les solutions multi-  
latérales au problème de crédibilité de son pays,  
et ce, pour trois raisons. D'abord, une attitude oc-  
cidentale bienveillante incitera les Soviétiques à  
consacrer leur énergie à autre chose qu'à chercher  
dans de nouvelles équipes à l'étranger un moyen  
de redorer leur blason. Ainsi, les Occidentaux  
libéreront gracieusement M. Gorbatchev de ses  
apportées préserver leurs intérêts.  
Ensuite, le règlement de ces conflits supprimera  
un obstacle de taille au renforcement de la dé-  
fense. Il se peut fort bien que le soul de M. Gor-  
batchev de limiter les dépenses militaires via la  
limitation des armements soit précisément ce qui  
dicte la modération de l'URSS dans le tiers-  
monde. L'Occident devrait utiliser à son propre  
avantage l'ordre des priorités du premier secré-  
taire soviétique.  
Enfin, si l'on croit que les réformes intérieures  
en URSS (*perestroïka, glasnost, et démocratiza-*  
*stiya*) s'opèrent dans l'intérêt des Occidentaux,  
alors il est essentiel que l'Ouest aide M. Gor-  
batchev à parer les attaques de ses propres col-  
lègues plus orthodoxes. Les conservateurs du  
Politburo soulignent à n'en pas douter de  
sérieuses réserves à propos d'une politique  
étrangère qui ne semble rien faire d'autre que  
passer de concession unilatérale en concession  
unilatérale. Ces conservateurs proposeraient  
volontiers un durcissement des positions sovié-  
tiques non seulement au Moyen-Orient ou en  
Afrique australe, mais aussi sur des questions es-  
sentielles comme la limitation des armements ou  
les droits de la personne. Une réaction occiden-  
tale constructive à la politique étrangère de  
M. Gorbatchev peut non seulement réduire l'ac-  
tivismisme soviétique dans des domaines importants  
pour l'Occident, mais également aider à protéger  
M. Gorbatchev contre les attaques de ceux qui  
aimeraient retourner aux jours de la stagnation  
brejnevienne, à l'intérieur des frontières, et de  
l'aventurisme, à l'extérieur. □

# J. KING

**6861-0061**

*J. King Gordon, éminent  
journaliste, éducateur*

est décédé le 24 février

*quatre-vingt-neuf ans.*

Clyde Sanger était un ami et collègue de King Gordon.

UN HOWMAGE DE  
CLYDE SANGER

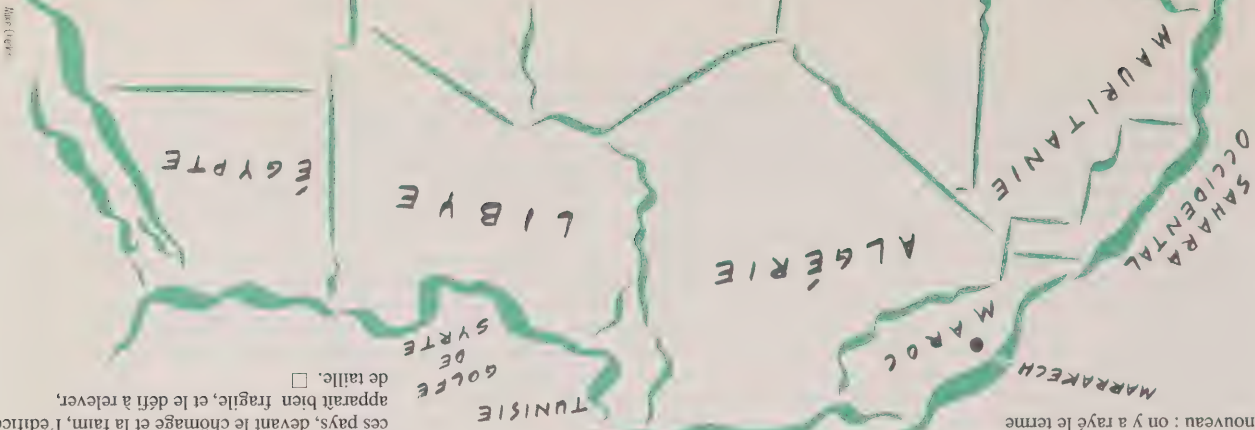

UNAD DISPARAIT UN PERSONNAGE EXTRAORDI-  
d'Hamlet (à son ami Horatio au sujet de son  
père) : « C'était un homme, un vrai; prenne-le  
quel comme ça. Jamais je ne reverrai son père »  
Mais quand on lit le Canada de ne jamais  
revoir de gens comme King Gordon, Frank Scott et  
d'autres de la même génération! Nous avons un tel be-  
soin d'hommes et de femmes de ce calibre!  
Qu'est-ce qui rendait King Gordon si cher à tant de  
gens ? Quelques bonnes pensées ont été émises à la  
messe commémorative célébrée à Ottawa en son hon-  
neur. Le député David MacDonald a choisi de parler de  
«déclaration dans la vérité» pour qualifier la vie que  
Gordon consacra à explorer la vérité, à l'affronter et à la  
révéler. Pointilleux sans être jamais pdaant, King avait  
d'abord été professeur d'éthique et ministre de l'Église  
Unité avant de se lancer dans le journalisme. Il éprouvait  
de toute évidence un sentiment de joie et de délectation  
à exprimer clairement des idées nouvelles et impor-  
tantes. Il évoquait un nouffant de Jimmy des anecdotes sur  
de grands hommes comme le père Jimmy Tompkins  
d'Antigonish, Cookie Lavagetto ou encore Dag Ham-  
marskjöld (en particulier sur celui-ci, sur Tommy Burns  
et sur tous ceux qui avaient participé aux opérations de  
maintien de la paix des Nations-Unies). De tous les gens  
que j'ai connus, King Gordon était le seul à toujours  
avoir sur lui un exemplaire de la Charte de l'ONU. Ap-  
paremment, ce document était pour lui aussi important  
que le Nouveau Testament avait dû l'être pour son  
célèbre père.

et il y avait aussi ce sentiment d'appartenir à une  
 Gordon, qui parlait gaélique, avait quitté les hautes  
 terres d'Ecosse pour devenir pasteur presbytérien à  
 Gengarry, dans l'est de l'Ontario. King avait écrit en  
 1984 qu'il avait toujours plus ou moins considéré cette  
 région comme sa terre natale. Mais en fait, son cœur  
 l'Ontario, dans son île baptiste Birkmead, c'était là  
 que son père, un président presbytérien qui avait mené  
 son église à l'Union en 1925, avait écrit une grande par-  
 tie de ses sermons sous le pseudonyme de Ralph Connor.  
 et c'est dans cette région que King lui-même avait en ce  
 qu'il avait qualifié de «léger accrochage avec la GRC». Pendant l'été 1960 (alors que tout le monde s'inquiétait  
 demandant à King d'entrer en contact avec les Nations-  
 Unies. Et trois jours plus tard, celui-ci ne payait plus  
 retrouver sur la rivière Congo, à bord d'un traversier  
 qui l'amenait vivre bien des aventures en qualité  
 d'agent d'information pour les Nations-Unies. Ne dirait-on pas que King a vécu une vie passion-  
 nante, dans un cadre privilégié et sécurisant ? Tel a ef-  
 fectivement été le cas, dans une certaine mesure, et nul  
 doute que ses contacts lui ont souvent été utiles. Mais  
 moniques que King s'en est en fait servi pour semer des  
 idées progressistes et influencer la façon de penser des  
 décideurs, et non pour essayer de se hisser au pinacle de

présentation d'un modeste journaliste. King était un homme d'État, un diplomate, un homme d'État. Il n'était pas un journaliste. Sa modestie nous a tous fait sourire.

DANS LES ANNÉES 1920, ALORS QU'IL ÉTAIT TITULAIRE d'une bourse Rhodes, il ne faisait pas partie du Club d'athlétisme de l'Université. Avec Graham Spry, George Ferguson et d'autres, il a préféré former le groupe «Oh Canada!», dont les idées étaient plus conformes au futur Statut de Westminster. Dans un mémoire intitulé «Fifty Years On» (*Saturday Night*, juillet 1983), Eugene Forsey a évoqué de façon désopilante le rôle que Gordon joua aux côtés de Frank Underhill dans l'élaboration du projet de manifeste de Regina pour la première convention du CCF (*Co-operative Commonwealth Federation*). Et King était bien entendu de la partie à la naissance des Nations-Unies, en qualité de directeur-général en chef de la Nation, puis à titre de premier correspondant de Radio-Canada, jusqu'à son entrée en 1950 au Secrétariat de l'ONU. Il a participé, à plus d'un titre, à des événements comme la signature de la Déclaration universelle des droits de l'Homme, le rapatriement de 60 000 prisonniers de guerre de retour d'Union soviétique, le rétablissement de la Corée après une guerre désastreuse, l'envoi de forces de maintien de la paix dans le Sinaï et les opérations civiles au Congo. Au-delà de son indéniable foi dans les mérites des Nations-Unies, King Gordon était intimement convaincu que, si seulement les puissances moyennes unissaient leurs efforts, elles feraient beaucoup pour rendre le monde à la raison. Elles s'étaient réunies à San Francisco pour modifier la version provisoire d'une Charte internationale des puissances avait été conçue à Dumbarton Oaks – et King les avait déjà vues à l'œuvre dans le Sinaï et au Congo. Il avait fait de Mike Pearson et de Dag Hammarskjöld ses héros, deux personnages indispensables mais téméraires, tous deux originaires de puissances moyennes. La Conférence sur le droit de la guerre avait été pilotée par des avocats qui venaient, eux aussi, de tels pays. King avait souvent écrit sur le rôle du Canada en tant que puissance moyenne et, tel un Ulysse des temps modernes, il avait parcouru les mers du monde pour ajouter à plusieurs conférences *Pace in Maribus* ses paroles de sagesse. «Venez, mes amis. Il est encore temps de chercher un monde plus neut.»

EN 1985, LORS D'UNE ASSEMBLÉE DU GROUPE DES 78 à Stonely Lake, il avait évoqué ce matin où, pendant la guerre, dans une maison d'édition de New York, son collègue le poète Stephen Vincent Benet avait fait irruption en s'écriant : « Il faut déchirer toutes ces mappemondes. » Il avait aussi repris la remarque de Sonny Rikhy sur la première photographie de la terre prise depuis l'espace : «Le monde est non seulement rond, mais il forme aussi un tout.» King ne se lassait pas de parler de «biens» : Nord et Sud, opérations de maintien de la paix, Nouvel Ordre international, et droits de la personne. Mais pour lui, il ne s'agissait pas simplement de «biens»; le monde formait un tout. Tout comme on sent du terme, un véritable tout. □

avant la pauvreté endémique se vivant dans tous ces pays, devant le chômage et la faim, l'édifice apparaît bien fragile, et le défi à relever, de taille. □

Pour les dirigeants maghrébins, l'UMA non avec l'UMA.

Elle pourra sans doute bénéficier d'autres économiques viables.

A cet égard, peu après la signature du traité d'association L/U.M.A., les États du Conseil de coopération arabe, organisation constituée cette année à Bagdad et regroupant l'Irak, l'Égypte, leur intention d'établir des relations de coopération

Troisième question : qu'advient-il si l'UMA n'arrive pas, selon l'expression de la revue *The Economist*, à apporter du « consensus sur toutes les tables » ? Si les problèmes que vivent quotidiennement les Maghrébins ne sont pas réglés, si l'UMA ne contribue pas au mieux à être des familles, elle sera perçue comme un échec. Le marché européen unique, dont la mise en oeuvre doit avoir lieu en 1992, est une menace économique qui a poussé les chefs d'Etat du Maghreb à s'unir ; il faudra que l'UMA démontre effectivement qu'elle peut être un partenaire

Aucune autre rencontre entre Hassan II et le Front Polisario n'a suivi celle de janvier 1989, aucune négociation ne s'est poursuivie entre les deux camps et la date du référendum n'a pas été fixée.

Deuxièmement, si les membres de l'UMA ne réussissent pas à maintenir la stabilité sociale à l'intérieur de leurs frontières, ils seront peut-être obligés de se concentrer sur leurs problèmes in-

de nous ce que vous voulez». Si les premiers pas sont faits, la partie est loin d'être terminée au Sahara occidental. Le bon déroulement du référendum est un condition sine qua non pour que le Front Polisario accepte les

avaient proposé pour la première fois en 1976 que l'Algérie permette au peuple saharoui de décider lui-même de son sort. Lorsque l'hebdomadaire français *Le Point* (30 janvier 1989) lui a demandé si l'Algérie ne perdait le référendum, le président de la République a répondu au cours d'une conférence : « Si le vote s'est déroulé en toute liberté, nous nous présentons aux autorités marocaines et leur disons : Nous sommes Marocains, faites

Ce n'est que tout récemment que le roi Hassan II a accepté de rencontrer les dirigeants de l'organisation saharouie. Il a donné son aval à la tenue d'un référendum que les Nations-Unies avec le Front Polisario depuis lors.

D'abord, un conflit persiste qui, lui, pourrait trop de questions demeurent en suspens. L'Organisation : le conflit au Sahara occidental. Le Maroc revendique l'ancienne colonie espagnole depuis 1976 et il mène un conflit armé

LENTHOUSISME DES DIRIGEANTS MAGHRÉBINS NE  
suffit pas pour que l'on applaudisse à leurs initia-  
tives. Il existe plusieurs ombres au tableau, et

Par ailleurs, on a confié à l'Union le mandat d'engager une politique commune dans divers domaines afin de veiller à la réalisation du développement industriel, agricole, commercial et social des États membres. Il faut comprendre que l'U.M.A. est une véritable organisation ayant ses propres structures, ses comités, ses conseils. Le président de l'État des pays membres occupe et les chefs d'État des pays membres occupent le poste à tour de rôle; le président est actuellement

de rapprochement des dirigeants maghrébins et pour cela, il est vrai que le traité concrétise les énormes efforts diplomatiques déployés depuis des mois. Le texte de la déclaration officielle affirme que l'Union est un « ensemble solide » qui contribue à l'« enrichissement du dialogue international ». L'UMA veillera de plus à renforcer « l'indépendance des pays du Maghreb arabe unitaire et à sauvegarder leurs acquis ». Elle devra en outre « agir de concert avec la collectivité internationale, en faveur de l'instauration d'un ordre mondial où prédomine la justice, la dignité, la liberté les droits de l'Homme, et marqué par la

Le U.M.A., ce qu'il faut, bien sûr, rester à voir. Samedi 18 février, la Presse de Tunis jubile. A une, en lettres bleues, un immense titre le confirme : « Le Maghreb uni ». Pour le président. Ben Ali, « l'agit d'un choix politique fondamental. Mais qu'on lui signe, au fait, ces chets d'Eia ? L'Union vient d'abord consolider les intentions

socialisme, on a mis un an au régime absolu du P.L.N. en intégrant le multipartisme, et l'on a réduit le rôle de l'armée.

De nombreux observateurs ont soutenu que le gouvernement algérien, trop préoccupé qu'il est à résoudre ses problèmes internes, délaissera

Le président Chadli a choisi la voie la plus sage : il a promis d'être à l'écoute de son peuple. Ce dernier a du reste réélu massivement en décembre 1988 à la tête du pays. Pour accéder véritablement aux demandes des Algériens, le gouvernement devait également élaborer une nouvelle constitution : elle fut adoptée au cours d'un référendum en février 1989. Elle répond ainsi aux desirs de changement et de renouveau : on y a rayé le terme

En réalité, les émeutes étaient prévisibles; le parti-Etat, avec sa structure vieillotte modelée à l'image soviétique, tournait en rond. En privatisant l'industrie lourde basée sur les hydrocarbures, en faisant de ce secteur la principale source de recettes (95 p. 100 de l'Erat, le FLN a causé plus de tort que de bien au pays; lorsque le prix du brut a chuté en 1986, le chaos économique était inévitable. Les quelques réformes apportées par le gouvernement n'ont aidé en rien : les Algériens, dont les deux tiers sont nés après 1962, année de la proclamation de l'indépendance, avaient faim, ils étaient avides de renouveau et de liberté, et ils manifestèrent leur colère contre la profonde dont les sources vomi bien

Si LA L'UNION A REUSSI A MODIFIER SES STRUCTURES politiques-sociales sans effusion de sang, il en est tout autrement pour l'Algérie. Certes, le 22 février dernier, les Algériens se sont dotés d'une nouvelle constitution, mais à quel prix ? Ils ont tous près d'un milliard les couteux qui marquent le mois d'octobre 1988; en tous cas ils n'ont pas oublié la violence avec laquelle le régime a tenu de les réprimer : arrestations arbitraires, coups et tortures. Une réaction qui a semé la stupeur tant à l'intérieur qu'à l'extérieur du pays : comment le FLN (Front de la libération nationale) le parti qui avait pourtant mené son peuple à l'indépendance, a-t-il pu agir de la sorte et

pour la première fois de leur histoire. Le président Ben Ali, seul candidat en lice, a recu plus de 99 p. 100 des suffrages. L'Assemblée législative tunisienne n'a pas été modifiée : les 141 sièges sont allés au parti au pouvoir, le Rassemblement constitutionnel démocratique (RCD). Les partis d'opposition ont critiqué le déroulement des élections : si le multipartisme est désormais permis en Tunisie, il faudra attendre encore pour que les diverses formations politiques participent de plain-pied aux rouages de la démocratie et aient des représentants élus à la Chambre.

Les Tunisiens ont été appelés à élire leur président

*sur toutes les tables ?*

PAR JULIE MORIN

des jeunes a peine sortis des institutions scolaires, voilà, Ben Ali n'est pas Bourguiba : les querelles entre Kaddafi et l'ancien président tunisien sont motorisées et on se souvient que leurs relations se sont refroidies à maintes reprises, jusqu'à la rupture des relations diplomatiques en septembre 1985. Le nouveau régime, obliant les querelles passées, entend donc entretenir de bonnes relations avec la Libye, malgré certaines divergences qui séparent les deux gouvernements. À Tunis, comme ailleurs, on se méfie des élans excessifs

de Kaddafi.

Un an plus tard, soit le 16 mai 1988, l'Algérie

et le Maroc ont repris leurs relations diplomatiques. En février dernier, tout juste avant le sommet, Hassan II a reçu le président Chadi!

Bendjedid, puis le 3 mars dernier, les deux chefs d'Etat ont réglé un litige frontalier en ratifiant la Convention de 1972 qui délimitait des centaines

de kilomètres de frontière entre les deux pays. Ce tournant décisif dans les relations entre l'Algérie et le Maroc a eu tout de même une conséquence

fâcheuse : l'isolement du Front Polisario. L'Al-gérie a signé l'article 15 de la constitution de l'UMA qui stipule que « les États membres s'en-

gagent à ne tolérer sur leur territoire aucune activité ou mouvement pouvant porter atteinte à la sécurité ou à l'intégrité territoriale d'un Etat

compte sur l'aide algérienne.

Quant à la méditerranée, a qui l'Espagne avait cédé la partie sud du Sahara occidental, elle a signé un traité de paix avec le Front Polisario en

BN KHALDOUN, CÉLÈBRE HISTORIEN ET SOCIO-  
logue tunisien du XIV<sup>e</sup> siècle, dans sa magis-  
trale *Histoire des Berbères*, rappelle que les  
Arabes avaient nommé «Maghreb» (Occi-  
dent) tout le territoire situé à l'ouest du golfe de  
Syrie, et «Machreb» (Orient), les terres situées à  
l'est. Le Grand Maghreb regroupe aujourd'hui  
cinq pays : la Libye, la Tunisie, l'Algérie, le  
Maroc et la Mauritanie. Leurs chefs d'Etat sont,  
respectivement, le colonel Mouammar Kaddafi,  
le président Ben Ali, le président Chadli Benja-  
bid, le roi Hassan II et le colonel Ould Taye.  
Le récit d'Ibn Khaldoun tend compte d'un

passés riches et tumultueux, un passé qui a laissé de profondes empreintes similaires çà et là au Maghreb : les dialectes près, la même langue, soit l'arabe. Ce sont les contours profondément musulmans, leurs minarets, insérés au cœur des villes, appellent les fidèles à la prière, de la Méditerranée jusqu'aux confins du désert. Ce sont des pays riches, qui malgré leurs luttes, querelles et différends, rêvent longtemps d'une union. Il a fallu attendre le Sommet de Marrakech, qu'on eût les dirigeants maghrébins en février 1989, pour que l'idée d'une union, d'un Grand Maghreb qui réunirait les cinq pays, vint finalement au jour. La concrétisation de l'Union du Maghreb arabe (UMA) a toutefois suivi une route sinueuse et

En décembre 1988, un an après la reprise des relations diplomatiques entre Tunis et Tripoli, la capitale de l'Etat tunisien accueillait le leader de la révolution libyenne. C'était la première visite officielle de Kadhafi en Tunisie depuis la déchéance de Bourguiba et l'accession de Ben Ali au pouvoir, en

novembre 1987.

Le chef d'Etat libyen est reparti trois jours plus tard après avoir tenu des propos qui ont choqué quelque peu : il s'en est pris aux pays occidentaux, en particulier aux Etats-Unis, et a commandé à Yasser Arafat qui avait reconnu l'Etat d'Israël. Sa visite a toutefois été des plus fructueuses : le colonel a accordé à la Tunisie des subventions importantes. Les deux chefs d'Etat ont conclu un accord pour la réalisation de projets que les deux pays voisins avaient laissés en suspens, comme par exemple la construction

La Tunisie ne pouvait demander mieux. Le pays, comme du reste tous les pays du Maghreb, est rattrapé par une dure crise économique. Le taux de chômage est élevé, et la Tunisie se retrouve avec un trop-plein de cadres, dont beaucoup sont

**Mario Proulx (Radio-Canada) :** On a eu l'impression, quand la nouvelle a été annoncée, que l'abandon des sous-marins nucléaires était en quelque sorte politique mais symbolique dans le sens où c'est impossible de couper l'aide moyen de rationaliser la mission confiée aux Forces canadiennes. Dans quelle mesure pensez-vous qu'elles soient déjà trop peu nombreuses pour rapport au travail à effectuer ? Et que pourrions-nous faire pour remédier à cela ?

**Fen Hampson :** Je suis d'accord avec vous pour dire que nous n'avons plus beaucoup de marge de manœuvre et que nous allons en avoir encore moins dans les années à venir. Je ne suis pas d'accord avec M. Ross, je ne pense pas que l'influence d'un pays dans la coopération internationale soit fonction de sa contribution financière, que ce soit à la défense de l'OTAN, au maintien de la paix ou à autre chose. Voilà une conception de l'influence qui ressemble à celle d'un comptable ...

Je pense que la plus grave menace qui pèse actuellement sur la sécurité internationale ne réside pas dans le conflit Est-Ouest. Certes, il y aurait là des possibilités de menaces, mais en réalité, ce qui met vraiment la sécurité internationale en péril, ce sont les conflits régionaux, à savoir les conflits qui éclatent pour la plupart dans le tiers-monde ... Un grand nombre d'entre eux portent que nous ne réduisons pas notre aide au développement, au moment justement où beaucoup de ces problèmes s'aggravent au lieu de se résorber.

**Mark Clark (Modèle 5) :** Je suis frappé de constater que les militaires canadiens se sont toujours efforcés d'inter à plus petite échelle les grandes puissances militaires en gardant une armée, une marine et une aviation raisonnablement complètes ... Seulement, je me demande s'il ne serait pas temps de renoncer à cette fiction et, peut-être, d'en jeter un peu par-dessus bord, de reconnaître que nous ne pouvons pas tout faire et conserver cette miniature des grandes puissances militaires du monde.

**Douglas Ross :** Je pense que vous avez tout à fait raison — il faut se délester de quelques sacs, si je puis dire, et peut-être que les forces terrestres ne vont plus servir désormais qu'à assurer le maintien de la paix à l'échelle internationale. Mais est-ce qu'on va nous donner les moyens de transport dont nous avons besoin pour emmener nos forces en Europe ? Non, certainement pas, du moins pas d'ici les quelques prochains budgets de ce gouvernement. L'Amérique du Nord est-elle plus menacée qu'apparaît sur le plan militaire ? Je le crois. En fait, la défense aérienne va se révéler être un véritable trou noir, qui va très probablement engloutir la totalité du budget de défense d'ici la fin du siècle. D'autant plus que le projet de mise au point des missiles de croisière avancée à grands pas ... Alors, nous allons avoir impérativement besoin d'un minimum de défense aérienne ... Sinon, nous pourrions toujours demander aux Américains de renforcer considérablement leur présence sur notre territoire pour nous fournir cette défense minimale.

**Kenneth Calder :** Je ne pense pas que nous soyons en position de jeter quoi que ce soit par-dessus bord. Je crois que nous allons probablement devoir faire les choses à une échelle un peu moins grande que prévu. Comment un pays borde de trois océans, qui a le littoral le plus long du monde, peut-il se passer de marine par exemple ? Comme Doug le faisait remarquer tout à l'heure, nous sommes effectivement menacés par les bombardiers et les missiles de croisière soviétiques. Comment le Canada peut-il se passer de défense aérospatiale et d'une forme ou d'une autre de forces aériennes ... ? Si nous n'avions rien d'autre au monde, nous voudrions probablement avoir une aviation, ne serait-ce que pour savoir ce qui se passe à l'intérieur du pays ... Comment pouvons-nous réduire nos effectifs en Europe alors que nous appartenons à une alliance collective sur laquelle pèse une menace conventionnelle d'envergure venant surtout du théâtre européen ... et plus particulièrement dans le contexte des négociations de la limitation des armements qui se déroulent actuellement en Europe ? Même au Canada, les participants de la limitation des armements reconnaissent qu'il est important de laisser nos forces en Europe et de continuer à faire partie de l'équation européenne.

**Kenneth Calder :** Ce que le gouvernement a dit, c'est que les paramètres du Livre blanc restent inchangés, qu'ils correspondent encore à sa politique. Vous vous êtes surtout attachés aux programmes qui ont été exposés dans le Livre blanc précité pour nous permettre d'atteindre ces objectifs. Le gouvernement dit la chose suivante : les objectifs restent valables. Je m'explique : en dépit de ces compressions budgétaires, la politique canadienne en matière de sécurité va continuer de reposer sur les trois piliers que sont la défense et la sécurité collective, la limitation des armements et le désarmement, et le règlement pacifique des différends ... Les programmes qui ont été reportés et suspendus ne l'ont pas été pour des raisons politiques, nous parce que les objectifs ont changé, mais parce qu'il n'y a pas d'argent. Si la situation mondiale avait suffisamment changé depuis 1987 pour justifier une analyse stratégique entièrement nouvelle alors, nous pourrions peut-être envisager d'écrire un nouveau Livre blanc. Or, nous estimons que cela n'est pas encore le cas. Contrairement à ce que disent un grand nombre de ses critiques, le ministère de la Défense nationale admet que les choses ont changé depuis 1987, qu'elles ne sont plus ce qu'elles étaient dans les relations Est-Ouest, en Union soviétique, etc ... Mais à notre avis, elles n'ont pas changé au point de justifier pour l'instant un nouveau Livre blanc.

HAROLD KLEPAK

D'APRÈS LES PLANS DE DÉPENSES, QUE PEUT-ON DÉDUIRE DES PRIORITÉS DU GOUVERNEMENT POUR

les années 1990 en matière de politique étrangère ? Je partage un peu avec M. Ross ce qu'il vient de dire. L'impact du budget va être limité. Ce qu'on voit ici n'est pas un changement de priorités extraordinaire, le budget est la priorité et je pense qu'on voit que les grandes lignes de la politique étrangère canadienne n'ont pas changé.

Dans ces grandes lignes, on veut nous donner la possibilité de « multiplier » nos rapports avec les États-Unis. En ce qui concerne l'Europe, les avancées sont assez évidentes depuis les années 1970 et les expériences que nous avons eues. Il est beaucoup plus facile, cette année, de parler de coupures de budget parce qu'on peut le faire sans être de haut profil dans les relations internationales quand on les regarde globalement. L'Australie en 1987 publiait un Livre blanc de la défense qui promettait une politique beaucoup plus poussée et de l'argent supplémentaire pour la défense. Deux ans plus tard, pour des raisons budgétaires, on voit qu'il y a quand même un retranchement. La Nouvelle-Zélande, un peu la même chose mais même plus frappant évidemment la cause de la presque sortie de ce pays de l'Alliance avec les États-Unis. Alors pour Washington, il y a des pays qui font beaucoup plus de tort à la situation globale que le Canada et c'est beaucoup plus facile pour nous de faire des coupures et de se maintenir comme bon allié des États-Unis.

L'ONU et le maintien de la paix, cette question de

viens de plus en plus importante. On voit des opérations arriver un peu partout ... ce n'est pas une exagération ... on parle de plusieurs autres possibilités ... on est à peu près partout et on a été toujours partout lorsqu'on nous demande de faire quelque chose. Évidemment nous avons des règles là-dessus mais si on nous demande de participer et si nous pouvons participer de façon correcte, on le fait. Alors des coupures dans la défense qui seraient ... qui sont comme celles que nous connaissons maintenant, pourraient avoir un impact là-dessus.

J'aimerais terminer en disant que, à mon avis, les questions de maintien de la paix et le lien avec l'aide internationale, notre engagement vers l'extérieur, vers le tiers-monde me préoccupent le plus de toutes ces questions traitées. Je pense que nous sommes dans une situation assez spéciale : le Canada est très actif au sein du Commonwealth, de la Francophonie, à l'ONU, dans les opérations de maintien de la paix, à l'OTAN, au sein du NORAD, etc. ... C'est un pays très lié au système international, c'est un pays engagé. Alors je pense que les opérations de maintien de la paix sont la sauvegarde de la capacité des forces armées d'agir, non seulement comme force logistique dans ces opérations, mais aussi avec l'infanterie. Évidemment la question du Nord et de la souveraineté est pour beaucoup liée à la question des sous-marins nucléaires. Je pense que c'est une des grandes questions pour nous : comment procéder maintenant pour remplir nos engagements et pour maintenir une vraie souveraineté dans le Nord.

TEN HAMPSON

LES ÉVÉNEMENTS DES QUELQUES DERNIERS JOURS SONT VÉRITABLEMENT REMARQUABLES. LA RÉDUCTION DES PROGRAMMES D'ACQUISITION DE MATÉRIEL DE DÉFENSE ET LA MISE EN VIGILANCE DES OBJECTIFS ÉNONCÉS PAR LE GOUVERNEMENT DANS SON LIVRE BLANC

mais les engagements que le gouvernement a pris à l'égard des paramètres fondamentaux du Livre blanc étaient de pure théorie, rien de plus : il ne s'agissait en effet que d'un ensemble de promesses sur papier, sans aucune explication sur les moyens dont on disposait pour les tenir. L'objet du Livre blanc était de prévoir les besoins du Canada en matière de défense d'ici le début du XXI<sup>e</sup> siècle et d'élaborer des programmes solides et prévisibles de financement. Tout juste deux ans plus tard, les Ca-

internationale ? Y a-t-il certains types de missions qui sont plus en accord

avec les objectifs et les buts de notre politique étrangère ? ... Certains prétendent qu'à l'avenir, notre sécurité sera essentiellement menacée par les trafiquants de drogue, les immigrants qui franchissent illégalement nos frontières et nos côtes, les déversements de pétrole et la pollution, et le pillage des ressources naturelles dans nos eaux littorales. Y a-t-il un volet militaire dans ce genre d'opérations de sécurité non traditionnelles, ou devons-nous mettre sur pied des forces spéciales qui vont s'occuper de ces menaces nouvelles et de plus en plus fortes qui pèsent sur notre sécurité ? ... Il y a d'importantes leçons à tirer des événements de la semaine dernière, des leçons qui se rapportent au mode de planification de nos ne soient pas apprises et que la bureaucratie continue de dire qu'il n'y a pas de problèmes.

allons aussi nous procurer de nouveaux hélicoptères pour la marine ... et des dragueurs de mines pour la Réserve navale ... À court terme, toutefois, le Ministère va envisager des solutions de rechange pour se doter d'une ma-

rine modernisée et efficace. Les forces canadiennes vont demeurer en Europe, et les effectifs vont rester à leurs niveaux actuels. Mais nous n'augmenterons pas nos effectifs militaires en Europe comme prévu dans le Livre blanc. À courte échéance, nous allons suspendre le renforcement de nos forces sur le continent eu-

ropéen, ce qui signifie non seulement que le projet relatif au char de combat sera interrompu pour l'instant, mais aussi que nous n'achèterons pas d'autres pièces d'équipement importantes pour nos forces aériennes et terrestres en Europe. En ce qui concerne la région septentrionale de l'OTAN, nous allons nous en tenir à notre engagement et laisser un bataillon d'infanterie dans le

nord de la Norvège. Pour ce qui est du maintien de la paix, nous allons veiller à nous doter des ressources nécessaires afin de répondre aux demandes raisonnables qui vont nous être faites à ce chapitre, où que ce soit dans le monde.

J'en viens maintenant aux effectifs de la Première réserve au Canada. Nous n'allons pas pouvoir atteindre l'objectif de 65 000 hommes fixé dans le Livre blanc. Nous allons construire moins de centres d'instruction de la Milice et annuler certains projets d'acquisition d'équipement pour les réserves. Nous allons toutefois continuer de développer et de mettre en œu-

vre le concept de la «force totale». Malgré tout cela, nous prévoyons en fait une expansion des réserves. Étant donné les restrictions financières, qui sont notre contribution à la réduction du déficit, nous allons devoir limiter les frais de personnel du Ministère pour régler nos autres lacunes et poursuivre certains de nos programmes de ré-équipement. Il va donc nous falloir renoncer à porter l'effectif de la force régulière à 90 000 hommes. Nous nous dirigeons en fait vers des effectifs un peu plus modestes que ceux que nous avons aujourd'hui.

Enfin, et il s'agit là d'un sujet auquel le public s'intéresse tout particulièrement, nous allons fermer plusieurs bases et stations des Forces canadiennes et réorganiser les fonctions de certaines autres ... Le gouvernement reste néanmoins déterminé à relever, à plus long terme, le taux de croissance réelle des bud-

gets militaires, ce qui devrait permettre au Ministère de se rapprocher des objectifs énoncés dans le Livre blanc.

## LOIS WILSON

J'AIMERAIS COMMENCER en disant que l'aide ex-

tréture accordée par le Canada diminue tous les ans depuis 1984. Pas de façon très marquée, je l'admets, puisque nous avons tout de même enregistré des résultats relativement satisfaisants; mais en 1984, l'aide extérieure représentait 0,5 p. 100 du PNB, alors qu'en 1988, ce ratio était tombé à 0,46 p. 100 et que cette année, le budget prévoit un taux de 0,43 p. 100. Notre premier ministre avait promis que d'ici 1995, l'aide aux pays étrangers aurait atteint 0,6 p. 100 du PNB. Reste à savoir si le gouvernement pourra tenir cette promesse.

Hommes les États-Unis, le Canada est le seul pays dont l'aide extérieure ait ainsi diminué entre 1984 et 1989. Ce qui est plus inquiétant, c'est de constater que l'essentiel des compressions à ce chapitre va se faire au détriment de l'aide alimentaire. Par exemple, on va réduire l'aide alimentaire de 66 millions de dollars, tandis que 67 millions vont être affectés au dément-

Deuxièmement, j'aimerais préciser que sept ministères sont visés par les réductions de dépenses, mais que l'aide extérieure est le seul poste pour lequel on va enregistrer une réelle diminution de crédits.

Troisièmement ... on pourrait dans un sens dire du Canada qu'il abandonne les «deux tiers-mondes» [les deux tiers du monde les plus peuplés et les moins riches en ressources], juste au moment où ils atteignent à leur

propre crise d'endettement et essaient de rembourser leurs emprunts. Avec la hausse des taux d'intérêt, je pense que les pays en développement vont avoir de plus en plus de difficultés à remonter la pente. On peut se demander quelle est la responsabilité du Canada dans ce problème ...

## L'imaginer.

«... le demi-million de personnes dépossédées de leur maison par la tornade qui a balayé le Bangladesh ... ne peuvent pas dire leur mot ... mais vont ressentir les effets des coupures d'une manière plus aiguë que la plupart d'entre nous ne peut l'imaginer.»

«Il est tout simplement ridicule de ne revoir sérieusement notre position de défense que tous les quinze ans ...»

Quatrièmement ... je pense que la réduction de l'aide extérieure est moralement choquante si on la replace dans le contexte de l'affluence relative du Canada. Mais comme l'a dit M. Wood, les victimes sont malheureusement très loin d'ici. Les Indonésiens n'ont pas le droit de vote, et ce sont eux qui vont ressentir l'effet des compressions. Je vois donc que le débat est essentiellement axé sur la scène nationale, et non pas tant sur le contexte international des responsabilités du Canada.

## DOUGLAS ROSS

Je PENSE QU'ON A BEAUCOUP TROP ACCORDÉ d'attention au rôle de provocations soulevé par l'incidence des augmentations d'impôts. Tous ces discours sur le sup-posé «raz-de-marée fiscal» et sur notre énorme dette qui fait du Canada, comme l'a dit Peter Newman, un Zaire peuple d'ours polaires, me paraissent vraiment exagérés ... Il y a beaucoup de moyens pour combler le déficit que nous n'avons pas utilisés ... D'une façon générale, le gouvernement ne s'en est pas pris aux profits des sociétés, il n'a pas cherché à réquisitionner les ressources financières des plus nantis pour assurer une contribution raisonnable à l'ordre international et préserver notre capacité de mettre en œuvre des politiques extérieures et de défense efficaces. J'estime que ces compressions budgétaires sont mal indiquées et qu'elles arrivent à un mauvais moment. Je n'hésiterais certainement pas à reprendre les remarques de Lois Wilson, qui a qualifié de «grave erreur» ces coupures dans le bud-

Passons maintenant à notre capacité générale de payer et de contribuer. Quand on regarde la contribution canadienne au cours des vingt dernières années, nous voyons qu'elle a diminué régulièrement, tant au plan de la politique de défense qu'à celui de l'aide internationale au développement. À la fin des années 1960, ces deux postes représentaient largement plus de 3 p. 100 du PNB; nous en sommes maintenant à près de 2,7 p. 100 ...

... Si nous comparons notre cas à celui des Pays-Bas, de la Norvège ou du Danemark, nous nous en tirons très mal. Prenons l'exemple des Pays-Bas qui, entre 1967 et 1987, ont systématiquement consacré ces deux postes un total d'environ 4,3 à 4,4 p. 100 de leur PNB à l'ordre international. En vingt ans, il y a cependant eu une redistribution : les dépenses militaires sont tombées de 3,8 à 3 p. 100 du PNB, la part de l'aide internationale au développement ayant augmenté en proportion. Même chose pour la Norvège. Ses dépenses en matière de défense ont chuté de 3,5 à 3,1 p. 100 du PNB, tandis que l'aide au développement est passée de 0,17 à 1,09 p. 100 du PNB. Il y a même des membres de l'OTAN qui consacrent plus de 1 p. 100 de leur produit national brut à l'aide au développement !

Quelle est l'incidence des réductions de dépenses sur la défense ? Ce que je vois se dessiner d'une façon générale, c'est une marginalisation de plus en plus nette de la politique de défense du Canada et, par ricochet, de sa politique étrangère. Nous ne nous exprimons pas sur les grandes questions d'actualité internationale, et ce n'est pas une coïncidence. On ne prend pas le genre d'initiatives dynamiques qu'un pays jouissant d'une sécurité aussi affirmée que la nôtre devrait prendre.

Nous n'avons rien à craindre ? Avec la technologie moderne, les techniques de plus en plus perfectionnées des systèmes d'armes stratégiques, je pense que nous sommes effectivement de plus en plus menacés. Si nous participons à la modernisation du NORAD, si nous avons initié à envisager de plus en plus sérieusement un renforcement massif de nos moyens de défense côtière, c'est précisément à cause de l'avènement de nouveaux missiles de croisière perfectionnés et des SLBM (missiles balistiques lancés de sous-marins), capables de détruire des cibles renforcées ...

À très juste titre, nous avons accepté de faire notre part pour essayer de stabiliser la dissuasion. Est-ce que ce nous nous acquittons de cette obligation avec ce budget ? Non, nous avons au contraire choisi de nous dérober, nous disons simplement aux États-Unis : «Désolés, vous allez devoir le faire pour nous ...»

# LE BUDGET FÉDÉRAL : ET LA POLITIQUE DE DÉFENSE

## UNE TABLE RONDE EN PRÉSENCE DES MÉDIAS

Le 2 mai 1989, l'ICPSI a commandité une table ronde sur les répercussions qu'auront les fortes

compressions financières annoncées dans le budget du 27 avril sur la politique de défense et la politique étrangère. Un groupe de spécialistes réuni par l'ICPSI a fait de brefs exposés, pour répondre ensuite aux questions des représentants de la presse écrite et électronique. Aux quatre coins du Canada, les journalistes intéressés ont pu participer à l'événement par un relais audio. Voici des extraits du débat.

des liens entre le budget, la politique de défense et la politique étrangère, nous n'avons pas la moindre idée des répercussions qu'aurait le budget dans ce secteur de la politique nationale. Nous avons voulu savoir ce que celui-ci révélait au sujet des priorités du gouvernement pour les années à venir. En fait, nous voyons à présent que l'aide extérieure et la défense, deux postes comptant pour 14 p. 100 des dépenses fédérales, ont subi 60 p. 100 de toutes les coupures budgétaires prévues pour l'an prochain et près de 50 p. 100 de celle de l'année suivante.

Si j'ai parlé en premier de l'aide extérieure, c'est parce que c'est de loin le poste de dépenses qui a subi les réductions les plus sévères, toutes proportions gardées. Les dépenses à ce titre vont en effet être réduites de 12 p. 100. Quant aux dépenses de la Défense, elles vont continuer de croître légèrement en termes absolus, même si le gouvernement a de toute évidence renoncé, comme il s'y était engagé, à faire en sorte que l'augmentation du budget soit toujours supérieure de 2 p. 100 au taux d'inflation.

Les bénéficiaires de l'aide extérieure ne pourront pas se faire entendre comme les Canadiens et Canadiennes touchés par le budget. Je crains que le demi-million de personnes dépossédées la semaine dernière ne voient pas vos reportages et ne puissent pas dire leur mot. Mais nul doute que ces gens vont ressentir les effets des coupures d'une manière plus aiguë que la plupart d'entre nous ne peut l'imaginer.

Du côté de la défense, les réductions budgétaires n'ont profité à personne. Il me semble assez évident que le déficit est le grand gagnant, mais nous allons tous y perdre si nous n'obtenons pas l'occasion de ce changement radical pour procéder à une réévaluation sérieuse et approfondie de nos engagements et de nos moyens en matière de défense, d'une part, et de toute notre politique de sécurité dans le contexte international de l'heure, d'autre part. Au Canada, l'essentiel du débat politique tournera probablement autour de la fermeture des bases militaires. Si l'aide aux collectivités et aux travailleurs touchés doit à juste titre rester pour nous tous une priorité légitime, ce n'est pas cela qui, dans les années 1990, va nous permettre de définir nos politiques en matière de défense.

Quelles sont les répercussions sur le plan international? Nos commissions budgétaires ne passeront certainement pas inaperçues, mais d'après les chiffres de l'Institut, le Canada reste au sixième rang des pays de l'OTAN pour ce qui est de l'importance des dépenses militaires et au sixième rang mondial pour l'aide extérieure. Vu notre position, nous n'avons pas à rougir face à nos alliés de l'OTAN. Exception faite des États-Unis qui, après tout,

sont une puissance mondiale, nous sommes le seul pays de l'OTAN à laisser des milliers de soldats à des milliers de kilomètres de ses côtes. Nous nous sommes engagés à ne pas rapatrier ces soldats tant qu'il dureraient les négociations de désarmement... Le Canada s'étant distingué comme nul autre dans le domaine du maintien de la paix et ayant mis sur pied un programme d'aide extérieure très respecté, désormais supérieur à celui de la Grande-Bretagne, les «casques bleus» et les pacificateurs canadiens vont être de plus en plus demandés dans de nombreuses régions du monde où de nouvelles voies menant à la paix sont peut-être en train de s'ouvrir. Tel est, à mon avis, le contexte actuel de notre politique de sécurité et de notre politique étrangère; comment pouvons-nous tirer le meilleur parti possible des ressources dont nous disposons, dans l'intérêt des objectifs auxquels la population canadienne souscrit?

KENNETH CALDER

IL A ÉTÉ DÉCIDÉ DANS

le budget que le ministère de la Défense nationale recevrait, au cours des cinq prochaines années, 2,74 milliards de dollars de moins que prévu. Le budget de la Défense va tout de même connaître une croissance réelle pendant cette période. Toutefois, cette croissance ne sera pas suffisante pour que nous puissions mettre en œuvre les programmes décrits dans le Livre blanc aussi intégralement qu'aussi rapidement que nous l'avions espéré. Il va nous falloir retarder la réalisation de certains objectifs de défense, annuler des programmes et en réduire d'autres, tandis que plusieurs projets vont être mis en attente...

Nous savons tous maintenant que le gouvernement n'a pas l'intention de donner suite au programme des sous-marins à propulsion nucléaire. En outre, nos projets d'acquisition d'avions de patrouille à grande autonomie, de dispositifs d'observation nocturne, de nouveaux CF-18 et du système de repérage de cibles et de surveillance aérienne par véhicule téléguide vont être annulés. Les programmes d'acquisition concernant les véhicules tout-terrain pour le Nord, l'équipement des avions-écoles pour la guerre électronique, les radios pour les forces terrestres et les appareils d'avionique pour les CF-5 vont être réduits. L'acquisition de véhicules blindés légers pour la Milice est remise à plus tard, et notre projet relatif au char de combat est mis de côté pour l'instant. Nous allons cependant continuer la mise en œuvre au Canada du programme de modernisation du système de défense aérienne de l'Amérique du Nord, tel qu'il a été prévu de le faire et de le financer.

Les deux phases du programme de remplacement des frégates et de modernisation des destroyers de la classe *Tribal* vont se poursuivre. Nous

OR, LA CONSTITUTION D'UN MARCHÉ LIBRE ET ouvert n'est probablement pas la meilleure solution. Il ne ferait que permettre aux principales sociétés aérospatiales américaines de récupérer la majorité ou la totalité des travaux de pointe effectués au Canada, en laissant pour compte les sociétés de moindre importance. Le gouvernement canadien doit veiller à ce que les entreprises obtiennent une part équitable des contrats les plus importants signés dans les domaines clés.

Pour ce qui est de la défense continentale dans son ensemble, le Canada doit toujours se soucier de protéger sa propre souveraineté en signant de réels contrats de société avec les États-Unis. Il doit pour le moins en faire suffisamment pour que les Américains ne se sentent pas obligés d'assumer toutes les responsabilités, ou du moins un grand nombre d'entre elles, en vue d'assurer leur propre protection. C'est un concept depuis longtemps

signer des accords de compensation dans d'autres secteurs industriels. Le problème se pose de façon passablement différente pour ce qui est des engagements à l'égard de l'OTAN. Ici, l'objectif consiste à renforcer l'état de préparation et l'endurance des défenses de l'Alliance en consolidant l'infrastructure industrielle nord-américaine de défense et en veillant à ce qu'elle puisse servir à assurer un approvisionnement régulier de forces et de fournitures en cas de conflit grave. C'est là un élément jugé indispensable à la dissuasion, plus particulièrement dans l'éventualité d'une guerre prolongée entre l'Est et l'Ouest.

# LES PÉRILS DE L'INTÉGRATION DE LA DÉFENSE

*La formation avec les E.-U. d'un marché commun des produits de  
défense ne doit pas porter atteinte à la capacité du Canada de  
mener sa propre politique de défense.*

PAR ROGER HILL

QUELQUES MOIS À PEINE APRÈS AVOIR TERMINÉ SON  
premier rapport, en juin 1987, le Groupe de travail  
avait quelque peu changé de ton. Dans son Rap-  
port final, publié en novembre 1987, on ne parlait  
plus d'un «marché commun» des produits de la  
défense, ni de suppression des barrières dans le  
domaine de la défense nationale, mais on préco-  
nisait plutôt une démarche progressive, qui com-  
mencerait par des mesures concrètes telles que  
la réduction des obstacles législatifs et adminis-  
tratifs au commerce et le lancement d'un pro-  
gramme d'éducation pour faire connaître et  
mieux comprendre les procédures, les accords et  
les pratiques en vigueur dans le secteur de la  
production de défense.<sup>3</sup>

Ce Rapport final maintenait cependant l'éven-  
tualité d'une intégration totale des infrastructures  
industrielles canadienne et américaine de défense.  
Cet objectif, pouvait-on lire dans le texte, devrait  
être atteint progressivement, par une réduction  
graduelle de toutes les barrières et de tous les  
obstacles à la libre circulation entre les deux pays  
des produits et services reliés à la production de  
défense.

D'un point de vue économique, cette évolution  
n'aurait probablement que des répercussions  
limitées sur le Canada dans son ensemble (sauf  
pour les industries de défense ou certaines en-  
treprises ou collectivités qui risquaient d'en  
profiter ou, au contraire, d'en pâtir considéra-  
blement). La collaboration canado-américaine dans  
le domaine de la production de défense remonte  
au moins à la Déclaration  
d'Ogdensburg, en vertu de laquelle les deux pays  
ont admis qu'ils devaient envisager au sens  
large la défense de la moitié nord de l'hémisphère  
occidental; ils ont alors mis sur pied une Com-  
mission permanente canado-américaine de la  
défense, chargée d'étudier les problèmes mari-  
times, terrestres et aériens, aux chapitres notam-  
ment du personnel et de l'équipement. Depuis la  
Seconde Guerre mondiale, on a vu proliférer  
entre les deux nations toute une série de liens et  
d'ententes regroupés dans les Accords sur le  
partage du développement industriel pour la  
défense et de la production de la défense. La ma-  
jeure partie des échanges bilatéraux, dont la

et une planification conjointe des industries de  
défense renforcerait de façon spectaculaire la  
sécurité de l'Amérique du Nord, consoliderait  
l'infrastructure de l'industrie de défense dans les  
deux pays et, aux yeux de l'OTAN, rendraient  
plus crédible la contribution nord-américaine à la  
dissuasion. Le rapport recommandait en particu-  
lier une augmentation du nombre des études con-  
jointes sur les nouveaux systèmes d'armes; la  
mise en oeuvre d'une politique «Achèter nord-  
américain» pour les produits militaires; la créa-  
tion d'une infrastructure nord-américaine de  
soutien pour fournir au Canada et aux États-Unis  
des dispositifs communs de réparation et d'appro-  
visionnement en pièces détachées, ainsi que des  
mécanismes conjoints d'approvisionnement et de  
transports, un renforcement des liens institution-  
nels entre le ministère de la Défense nationale et  
les organismes des États-Unis oeuvrant dans le  
domaine de la production de défense; et une ré-  
duction des obstacles commerciaux susceptibles  
d'influer sur l'état de préparation de l'industrie  
de défense. Le texte soulignait par ailleurs l'im-  
portance de l'infrastructure industrielle nord-  
américaine de défense (NADIB) et insistait  
sur le fait qu'il était à la fois indispensable et  
souhaitable de poursuivre l'intégration.

De la même façon, les répercussions de l'inté-  
gration sur les systèmes canadiens de défense  
étaient assez clairement exposées. «Si nous  
voulons préserver les acquis de l'intégration et  
même en tirer à l'avantage des avantages plus nets  
encore», avançait le Groupe de travail, «les deux  
nations doivent chercher de nouvelles possibilités  
de défense, les parités nationales.»

Le Groupe de travail prétendait qu'un ren-  
forcement de l'intégration s'inscrivait en fait dans  
le droit fil de l'engagement pris à Québec en  
1985 par le premier ministre Brian Mulroney et le  
président Reagan lors du Sommet de Shamrock,  
quand les deux hommes avaient convenu de  
resserrer les liens de coopération entre leurs deux  
pays. Nul doute que le Groupe avait aussi estimé  
d'une section du Livre blanc de la défense de juin  
1987, passée pour ainsi dire inaperçue, qui se  
lisait comme suit :

« Dans le cadre des Accords sur le partage du  
développement industriel pour la défense et de  
la production de la défense, le Canada colla-  
borer avec les États-Unis pour mettre au point  
et produire du matériel de défense.... Nous

AN DENNIER, PENDANT LA PÉRIODE QUI A  
précédé les élections fédérales, les journaux  
du pays ont publié brièvement un inter-  
sant reportage sur la production de défense.

Un groupe de travail composé de hauts fonction-  
naires de la Défense nationale, des Affaires ex-  
trangères et d'autres ministères (le Groupe de  
travail sur l'état de la préparation de l'industrie  
de la défense, formé en 1985 par le Comité de  
gestion de la Défense, au ministère de la Défense  
nationale) avait recommandé, d'une part, que le  
Canada et les États-Unis forment un marché  
économique commun dans le domaine de la  
défense, en renforçant l'intégration continentale  
des productions dans ce domaine et, d'autre part,  
qu'ils renforcent les liens de coopération exist-  
ants pour faire une planification industrielle con-  
jointe entre le ministère de la Défense nationale  
et le Pentagone. Le groupe avait, semble-t-il, for-  
mulé vingt recommandations précises en vue de  
favoriser plus d'intégration et d'institutionna-  
lisation, et il avait en outre exhorté les décideurs  
des deux pays à adopter une perspective «conti-  
nental» que «nationale». L'

En plein coeur d'une élection axée sur le libre-  
échange et l'avènement de la nation canadienne, ce  
rapportage avait de toute évidence une «couleur»  
politique. Mais est-ce qu'il signifiait vraiment  
qu'un groupe de puissants hauts fonctionnaires  
préparerait déjà les prochaines étapes sur la voie de  
l'intégration, avant même que l'accord sur le  
libre-échange ne soit devenu loi ? Selon un jour-  
naliste, le rapport du groupe de travail avait été  
gardé secret; en d'autres termes, il avait été jugé  
trop «brillant». Or, il n'en était rien. Le ministre  
associé de la Défense nationale, M. Paul Dick,  
avait déclaré devant la Chambre des Communes  
que le résumé du rapport avait été rendu public  
environ six mois auparavant, soit en juin 1988.<sup>2</sup>

En fait, le ton fortement intégrationniste du  
rapport aurait pu être égrené sur le plan politique  
si le contenu du document avait été largement  
diffusé. Le texte avait été terminé en juin 1987,  
alors que le Canada se trouvait en plein dans les  
négociations sur le libre-échange. Les auteurs y  
critiquaient l'orientation très nettement nationa-  
liste, protectionniste et politique du gouverne-  
ment qui, selon eux, avait restreint la libre  
circulation des biens de défense entre le Canada  
et les États-Unis. Ils soulignaient que la formation  
d'un marché économique commun de la défense

portent sur la répartition des terres, mais aussi sur les impôts fonciers, les crédits agricoles, le contrôle des prix des pesticides ou des engrais, les types de cultures ou d'apports (comme les subventions accordées pour divers primes à l'exportation, la construction et l'entretien des routes, et la coordination et le financement des organismes publics chargés d'appliquer ces décisions.

Au Guatemala, par exemple, le gouvernement civil, nouveau et encore fragile, prépare une enquête détaillée afin de révéler la quantité et la valeur des biens fonciers et les noms de leurs propriétaires. À ce jour, ces informations ne sont tout simplement pas connues. Le gouvernement cherche même à inclure dans cette enquête le Peñon, cette vaste zone frontalière du nord qui a été pendant des années sous la botte de l'armée répressive guatémaltèque. La région est hachurée sur certaines cartes du pays, comme si l'on voulait signifier par là, consciemment ou non, que quelque esprit malveillant plane sur cette partie du territoire national. Une enquête de ce type promet d'être politiquement explosive dans un pays doté de systèmes de répartition des terres et d'imposition régressive comptant parmi les plus inéquitables d'Amérique latine.

L'IDÉOLOGIE NE SEMBLE PAS ÊTRE UN facteur aussi décisif qu'on pourrait le penser lorsqu'il s'agit de déterminer l'utilisation des ressources. Le Nicaragua révolutionnaire, qui a été plus près de résoudre le problème de la répartition des terres que n'importe lequel de ses voisins, s'apprête à décimer ses régions orientales, limitrophes après la guerre, pour défricher de nouvelles terres cultivables et réaliser des rêves d'exportation de viande bovine et de coton qui rivalisent avec toutes les ambitions que le Honduras ou le Guatemala ont innocentes, en ce qui concerne les conséquences à long terme. La destruction de ressources naturelles n'est pas la cause première des troubles politiques en Amérique centrale. La réalité est bien plus obscure et complexe : il y a beaucoup de causes que seules les politiques mettant l'accent sur le développement viable de ces ressources ont des chances de favoriser une croissance économique et une

Malheureusement, dans la région, rien ou presque ne porte à croire que les dirigeants ont saisi l'idée qu'il existe des liens entre les décisions d'ordre macro-économique et l'utilisation des ressources, sans parler de leur rapport avec la sécurité à long terme. Les donateurs internationaux ne font pas plus preuve de discernement : tant les institutions multilatérales, comme la Banque mondiale, que les organismes d'assistance de la plupart des pays industrialisés ont eu tendance à investir énormément dans de grandes entreprises agricoles, mais ils ont négligé les 10 millions de petits fermiers d'Amérique centrale, malgré la perversion des plans d'utilisation des terres. C'est à peine surprenant, puisque les milieux politiques et les décideurs en Europe occidentale et en Amérique du Nord commencent seulement à entrevoir les mêmes liens étroits qui existent entre l'économie et l'environnement. Les problèmes sont partout les mêmes. Mais leur virtuellement en Amérique centrale ajoute à l'urgence des changements nécessaires. La triade d'espoir (paix, démocratie et développement) proposée par les cinq présidents centraïntracains à Esquipulas sera viable seulement quand on aura compris tous ces liens et que l'on agira en conséquence. □

IL EN RÉSULTE, POUR LES GOUVERNEMENTS SALVADORIENS ET AMÉRICAINS, UNE préoccupation croissante quant à la sécurité à court terme, et des coûts de 211 millions de dollars américains. Le personnel militaire du pays est passé de 10 000 soldats en 1978 à 47 000 en 1987, sans compter les troupes paramilitaires de sécurité fortes de 12 000 hommes.

La tendance est la même ailleurs. L'armée guatémaltèque, qui comptait 14 270 hommes en 1978, en comptait maintenant 38 000. Les forces armées nicaraguayennes, avec leurs 77 000 hommes, ont augmenté de 50 p. 100 en valeur réelle entre 1979 et 1983.

Ces chiffres ne tiennent pas compte des sommes colossales que les États-Unis et le bloc de l'Est ont investies pour soutenir les régimes qui leur agréent. La sécurité était l'obsession américaine de l'ère Reagan. L'ancien secrétaire d'État Henry Kissinger, il nous sera impossible de convaincre les pays menacés dans le Golfe persique et ailleurs que nous savons comment maintenir l'équilibre planétaire. » Pourtant, en 1984, la Commission bipartitionale concernant l'Amérique centrale, que présidait M. Kissinger, a reconnu dans la pauvreté et les inégalités deux des grandes causes de la dés-

tabilisation dans la région, mais elle a à peine fait allusion à l'environnement.

S'IL EST ÉVIDENT QUE LES COÛTS HUMAINS ET FINANCIERS DES CRISES IMBRIQUÉES EN AMÉRIQUE CENTRALE SONT ÉNORMES, EN REVANCHE, AUCUNE COMPTABILITÉ ne saurait estimer dans quelle mesure la peur pour leur sécurité a modifié la psychologie et les priorités des gouvernements. Les gouvernements

démocratiques sont réduits pour leur obsession du court terme. Leurs horizons dépassent rarement l'année de l'élection suivante. Dans des pays où les crises prédominent, qu'elles soient militaires ou économiques, la réaction du pouvoir politique risque d'être encore plus « myope ». Il appliquera une gestion de crise aux pires cas, et les ressources naturelles n'entrent pas dans la catégorie des pires cas jusqu'au jour où les désastres inhérents à une plantation à très court terme surviennent. Alors seulement, et parce qu'ils font la

une des journées, on leur cherchera un remède immédiat.

Cependant, ces questions sont essentielles à la viabilité des économies de tous les pays de l'isthme. L'environnement n'est pas quelque chose dont on peut s'occuper une fois la paix à portée de la main, pas plus qu'il ne s'agit simplement de la parcs et d'un sujet de conversation. Sa portée plénière et essentielle est à la fois vaste et profonde, car il embrasse la question fondamentale de savoir quelle terre est utilisée, par qui et pour quoi. Vu les pressions démographiques et la diminution des terres et des ressources naturelles, ces questions prennent encore plus d'importance. Par rapport aux terres arabes disponibles, la densité de population des autres pays centraïntracains est proche de celle du Salvador.

La manière dont les ressources locales sont utilisées ou mal employées dépend en grande partie de décisions prises dans les capitales. Ces décisions

écologique en Amérique centrale abandonner : les forêts decimées, l'érosion des sols, les cultures sans arbrus, les ristes pldonvilles qui cement les villes, la puanteur des eaux usées non traitées, la brûlure des pesticides que le vent apporte des champs de coton, toute une litanie de désastres qui menacent l'isthme assiéé autant que la tourmente politique

La terre, la population et les ressources sont si étroitement liées qu'il est

[illegible]

Cependant, il est plus facile de décrire un cercle vicieux que de donner la solution pour le rompre.

LE PLAN DE PAIX POUR L'AMÉRIQUE

tion, a vu le jour à Esquipulas, dans le Guatemala le 7 août 1987, marquée. Ce jour-là, les présidents de cinq pays (Cerezo, du Guatemala, Duarte, du Salvador, Azcona, du Honduras, Ortega, du Nicaragua et Arias, du Costa Rica) sont convenus d'un série de procédures interdépendantes pour instaurer «une paix ferme et durable»

Américain, mais parvenue à donner un nombre de rencontres entre représentants et ministres des Affaires étrangères, rencontres qui, après des mois de manoeuvres diplomatiques, ont débouché sur un nouveau sommet entre les cinq présidents en février de cette année, à Costa del Sol, au Salvador. Cette coopération a survécu à bien des revers. Ce qui a incité les prestidents ne fut-ce qu'à aller jusqu'à ce

président Daniel Ortega du Nicaragua a déclaré devant une commission parlementaire canadienne : « Un point nous unit : nos problèmes économiques

« C'est une bonne chose, car les économies ploient sous le poids d'une dette extérieure plus forte par rapport au produit intérieur brut (PIB) que celle de la plupart de leurs voisins d'Amérique latine, car le prix de leurs principales exportations baisse, un chômage et un sous-emploi endémiques sévissent, et les infrastructures (routes, installations de traitement des eaux usées, réseaux électriques, par exemple) qui, au Nicaragua et au Salvador, se détériorent peu à peu avec la guerre civile, sont extrêmement malades. L'effet négatif de tous ces facteurs est encore exagéré par une forte croissance démographique, une fonction publique sous-payée et mal formée, et une

des ressources renouvelables : forêts, sols, eau et pêcheries. Les ressources naturelles représentent plus de la moitié de la production économique de la région, la moitié de ses emplois et la plupart de ses exportations. La crise économique est donc, essentiellement, une crise écologique (la dégradation des ressources naturelles) qui, elle, se résume à une question de jeux politiques et de rapports de puissance.

LES PROBLÈMES FONDAMENTAUX SONT AU NOMBRE DE TROIS. TROP DE GENS, trop peu de terre, et des schémas d'utilisation de celle-ci catégoriquement mauvais. La répartition des terres a commencé à se fausser au siècle dernier avec l'introduction progressive des cultures d'exportation. Pour planter des cafés,

# ENVIRONNEMENT ET SÉCURITÉ

Comment la terre est utilisée, quelle terre, par qui et pour qui ? Les questions politiques essentielles pour cet isthme déchiré par la guerre correspondent aussi à des problèmes fondamentaux en matière d'environnement.

*matière d'environnement.*

dément. Partout dans l'isthme, les fermiers démunis sont amenés soit à cultiver à flanc de coteau, soit à défricher la forêt vierge, dont l'orée recule rapidement. D'après les statistiques de l'Organisation des Nations-Unies pour l'Agriculture et l'Alimentation (FAO), en 1960, 61 p. 100 environ de la région était boisée ou couverte de forêt, alors qu'un quart environ était cultivée. En 1980, il ne restait que 40 p. 100 en forêt, mais la surface agricole était passée à 53 p. 100, dont les deux tiers en pâturages. Ces mêmes tendances continuent, bien que l'industrie bovine contribue peu aux recettes d'exportation, en comparaison des vastes étendues livrées au bétail. En 1980, par exemple, les recettes d'exportation variaient entre 18 \$ et 47 \$ par kilomètre carré de pâturage, comparativement aux 1 500 \$ à 1 800 \$ que rapportait le café, toujours au kilomètre carré. Malheureusement, pour les fermiers sans terres, les coteaux comme les terres défrichées sont rarement viables : les premières s'effondrent en quelques années par des cultures intensives, sont enlevées au bout de deux ou trois saisons, et les lopins qui leur permettraient de

et rend la quête encore plus aléatoire. L'Amérique latine, service des Nations-Amérique centrale dépasse aujourd'hui le qu'elle a plus que doublé en vingt-croissance démographique étaient de pour le Guatemala, le Honduras et le semble de la région. Si l'on se fie au me aura encore doublé d'ici un quart de

## NOTE FROM THE EDITOR

Our cover story this issue deals with the tension and conflict brought on by the transition of Namibia from colony to nation. In addition to a story filed by **Patrick Nagle** – in which he makes clear why a successful outcome is important not only to Namibians, but to everyone else in Southern Africa – we present some of the conclusions about the election process reached during a two-day international conference held in Ottawa in July.

Since that conference, some of the independent observers who participated have gone to Namibia and returned with their assess-

ments. While most were guardedly optimistic, they reserved some of their strongest criticisms for the cumbersome (one newspaper account of the observers' press conference used the words "grotesque" and "ludicrous") vote tabulation machinery set up by the South Africans for use in the November vote. The Canadian observers warned that if the centralized vote-counting process was not changed, the delay of up to several weeks before results are made public would be "almost certain to raise impatience and suspicions to the boiling point" – a central concern raised at the Institute's July conference.

Any doubts that the danger of violence is high, or that peacekeeping is dangerous work, are dispelled by numerous incidents reported from UNTAG headquarters in Windhoek. One of the most serious came on 11 August, just as *Peace & Security* was going to press:

Yesterday evening, at approximately 9:20 pm, the UNTAG regional office at Outjo [northern Namibia] was attacked and subsequently damaged by what appear to have been gunfire and explosives – possibly hand grenades. A private security guard ... assigned to the UNTAG premises, was killed.

The same evening, a similar attack was carried out against a drill hall in a military compound in Outjo where weapons are stored. Members of the UNTAG Kenyan Battalion [Kenya's contribution to the UNTAG force] are also housed within the compound. Light damage and no injuries are reported in connection with this second incident.

It was not immediately clear who had attacked the UNTAG posts or why.

A new and continuing feature in *Peace & Security* is a column by Institute CEO, **Bernard Wood**. In this first column, he charts some new directions and initiatives for the Institute, now entering its sixth year of activity since its creation by Parliament in 1984.

The editors also want to note the departure from our editorial board of **Hilary Mackenzie**, formerly of *Maclean's* Ottawa bureau and recently named to the magazine's bureau in Washington, DC. Ms Mackenzie has been an enthusiastic supporter of *Peace & Security*. We wish her well in her new position.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus.

The Institute is a Crown Corporation. Members of its Board of Directors were appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

16 DEFENCE NOTES

IN THE SPEAR STRAIGHT highway to Owamboland the roadside is clotted with tin shacks – the she-beens, the brothels, the *cuca* shops and the homes of the thousands of Namibians whose lives were financed by the South African military presence. This is where the future of Namibia will be decided.

If the incoming independence government cannot reconcile with the people who worked for years to assist Pretoria's illegal occupation of their country, there will be nothing but more strife for the former German colony of South West Africa. One of the many writers who has tried to fathom the conflict-ridden existence of a massive desert with a minute population, concluded: "When the Lord made Namibia he intended it for obscurity."

Alas, this has not been so and the country will not achieve such a deistic designation for years to come. The principal contribution to this sorry state is a tale of unalloyed colonial exploitation, quarrelsome internal politics and ineffectual world attempts to put things right.

South West Africa came into being as part of the European dissection of the African continent in the 19th century. It was Germany's first colony and they ran it with an iron fist. "I know these African tribes," wrote the Prussian general in charge of suppressing a 1904 rebellion,

they are all the same; they respect nothing but force.... To exercise this force with brute terror and even with ferocity was and is my policy. I wipe out rebellious tribes with streams of blood and streams of money. Only by sowing in this way can anything new be grown, anything that is stable.

With Germany's loss of the First World War the territory became a League of Nations responsibility. The British Empire, using its neighbouring South African colony, occupied the land until 1920 when the League of Nations mandate initiated the tortuous modern history of Namibia. South Africa continued to administer the protectorate at such a cost as to have the responsibility described in parliament as a "white elephant" that would be best returned to Germany. Among other things, the South Africans tried to collect a dog ownership tax which the natives resisted as a persecution. "If they are too poor to pay for dogs, why should they keep dogs," was the reasoning of a Pretoria representative.

A series of bush rebellions, inflamed by the callousness of the South African administration, plagued the countryside until the collapse of the League of Nations and the outbreak of the Second World War put the protectorate back in limbo. After the war and emergence of the United Nations, the incorporation of Namibia into South Africa was rejected by the world powers.

A FAMOUS DECLARATION WAS WRITTEN INTO THE UN CHARTER (WHICH would not be fulfilled, in Namibia's case, for twenty-four years) which set out the operating principles for those UN members responsible for the administration of "non-self governing territories": these countries accepted as a "sacred trust the obligation to promote to the utmost ... the well-being of the inhabitants ... to ensure with due respect for the culture of the peoples concerned, their political, economic, social and educational advancement, their just treatment and their protection against abuses." Instead, in 1949, the South African government challenged the UN's authority on the legal grounds that the mandate had lapsed with the demise of the League of Nations.

Despite an International Court of Justice ruling that the UN still held final control, South Africa unilaterally abrogated its responsibility to the

# NAMIBIA

## rites of passage

*With a UN-supervised election,  
Namibians finally get their chance to end a  
century of colonial rule.*

BY PATRICK NAGLE

Organization (SWAPO) rose up against this oppression and prosecuted a twenty-three year armed struggle culminating in the planned early November elections for a constituent assembly. This makes Sam Nujoma, the SWAPO leader, another key to the future of Namibia. Despite his years in exile as a spokesman for Namibian independence he is not well-known or clearly-assessed by Western governments. He does have a reputation for being erratic and ill-tempered but his consistency in the Namibian independence cause has never been questioned.

THE UNHAPPY ATTEMPT OF ARMED SWAPO GUERRILLAS TO INFILTRATE Namibia after the commencement of the 1 April UN transition process has never been laid directly at Nujoma's doorstep because he was not at the Angola take-off point when the penetration started. But the damage done to SWAPO's image by a successful South African counter-attack and propaganda campaign can only be measured after voting day.

Few doubt that the SWAPO political party will win the most seats in the November poll, intended to create a broad-based assembly charged with writing a constitution for a national election next spring. The question is whether SWAPO can win two-thirds of the seats in the first vote. If they do, they plan to rewrite the rules of the assembly – which they could do according to the rules of the game – and take over immediately as a de facto government.

Their opposition, which is mainly backed by the residual white population of Namibia, is campaigning strenuously to avoid this eventuality. Now that it is finally up to strength and functioning throughout the country, the UN transition team (UNTAG) is specifically assigned to ensure that this is a "free and fair" election. The whites, backed by the remnants of the South African territorial administration, claim SWAPO is being helped by the UN to rig the vote, while the blacks, including SWAPO, claim that the territorial authorities are intimidating them.

The enabling UN Resolution 435 is not drafted precisely enough to prevent these accusations flying back and forth. Thus an assumption of goodwill on the part of all those involved has not been forthcoming; rather, the political leadership on both sides seem to be competing for the cheap-shot-of-the-year award to be scored off UNTAG.

By comparison, the Lancaster House agreement that turned Rhodesia into Zimbabwe contained a considerable number of checks and balances of both sides. And although Zimbabwe President Robert Mugabe has never been happy with some elements of Lancaster House, he has scrupulously adhered to the letter of its provisions, to the benefit of his country through continued international economic and military assistance.

IF THE NAMIBIAN PROTAGONISTS CANNOT OVERCOME THEIR GHASTLY HISTORY and present a united country to the world, their only future is as a questionable charity case. For a start, South Africa is withdrawing the subsidies that have propped up Namibia for more than a decade. The

mandate and started governing Namibia as a territory of its own. The growth of the *apartheid* society in South Africa and its extension into Namibia led to Pretoria's estrangement from world opinion. In 1966, the UN declared South Africa had disavowed its mandate making its presence an illegal occupation. In response, Pretoria created white economic areas and black homelands that divided the country along racial lines and enforced the division with police and military garrisons.

The South West Africa Peoples

existing economy of mining and farming is not strong enough to take up the slack even though diamonds, uranium and copper make up a third of gross domestic product, eighty-five percent of export earnings and about half of government revenue. There is an unknown potential for a fishing industry but the existing infrastructure is located in the South African enclave of Walvis Bay, Namibia's best ocean port and still the subject of dispute between South Africa, which wants to keep it after independence, and the UN.

The SWAPO economic position paper released with the election platform promises a mixed economy with a strong emphasis on government participation. "The state will have ownership of a significant part of the country's economic resources," the document states. "No wholesale nationalization of the mines, land and other productive sectors is, however, envisaged in the foreseeable future."

The principal short-term positive effect of the transition to Namibian independence has been a measurable reduction in the regional conflicts that have beggared southern Africa in recent years. How long this can

John White

last is only speculation, given the volatile state of South African politics.

Pretoria is reported to have nuclear weapons capability and has now embarked on a ballistic missile development programme. The country's white leaders have stated many times that they intend to retain their security apparatus as the mainstay of their position as the region's dominant power. The evident and most troublesome indication of this resolve is the upgrading and hardening of army and air force bases along South

Africa's northern border with Botswana and Zimbabwe. Included in this buildup are some of the battle-tempered black units from the Namibian border war.

For its part Zimbabwe has escalated its defences against South Africa with the purchase of new MiG fighters from the USSR. It would be the penultimate tragedy for southern Africa if the final settlement of the Namibian question led only to ruinous confrontations along the Limpopo River similar to those that have blasted the Namibia-Angola border for the past ten years. □

## Transition in Namibia

### An Institute International Roundtable

■ On 6 and 7 July 1989, the Institute for Peace and Security held an international roundtable in Ottawa on the subject of the upcoming election in Namibia. Chaired by the Institute's Director, **Bernard Wood**, the roundtable was designed as an intensive briefing session, drawing on the training and experience of a number of participants. Video briefings sent from Windhoek, the capital of Namibia, lent a sense of immediacy to the proceedings. Among those making presentations either in person or by television were:

**Martti Ahtisaari**, Special Representative of the UN Secretary-General in Namibia; **William Barton**, former Canadian ambassador to the UN; **Pierre Beaudet**, researcher with the Centre d'information et de documentation sur le Mozambique et l'Afrique australe, Montreal; **Lord Chitnis**, of the Southern Africa Advanced Education Project, Oxford; **Michael Clough**, Senior Fellow at the Council on Foreign Relations, New York; **Joseph Diescho**, a scholar from Namibia, at Columbia

University, New York; **Colonel Don Ethell**, Director of Peacekeeping Operations, Department of National Defence, Ottawa; **Stephen Fanning**, head of the UNTAG civilian police monitoring unit, Windhoek; **Gordon Fairweather**, Chairman of the Immigration and Refugee Board and veteran election observer; **Marrack Goulding**, UN Under-Secretary for Special Political Affairs; **Neil Haffey**, head of the Canadian Observer Mission, Windhoek; **Gwen Lister**, editor of *The Namibian*, Windhoek; and **James Mutambirwa**, of the World Council of Churches.

The following is excerpted from the Institute summary report, *The Election Process in Namibia: An International Roundtable*. The full document (16 pages) is available from the Institute. The section presented here deals specifically with Namibia's and the UN's most immediate problem in the coming months: the complex business of carrying out free and fair elections.

### Election Day and Immediately After

■ During the transition period to independence, Namibia is being governed by South Africa through an Administrator-General (AG), Louis Pienaar. The UN Secretary-General appointed his Special Representative (SR), Martti Ahtisaari, to ensure that each stage of the electoral process in Namibia was free and fair. These two officials are called upon to work together to implement Resolution 435. The details of each stage in the electoral process must be satisfactory to both officials. The process is cumbersome.

There will be two UNTAG election officials and two UNTAG police personnel supervising each polling station. The ballots will probably carry the symbol of each political party so that both literate and illiterate voters can participate without difficulty. After casting a ballot, each voter will dip a finger into indelible ink so that he or she cannot vote more than once.

Having international observers present on election day is an important part of ensuring free and fair elections. One speaker had a detailed checklist of practical requirements for a proper vote. For example: Is there sufficient freedom of movement? Are uniform guidelines being followed by all election officials? Are the polling stations easy to find, even for illiterate voters? Is there an effective method for resolving disputes on the spot?

Other concerns were expressed: after the polls are closed, international observers must pronounce judgement on the fairness of the election before the votes are tallied so that their reports will be seen to be impartial. Participants were concerned with some of the proposals for tallying the ballots. Would not the comparison of the ballots with fingerprints on registration forms breach the secrecy of the vote? Would not the transport of all ballot boxes to Windhoek for counting increase the possibility of tampering?

It was suggested that the ballots should be quickly counted on the spot, and then moved in sealed boxes to the capital for a second count. Furthermore, the period between the time that the polls are closed and the time that the results are announced should be kept as short as possible. Most participants supported these suggestions as ways to reduce the chance for fraud.

One recommendation arising out of the Roundtable discussion was the creation of an Election Council comprising representatives of the AG, the SR, and each of the participating political parties. According to the Commonwealth Observers Group commenting on a similar body created for the elections in Zimbabwe, "it provided a vehicle through which complaints could be made" and difficulties resolved. Many participants supported a similar Election Council for Namibia, especially since the proposal of an independent electoral commission now seemed impractical. □

# WORDS AND DEEDS: TRANSFORMING SOVIET FOREIGN POLICY

*By studying the words of Soviet leaders we can understand not only what has changed in the USSR but also why.*

BY PAUL MARANTZ

**T**HUS FAR, THE WESTERN REACTION TO Mikhail Gorbachev has been somewhat schizophrenic. He has clearly captured the imagination of the man and woman in the street. "Gorby-fever" and "Gorbymania" have swept much of the Western world. Yet along the corridors of power, most policy-makers are far more cautious and skeptical. Western skeptics are fond of the adage that deeds speak louder than words, and they argue that neither the deeds nor the words of Soviet foreign policy convincingly demonstrate that Gorbachev has broken with the Soviet past. Other less skeptical Westerners argue that while the process is still in its early stages and is dependent upon the continued survival of Gorbachev's reformist approach, it nonetheless has vast significance for the future course of Soviet foreign policy and East-West relations.

It is vivid testimony to the speed with which people adapt to new circumstances and the rapidity with which the extraordinary is accepted as commonplace that there is not a wider appreciation of the degree to which Gorbachev has already transformed the conduct of Soviet foreign policy. Let us imagine for a moment that back in February 1986, at the time that Gorbachev first unfurled his call for "new thinking" in international politics, a skeptical Western observer had advanced a test of Soviet intentions. Suppose he had declared that he would not be convinced that a genuine change had taken place until the Soviet Union had met these conditions:

Soviet troops were withdrawn from Afghanistan; the Soviet Union accepted the American zero-option for the elimination of Intermediate-Range Nuclear Forces in Europe; the Kremlin agreed to highly intrusive international inspection of its military facilities; the Soviet Union initiated unilateral reductions in its armed forces amounting to ten percent of all its troops and twenty percent of its tanks; Moscow permitted the legalization of Solidarity and allowed it to function as a freely-elected opposition party within the Polish parliament; the Soviet Union exerted its influence on behalf of a political settlement to the con-

flicts in Cambodia and Angola; the jamming of Western radio stations broadcasting to the Soviet Union was ended; Andrei Sakharov and hundreds of other political prisoners were freed; articles by Western scholars and policy-makers began to appear with some frequency in the Soviet press; and Soviet scholars and journalists were allowed to criticize openly the foreign policies of Stalin, Khrushchev and Brezhnev.

Had someone proposed such a sweeping test of Soviet intentions in 1986, Western experts on the Soviet Union would have been virtually unanimous in objecting that the proposed criteria for judging Soviet policy were far too stringent and had little likelihood of being met in the foreseeable future. The experts would have argued that at best a few of these measures might be instituted in the next several years. Yet in the space of less than four years, all of these changes have occurred or are in the process of occurring. Gorbachev has moved far more quickly and comprehensively than virtually anyone thought possible just a few years ago. The concrete deeds have been delivered; they are not just being promised.

CONVENTIONAL WISDOM HOLDS THAT DEEDS ARE more important than words in assessing the nature of Soviet foreign policy, but in some ways the reverse is true. After all, specific deeds (such as the withdrawal of Soviet troops from Afghanistan), can take place for a variety of reasons. A reversal of past policy may be motivated by nothing more than temporary weakness and a desire to mislead the enemy or, alternatively, it may reflect a fundamental reassessment of previous assumptions and a genuine belief that new, more cooperative forms of international interaction are now both possible and necessary. By studying the words of Soviet policy-makers, we can get a better idea of how they conceptualize the foreign policy issues confronting them.

If Soviet thinking about the nature of international politics has really changed, then the policy initiatives of the past four years are far

more likely to be long lasting. Conversely, if the way in which the Soviet leadership conceptualizes international politics has not been altered, then these policy shifts are more likely to be based upon temporary tactical considerations, and many of them might be reversed once the Soviet Union's current difficulties are overcome. Thus, we have to look both at deeds and words so as to be able to ascertain not just *what* has changed, but *why* these changes have taken place.

Four major trends are currently reshaping Soviet perspectives on international politics. First, there is now a far greater appreciation than ever before in Soviet policy-making circles of what has been termed "the action-reaction phenomena" in East-West relations. The traditional Soviet view had been that the foreign policy of the West was dictated by the class nature of the capitalist system. Capitalist states were said to be implacably hostile to the Soviet Union not because of the particular foreign policies adopted by the Soviet Union but because of what the Soviet Union was – a socialist state whose existence demonstrated to the workers of the world that there was a real alternative to capitalist oppression. In stark contrast to this traditional view, Soviet spokesmen now acknowledge that much of Western policy has in fact been a reaction to Soviet actions and that the West is motivated by a real, and not feigned, fear of Soviet aggression.

As a corollary of this, Gorbachev and his associates have recognized that if the Soviet Union wishes to dampen the arms race and to promote cooperative endeavors between East and West, it must first alter those policies which the West finds so threatening. As a recent article in the Soviet press pointedly observed:

We have gotten used to phrases like: "We are mankind's vanguard"; "The future belongs to us"; "We will be victorious on a world historical scale." But have you tried to put yourself in the position of those who, in our opinion, are in the rear guard, to whom the future does not belong, and who, according to our viewpoint, are doomed to depart from the historical arena, doomed to perish? What must their attitude toward us be?... It is no accident that people in the West have

formed an impression of the U.S.S.R. as being a country that seeks to conquer the world.... In order to change people's opinion about us we must change ourselves.

In the same vein, the Soviet Foreign Minister, Eduard Shevardnadze, bluntly advised his colleagues: "We should not pretend, Comrades, that norms and notions of what is proper, of what is called civilized conduct in the world community do not concern us. If you want to be accepted in it you must observe them."

A SECOND IMPORTANT DEVELOPMENT IS THE unprecedented nature of the self-criticism concerning the errors and mistakes of past Soviet foreign policy that is now being publicly aired. Prior to Gorbachev, Soviet foreign policy was virtually immune to criticism. Even at the height of Khrushchev's de-Stalinization campaigns in 1956, 1961 and 1962 virtually nothing of a critical nature was published concerning Stalin's conduct of East-West relations.

Since the latter part of 1987, Soviet foreign policy has been subjected to a searching re-examination totally unlike anything seen in the past sixty years. Stalin has been condemned not just for his hostile stance toward the German Social Democrats in the 1930s, his handling of the Nazi-Soviet Non-Aggression Pact of 1939, and his later rejection of Soviet participation in the Marshall Plan, but also for following a "hegemonic, great power" policy of expansionism into Eastern Europe which was perceived in the West as a grave threat to the existing international balance of power.

Khrushchev has been publicly criticized for his mishandling of the Cuban missile crisis, his exaggerated optimism about Soviet economic prospects compared to those of the West, and his propagandistic championing of "General and Complete Disarmament" instead of a more realistic policy of gradual arms control coupled with international inspection and verification.

Brezhnev's foreign policy has been condemned for its exaggerated preoccupation with military strength, its fueling of the arms race, and the blunder of Afghanistan. In a particularly noteworthy reassessment of Soviet foreign policy, an influential scholar, Vyacheslav Dashichev, sharply criticized Brezhnev's neglect of the inter-connection between the Soviet Union's single-minded pursuit of gains in the Third World in the 1970s and the ensuing decline of East-West detente:

Though we were politically, militarily (via weapons supplies and advisers), and diplomatically involved in regional conflicts, we disregarded their influence on the relaxation of tension between the USSR and the West and on their entire system of relationships. There were no clear ideas of the Soviet Union's true national state interests. These interests lay by no means in chasing petty and essentially formal gains associated with leadership coups in certain developing countries.

A third important development is the waning of the sense of mission. Past Soviet leaders all believed that capitalism was doomed, that time was on the side of the Soviet Union, and that the international balance of power was steadily and inevitably tipping in Moscow's favour. Khrushchev and Brezhnev were particularly active in attempting to promote this process by probing for weak spots in the Western alliance. While there were occasionally brief periods of retrenchment under past leaders, these were viewed as just a temporary pause in the ongoing class struggle. It was firmly believed that a quick fix of the Soviet Union's temporary economic or political difficulties would allow the speedy resumption of the onward march of Soviet world power.

UNDER GORBACHEV, THIS OPTIMISM IS vanishing. The strength and resilience of the capitalist system are recognized. Increasingly it is acknowledged that there is no quick fix for the Soviet economy and that it will take decades for the Soviet Union to get its house in order. The Soviet sense of international mission is declining. Moscow's perception of itself as the centre of world revolution is diminishing. Increasingly, Soviet policy-makers define their goal not as promoting the demise of capitalism, but as avoiding nuclear war, lowering international tension, and creating a

benign international climate so that the Soviet Union can peacefully pursue the urgent task of domestic restructuring.

A fourth and final development of major significance in reshaping Soviet foreign policy is the process of change affecting some of the basic attitudes that have long influenced Moscow's approach to the West. The combined impact of the authoritarian Tsarist legacy, the conspiratorial origins of the Bolshevik Party, and the long nightmare of Stalinism produced a political climate which bred deep feelings of insecurity and vulnerability, a fear of foreign penetration, dogmatic self-righteousness, and the intolerance of diversity and different points of view.

ALL THIS IS BEGINNING TO CHANGE. THE reformers associated with Gorbachev are aiming at nothing less than the creation of a new political culture, a political culture which accepts the legitimacy of diversity, rejects any notion of infallibility, is less dogmatic, and does not feel threatened by controversy and debate. While the creation of a fundamentally new political culture is a daunting task, the past few years have seen remarkable progress. If this process continues, it will have a major impact on the way in which Soviet foreign policy is debated, formulated, and executed. A greater toleration for diversity at home goes hand in hand with the acceptance of different economic and political systems abroad.

What are the policy implications of this analysis? Paradoxically, it appears that the West needs to be both cautious and bold in framing an appropriate response. Caution is necessary because the process of liberalization and reform is only beginning; it remains vulnerable to disruption. Such potential developments as the continued stagnation of the Soviet economy, the intensification of nationalism within the Soviet republics, a popular uprising in Eastern Europe, or a conservative revolt against Gorbachev within the Communist Party all threaten the current trend toward moderation. The recent tragic events in China are a vivid reminder of just how quickly an authoritarian regime can intensify repression if the ruling elite fears that disorder is undermining its power.

Nonetheless, the opportunities are too great, the stakes are too high, and public opinion in the West is too impatient for us to be able to adopt a cautious wait-and-see attitude. Only by recognizing that the Soviet Union's overtures to the West are the product of a far-reaching and revolutionary process of change – not just another replay of past peace campaigns – will Western policy-makers be able to formulate an appropriate response to the historic opportunities that loom before us. [

# THE GRAND BARGAIN

*The tangible prospect of global environmental collapse has elicited some new approaches to international cooperation.*

BY DAVID RUNNALLS

**A**S AN ILLUSTRATION THAT 1988 WAS definitely the year of the environment, that bible of middle class American propriety, *Time* magazine, nominated Earth as planet of the year (one wonders which one is in the running for next year's award) and devoted almost an entire issue not only to environmental matters but to international environmental matters. *Time's* more affluent stablemate, *Fortune*, capped things off by describing 1988 as "The year the earth spoke back."

To put this development in perspective, let us remember that Margaret Thatcher was elected for the first time as Prime Minister only ten years ago on a platform that could generously be described as being contemptuous of the natural environment and those who cared about it; Ronald Reagan believed fervently when he was elected in 1980 that many of the so-called pollution problems were caused by trees; and the Conservative government assumed office in Canada in 1984, confident that it could substantially cut the budget and staff of Environment Canada with impunity. At one point, the Nielsen Commission seriously considered abolishing the department completely. On the other side of the political spectrum, the Soviet Union had always maintained that environmental problems were fundamentally caused by the structure and operation of capitalism and were largely absent from the Soviet system.

These perspectives were all changed during one extraordinary week in October of last year when the following cast of characters each made an environmental speech: George Bush (remember the "I have always been an environmentalist" address?); Michael Wilson (to the World Bank and the International Monetary Fund of all people); Edouard Shevardnadze (who told the UN General Assembly that the Soviet Union viewed global environmental change as the single greatest threat to its national security) and even the redoubtable Margaret Thatcher – the Iron Lady told the Royal Society that atmospheric change was the single greatest challenge facing the scientific community for the remainder of the century.

Not only had a number of these people been converted along the road to environmental Damascus, but some of the conversions seem to have been truly miraculous. George Bush and Michael Dukakis had not become born-again environmentalists; they had become, through some miracle of alchemy, life-long environmentalists.

WHY ARE ALL THE POLITICAL LEADERS OF THE Western (and increasingly the Eastern) world looking to don cloaks of various shades of green? The answer is perhaps best found in the report of the World Commission on Environment and Development – the Brundtland Commission. The Commission points out that no matter what we do, during the next decade the planet's population will double and that feeding, housing and clothing both ourselves and our five billion new neighbours will require an expansion of five to ten times our present economic production. An expansion of anything like this size will place such enormous strain on natural systems that the Commission concluded that the natural environment would become a significant constraint on economic growth.

Perhaps the most dramatic example of the earth's natural systems speaking back is the increasing evidence that we are changing the world's climate. As the participants in last summer's Toronto Climate Conference pointed out: "... the rates and magnitude of climate change in the next century may substantially exceed those experienced over the last 5,000 years. Such high rates of change would be sufficiently disruptive that no country would likely benefit in toto from climate change."

The participants were speaking of the changes resulting from further destruction of the earth's layer of protective ozone caused by CFCs commonly used to blow foam, run cooling devices, and by the electronics industry. They were also referring to the "greenhouse effect" in which the build-up of carbon dioxide and other gases leads to an overall warming of the earth's climate, with accompanying major rises in sea levels within the next thirty to forty years.

Negotiations on ozone have proceeded rapidly since the discovery of the first ozone hole over Antarctica in 1986. In September 1987, Canada hosted a meeting which produced the Montreal protocol – an agreement to cut consumption of CFCs in half by the turn of the century. Before the protocol had fully entered into force, a flurry of diplomatic activity, culminating in meetings in London and Helsinki earlier this year, called for a halt to production of the substances by the year 2000.

Canada also opened the batting on global warming with the 1988 Toronto Conference. It set a goal of reducing CO<sub>2</sub> emissions by at least twenty percent by the year 2005. It was followed by a meeting of legal experts in Ottawa in February of this year and by meetings of the preparatory groups for the next World Climate Conference to be held sometime in 1990. It is hoped that drafts of legal instruments for regulating at least some of the greenhouse gases will be ready by the time of that meeting.

There is a growing realization, however, that none of this is enough. Atmospheric change is a genuinely global problem, demanding global solutions and some sort of burden sharing. When countries had agreed on the need to eliminate ozone destroying chemicals, the problem arose of how to help developing countries to achieve the new standards. Countries such as China and India have ambitious plans to provide refrigerators on a large scale to their massive populations – a goal which it would be difficult to fault. Why should they, they reason, have to cut back on these plans or replace the cheap freon now used in refrigerators with more expensive substitutes?

This problem of equity is even more pronounced in the case of global warming. The US and the USSR between them produce almost forty percent of the CO<sub>2</sub> released by the burning fossil fuels. China and the other developing countries produce a small fraction of that amount. Chinese development plans call for the construction of some two-hundred new coal-fired generating stations in the medium-term future. Any gains from major cutbacks in energy production by the superpowers, Japan

and Western Europe, could easily be wiped out by this kind of expansion.

Tropical deforestation not only contributes to the production of CO<sub>2</sub>, thereby worsening the problem of global warming, but the growth of new forests can act as a "carbon sink," locking up some of the CO<sub>2</sub> produced by combustion. The politicization of the rainforest issue by the Western environmental groups, and overtones of threats to national sovereignty, ensure that little action will be taken by the governments of Brazil and other tropical forest producers without some quid pro quo which is saleable to their own constituencies.

ALL OF THIS IS LEADING TO CALLS FOR UNPRECEDENTED changes in the international system, leading up to what many have described as the "Grand Bargain." It is not yet clear what form such a bargain would take or under whose auspices it would be constructed, but the general lines seem to be as follows: standards would be set for emissions of greenhouse gases (including CFCs). These standards would call for drastic reductions for the industrialized countries and allow for some expansion of emissions in the Third World. Major changes in the terms of technology transfer would be necessary in order to give developing countries access to the latest non-polluting energy technologies as soon as they become available. Last, but not least, there would be major new transfers of resources from North to South.

The Toronto Conference called for the establishment of a World Atmosphere Fund. Such a fund would be used to assist developing countries to limit and adapt to climate change by pursuing sustainable development strategies. Various proposals have been put forward to build the fund. Prime Minister Brundtland of Norway has proposed a straight percentage of GNP (0.1 %). Others have suggested a "carbon tax" under which various types of fuels are taxed according to their tendency to produce carbon dioxide. In general, coal produces 1.7 to 2.0 times as much CO<sub>2</sub> as natural gas; oil emits about 1.4 times as much as natural gas.

Recent meetings on ozone depletion also recognized the need to provide funding for the developing countries to ease the transition away from the damaging types of CFCs. The US Environmental Protection Agency (EPA) is considering a system similar to that proposed by President Bush to combat acid rain. This would involve auctioning off the declining US CFC allotment to the highest bidders.

Some observers have also stressed the need for a link between actions taken to deal with climate change and debt relief. The developing world is now paying US \$43 billion more to the North than it is receiving in foreign assistance and private capital flows. It is unrealistic to expect these countries to inflict further hard-

ships on their citizens to combat climate change. Various schemes have been put forward including a sizeable expansion of the so-called "debt-for-nature" swaps, or an adaptation of the Brady plan (US Secretary of the Treasury, Nicholas Brady) to permit countries to redeem some of their debt in exchange for changes in policies and projects to promote more efficient use of energy, better forestry practices, greater access to family planning services and the like.

Any of these proposals, or a combination, could generate very large sums of money or debt relief – on the order of at least \$20 to \$30 billion per year – and they have now

Nicholas Vitaro

reached the talking stage. The Dutch Government has commissioned its former Minister of the Environment to produce a firm set of proposals for the next preparatory climate meeting to be held in the Netherlands in October.

These financing proposals have been accompanied by calls for institutional reform of the international system to enable it to deal with the cross-cutting nature of the threat. There is a feeling among many that none of the existing UN agencies has a sufficiently broad mandate to encompass all of the issues. The calls for institutional change range in scope from the strengthening the Secretary General's Office to enable it to genuinely coordinate UN system activities and the provision of a new and broader mandate for the United Nations Environment Programme, to Maurice Strong's proposal to revise the UN Charter to enable the now moribund Trusteeship Council to be re-invigorated with a mandate to be the Trustees of the Earth. Other suggestions have involved redefining the word "security" to encompass environmental security, thus expanding the role of the Security Council.

This feeling of urgency led the French, Norwegian and Dutch Governments in the preparation for the recent summit in The Hague to propose the creation of a supranational agency to preserve the earth's atmosphere. This agency would be able to act on majority vote in some cases (no automatic veto by the five

great powers, in other words), and would have the power to impose mandatory economic sanctions recommended by the International Court of Justice on "goods produced under conditions with negative impact on the atmosphere." The authority would also have the power to raise money to compensate those countries for whom compliance would be an unfair burden. Although this proposal was not fully accepted, it is indicative of the real possibility of movement which many now sense.

FURTHER EVIDENCE OF "NEW THINKING" ON THE part of governments on the link between the environment and economics can be found in the results of the G-7 economic summit in July in Paris. Fully one-third of the final communiqué was taken up with the topic, with particular attention paid to the acute dilemmas facing poor countries – and therefore all the rest of us – in finding ways to increase living standards without adding further to global ecological stress. The G-7 leaders, while mostly avoiding specific cases, allowed as how economic incentives could be used to encourage developing countries to take "environmentally desirable action," and that in certain instances "debt forgiveness and debt-for-nature swaps" could be useful.

What role in all of this for Canada? If the Prime Minister wants to be statesmanlike in his second term, then the 1990s version of Pearsonian internationalism must lie in the reconciliation of the need to both postpone and mitigate the effects of climatic change, and to satisfy the basic needs of the poor through a global programme of sustainable development. Canada has already been at or near the front on these issues. For once, it might genuinely be one of those times when, as a middle power, we could take the lead, with our credibility as both a member of the Group of Seven and as a friend of the Third World (Mr. Wilson's recent budget notwithstanding).

These are immensely complicated issues, and the ground is shifting very rapidly. They will be discussed in a whole range of fora under different conditions. They will require new mechanisms for arriving at national positions for negotiations because of their tendency to cut across departmental jurisdictions. Once the dialogue begins, it will be difficult to resist the temptation to add other issues to the list – arms control, new definitions of national security, and so on. A repeat of the ill-fated North-South dialogue, which dragged on through the late 70s and early 80s until it petered out in a series of inconclusive meetings, is regrettably all too possible. Yet this time, surely we have more going for us: a shared sense of the clock ticking, the opportunities provided by the existence of *glasnost* and the recent opening of Eastern Europe, and an uneasy but easily mobilized public opinion.

# IN SEARCH OF A SPACE POLICY FOR CANADA

*The government will soon have some important decisions to make on the future of our civilian and military space programmes.*

BY JOCELYN COULON

CANADA IS CURRENTLY EXPERIENCING ITS second space age revolution which, thanks to an array of space programmes – military and civilian, on-going or at the development stage – will propel it into the twenty-first century. This revolution will enhance civilian and military communications, remote sensing and surveillance of Canadian territory, as well as advancing space sciences in the economic, technological and medical fields.

Ranking eighth among the space powers of the world, Canada will have to make important choices at the beginning of the next century. Civilian space activities in this country will reach a plateau a few years from now, while a growing part of the country's space budget could well be allocated to military activities. The militarization of the space programme remains a possibility, albeit a remote one, and is subject to the vagaries of international politics.

By the year 2000, the government will have allocated some three billion dollars to the civilian programme. Last March, it created the Canadian Space Agency to coordinate all civilian space activities, which until then had been scattered among a half-dozen departments and research institutes. The Department of National Defence (DND) runs a small military space programme, whose projects are nevertheless extremely ambitious; this programme will grow considerably if the military gets what it wants.

Since the launching of Alouette in 1962, Canada's contribution to space activities has mostly been of a civilian nature. The prosperous 1960s and 1970s, when eight satellites were put into orbit and the space industry was growing at a rate of fifty percent a year, was followed by a period of stagnation. The Canadian civilian programme regained some vitality in the late 1980s with the launching of three major projects and a handful of others of lesser importance. According to a major plan developed by the Mulroney government in 1986, Ottawa will spend more than \$3 billion between now and the year 2000 to take part in the US space station programme, in a mobile telecommunications system (M-SAT) and in a remote sensing satellite using a synthetic aperture radar (RADARSAT) which will allow

transmission and reception of signals all over the planet, in cloudy conditions or in the dark. The government's plan includes several other projects to be implemented with the participation of Europe, Japan, the United States and the Soviet Union.

During the 1980s, Canada has spent on average some \$160 million a year on civilian space activities; this amount should reach \$230 million in the 1990s. (We trail far behind France, \$1 billion; Japan, \$900 million; and the United States, \$10 billion.) According to the Ministry of State for Science and Technology, thirty-seven percent of the civilian programme budget will be allocated to the space station, thirty-five percent to RADARSAT, ten percent to M-SAT, and eighteen percent to the other projects.

CENTRAL TO THE CIVILIAN PROGRAMME IS Canada's participation in the US space station, a project begun by President Reagan in 1984. Canada, Japan and the European Space Agency's members were all invited to take part in this endeavour which will culminate, between 1995 and 1998, with the deployment in space of a permanent base that will be managed by eight astronauts. After three years of negotiation, Ottawa agreed, in April 1988, to allocate \$1.2 billion over a fifteen-year period to a programme whose total costs should reach \$40 billion; we will build the station's mobile maintenance and repair centre. This centre will be equipped with a new Canadarm, previously installed on American space shuttles, which will be used to handle the satellites. Moreover, a Canadian astronaut will work for six months every second year on board the station.

Last year, all the partners in the space station signed a memorandum of understanding spelling out the terms of their participation; an agreement whose negotiations were hindered by conditions specified by the Americans regarding the military elements of the stations's functions. We will come back to this later.

While the civilian space programme is well known and widely accepted by the Canadian population, the military space activities of the country remain obscure. In fact, they are still very much in their infancy. All that should change in a few years when DND completes

its numerous studies in the fields of communications, surveillance and early warning. The government will then have to free up significant amounts of money to give the country a true military space programme.

Long neglected in favour of civilian activities, the military use of space became a concern to the government at the beginning of the 1980s. Yet, the Canadian military is not discovering space: it is rediscovering it. John Kirton, of the University of Toronto, has written that at the end of the 1950s, the military played a key role in the creation of the Canadian space programme. The Alouette satellite was built at the Defence Communications Research Centre. And until 1966, according to Kirton, Canadian space projects administered by the military represented forty-one percent of total Canadian expenditures in the field.

After a period where, for political and commercial reasons, the space programme was "demilitarized," interest in the military side has resurfaced. Taking up ideas expressed by the Defence Management Committee in 1974, the Senate Special Committee on National Defence (1985) and the authors of the White Paper on Defence (1987) revived the concept of an independent military space effort.

After long hearings on the air defence of Canadian territory, the Senate Committee recommended in 1985 that the government establish its own military space programme to concentrate on early warning, surveillance and communications tasks necessary to protect national security. Based on the evidence gathered at the hearings, the Committee concluded that DND would need eight to twelve satellites to do the work and that this programme should be allocated at least \$150 million per year for five years, and \$350 million each year during the 1990s.

THE SENATE REPORT DID NOT GO UNHEEDED: DND took up its main elements two years later in the 1987 White Paper. Here, Perrin Beatty, then minister of National Defence, announced an ambitious programme of rearmament and strategic repositioning. The new defence policy rested on the acquisition of a fleet of ten to twelve nuclear-powered submarines. While in

April Ottawa announced the cancellation of the submarine programme and a cut of almost three billion dollars in the Defence budget, resources allocated to space research remained untouched.

The White Paper stated that research programmes had been authorized for investigating radar or infrared space systems which would allow the detection and tracking of aircraft and cruise missiles. These space systems would replace, some fifteen years in the future, the land-based radar stations of the North Warning System, which will become obsolete by the end of the century.

But the substantial policy statement regarding the military space programme is to be found in an internal document made public by DND in July 1987, a few weeks after the tabling of the White Paper. Here the military spells out specifically its technical and strategic requirements. It highlights the three main objectives of the programme:

- to allow Canada to meet its defence commitments, by using space technology when it is cost-efficient and appropriate to do so;
- to promote the use of space for peaceful purposes;
- to contribute to the Canadian economy.

The authors wrote that, "DND should realize that insufficient Canadian involvement in space activity might impose severe constraints on the range of future military options, to the possible detriment of Canadian security and sovereignty interests."

DND wants to go beyond its commitments to NATO and NORAD; by acquiring a space infrastructure, it could make the Canadian armed forces totally or partially independent. It is not a matter of having a Canadian armed presence in space, but rather of using space passively. In addition, the research and development branch at DND puts a lot of stock in the government policy which aims at providing Canadian business with economic spin-offs.

DND PLANS ARE VERY AMBITIOUS AND COVER A number of fields: surveillance, communications, navigation, search and rescue, meteorology, oceanography and mapping, and finally, manned space flights. In 1986-1987, the Department of National Defence released \$46 and \$48 million respectively for research related to space radar technology and millimetric rapid circuit technology. Those two research programmes, which will span five to seven years, will provide enough information to make possible a decision on the need to get involved in the areas on a long-term basis.

The purpose of the space radar programme is to develop an air, land, sea and underwater surveillance system. Its principal function will be to detect, track and identify aircraft and cruise missiles approaching North America. It will be linked to a combat management system for the interception and destruction of such intruders - activities which would take place

within the structure of NORAD. The radars will also be used for Arctic surveillance.

DND knows that it will be impossible to develop an independent space radar network, because of the high costs involved. According to the Pentagon, a world network could cost between six and ten billion US dollars. The Canadian military is hoping, therefore, to contribute to the deployment of the segment that will cover North America, by providing ten to fifteen percent of the costs of a US programme.

The millimetric wave communications programme is also of great importance to the military. From DND's point of view, a reliable, efficient and independent communications network is vital, in order to ensure contact between Canadian Forces units around the world, notably in Cyprus, Europe and the Middle East. At present, DND must lease lines going via satellites such as the ANIK C (and soon, E) series. Unlike the US military, it does not have satellites of its own. Finally, the military are involved in many other programmes, such as the complete modernization of the entire Canadian Forces communications network, access to the US network NAVSTAR/GPS (Global Positioning System), the search and rescue SRSAT system, the development of security measures for ANIK E satellites, and so on.

Also unlike its US counterpart, DND does not have a unified space command. The Directorate of Space Doctrine and Operations was disbanded last summer, and there is no equivalent to the civilian Space Agency to coordinate military space policy. DND will no doubt have to adopt such a structure within a few years.

MOST EXPERTS AGREE THAT AT THE PRESENT rate, the military space budget could soon exceed \$150 million per year, even taking into account the fact that Canada does not build its own surveillance, communications, and navigation satellites. If DND gets the go-ahead for its projects, that budget could easily reach \$400 million a year by the turn of the century.

Except for ongoing discussions at the Inter-ministerial Space Committee, where all government participants in space activities get together, there are few links between the civilian programme and its military counterpart. However, two questions come to mind when looking to the future: will we see a militariza-

tion of the civilian programme, as is the case in the United States? Will our cooperation with our powerful neighbour carry us along in that direction? The National Aeronautic and Space Administration (NASA - the US civilian space agency) budget is limited to US \$10 billion, while that for military space activities approaches \$15 billion. The same cannot be said yet for Canada, but ten years or so from now, the slowing down of the civilian programme and the launching of a strong military programme could lead to a Canadian space policy with a similar bias in favour of the military.

The US and Canada are collaborating on both government and private levels. In the first instance, Canada is bound to the US by a number of military and technical agreements related to NORAD, military communications and navigation systems, and the space station. During the negotiations on the station, which led to last year's agreement; it was decided that the station would be built for peaceful purposes, despite objections from the Pentagon that it did not want to exclude any military option. The agreement, however, does not specify which military activities are forbidden. Moreover, the American can do as they please in a large part of the station, since they own seventy

percent of it. Some experts maintain that the America's partners could well be presented with a *fait accompli* once the station becomes fully operational and is being used for significant military activities.

As for the private sector, Canada's space industry exports seventy percent of its production which ends up being integrated in a myriad of American products, both civil and military. If Canada launches its military space programme, or, more simply, if cooperation between the United States and Canada intensifies, our country's industries could well find themselves more and more associated with military ventures.

There are still a few years left before Canada is confronted with vital choices related to its space policy. The new Space Agency will, within the next year, define its objectives for the beginning of the next century. This would seem to indicate that an energetic civilian programme will be pursued. The country, however, will not be able to neglect its military requirements for long, and apportioning resources between the two programmes will involve some difficult choices. The time for making decisions is almost at hand. □

# FIGHTING TO THE LAST AFGHAN

*There is no shortage of Afghans who could form a popular government – if only the outsiders would get out of the way.*

BY SELIG S. HARRISON

**T**HE COMPLETION OF THE SOVIET WITHDRAWAL from Afghanistan in February set the stage for a new and bloodier phase of the civil war that led to the invasion a decade ago. After six months of inconclusive fighting, however, the Afghan adversaries and their superpower mentors are cautiously edging toward negotiations on a political compromise.

Moscow is eager for a settlement. Mikhail Gorbachev recognizes the limitations of the Afghan Communist Party and wants to escape from the futile commitment made by his predecessors. This was unambiguously spelled out to me in a series of high-level meetings with officials of the Foreign Ministry, the Defence Ministry and the Communist Party Central Committee during a recent three-week visit to Moscow.

To be sure, the Kabul Communist regime has displayed much greater motivation, discipline and staying power than most observers anticipated. But Soviet leaders – and Afghan President Najibullah – are keenly aware that the regime could not survive on its own without the continuous airlifts and supply convoys provided by Moscow.

In my view, Gorbachev is prepared to support a peaceful transfer of power in Afghanistan in which President Najibullah's regime would step down coincident with the conclusion of negotiations to establish a broad-based transitional government. Moscow's minimum conditions for such a political settlement are that the Communists not be excluded from the process of establishing a transitional regime; that the process be conducted under independent auspices, free from the control of Pakistani and American intelligence agencies; and that the Communist Party be recognized as a legitimate participant in any future elections to be conducted by a transitional government. Representation of the Communist Party, as such, in a transitional government is an expendable bargaining demand.

While giving up its effort to ensure Communist dominance, in short, Moscow wants to be able to say that it has preserved an opportunity for the Communists to compete in the power struggles ahead. Indeed, it is important to recognize that the Geneva accords were accept-

able to the Soviet Union as a face-saving compromise precisely because they did not require Moscow to abandon its Afghan clients.

THE BASIC DILEMMA NOW CONFRONTING MOSCOW and Washington alike is that neither the Kabul regime nor the Peshawar government-in-exile established by Pakistan and the United States, represents the majority of Afghans. Neither can serve as the nucleus of a broad-based transitional regime because both have alienated the Afghan nationalist majority. The Afghan Communist Party has been indelibly tainted by its collaboration with a foreign occupation force. But the Pakistan-based government-in-exile is also widely rejected as the creation of Islamabad's Directorate of Interservices Intelligence (ISI).

The ISI played a conspicuous, heavy-handed role in arranging and manipulating the Islamabad *shura*, or council, that set up the exile government in February, 1989. Protégés of the late President Zia Ul-Haq are still in control of the ISI despite Prime Minister Benazir Bhutto's continuing efforts to tame the powerful military intelligence organization. Zia had made no secret of his desire to install a Pakistani satellite regime in Kabul dominated by Islamic fundamentalist Afghan splinter groups that have been artificially built up with Pakistani support. Despite the installation of a moderate, Sibghatullah Mojadidi, as its figurehead president, the narrowly-based exile government is firmly controlled by fundamentalist factions, and has thus been discredited from the start in the eyes of most Afghans.

In order to understand the political isolation of the government-in-exile, it is necessary to recognize the nature of Islam in Afghanistan, where the established clergy has long been identified with the Hanafi school of Islamic law and various Sufi sects. The power of the local mullah in traditional Afghan society has been reinforced by a symbiotic relationship with chieftains of the Pushtun tribes, Afghanistan's dominant ethnic group. By contrast, the fundamentalist groups, preaching more purist Islamic doctrines, are seeking to destroy the Pushtun tribal system as incompatible with

their concept of a centralized Islamic state linked to a pan-Islamic revival. They oppose most of the modernization measures initiated by previous regimes, especially those liberalizing the status of women.

Numbering at most 1,100 in the early 1970s, the Afghan fundamentalists faced severe repression under former King Zahir Shah, a Pushtun, and his successor, Mohammed Daud. In 1975, most of them fled to Pakistan. There they linked up with the Intelligence Directorate, staging raids against the Daud regime then at odds with Pakistan. This link made them Pakistan's favoured Afghan protégés after the 1978 Communist takeover. Nurtured by massive aid from the US as well as by fundamentalists in the Middle East and Pakistan, the fundamentalist factions have grown to number some 15,000 hard-core activists.

FOR MANY AFGHANS, ZAHIR SHAH SYMBOLIZES a period of relative stability when Afghanistan enjoyed friendly relations with the Soviet Union. But fundamentalist leaders, remembering the former king's repression, bitterly oppose any role for him in organizing or leading a new regime. Pakistan has actively obstructed efforts by Zahir Shah's supporters to organize broad-based negotiations among Afghan factions that would pave the way for the peaceful replacement of the Communist regime. Instead, Pakistan has treated the seven-party resistance alliance as the sole voice of non-communist Afghans.

The roots of Pakistan's hostility go back to the early nineteenth century, when the original Afghan state created in 1747 by the Pushtun tribes under Ahmad Shah Durrani embraced the Pushtun areas of what is now northwest Pakistan. Later, as part of the "Great Game," the British Raj annexed 40,000 square miles of Afghan territory between the Indus River and the Khyber Pass. They then proceeded to hand over their ill-gotten territorial gains and half the Pushtun population to the new Pakistani government in 1947. By dividing the Pushtuns, the British bequeathed an issue that has preoccupied Pushtun-dominated Afghan regimes ever since and has poisoned the relations between Afghanistan and Pakistan.

Zia channelled the lion's share of American weapons aid to the fundamentalists, consciously downgrading Pushtun resistance groups. Since becoming Prime Minister, Benazir Bhutto has attempted to reverse his anti-Pushtun policy, calling for a broad-based Afghan government dominated neither by the Communists nor the fundamentalists. Pakistan's interests require such a government, she told me in June 1988, since "continued civil war means the continued presence of three million refugees." In a subsequent interview with *The Nation* of Lahore, she warned more explicitly that efforts to establish a Pakistani satellite state in Kabul might stir up a Pushtun backlash.

When Bhutto visited Washington in June, she urged the US to pursue a political solution of the Afghan war through negotiations with the Soviet Union. The Bush administration stalled for time, arguing that the resistance should be given another chance to overthrow Kabul militarily this summer and fall. But administration officials express increasing impatience with the poor military performance of the resistance and the inability of the government-in-exile to broaden its base. If the Kabul regime is still intact by the end of the fighting season in October, these officials foresee an intensified search for a political solution.

WHAT EXPLAINS THE STAYING POWER OF THE Communist forces demonstrated in the Jalalabad fighting? To be sure, the Kabul regime has airpower, while the resistance forces do not. Another military factor responsible for the poor showing of the resistance forces in the Jalalabad assault so far has been their lack of experience in conventional warfare. But an important and often overlooked part of the answer lies in the fact that the Communist Party has a hard core of forty thousand highly-motivated activists who see themselves as nationalists and modernizers carrying forward the abortive reform effort launched by King Amanullah from 1919 to 1929. On a visit to Kabul in 1984 and in continuing contacts with Communist leaders, I have been reminded that dedication and a patriotic self-image are not a monopoly of the resistance fighters.

The taint of Pakistani sponsorship now attaching to the Peshawar exile regime has reinforced this patriotic self-image and enabled the Communists to rationalize their own record of a decade of collaboration with Soviet occupation forces. Many party activists are drawn from previously-submerged social groups, including women. They will not easily give up their new status and are likely to continue to fight rather than abandon the field to the resistance.

Conceivably, with a large-scale expansion of Pakistani technical and logistical support now being provided, the resistance forces would be able to use armored vehicles and improve their showing. However, the deep-seated divisions

in the resistance would make a definitive victory unlikely in the absence of years of training in conventional warfare and a massive escalation of American military aid extending not only to armored vehicles but also to aircraft. More important, even in the event that the Communists are dislodged from Kabul, they would not necessarily stop fighting. Afghanistan would in all probability remain locked in a continuing civil war involving the Communists; Islamic fundamentalist factions backed by Pakistan, the United States and Saudi Arabia; Shia groups backed by Iran; and many of the resistance field commanders, especially those linked to the Pushtun groups who look to Zahir Shah as their spokesman.

Among the possible topics of Soviet-American discussions on Afghanistan is an agreement to terminate military aid to the Afghan combatants. Originally proposed by the United States in March, 1988, "negative symmetry" was rejected at that time by Moscow. Since Gorbachev's reversal of the Soviet position in November 1988, however, it is Washington that has rejected the concept.

If an aid cutoff could be agreed upon, the Afghan combatants would be compelled, for the first time, to focus seriously on possible political compromises. Secretary General Pérez De Cuellar would then have an opportunity to pursue the 3 November 1988, General Assembly resolution calling on him to promote a broad-based government embracing "all segments" of the Afghan people.

One of Zahir Shah's close advisers, Sultan M. Ghazi, has urged the Secretary General to convene a series of national unity conferences, or mini-*shuras* as a prelude to a larger *shura*.

Neither Kabul nor the Peshawar government-in-exile would be represented as such. However, the invitation list would be designed to provide for representation of all significant political and social forces. The mini-*shuras* could choose an interim government directly, composed of independent, non-partisan figures, as proposed by former UN mediator Diego Cordovez in July 1988, or they could call a larger gathering for this purpose.

CONTRARY TO THE WIDESPREAD IMAGE OF A hopelessly polarized society, there is no shortage of respected, centrist Afghans who could form a government capable of commanding popular support. Former Deputy Prime Minis-

ter Abdul Samad Hamed, former Justice Minister Abdul Sitar Sirat, former Agriculture Minister Abdul Wakil and former Deputy Prime Minister Ali Ahmad Popal are examples of the many experienced Afghan leaders who are not tainted by fundamentalist extremism, past links with the Communists, or the corruption charges that have discredited most of the alliance leaders.

While the Communist Party cannot be wished away in a postwar Afghanistan, it clearly cannot have a significant role in an interim regime and is not likely to win major representation in any future elections. Just as the US should not seek to exclude all Communist participation in the process leading to an interim regime, so the Soviet Union should be prepared to support representative processes that would, by their nature, consign the Communists to clear minority status.

Many Bush administration officials are skeptical of all formulas for replacing the Communist regime peacefully. Such scenarios, it is argued, implicitly assume that the existing Kabul governmental infrastructure would be left in place, at least initially. In this view, the armed forces, police and intelligence services of the Communist regime must be militarily destroyed and uprooted or they will subvert any new government. It is necessary to "start from scratch," as President Reagan put it in a press conference in November 1988.

The task of reshaping the armed forces, police and intelligence services inherited from the Najibullah regime would clearly not be an easy one. But the leadership of a successor regime would be fortified by its control of Western, UN and Soviet aid resources. Communist

discipline is not likely to survive for long within the security services in the midst of the political realignments that would accompany a broad-based regime. As the memory of the Soviet occupation fades, Afghan nationalism is likely to reassert itself, gradually diluting and domesticating Afghan Communism.

In my view, a policy designed to start from scratch in Afghanistan carries unacceptable moral as well as political costs. Such a policy is, in effect, a policy of fighting to the last Afghan, in the misguided pursuit of perceived American geopolitical objectives that can be achieved more effectively through political and diplomatic means.

## FROM THE DIRECTOR

### NEW DIRECTIONS FOR THE INSTITUTE

THE MIDDLE OF 1989 marked a natural crossroads for the Institute for Peace and Security. It was the five-year point in the Institute's life; the steady growth in the funding base (as provided in our founding legislation) had reached a plateau, and the Board of Directors agreed that it was a logical time to draw on the lessons of the initial building phase and to set clear directions for the future.

As the new Director, I seized every opportunity to consult my colleagues on the Board and staff about our past experience, and undertook a programme of external consultations, to seek the most balanced perspective possible. The result was an extraordinarily useful series of speaking and media engagements, small-group discussions and "accountability sessions," in every region of the country, meeting a cross-section of Canadians who follow the Institute's work and use its services – not excluding parliamentarians, federal, provincial and territorial officials and national and local journalists.

After further internal consultation – in which all Institute staff participated – our Board considered and agreed upon a set of medium-term directions for the Institute at our two-day meeting in mid-June. These discussions allowed for a bridging between past experience and future plans, since this was the last opportunity for our founding Chairman, and for several other distinguished directors who were retiring, to sum up their impressions and suggestions. What follows is an outline of our main conclusions.

FIRST, THE "REAL WORLD" ENVIRONMENT in which the Institute pursues its mandate of increasing knowledge and understanding of issues of international peace and security is today extremely challenging, and likely to remain so for years to come. The dramatic improvement in East-West relations, and the possibilities for progress in arms control and conflict resolution, creates *more* work, not less, for our Institute and its collaborators. None of the traditional issues has gone away – working out sensible options for defence policy and concrete arms control is tougher than ever – but we must also confront the huge and exhilarating tasks of contributing to new institutions, initiatives to resolve and reduce conflicts around the world, and responses to new kinds of international security threats, such as global

climatic change. Such an agenda could easily lead to overload, or to a diffused and diluted effort, so the Institute has identified a number of areas for concentrated work, along with its general and responsive coverage, in a flexible five-year strategy.

The Board also agreed that the pre-eminent mandate and resources entrusted to us by Parliament call for a clear stamp of excellence and relevance in all the Institute's activities, especially if it is to discharge credibly its responsibility to "study and propose ideas and policies." Another basic principle is that the Institute will continue to work in partnership with a wide range of other institutions, groups and individuals in the achievement of the central goals, by fostering and funding the appropriate research, information and educational activities. In addition to working with such specialized partners, however, the Institute accepts a central responsibility for making analyses of international peace and security accessible and interesting to a much wider public, to policy-makers and opinion leaders, both in Canada and abroad. This objective requires an energetic and professional working relationship with the information media which play a vital role in shaping understanding on these questions.

WITHIN THE FRAMEWORK OF OUR LEGISLATIVE mandate, our programme will continue to deal with the full range of peace and security issues, with particular attention to arms control, disarmament, defence, conflict resolution as well as some of the "frontier" questions in the field. We will maintain general monitoring, response, and referral capabilities in these areas, with our senior researchers each covering designated fields. This general issue coverage will also be maintained through the widest possible accessibility of such vehicles as our annual Guide, our streamlined publications programme, and vigorous outreach of our information services, through libraries, schools and other institutions. Six project-areas or clusters for *intensive* concentration over the next two to five years are as follows:

The non-proliferation of weapons of mass destruction;

Canadian defence and security policy;

Measures for strengthening international systems of peacekeeping, peace-making and peace-building;

Developing, maintaining and calling upon networks of experts concerned with particular regions of conflict or potential conflict;

Enhancing international cooperation and security in the Arctic region;

Exploration of new threats and new approaches to international security.

A number of these project-areas build on well-established activities undertaken or supported by the Institute, and others have already been the subject of new initiatives. For example, work on the review of defence and security policy is being launched against the background of a completed study on the future of Canadian land-forces, and the media round-table on defence, foreign policy and the federal budget held in early May. The project-area on international mechanisms for strengthening peace proceeds from a number of projects on peacekeeping, mediation and conflict resolution. Our "network" coverage of regions of conflict will draw on the lessons of the large-scale project on Cyprus conducted over the past year, and take such forms as the current programme on the transition to peace and elections in Namibia. The Arctic cooperation and security focus will bring together a large number of studies, and intensify a range of national and international contacts in these fields. New approaches to international security are already the subject of a commissioned project by a multi-university team.

THE INSTITUTE'S MANDATE TO APPROACH THE field of international peace and security "from a Canadian perspective" is not justification for any narrow nationalism. In fact, the global range of Canada's interests and potential contributions, as well as the strengths and curiosities of Canadians, mean that our agenda must be broad and innovative. By this same token, we have concluded that it is a responsibility of key Canadian institutions to concentrate resources primarily in areas of world importance where they can actually make the most difference. Thus the Institute's own analytical and educational work, and some of the work it undertakes with others, will be guided more explicitly by a sense of where Canada's strengths in enhancing international peace and security are most likely to be found over the medium-term. Our Board and staff are convinced that in the process of specializing in this way we will not only be the most effective resource for the Canadian community, but also build appropriate recognition and influence for this work world-wide. □

— BERNARD WOOD

*Bernard Wood is the Executive Director and Chief Executive Officer of the Institute.*

## REPORT FROM THE SECURITY COUNCIL

### Cyprus

There is growing optimism that the two sides in the Cyprus dispute may be inching towards a settlement of what has become one of the longest and most frustrating issues before the Security Council. After years of fitful efforts, hopes are now pinned to negotiations between Turkish Cypriot leader Rauf Denktaş and George Vassiliou, the President of the Republic of Cyprus.

In a bid to advance the talks, the Council issued a terse statement on 9 June, during a routine meeting to renew the mandate of UN forces in Cyprus (UNFICYP): "The members note that 25 years have elapsed since the establishment of UNFICYP.... They regret that, in that time, it has not been possible to achieve a negotiated settlement of all aspects of the Cyprus problem."

Canada was particularly active in drafting the statement. It argued for the strong language in order to make clear that nations contributing troops were growing weary of the stalemated negotiations. "The prime purpose was to register a sense of impatience that there has been twenty-five years of peace-keeping and we don't want there to be twenty-five more," a Canadian diplomat explained. "The problem is that as long as both sides rely on the UN force, they don't do anything [to advance negotiations]."

The diplomat said the latest negotiations are "the most hopeful in years." The two sides are scheduled to come up with a broad outline for an agreement sometime in September. They are then to meet with the Secretary-General to work out the details.

"If it doesn't work out, there won't be a return to the status quo of UNFICYP. The Security Council is frustrated. If the two sides don't give it their best shot then they'll suffer the consequences," the diplomat said. He did not spell out the specific consequences but the implication was that troop contributors would consider cut-backs. Frustration led Sweden to withdraw all of its troops last year.

Canada is also concerned that UNFICYP's financing is voluntary and at present, \$165 million in the red. During Council consultations, Canada sought relief in a proposal for a mandatory assessment of all UN members, but the Soviet Union and France are said to have opposed the move.

### Middle East

As in the past, events in Israel continued to be a major concern. In the space of a month, the Council voted on two resolutions critical of Israeli treatment of Palestinians in the occupied territories.

The first resolution, which "strongly deplored" Israeli policies and practices "which violate the rights of Palestinian people" was vetoed on 9 June by the US. The remaining fourteen members, including Canada, supported it. Canada's backing of the document was grounded in the belief that Israel was not doing enough to respect the provisions of the Geneva Convention relative to the protection of civilians under military occupation. The criticism of Israel was tempered by praise for the authorities in standing up to West Bank vigilantes.

The debate on the resolution was preceded by delicate negotiations. Initially, the document's sponsors had sought to use the strongest language available and "condemn" Israel. But Canada and others successfully lobbied for slightly softer language that instead "strongly deplored" Israel.

"We tried to get the language to be as acceptable as possible, then you have a resolution with moral weight," said a Canadian diplomat. "You don't want to show a divided Security Council."

Nonetheless, the US found the language unacceptable. It rejected the document for being "unbalanced," in that it failed to address the violence committed by Palestinians. As was the case with many previous resolutions critical of Israel, the US was left diplomatically isolated by its veto. The US, however, refrained from using its veto on 6 July, during a vote on a resolution expressing "deep regret" over the continuing deportation of Palestinian civilians. It chose instead to abstain, and the resolution was adopted.

In other Middle East matters, the Council, in one of its shortest meetings ever, renewed on 30 May the mandate for the UN buffer force in the Golan Heights (UNDOF) which stands between Syrian and Israeli troops. On 31 July, the Council renewed the mandate of UN forces in Lebanon (UNIFIL).

### Other Issues Before The Council

The Council also continued to monitor events in Namibia. Despite the problems of the initial phase of the operation, diplomats seem confident that the overall process is on track for elections in November. Nevertheless, they are conscious of the potential for what one diplomat termed, a few "hiccups."

One such problem arose on 28 June, when Secretary-General Javier Pérez de Cuellar warned the Council of an atmosphere of "fear and intimidation" in northern Namibia that jeopardized conditions for fair elections. He blamed the activities of a counter-insurgency unit of the South-West Africa Police Force for what he called "unacceptable" conduct.

The issue of terrorism was also the focus of Council deliberations. In a unanimous resolution the fifteen members called for an inter-

national regime for the marking of plastic or sheet explosives to make them more detectable. It urged all states to intensify research in order to prevent acts of terrorism against civil aviation.

On 31 July, the Council also adopted a resolution sponsored by Canada and Finland which condemned all hostage taking and called for the worldwide release of hostages and abducted persons. The resolution, although not directly related to the kidnapping of a Lebanese religious leader by Israel, was adopted on the same day the cleric's followers claimed they had executed Lt. Col. William Higgins, an American officer serving with UN forces in Lebanon. On learning of his death, the Council expressed its "outrage" and demanded that all hostages and abducted persons be released.

On 27 July the Council turned its attention to events in Central America. In a policy shift, the US went along with a resolution that called for the disbanding of the Nicaraguan Contras as part of the Central American peace plan. For the past few years, the US has prevented consideration of the issue. Its shift was balanced by the resolution's appeal to all countries to halt military aid to guerrillas in the region, an allusion to the conflict in El Salvador. The resolution also permits continued humanitarian aid to the Contras.

The vote was followed eleven days later by the surprise decision of the five Central American presidents to support the demobilization of the Contras. UN troops would be required to oversee this, as well as to guard the Honduras-Nicaragua border against infiltration and illicit arms shipments. Any such operation will require the approval of the Security Council, where the US has a veto. □

— TREVOR ROWE

## REPORT FROM THE HILL

### Fiscal Restraint

The impact of the 27 April budget is still being felt throughout the public service. For National Defence, the cuts meant a complete review of maritime capabilities following the cancellation of the plan to acquire a fleet of nuclear-powered submarines. Other options are currently under exploration. Defence Minister McKnight also intimated on 7 June, at the end of a visit to CFB Lahr in West Germany, that Canada would maintain its 7,500 troops in Europe "in the near term," but that the government would be assessing the wide range of roles to which Canada is currently committed.

There were questions in the House concerning the delay in plans to build the Polar 8 icebreaker in the light of soaring cost estimates. On 8 May NDP MP Audrey McLaughlin (Yukon) asked Transport Minister Benoit Bouchard when the building would begin. Although the Minister confirmed the government's commitment to the project, he and other senior ministers refused to reaffirm commitments about price, capability, contractor or sailing date. The project had first been announced as a means of protecting Canadian sovereignty in the furor following the 1985 voyage by a US Coast Guard icebreaker through the Northwest Passage. Yet despite an initial cost estimate of half a billion dollars, only \$1.6 million is earmarked for the programme this year.

Margaret Catley-Carlson, the President of the Canadian International Development Agency (CIDA) which had also borne substantial cuts in the budget, discussed the effects of the cuts as

well as aid policies in general in an appearance before the House Standing Committee on External Affairs and International Trade (SCEAIT) on 1 June. She reviewed her six years as president, noting that in 1983 CIDA had 1,082 person-years and a budget of \$1.35 billion; in the interim, person-years have increased by about fifty, the budget has grown to \$2.2 billion – \$2 billion after the cuts – presenting, in her words, "a very real management challenge." To this is added the process of decentralization: a far greater percentage of CIDA staff will be transferred to the field, in response to a key recommendation of SCEAIT in its 1987 report, "For Whose Benefit?"

### Turmoil in China

External Affairs Minister Joe Clark rose in the Commons almost daily in the weeks beginning 5 June, following the crackdown by the Chinese government on protesters in Beijing's Tiananmen Square. He answered a torrent of opposition questions and gradually announced a series of measures in response to the official repression that had been unleashed. Specifically: Canada recalled its ambassador and was the first Western nation to do so. Mr. Clark twice called in the Chinese ambassador to register the government's "profound disapproval" and its expectation that the Chinese official actions would be brought to an end, (the ambassador told reporters that Canada should not be meddling in China's internal affairs). The government airlifted Canadians out of China. Defectors from China's Canadian missions were assured by the Minister that their cases would be treated "in a most sympathetic way." Canada withdrew from three aid projects; kept on hold four of five agreements, the signing of which had been postponed in the immediate aftermath of the Tiananmen incident; and indefinitely suspended activity associated

with the massive Three Gorges dam project on the Yangtze river – a project which has already received considerable criticism for environmental reasons.

On 30 June the Minister made a detailed statement outlining the new realities of the Canada-China relationship, following a series of consultations the government had held with a wide variety of interested parties. A \$1.5 million assistance program for Chinese students in Canada was also announced, along with the creation of a panel to advise the government on their predicament.

The opposition called for a number of additional measures such as strong international action from the World Bank and other international institutions. The Minister indicated that the government would seriously consider Liberal leader John Turner's suggestion in the House on 26 June, that the issue of Hong Kong's future be placed on the agenda of the next meeting of Commonwealth Heads of Government (in Kuala Lumpur in October).

### Parliamentary Committees

Parliament recessed for the summer on 27 June, to resume on 25 September. The House Standing Committee on External Affairs and International Trade (SCEAIT) began work on a major, year-long study of Canada's relations with the Soviet Union and Eastern Europe which will recommence when Parliament resumes. The Committee will also undertake a study on international debt questions with a particular focus on Africa. These specific references do not prevent SCEAIT from exploring other issues as circumstances warrant.

The House Standing Committee on National Defence will be investigating questions of maritime sovereignty in the fall.

The Special Senate Committee on National Defence is nearing completion of a study on Canada's

land forces; after a further extension their report is expected in October 1989.

### Short Notes from the Hill

The Prime Minister and External Affairs Minister attended the Francophone Summit in Dakar, Senegal, on 24 May. They then went on to the NATO Summit in Brussels 29 and 30 May, while Mr. Clark was joined by the Finance and Trade Ministers to attend the Organization of Economic Cooperation and Development (OECD) Ministerial meeting 31 May and 1 June in Paris. The Prime Minister also attended the Economic Summit of the seven industrialized countries in Paris 14 to 16 July. Both the OECD meeting of twenty-four industrialized nations and the Economic Summit were notable in the stress they placed on environmental issues.

Canada was the only one of the world's major industrialized democracies to send a senior observer – Joe Clark – to the meeting of the Group of 77 (representing 127 developing countries) to discuss economic development, particularly debt questions, in Caracas, Venezuela on 19 and 20 June.

On 6 June, Joe Clark announced the departure of Doug Roche as Ambassador for Disarmament, a position he had held since October 1984.

On 28 June, Mr. Clark announced that Canada will provide technical assistance to the Supreme Electoral Council of Nicaragua to help organize its general elections, scheduled to be held in February 1990.

On 25 July the Prime Minister named Margaret Catley-Carlson as deputy minister of Health and Welfare. She will be succeeded as CIDA president by Marcel Massé, who was CIDA president from 1980–1982. He most recently served as Canada's executive director to the International Monetary Fund in Washington. □

– GREGORY WIRICK

## ARMS CONTROL DIGEST

### Conventional Arms Control

Remarkable progress was made during the second round of the Conventional Forces in Europe (CFE) negotiations, from 5 May to 13 July. First, on 18 May, the Warsaw Pact responded to NATO complaints about the vagueness of its earlier proposals by suggesting precise ceilings on various kinds of equipment, to be achieved through reductions by 1997. The proposed limits included 20,000 tanks and 28,000 armoured troop carriers for each side (identical to the NATO proposal of 9 March), and 24,000 artillery pieces (compared to NATO's proposed 16,500). The East would thus have to withdraw from Europe or retire, by its own estimates, a total of about 40,000 tanks, 47,000 artillery pieces, and 42,000 armoured troop carriers over the next eight years. It also called for each side to be limited to 1,350,000 troops, 1,500 "strike aircraft," and 1,700 helicopters.

Late May saw additional Eastern moves toward the Western position, including acceptance of the principles of sublimits on the forces of any one nation, on forces stationed outside their own countries, and on forces within regional "subzones" (to prevent their concentration). Thus, for example, the USSR would be permitted a total of 14,000 tanks, 17,000 artillery pieces, and 18,000 armoured troop carriers, only slightly above the number that would be allowed them under NATO's proposal. This, in turn, would amount to reductions of 17,580 tanks, 24,775 artillery pieces, and 27,000 armoured troop carriers beyond those announced as unilateral cuts by President Gorbachev at the UN last December.

In response, NATO at its summit meeting on 29 and 30 May for

the first time accepted the idea of limits on aircraft and personnel numbers, as demanded by the Warsaw Pact. US President Bush called for reductions to 15 percent below the current NATO levels in both helicopters and land-based combat aircraft, and a ceiling on US and Soviet ground and air force personnel in Europe of approximately 275,000 each. The latter would require the withdrawal of some 325,000 Soviet troops, compared to 30,000 Americans. Soviet Foreign Minister Shevardnadze welcomed the new proposals as "serious and constructive, and meeting our stand halfway in many respects." Bush also called for agreement to be reached within six months to a year, and the reductions to be completed by 1992 or 1993.

Further movement was recorded before the end of the round. On 29 June the Warsaw Pact proposed a new, larger "sub-zone," including the Baltic and other military districts of the western USSR, in an attempt to assuage Western concerns about the possible concentration of Soviet forces in areas close to central Europe. And on 13 July, two months ahead of schedule, NATO tabled details of its proposed limits on aircraft and helicopters, setting alliance ceilings of 5,700 and 1,900, and national ceilings of 3,420 and 1,140, respectively. Such limits would require NATO to destroy about 1,000 aircraft and the Warsaw Pact, 3,900 (by NATO's count). Major differences remained, however, over which types of aircraft would be subject to cuts, NATO wanting to include all combat aircraft and the Pact wishing to exclude fighter interceptors and medium bombers.

Other areas of continued disagreement included: the Pact's insistence on personnel limitations applying to the alliances as a whole, as well as to the forces of non-US NATO members stationed outside their own territory; whether or not stored equipment should be included in the limits on foreign-

stationed forces and on the forces within subzones (the Pact in favour, NATO opposed); the geographic parameters of the subzones, as well as the ceilings to take effect within them; the definition of certain types of equipment, such as tanks and artillery pieces; and each side's estimates of its own and the other side's current holdings. Finally, neither side had yet formulated comprehensive verification provisions. Although both sides pledged to attempt to reach an agreement within the time frame proposed by President Bush, most independent observers doubted that this would be possible.

### Nuclear and Space Arms Talks

The Nuclear and Space Arms Talks (NST) resumed for their eleventh round on 19 June, after a seven-month recess during which the new Bush administration reviewed the US position. Many observers were disappointed with the results of Washington's review, which mainly reconfirmed old positions and made no headway on such outstanding issues as constraints on ballistic missile defences, mobile ICBMs, and sea-launched cruise missiles. However, the Soviets were evidently pleased that previous understandings embodied in the 400-page draft treaty had been preserved. The Bush administration rejected Congressional recommendations that a US-proposed ban on mobile ICBMs be made to apply only to missiles with multiple warheads. Many arms control advocates have been urging the US to drop its proposed ban entirely, contending that mobile missiles are less vulnerable to attack and hence more stabilizing. However, the administration has been reluctant to drop the ban until Congress agrees to fund its own two new mobile ICBM programmes, since the Soviets have already deployed such missiles.

One new US initiative, introduced at the beginning of the new round, was a proposal to put into

effect agreed verification measures even before a final treaty text is completed. Although some critics perceived the move as a delaying tactic, Soviet negotiators were reported to have responded favourably.

### Brief Notes

The controversy within NATO over talks on short-range nuclear forces (SNF) was resolved at the 29 and 30 May summit by US agreement to begin negotiations on a "partial" reduction of such weapons once implementation of a conventional forces agreement was "underway." In support of his call for immediate negotiations to ban SNF, Soviet President Gorbachev on 11 May had announced that he would unilaterally reduce his arsenal of SNF warheads by 500. American officials retorted that this would have little impact on the estimated Warsaw Pact total of 10,000 such weapons, while noting that NATO had unilaterally reduced its own stocks by more than 2,400 since 1979.

The US and USSR on 12 June signed an "Agreement on the Prevention of Dangerous Military Activities," covering unintentional incursions of military aircraft into the territory of another country; the hazardous use of lasers; the disrupting of operations in "special caution areas" (such as the Persian Gulf); and interference with command-and-control networks. The agreement also establishes a Joint Commission to improve communications and handle disputes.

On 17 July it was reported that the US and USSR had reached agreement on key elements of a global Chemical Weapons Convention, including a timetable for the destruction of such weapons and detailed procedures for challenge inspections. The recommendations will be submitted to the 40-nation Conference on Disarmament in Geneva, where the Convention is being negotiated. □

## DEFENCE NOTES

### B-2 Flies into Modernization Debate

On 17 July the B-2 Stealth bomber flew for the first time, however, at a cost of US \$530 million per airplane (\$70 billion for the proposed purchases of 132), the maiden flight ran into severe turbulence in Washington, where legislators debated the 1990 budget, and, more broadly, the future of US strategic forces.

In July the House Armed Services Committee voted to reduce the 1990 stealth bomber budget by \$1 billion, and to reduce the 1990 purchase from three aircraft to two. Even these planes cannot be bought, according to the House resolution, until the Air Force produces a plan to reduce the cost of the programme. The Senate resolution was considerably less restrictive, requiring that the Pentagon certify the B-2's airworthiness, and ability to penetrate Soviet bomber defences, but leaving the budget largely intact. A conference committee of the two houses is expected to reconcile these differences before the fall, but the statement of performance requirements imposed on the Air Force may take considerably longer to produce.

The debate over the B-2 is part of a broader debate between the Bush administration and Congress over the future structure of US strategic nuclear forces. In January President Bush announced a review of force modernization plans prior to the resumption of arms control negotiations with the Soviets. The review is now long overdue, but the shape of the US force structure is in any case emerging from the continued tug-of-war in Congress.

In an April compromise between the Pentagon and the

Congress, the single warhead Midgetman, which has few supporters in the Pentagon, was restored to the 1990 budget in exchange for the continued funding of the road-mobile version of the ten-warhead MX missile. In late July the House of Representatives voted first to halve funding for the deployment of the MX missile, and later, to kill the Midgetman. The double blow was a product of Congressional politics, not strategic analysis. When the Democrats voted to limit MX funding, Republicans retaliated by voting with liberal Democrats against Midgetman.

Led by New York Congressmen determined to save Grumman Aircraft's Long Island factory, the House further shredded the administration's defence budget by restoring funding to the F-14 fighter aircraft – one of only two major procurement programmes which Secretary of Defense Richard Cheney had been able to cut in his original budget proposal.

In testimony to Congress, Pentagon Chiefs have argued that without the B-2, US negotiators in Geneva would need to revise their negotiating position or even withdraw from the talks. President Bush, still without the conclusions of his strategic review, has claimed that he has established a "solid strategic program" which depends on the package of the B-2, Midgetman, MX, and the continuation of SDI. Adding his voice to the fray, on a July visit to Washington which included an appearance before the House Armed Services Committee, Marshal Akhromeyev, Special Adviser to Gorbachev, told reporters that, if the B-2 is deployed, "there will be a reaction on the part of the Soviet Union."

### Picking Up the Pieces in Ottawa

Although the Mulroney government has not undertaken a formal review of defence policy following this year's budget cuts, various official statements indi-

cate the course of the painful reassessment now taking place in Ottawa.

Under the programme envisaged by the White paper, the Navy would have built towards a fleet of 28 combat ships, to include 12 frigates, 4 destroyers, and 12 nuclear-powered submarines. The acquisition of the nuclear submarines was partly at the cost of a third batch of six new frigates projected for the late 1990s. With the cancellation of the nuclear submarines, Canadian navy officers held out the lingering hope that the third batch of frigates would be restored. Speaking before a Commons committee in June, Defence Minister William McKnight dashed such hopes with the announcement that there would be no third batch of frigates. No decision has yet been made on a replacement for the three conventional submarines due for retirement.

Without the third batch of frigates, Canada will have 16 combat surface ships at the turn of the century, 4 of which will be 25 years old. If the conventional submarines are replaced only on a one-to-one basis, the Canadian Navy may end the century with fewer than twenty combatant vessels.

Also in June, McKnight told reporters in Europe that a decision on a small number of replacement tanks for Canadian forces in Europe will be made at the end of the year. Meanwhile, the government has scrapped White Paper plans to expand Canadian armed forces in Europe to divisional strength. The expansion to divisional strength was promised to NATO as compensation for the withdrawal of the Canadian commitment to reinforce Northern Norway.

Finally, DND has moved to augment the number of Aurora long-range patrol aircraft by purchasing three additional aircraft frames from Lockheed. Operating without the sophisticated electronic monitoring equipment of the Aurora, the new aircraft (to be called Arcturus) will take over Arctic sovereignty patrols, thereby

freeing the Auroras for operations in an anti-submarine warfare role.

### Defecting Mig

In July, a Soviet Mig-23 operating from Poland lost engine power. The pilot turned the plane towards the Baltic, and bailed out, whereupon the plane recovered power, turned West, and flew across NATO airspace until it crashed in Belgium. The Soviets have admitted that they were unable to follow the aircraft on radar, and were unaware of its fate until informed by Western authorities. Unofficial sources have suggested that NATO aircraft might have been unwilling to shoot it down for fear that it might have carried nuclear-tipped missiles.

The incident may reinforce the Polish claim that there is a need for a European risk reduction centre which would permit rapid communication to avoid misunderstanding in such situations.

### Lake Concrete

In July Western reporters were allowed to visit Kyshtym Industrial complex east of the Urals. Kyshtym has been the site of the main Soviet military reactor complex, although its ancient reactors are now being phased out. Among the horrendous errors in the handling of nuclear materials at Kyshtym, Soviet officials admitted to the existence of a radioactive lake, which they propose to fill with concrete.

The growing list of Soviet accidents and mismanagement of nuclear materials, now made known to the Soviet public for the first time, appears to have brought the nuclear allergy to the Soviet Union. At the People's Congress in June, representatives called for an end to all Soviet nuclear testing. After almost five months without testing, however, the Soviet programme resumed on 8 July with an underground explosion at Semipalatinsk. □

## LETTERS TO THE EDITOR

### Ever Elusive Defence Debate

Professor K.R. Nossal's explanation in "All in Favour, Say Aye," (*Peace&Security*, Spring 1989) for the lack of defence debate in last November's federal election – "we have no debate because there is nothing to debate" – must surely have come as a surprise to the tens of thousands of peace activists who lined the city streets in the early 1980s, and to the DND officials who sought equal airtime for the military perspective in the heat of the cruise missile testing debates.

I accept his view that the circle of ardent advocates who vigorously debate Canadian defence issues is a small one. What he fails to ask is whether the defence decision-making process itself – one which is secluded from public scrutiny, highly technical and which carries dreadful implications most citizens would not care to confront on a daily basis – isn't also something which hinders public involvement.

The preoccupation with "concrete interests" is rather selective. Frankly, I would have thought that an interest in survival was fairly "concrete." To support his belief that "most Canadians have made a careful calculation about the consequences of embracing an alternative defence policy," he cites public opinion polls showing overwhelming public support for Canadian involvement in NATO and NORAD, [as well as] election results.

The problem with this reasoning is that making a "careful calculation" about your interests implies a detailed knowledge of them. But how many Canadians can honestly be expected to have an intimate understanding of al-

liance policies and their security implications? These statistics may tell us that Canadians support alliance participation, but not why.

The second argument that, "if Canadians wanted an alternative defence policy, they would have voted in the NDP by now," is equally weak. Professor Nossal ought to know that in Canada, as in many Western democracies, elections are not won or lost on foreign policy issues – so elections make poor indicators of public foreign policy preferences.

*Tony Rogers, Hong Kong*

### Export or Die

Roger Hill rightly warns of the hazards of Canada-US defence production integration ("Unified Canada-US Defence Production," *Peace&Security*, Summer 1989). Leaving aside the fact that such integration is already well advanced, with serious implications for independence in Canadian security policy, it is worth considering whether the implied solution, a better developed (perhaps specialized) national defence industrial base in Canada, isn't in fact at the root of the problem.

The DND Task Force report which Hill quotes, promotes integration, in part, on the grounds that Canadian security requires a well-developed defence industry base in Canada that can be mobilized in times of crisis and that can assure the supply of military equipment during periods of intense demand. But that leads to the sixty-four thousand (more like billion) dollar question – how can Canada sustain a commercially viable military industry during periods of reduced demand (i.e. during peace time)? The problem is acknowledged in another defence industry report, the Department of Supply and Services Defence Industrial Base Review 1987: "The Canadian defence market is insufficient in size and scope to support a wholly Canadian defence industrial base." A commercial military industry cannot survive

on Canadian military purchases, so both the DND Task Force and the Supply and Services reports look to exports as the basis for economic viability in the industry.

That begs another question. Where is the industry to find those exports? The biggest export market available to Canada is the US, but access to that market is still under threat (despite thirty years of formal defence production sharing) from US protectionism. And as American procurement is inevitably cut back – the combined effect of detente and budget restraint – that protectionism is certain to increase in an effort to preserve the shrinking market for American firms. Thus, the argument goes, Canada needs a way around American protectionism to gain unrestricted Canadian access to the American market – namely, full integration of the Canada-US market and industry so that Canadian firms are essentially defined as American for purposes of defence procurement in the US. In other words, the perceived need for a more developed Canadian defence industrial base is precisely what is creating the pressure (from Canadians) for an integrated North American defence industrial base.

Those who want increased military production in Canada need to understand that this will be possible only through increased exports. And if the Americans won't buy more than they already do (over fifty percent of Canadian military production) Canada will have to rely more on Europe and the Third World to support its military industry ambitions. But Europe has plenty of surplus military production capacity of its own, and the Third World is a highly competitive market in which a willingness to sell to human rights violators and war zones is rapidly becoming a prerequisite to success.

If Canada wants to establish some measure of military production independence from the Americans and wants to avoid relying

on military sales to zones of repression and war, a commercially viable, enlarged Canadian military industrial base is a non-starter. A truly independent Canadian defence industrial base will have to depend entirely on public subsidy, not on commercial sales, and will have to accept the higher per unit costs of shorter production runs – that might be the best incentive yet for Canada to reassess its security and military equipment needs.

*Ernie Regehr,  
Project Ploughshares, Waterloo*

### Much Ado About Nothing

Ted Hopf's article ("Is the West Missing the Soviet Boat?" *Peace&Security*, Summer 1989) seems to be an effort to say something while bending over backwards to say nothing. Hopf gives three reasons why the West should be encouraging. First, it channels Soviet energies away from new adventures – so the West must give Gorbachev "a graceful way out of commitments" (that is, a graceful way to abandon his interests) "while ensuring that any settlement preserves Western interests." Is that not what the West is doing already, and how does it differ from "a chilly response"? Secondly, it promotes detente – so the West should use Gorbachev's priority for disarmament, which dictates his moderation in the Third World, "to its [the West's] advantage." Is that not what the West is doing already and how does it differ from "a chilly response"? Thirdly, to help him against his conservative colleagues who are concerned that Gorbachev's foreign policy "seems to do nothing but make one unilateral concession after another," the West should give Gorbachev "a constructive response." What constructive response? The earlier two suggestions to give Gorbachev a face-saving way to retreat still more for Western advantage or something unspecified which Hopf can't bring himself to write about? *B. Wallis, Ottawa* □

## REVIEWS

### Diefenbaker's World: A Populist in Foreign Affairs H. Basil Robinson

Toronto: University of Toronto Press,  
1989, 352 pp., \$29.95 cloth

This absorbing book broadly tours the foreign policy horizons – 1957 through 1963 – largely from the vantage point of the Prime Minister's Office, where the author, then a rising foreign service officer, served as John Diefenbaker's liaison to the Department of External Affairs. Robinson wisely emphasizes at the outset that his account concentrates on the issues he was personally involved in and therefore "does not pretend to be an all-embracing history of Diefenbaker's decisions and activities in the foreign policy field."

So while this is not the definitive work on Canadian foreign policy in the Diefenbaker years and perhaps will not be the last word on Diefenbaker as foreign policy-maker, it accomplishes exactly what its author sets out to do. Drawing upon his own firsthand experiences backed up with some archival work, Robinson vividly, often compellingly, and sometimes colorfully portrays John G. Diefenbaker in power, reacting to a world in which the Americans want Canadian forces equipped with nuclear arms and the US president confronts the Soviets over the Cuban missiles; Britain wants into the European Economic Community and out of the encumbrances of its imperial past; and the presence of racist South Africa becomes intolerable in the increasingly multiracial Commonwealth.

Ever-loyal Diefenbaker partisans will either dislike the book or take it as confirmation of what they have long believed about

what Diefenbaker himself used to call the "Pearsonalities" who worked for the Department of External Affairs. For while Robinson carefully underlines the complexities of the international situations in which Diefenbaker found himself, and scrupulously identifies the prime minister's virtues and foreign policy successes, the portrait that emerges is far from flattering. Diefenbaker, he says – and demonstrates – was "a difficult, egocentric man," who suffered from "a collision of impulses." Inconsistent, quick to take insult, ever distrustful of advisers, lacking a coherent approach to foreign policy, and with his eyes always on short-term political gain and immediate tactics, Diefenbaker in the end "simply defeated himself."

That final defeat on the floor of the House of Commons and in the general election of 1963 was precipitated by the nuclear weapons issue, to which a substantial portion of the book is devoted. Robinson's account of the deliberations within the East Block and of the discussions between the Canadian and US governments (including the famous Kennedy-Diefenbaker discussions of May 1961 in which Robinson was a participant) rounds out what has been known from other sources, and in many respects can be taken as authoritative. Diefenbaker obfuscated to the end about the Canadian commitment to acquire the weapons. Robinson shows "that in its first two years the Diefenbaker government was consciously heading in the direction of acquiring nuclear weapons for its own forces, both in Canada and Europe."

Still, because the nuclear weapons stories and the Kennedy-Diefenbaker tales have been told so often by others, the details themselves can no longer surprise. In addition to the portrayal of Diefenbaker himself, the real gems in this book lie elsewhere.

Because of his role as liaison between the PMO and External Affairs, Robinson is able to masterfully outline the relationship between Diefenbaker and his second secretary of state for external affairs, Howard Green. The relationship between Diefenbaker and British Prime Minister Harold Macmillan, at a time when Anglo-Canadian relations were still not quite clearly "foreign" also stands out.

Finally, buried deep within the book, almost as an aside, Robinson suggests a useful term which deserves broader consideration and can especially be applied to Canadian defence policy. Diefenbaker's approach toward the US, he says, was characterized by "a kind of push-resistant nationalism, aimed at whatever the source might be." In this, was Diefenbaker not typically Canadian?

### Danger and Survival: Choices About the Bomb in the First Fifty Years McGeorge Bundy

New York: Random House, 1988,  
735 pp., US \$24.95 cloth,  
US \$12.95 paper

No serious student of international affairs can afford to pass up McGeorge Bundy's highly important book. A former professor of foreign policy who was also Dean of Arts and Sciences at Harvard, McGeorge Bundy was one of the Charles River "whiz kids" conscripted by John Kennedy to work in the White House. He served as special assistant for national security affairs and like so many stayed on to work for Lyndon Johnson after Kennedy's assassination. He later headed the Ford Foundation and is now professor of history at New York University.

Bundy examines the critical choices and decisive turning points in the history of nuclear

weapons: the decision to build the bomb and the early history of the Manhattan Project; the decision to drop the bomb on Japan; the failure of the Baruch plan to place atomic weapons under international control; the decision to build the H-bomb; and major crises in the nuclear age such as those over Berlin and Cuba. His new book is a tour de force which will surely stand as the definitive account of the political history of nuclear weapons.

This is no ordinary account of the nuclear age, intent on reciting what is now a familiar tale. Instead Bundy has delved deep into the archives to challenge much of the prevailing conventional wisdom about the development of nuclear weapons and their role in US foreign policy while also raising some of the deeper moral and ethical dilemmas which were occasionally confronted – or as often as not, ignored – by top American scientists or their political masters. For instance he argues that Truman's decision to proceed with research on the H-bomb was a failed opportunity to halt the arms race. Had the United States pledged not to proceed in the development and construction of the H-bomb (as some of the President's advisers had suggested) it might well have exacted a similar pledge from the Russians. Instead Truman gave the go-ahead for research and development and the nuclear arms race took another major upward turn.

Bundy argues convincingly that it was not Kennedy or his Secretary of Defense Robert McNamara who shaped America's current strategic force posture as is commonly argued, but former President, Dwight D. Eisenhower. Eisenhower's legacy, Bundy suggests, was profound but also marked by extraordinary excess:

The decisions he made and allowed others to make were so broad and so deep that even in the middle of the 1980s the underlying structure of the

nuclear armaments of the United States retains a shape that the Eisenhower of 1960 would recognize: three major classes of strategic weapons based on aircraft, land-based missiles, and submarines, and a large variety of less-than-strategic weapons with shorter ranges and uncertain missions.

Students of the Cuban missile crisis will also find Bundy's chapter on this episode, which is also the longest in the book, revealing and insightful. Bundy concludes that "[t]he risk of nuclear war in the thirteen days was real, and the most important single consequence of the missile crisis may be that neither side wants to run such risk again." He goes on to suggest however that "the risk was small, given the prudence and the unchallenged final control of the two leaders."

Recent revelations by Soviet and Cuban officials at a Harvard-sponsored conference in Moscow that the Soviet Union had actually placed nuclear warheads in Cuba and that Fidel Castro was urging that the missiles be fired in the event of a US invasion of the island (which seemed imminent, from his point of view) would suggest that the risks were greater than Bundy believes. Nevertheless, Bundy has provided us with a highly probing and informative first-hand account into President Kennedy's thinking and the thoughts of those who sat around the table of the Executive Committee of the National Security Council during those fateful days in October 1963.

In the final chapter of the book Bundy provides us with his own views of the lessons and hopes of the nuclear age. He argues that survival in the nuclear age will require "candour and caution and imagination and effort." But the harsh reality is that nuclear weapons cannot be wished away and "[r]eduction of the risk, decade by decade, is our best hope for long-run survival." Let us hope that McGeorge Bundy's sound advice will not be lost on those responsible for current and future arms control. — *Fen Osler Hampson*

*Mr. Hampson is a research associate at the Institute and teaches international affairs at Carleton University*

### Rites of Spring: The Great War and the Birth of the Modern Age

Modris Eksteins

*Lester and Orpen Dennys: Toronto, 1989, 396 pp., \$26.95 cloth*

We are now well into the season of fiftieth and seventy-fifth war anniversaries. Each week for the next five years will contain at least one public reminder of a battle or a heroic death or a mass slaughter. What we won't get much of is historical and cultural perspective: why was the Great War a unique event; how did the West deliver itself twice inside twenty years into a holocaust; what was in the cultural baggage the soldiers carried off to war with them; and why are we — citizens of the last decade of the twentieth century — shaped by these events and by the attitudes, and assumptions of those who participated in them.

Eksteins is a professor of history at the University of Toronto; however, I suspect there are lots of historians who will object to his method here. The author is writing cultural history and he has a thesis: that the sensibilities of both *modernism* and the *avant-garde* spring from the same roots as fascism and Nazism. Furthermore, Eksteins believes that the calamitous period from 1914 to 1945 is not only the story of war in a narrow sense of violent conflict organized for political ends, but also the working through of a cultural upheaval which was driven forward mostly by the new, and in 1914, uniquely dynamic German nation. While all of Europe was suffering the physical and cultural dislocation of industrialization, it was Germany, Eksteins asserts, that experienced the profound social and psychological effects most intensely — "The German experience lies at the heart of the 'modern experience.'"

It is not just Eksteins' thesis, but also the way he goes about his work that is audacious and refreshing. He sets up the book as a three-act play with an incongruous succession of calamities, cultural gurus and audiences that meet in and around and through the Great War: Serge Diaghilev almost, but not quite, meets Thomas Mann in turn-of-the-century Venice; there is an immensely influential and

intentionally scandalous debut performance of the ballet, *Le Sacre du printemps*, in Paris the year before war breaks out; deliriously happy crowds all over Europe take to the streets during the unusually balmy summer of 1914 to celebrate the coming of war; and even in the German General Staff's plan for victory in Europe, the Schlieffen plan, Eksteins finds the German "modernist" preoccupation with fantasy, rebellion and the big event — "a grand scheme, a Wagnerian script, that elevated limited tactical adventure to a total vision."

As the Great War grinds on through 1917, the grisly realities of a war of attrition serve to affirm the modernist preoccupation with myth and violence and death. When it finally ends, Germany has lost but the ethos has seized all of Europe. The spectacle of Lindbergh's flight from the new world to the old provides a popular hero for a continent disillusioned and exhausted by its present, and alienated from its past.

The book ends in Hitler's bunker in Berlin: while he plans his suicide his faithful officers dance in the cafeteria. From the experience of the Great War the Nazis had coaxed some meaning — however perverse and corrupt — where none could be found before. "The Great War was the psychological turning point ... for modernism as a whole. The urge to create and the urge to destroy had changed places." For Eksteins, fascism and Nazism were the embodiment of mass alienation brought about by the First World War, "Nazism was not just a political movement, it was a cultural eruption."

Eksteins' construction is not fully satisfying in that it stops too early. After accounting for the birth of the modernist sensibility, Eksteins touches only fleetingly on what he refers to as our present "post-modernist age." We are left to ourselves to make sense of this double-edged "modernism" amidst the chaos of our own time; where the political order of Europe, frozen for forty years after Berlin's fall, is shifting too rapidly for the alleged experts to explain or even understand. — *Michael Bryans*

*Mr. Bryans is editor of Peace & Security.*

### BRIEFLY NOTED

#### The US-Canada Security Relationship

David G. Haglund and  
Joel J. Sokolsky, editors

*Boulder, Colorado: Westview Press, 1989, 306 pp., US \$28.00 paper*

Sub-titled "The Politics, Strategy, and Technology of Defence," this compendium contains a dozen essays on issues central to the US-Canada relationship in the military and security arenas. The chapters originated as papers for a June 1988 Queen's University conference marking the fiftieth anniversary of President Roosevelt's 1938 speech at Queen's in which he explicitly recognized the US interest in the security and defence of Canada. Among contributors to the volume are: John Anderson, a former Assistant Deputy Minister of Defence, on the modernization of North American air defence; Lt. Col. Douglas Bland, on the military consequences of neutrality; and Joel Sokolsky of the Royal Military College, on the strategy and politics of the original decision (since reversed) to purchase nuclear-powered submarines.

#### Human Rights in Canadian Foreign Policy

Robert O. Matthews and  
Cranford Pratt, editors

*Kingston and Montreal: McGill-Queen's University Press, 1988, 375 pp., \$37.95 cloth, \$15.95 paper*

This edited volume contains chapters by some fifteen authors with varying kinds of expertise in the field of human rights. The book examines Canada's human rights behaviour in five different international forums, in two policy areas and in three bilateral relationships. The editors conclude that while Canada has shown a genuine interest in promoting human rights throughout the world, "this interest has not been without limits."

(The two titles noted above were published with financial assistance from the Institute for Peace and Security.) □

# A DIRECTORY TO INSTITUTE PUBLICATIONS

## Key

OP – Occasional Paper  
BP – Background Paper  
WP – Working Paper  
FS – Factsheet

## OCCASIONAL PAPERS

The Institute publishes approximately four Occasional Papers each year. These monographs aim for both scholarly excellence and policy relevance, and deal with the subjects that fall within the areas defined in the Institute's mandate.

## BACKGROUND PAPERS

This series is a medium for timely analysis, in a non-academic style, of major events and emerging issues of peace, conflict and international relations. In some of these, authors are encouraged to incorporate their own personal viewpoints in the presentations.

## WORKING PAPERS

Working Papers, the result of research work in progress or the summary of a conference, are often intended for later publication by the Institute or another publisher, and are regarded by CIIPS to be of immediate value for distribution in limited numbers – mostly to specialists in the field. Unlike all other Institute publications, these papers are published in the original language with a translation of only the abstract.

Factsheets provide short synopses of current issues in arms control, disarmament, defence and conflict resolution, and outline the historical context for contemporary events. The series is intended primarily for senior secondary students and teachers.

## PEACE & SECURITY MAGAZINE

Peace & Security is a quarterly magazine published since Spring 1986 to let Canadians and others know what the Institute is doing, and to provide a forum for the full range of Canadian viewpoints on issues of peace and security.

## ANNUAL GUIDE

The Guide, published annually, provides a basic reference source on Canadian policies in the field of peace and security. It seeks to identify the major policy issues to which Canada responded in the year, place them in context, and, where appropriate, cite a range of Parliamentary comment on these issues.

## ANNUAL REVIEW

Once a year, the director of the Institute takes stock of the major events and trends in the areas of peace and security, and their implications for Canadian policy.

## ANNUAL REPORT

The Annual Report sets out for the Parliament and the people of Canada the record of activities and financial statements of the Institute for each fiscal year.

To order, please write:

**The Canadian Institute for International Peace and Security**

## Barton Awards Programme

The Institute invites applications for its Awards Programme, now designated the Barton Awards in honour of the first Chairman, former UN Ambassador William Barton. The programme is open to both academics and non-academics who wish to enter or continue studies in the field of international peace and security. The programme is intended to encourage expertise and scholarship in that area by supporting Canadians who wish to pursue their studies at institutions abroad or in Canada.

The Institute expects to make ten awards, two senior fellowships valued at up to \$30,000 and eight scholarships at up to \$14,000. Applications will be assessed by an independent selection committee and decisions will be announced in May 1990.

Applicants must be Canadian citizens whose experience or academic qualification enable them to pursue advanced study.

The deadline for applications for the 1990–1991 academic year is 1 February 1990.

For further information and application forms please write to:

The Barton Awards Programme  
Canadian Institute for International Peace and Security  
360 Albert, Suite 900  
Ottawa, Ontario  
K1R 7X7

## NEWS FROM THE INSTITUTE

**William Barton**, Chairman of the Board of Directors of the Institute since its founding in August 1984, retired from the Board after five years of service. After its June meeting, the Board of Directors decided that in recognition of his work with the Institute, awards and scholarships would henceforth be named the *Barton Awards*. Other members leaving the Board after three-year terms are **Ann Gertler**, **Kal Holsti**, **Richard Mercier**, **Brian Urquhart** and **Jean-Guy Vaillancourt**.

The Secretary of State for External Affairs, the Right Honourable **Joe Clark** recently announced the appointment of new Board members. They are **Beatrice Bazar** from Montreal, a former national president of the United Nations Association in Canada, and current director of the Canadian Human Rights Foundation; **Lincoln Bloomfield** of Boston, who has been associated with the Massachusetts Institute of Technology for many years and whose field of interest is international institutions and organizations; **Francine Fournier** of Ottawa, the secretary-general of the Canadian Commission for UNESCO; **Reginald Lane**, a retired Lieutenant-General who now lives in Victoria and is active in the Royal United Services Institute; and **Elinor Powell** of British Columbia, a former president of the Canadian Physicians for the Prevention of Nuclear War. Mr. Clark also announced that, after consultation with the Board of Directors and the opposition parties, the government has appointed **David Braide** as Chairman of the Board for a three-year term.

On 8 June the Institute's Director and senior managers appeared before the House of Commons Standing Committee on External Affairs and International Trade. MPs of all parties engaged in a lively and wide ranging discussion with the Institute's Director about a number of international issues and the Institute's own projects and analyses. This was the first appearance the Institute has made as a crown corporation to discuss estimates before the Committee.

"Cyprus: Visions For the Future" was the title of the fourth and final seminar in a year-long Institute project which explored the roots of the conflict in Cyprus and the possibilities for its resolution. In the final seminar, participants focussed their discussions on possible future developments rather than on past problems, and reached consensus on the need for the two communities to work together in order to build a common Cypriot political identity. The two municipal leaders of divided Nicosia, **Mustafa Akinci** and **Lellos Demetriades**, spoke about their experiences cooperating on practical problems in their city, such as water and sewage systems. It was agreed that confidence-building measures between the two communities should be encouraged and broadened. Participants also discussed the role of the United Nations Force in Cyprus (UNFICYP) and the UN Secretary-General's efforts to promote a settlement. They recommended that contributions to UNFICYP might be made conditional on progress towards a settlement, that negotiations for a

renewal of the mandate begin earlier, and that the force become more of an observer force with a quick reaction capability.

During the autumn two new research assistants will join the Institute staff: they are **Marie-France Desjardins** and **Robin Hay**. Ms. Desjardins is a graduate of the Paterson School at Carleton and the Université du Québec à Montréal in history and international affairs, and has published a number of articles on non-proliferation and nuclear-powered submarines. Mr. Hay also graduated from the Paterson School, and did his undergraduate work at the University of Ottawa, specializing in international relations and history. His publications have focussed on arms control issues. Research assistants **Peter Gizewski** and **François Lafrenière** left the Institute; **Doug Hamlin**, a Fellow for the past year returned to the Department of External Affairs; and **Bruno Munier's** term as a Fellow also expired at the end of August.

The Institute welcomed two new Fellows in the fall: **Ron Fisher** from the University of Saskatchewan and **Gordon Sharpe** from the Department of National Defence. Lt. Col. Sharpe, an air navigator, will study questions of aerial surveillance. Professor Fisher will concentrate on social psychology and international conflict resolution.

**Fauzya Moore**, a grants officer, left the Institute in June to work with the Centre for International Cooperation and Develop-

ment at the University of Ottawa. **Rychard Brûlé**, senior grants officer, returned from the National Defence College where he had spent the last year; his replacement at the Institute, **Marie-Andrée Lalonde-Morisset** will act as media relations officer from September until December. **Michel Proulx**, material manager, and **Suzanne Payant**, receptionist, have both left the Institute to return to university.

The Institute hosted a number of seminars during the late spring and summer: **Louis Kriesberg** of Syracuse University spoke on the current state of studies in conflict resolution; **K.M. de Silva**, professor of history at the University of Peradeniya and director of the International Centre for Ethnic Studies in Colombo, Sri Lanka, led a discussion on "Ethnicity, Conflict and Development: A Comparative Perspective;" **Rashid Khalidi** of the University of Chicago, led a seminar on the *Intifada* and current developments in Israel, the West Bank and Gaza; **Edy Kaufman**, executive director of the Harry S. Truman Research Institute, and senior lecturer at the Department of Political Science of Hebrew University, Jerusalem, spoke on "Israeli and Palestinian Attitudes towards the Peace Process;" **Boris Alekhin**, an economist, and exchange visitor from the Institute of the USA and Canada in Moscow, gave a seminar which focussed on his month in Canada, during which time he visited the Royal Bank of Canada, and Dominion Securities in Toronto; **Gerald Steinberg**, a professor at Hebrew University in Jerusalem and specialist on arms control issues, led a discussion on the proliferation of weapons of mass destruction in the Middle East, and emphasized the need for confidence-building measures between Israel and its Arab neighbours; and **Mark Sakitt**, a

### Grants Procedures and Deadlines

■ *The Institute allocates grants twice a year. Contact the Institute for a copy of updated criteria and application forms. Please note the following deadlines:*

30 June for an October decision

31 December for a March decision

physicist at the Brookhaven National Laboratory, spoke on submarine warfare in the Arctic.

“The Challenges of Security and Cooperation in the North Pacific: A Canadian Perspective” was the title of a paper delivered by **Bernard Wood** at the Fletcher Hokkaido North Pacific Forum in Sapporo, Japan at the end of July. Mr. Wood put forward the view that the Pacific region has the opportunity to build a regime for security and cooperation which can avoid some of the dangers and burdens of excessive military competition that have historically plagued other regions as they came to prominence in world affairs. He also said that the Pacific region is in a position to pioneer new methods for dealing with some of the underlying causes of international conflict and for responding to the new, shared challenges to international security in areas such as environmental degradation, mass poverty and population growth. The meetings, which were sponsored by the National Institute for Research Advancement, drew participants from Asia, North America and Europe. In late June, Mr. Wood gave the closing lecture to the National Defence College in Kingston on the future of the international system.

**Ron Purver** gave presentations on Arctic arms control at a *Pacem in Maribus* conference in Moscow in June, and a workshop on Arctic security at the University of Aberdeen in Scotland. He also delivered a paper on undersea warfare and arms control at a conference in Halifax sponsored by the Centre for Foreign Policy Studies at Dalhousie and the Department of History at the University of New Brunswick. In July, Mr. Purver attended the fifth general assembly of the Inuit Cir-

cumpolar Conference in Sisimiut, Greenland.

**Michael Bryans** was elected to the Board of Directors of the Canadian Periodical Publishers' Association at its recent annual meeting in Toronto.

**Katherine Laundy** and **Susan Connell** organized, and spoke at mini-conferences in Calgary and Yellowknife on peace and security information resources.

### Scholarships Awarded

The Canadian Institute for International Peace and Security recently awarded twelve (\$14,000) scholarships to Canadians who wish to further their studies in the subject areas of international peace and security. The scholarships are awarded annually as part of the Institute's Awards Programme. The award holders come from different disciplines and will pursue a variety of studies.

**Jean-François Bergeron**, Québec City, will be pursuing a Ph.D. in Political Science at Laval University in cooperation with the Centre for Intergroup Studies in South Africa concentrating on Political Change in South Africa.

**David Ross Black**, Toronto, will be pursuing a Ph.D. in Political Science at Dalhousie University concentrating on Middle Power Foreign Policies Towards Southern Africa: Australia, Canada, and Sweden.

**Walter Henry Dorn**, Toronto, will be completing a Ph.D. in Chemistry from the University of Toronto in cooperation with the Linköping Institute of Technology (Sweden) concentrating on Chemical Sensing for Arms Control Verification.

**Laurent Frappé**, Québec City, will be pursuing a Ph.D. in International Relations at Université Laval concentrating on Conflicts and International Relations in Latin America.

**Frank E. Harvey**, Montréal, will be pursuing a Ph.D. in International Relations at McGill University concentrating on Conflict, Crisis and War.

**Robert Neil Huebert**, Winnipeg, will be pursuing a Ph.D. in Political Science at Dalhousie University concentrating on Defence and Canadian Arctic Policies.

**Howard Peter Langille**, Annapolis Royal, Nova Scotia, is completing his studies at Bradford University in England toward a Ph.D. in Philosophy, concentrating on Peace Studies. He will examine the question of Canadian Defence Policy: Options for Common Security.

**Laure E. Paquette**, Montréal, will be pursuing a Ph.D. in Political Science at Queen's University concentrating on Strategies and Civilizations.

**Leigh Edward Sarty**, Toronto, is completing a Ph.D. in Political Science at Columbia University in New York City concentrating on a Comprehensive Study of the Soviet Union's Postwar Relations with Canada, 1966-1980.

**Larry Anthony Swatuk**, Windsor, will be pursuing a Ph.D. in Political Economy and Foreign Policy at Dalhousie University concentrating on The Political Economy of Small State Survival: Foreign Policy Making in Botswana, Lesotho, and Swaziland, 1966-1988.

**Puay-Khoon Tang**, Toronto, will be pursuing a Ph.D. in International Relations at the John Hopkins University in Washington D.C. concentrating on Canada-Japan Technology Transfer in Telecommunications: Implications for International Peace and Security.

**Michael Charles Williams**, Victoria, will be pursuing a Ph.D. in Political Science at York University concentrating on The Dialectic of Deterrence.

Ms. Laundy chaired a workshop at the Canadian Library Association meeting in Edmonton on the role of libraries in the dissemination of information on peace and security issues.

“Lest We Forget” is the title of a retrospective of war art, opening at the London Regional Art Gallery in early September. The Institute worked with the gallery to develop a series of public programmes for students and the gen-

eral public on the theme. **Bernard Wood** and **Margaret Bourgeault** attended and spoke at the opening.

**Bruno Munier**, a Fellow at the Institute spoke at Carleton University in June on the international impact of the repression in China. Mr. Munier was in China in May during the demonstrations in Tiananmen Square, but before the military action; since his return he has shared his impressions with a number of groups.

During **July Garfield Newman**, a teacher with the York Regional Board of Education at the Dr. G.W. Williams Secondary School in Aurora, and **Geoff Irvine**, who teaches at Sir Wilfrid Laurier High School in the Carleton Board of Education, were at the Institute working on revisions to the “Teachers Handbook on Peace and Security.” The book, which was written by Mr. Irvine and **Brad Feasey** of the Institute staff, was field-tested during the 1988-1989 academic year by a number of teachers. Their reports played a crucial role in the revisions.

**Anthony Figgis**, director of research at the Foreign and Commonwealth Office of the United Kingdom, was the guest at a briefing session at the Institute on research activities in Canada on international issues.

The Institute was host to a roundtable discussion on varying perspectives on defence policy with representatives from the Canadian organization, Veterans Against Nuclear Arms, and two of their guests from the Soviet Union and one from the United States. Members of several other peace and defence interest groups also participated in the discussions.

Members of the National Defence College of Thailand visited the Institute in late August; **John Toogood** spoke to them on Canada's security interests. □

## LETTER FROM BUENOS AIRES BY MADELEINE POULIN

**On the road into Buenos Aires from the airport, wisps of fog trail along the ground. True to Sunday tradition, residents of the capital, *porteños*, dot the semi-rural scenery preparing *parillada*, the gaucho's barbecue, next to their locally assembled Renaults and Fiats....**

Nostalgia for the pampas persists in this city which faces the Atlantic, a city that is simultaneously reminiscent of Paris, Madrid and Italy, and is home to one-third of all Argentines.

"A city that consumes what the rest of the country produces," observes a woman who knows what she is talking about. Amalia Delacroze Fortabat owns huge estates in the hinterlands, and lives in sumptuous style in Buenos Aires. "Amalita is Peronist," our driver announces before dropping us at her prestigious address.

"But," he adds, "she was a radical with the radicals, and a militarist under the military." Our cynical driver, like eighty percent of Argentines, is of Italian descent.

Male servants, with the bearing of a head-of-state's security guards, take us in tow and lead us to a sitting room where a white-gloved butler offers us coffee. As soon as she enters the room, and without waiting for questions, Mrs. Fortabat launches into a tirade on the foreign debt, the dollar's rise against the *austral*, and the resulting runaway inflation. She is not suffering personally of course, since the products she exports earn dollars, but she knows that others, outside the privileged dollar economy, must cope with prices that rise by the day or even by the hour. Crisis reigns.

"In times of crisis," she explains, "the people need someone who speaks their language." This heiress to an "old money" Argentine fortune, who generations later still clings to her French passport, then proceeds to sing the praises of the provincial *caciques* (political bosses), especially Peronist Carlos Menem. He is a product of

the other Argentina – the fertile hinterland – which does not look to Europe, like Buenos Aires, but toward the South American continent. "I know Carlos Menem personally, and I'm not afraid," she says. A country boy, the son of Syrian immigrants, "Peron's heir" has the blessing of the Argentine oligarchy.

### **It is certainly not a revolution; it is even insurance against revolution. But it evokes the corporatism so dear to Franco and Mussolini ...**

"Of course, these people fear nothing!" explodes an Argentine friend, less well off, but just as Europeanized as Mrs. Fortabat. He gives me to understand that thirty or forty of "these people" with their enormous reserves of dollars can easily sow economic chaos, discredit one government, and have another elected that better serves their interests.

Paranoia? Perhaps, but there are many who fear Peronism and Menem, and they certainly form the majority of Argentines that visitors from the North are likely to meet. They work in the universities, the press and the publishing houses. Their view of Peronism differs little from that of many diplomats posted to Buenos Aires: "Democracy under siege."

"But what democracy?" A European-educated businessman who has opted for Peronism notes with irony: "The problem with Argentines, the ones who live in Buenos Aires, is that we think we're Europeans. And we hide from the fact that behind a demo-

cratic facade, an old system of domestic colonialism persists." "Belgium in Ethiopia," he adds by way of illustration. So much for the democracy regained six years ago under Raul Alfonsín – a period that ended in economic disaster.

What will democracy be like under the Peronist Menem? "We are entering into a social contract that will reconcile the interests of the various groups," says the businessman. The state as referee. The Peronists have an initial advantage in this role, since they have traditionally enjoyed the support of the unions. It is certainly not a revolution; it is even insurance against revolution. But it evokes the cor-

poratism so dear to Franco and Mussolini, and practised to some extent by Peron from 1946 to 1955, and yet again briefly in the mid-1970s. On both occasions, Peron had been democratically elected. And each time, the experiment ended in a military coup.

General Lanusse lives in a small apartment strewn with mementoes of his glorious career. Before retiring on a modest pension, he was President of the Republic. In 1973, he headed the transition between a military regime and the election of Peron. His entire career has been haunted by Peronism, an ideology he abhors and for which he still has "no clear definition." What he now fears, given the past record, is abuse of power and disorder. He is not alone in predicting chaos, but unlike others, he does not believe the army will want to seize power again: "A military coup is not the answer. It does not produce the desired results and it seriously harms the army." He does admit, however, that some elements of the military might be tempted. After all, how can one overlook the chronic militarism that afflicts Argentina?

Escorting us back to the elevator, he recalls with sadness the Argentina of the 1930s; it was just as prosperous as Canada and Australia. "But we are unstable. There is no consensus in this country, only narrow self-interest."

Appropriately enough, it was in the countryside where we met the person who claims to reconcile all of these interests – first, in the midst of a frenzied crowd in a village, then at home, in the Governor of Rioja's residence, and finally, in the hamlet of his birth, in the same poor, remote province where his family still tends a vineyard. Behind the facade of provincial playboy, tennis ace and bush pilot, I found a rather diminutive, introverted and fairly reasonable man. Is he the Andean demagogue portrayed by his critics? Andean, definitely. Carlos Menem has no nostalgia for Europe. His loyalty is to South America and his goal is Latin-American unity to counter the North American and European economic blocs. "We live in a world committed to universalism, but first we must create continental unity."

But isn't the real first job to create today's Argentina; letting the nostalgia for Europe and for the golden years of the pampas fade away so that the Argentine people can start referring to "our" country, rather than "this" country – *este país* – as they do now? And does today's answer lie in the wizardry of a Peronist-style contract?

I watch Carlos Menem's Cessna take off from the country road improvised as a landing strip. As it weaves against the backdrop of mountains, the small plane looks very fragile, and I wonder how the man behind the controls will be able to put his country back on the road to progress, and keep it there. □

Madeleine Poulin is co-host of Radio-Canada's public affairs television programme *Le Point*.

## Le long de la route entre l'aéroport et la ville de Buenos Aires, des lambeaux de brouillard traînent au ras du sol.

# LETTRE DE BUENOS AIRES

PAR MADELEINE POULIN

Voilà pour la démocratie retournée il y a six ans avec Raul Alfonsín, époque qui s'est soldée par un désastre économique. Que sera la démocratie sous le péroniste Menem ?

«Nous concluons un pacte social

qui garantira les intérêts des différents groupes» répond l'homme d'affaires péroniste. L'Etat-arbitre.

Dans ce rôle, les péronistes ont déjà

un atout, puisque les syndicats leur

sont traditionnellement acquis. Non,

ce n'est pas la révolution. C'est

même un vaccin contre la révolution.

Et l'on sent les relents du corporatisme qui lui cher à Franco et à

Mussolini, avant d'être plus ou

moins pratiqué par Peron de 1946 à

1955, et brièvement, au milieu des

années 1970. Les deux fois, Peron

avait été élu démocratiquement.

Chaque fois, l'expérience a été

annulée par un coup d'Etat militaire.

Le général Lanusse vit dans un

petit appartement tapissé des sous-

un péroniste, celle qui n'est pas si féconde, celle qui n'est pas si féconde de cette autre Argentine, Argentine, a la bénédiction de l'oligarchie argentine.

«Evidemment, ces gens-là n'ont

peur de rien!» expose un ami ar-

gentin, moins bien nanti, mais tout à

fait aussi européanisé que Madame

Fortabat. Et l'on me laisse entendre

que ces «gens-là», qui disposent

d'énormes sommes de dollars, peu-

vent très bien se mettre à trenaie ou à

cinquante pour semer la pagaille

Fidèles au rendez-vous du dimanche, les porteños, les habitants de la capitale, sont là, dans cette demi-campagne, à côté de leur Renault ou de leur Fiat de fabrication locale, préparant la *parillada*, la grillade du gauchito. Nostalgie de la pampa, dans une ville tournée vers l'Atlantique, qui rappelle à la fois le tiers de toute la population argentine. «Une ville qui consomme ce que produit le reste du pays.»

La formule est d'une femme qui

sait de quoi elle parle, Amalia Deiacroze Fortabat possédée d'im-

vincées, et elle vit somptueusement à

Buenos Aires. «Amalia est péro-

niste», nous avait annoncé pérem-

toirement notre chauffeur avant de

nous déposer devant la prestigieuse

adresse. «Mais, avait-il ajouté, elle

était radicale avec les radicaux, et

militariste sous les militaires.»

Notre chauffeur cynique est d'ori-

gine italienne, comme 80 p. 100 des

Argentins. Un personnel masculin,

aux allures d'agents de sécurité

dignes d'un chef d'Etat, nous prend

en charge et nous achemine vers un

salon où un domestique gentilé de

colton bien blanc nous offre le café.

Dès son entrée, Madame Fortabat

moment.

Paratonia ? En tout cas, ceux qui

ont peur du péronisme et de Menem

sont nombreux. Et ils forment sans

doute la majorité des Argentins que

rencontrera un visiteur venu du

Nord. Ils sont dans les universités,

dans la presse, dans les maisons

d'édition. Leur regard sur le pétro-

lisme ne diffère pas beaucoup

de celui de beaucoup de diplomates

en poste à Buenos Aires : «La

démocratie est menacée.»

«Mais quelle démocratie ?» Un

homme d'affaires formé en Europe,

mais qui a choisi le péronisme,

ironise : «Notre problème à nous,

Argentins de Buenos Aires, c'est

que nous nous prenons pour des

Européens. Et nous nous cachons le

fait que, derrière une façade de

Belgique en Ethiopie», ajoute-t-il

pour faire image.

24 AUTOMNE 1989

«Nous concluons un pacte social

qui garantira les intérêts des différents groupes» répond l'homme

d'affaires péroniste. L'Etat-arbitre.

Dans ce rôle, les péronistes ont déjà

un atout, puisque les syndicats leur

sont traditionnellement acquis. Non,

ce n'est pas la révolution. C'est

même un vaccin contre la révolution.

Et l'on sent les relents du corporatisme qui lui cher à Franco et à

Mussolini, avant d'être plus ou

moins pratiqué par Peron de 1946 à

1955, et brièvement, au milieu des

années 1970. Les deux fois, Peron

avait été élu démocratiquement.

Chaque fois, l'expérience a été

annulée par un coup d'Etat militaire.

Le général Lanusse vit dans un

petit appartement tapissé des sous-

un péroniste, celle qui n'est pas si féconde, celle qui n'est pas si féconde de cette autre Argentine, Argentine, a la bénédiction de l'oligarchie argentine.

«Evidemment, ces gens-là n'ont

peur de rien!» expose un ami ar-

gentin, moins bien nanti, mais tout à

fait aussi européanisé que Madame

Fortabat. Et l'on me laisse entendre

que ces «gens-là», qui disposent

d'énormes sommes de dollars, peu-

vent très bien se mettre à trenaie ou à

cinquante pour semer la pagaille

moment.

Paratonia ? En tout cas, ceux qui

ont peur du péronisme et de Menem

sont nombreux. Et ils forment sans

doute la majorité des Argentins que

rencontrera un visiteur venu du

Nord. Ils sont dans les universités,

dans la presse, dans les maisons

d'édition. Leur regard sur le pétro-

lisme ne diffère pas beaucoup

de celui de beaucoup de diplomates

en poste à Buenos Aires : «La

démocratie est menacée.»

«Mais quelle démocratie ?» Un

homme d'affaires formé en Europe,

mais qui a choisi le péronisme,

ironise : «Notre problème à nous,

Argentins de Buenos Aires, c'est

que nous nous prenons pour des

Européens. Et nous nous cachons le

fait que, derrière une façade de

Belgique en Ethiopie», ajoute-t-il

pour faire image.

Orient, et il a insisté sur la nécessité d'adopter des mesures propres à accroître la confiance entre Israël et ses voisins arabes; et Mark Sakiti, physicien au *Brockhouse National Laboratory*, a fait un exposé sur la guerre sous-marine dans l'Arctique.

«Une perspective canadienne sur les défis que représentent la sécurité et la coopération dans le Pacifique-Nord», tel était le titre d'un exposé que **Bernard Wood** a prononcé au Fletcher Hokkaido North Pacific Forum, à Sapporo (Japon), à la fin de juillet. M. Wood a fait valoir que les pays du Pacifique ont au jourd'hui l'occasion d'instaurer un régime de sécurité et de coopération qui peut leur permettre d'éviter certains des écueils et entraves alliant de pair avec une concurrence miltitaire excessive et ayant, au cours de l'histoire, affligé d'autres régions à mesure qu'elles acquéraient un certain statut sur la scène internationale. Il a également déclaré que la région du Pacifique est à même d'adopter de nouvelles méthodes pour enrayer certaines causes sous-jacentes des conflits internationaux et affronter les nouveaux dangers, tels que la dégradation de l'environnement, la pauvreté généralisée et la croissance démographique, qui menacent la sécurité internationale à l'échelle planétaire.

Des participants venus d'Asie, d'Amérique du Nord et d'Europe ont assisté aux réunions, qui étaient parrainées par le *National Institute for Research Advancement*. À la fin de juin, M. Wood a prononcé l'allocution de clôture sur l'avenir du système international, au Collège de la Défense nationale, à Kingston.

**Ron Purver** a fait des exposés sur la limitation des armements dans l'Arctique, à une conférence «Pacem in Maribus» à Moscou, en juin, et dans le cadre d'un atelier sur la sécurité dans l'Arctique, à l'Université d'Abertdeen, en Ecosse. Il a également prononcé une allocution sur la guerre sous-marine et la limitation des armements, pendant une conférence parrainée à Halifax par le *Centre for Foreign Policy Studies* (Université Dalhousie) et le département d'histoire de l'Université du Nouveau-Brunswick. En juillet, M. Purver a assisté à la cinquième assemblée générale de la Conférence inuit circumpolaire, à Sisimiut (Groënland).

**Michael Bryans** a été élu membre du conseil d'administration du *Canadian Periodical Publishers' Association*, à la dernière assemblée annuelle de cet organisme à Toronto.

**Katherine Laundy** et **Susan Connell** ont organisé des mini-conférences à Calgary et Yellowknife sur les moyens d'information ouverts à la paix et de la dans les domaines de la paix et de la sécurité internationale. Les mini-conférences ont été organisées dans le cadre du Programme d'aide financière de l'ICPSI. Les titulaires des bourses poursuivront des études dans diverses disciplines.

L'Institut canadien pour la paix et la sécurité internationales vient de décerner douze bourses d'études (14 000 \$) à des Canadiens et Canadiennes qui souhaitent poursuivre des études dans les domaines de la paix et de la sécurité internationales. Les bourses sont attribuées chaque année dans le cadre du Programme d'aide financière de l'ICPSI. Les titulaires des bourses poursuivront des études dans diverses disciplines.

**David Ross Black**, de Toronto, entreprendra un doctorat en sciences politiques à l'Université Dalhousie et mettra l'accent sur les politiques étrangères de trois puissances moyennes, à savoir l'Australie, le Canada et la Suède, à l'égard de l'Afrique australe.

**Walter Henry Dorn**, de Toronto, terminera un doctorat en chimie à l'Université de Toronto, en coopération avec l'Institut de technologie de Linköping (Suède). Ses travaux porteront principalement sur la détection par des moyens chimiques aux fins de la vérification de l'observance des accords sur la limitation des armements.

**Laurenti Frappé**, de Québec, fera un doctorat en relations internationales à l'Université Laval. Ses travaux traiteront surtout des conflits et des relations internationales en Amérique latine.

**Frank E. Harvey**, de Montréal, entreprendra un doctorat en relations internationales à l'Université McGill; l'essentiel de ses études portera sur les conflits, les crises et la guerre.

**Robert Neil Huebert**, de Winnipeg, fera un doctorat en sciences politiques à l'Université Dalhousie et il se penchera particulièrement sur la défense et les politiques du Canada au sujet de l'Arctique.

**Howard Peter Langille**, de Annapolis Royal (Nouvelle-Écosse), terminera un doctorat en relations internationales à l'Université Bradford, en Angleterre, ses études de philosophie au niveau du doctorat; il s'intéressera principalement aux études sur la paix. Le thème de ses travaux sera : La politique canadienne de défense : les options en vue de la sécurité commune.

**Laure C. Paquette**, de Montréal, poursuivra des études doctorales en sciences politiques à l'Université Queen's, en mettant l'accent sur les stratégies et les civilisations.

**Leigh Edward Saffy**, de Toronto, terminera un doctorat en sciences politiques à l'Université Columbia, en mettant l'accent sur les relations canado-soviétiques entre 1966 et 1980.

**Larry Anthony Swalik**, de Windsor, fera un doctorat en économie politique et en politique étrangère, à l'Université Dalhousie. Le thème de ses études sera : L'économie politique des petits États lutant pour survivre : l'élaboration de la politique étrangère au Botswana, au Lesotho et au Swaziland, de 1966 à 1988.

**Puy-Khoon Tan**, de Toronto, entreprendra un doctorat en relations internationales à l'Université John Hopkins de Washington (D.C.). Sa thèse aura pour thème : Les transferts de technologie entre le Canada et le Japon dans le domaine des télécommunications : incidences sur la paix et la sécurité internationales.

**Michael Charles Williams**, de Victoria, fera un doctorat en sciences politiques à l'Université York et se concentrera sur la dialectique de la dissuasion.

En juillet, **Garfield Newman**, professeur à l'école secondaire Dr. G. W. Williams (Commission régionale de York) à Aurora, et **Geoff Irvine**, qui enseignent à l'école secondaire Sir Wilfrid Laurier (Commission scolaire de Carleton), ont travaillé à l'Institut à réviser le «Manuel de l'enseignant sur la paix et la sécurité». L'ouvrage, qui a été écrit par M. Irvine et **Brad Peasey**, membre de l'Institut, a été mis à l'essai par divers enseignants et enseignantes pendant l'année scolaire 1988-1989. Les observations de ces personnes ont été essentielles au stade de la révision.

**Anthony Figgins**, Directeur de la recherche au *Foreign and Commonwealth Office of the United Kingdom*, était l'invité à une séance d'information organisée par l'Institut au sujet des activités de recherche menées au Canada sur les questions internationales.

L'Institut a accueilli les participants à une table ronde sur divers points de vue intéressant la politique de défense; étaient présents des membres de l'organisme canadien Anciens combattants contre les armes nucléaires ainsi que deux de États-Unis. Des membres de plusieurs autres groupes de pression s'intéressant à la paix et à la défense ont également pris part aux discussions.

Des membres du Collège de la Défense nationale de la Trinité ont visité l'Institut à la fin août. **John Toogood** les a entretenus sur les intérêts du Canada en matière de sécurité. □

**William Barton**, président du conseil d'administration depuis la fondation de l'Institut en août 1984, a quitté son poste après cinq ans de service. Après sa réunion de juin, le conseil a décidé, pour souligner la valeur du travail accompli à l'Institut par M. Barton, de donner le nom de ce dernier à son programme de bourses. Les autres membres du conseil qui terminaient alors leur mandat de trois ans étaient **Ann Gertler**, **Karl Holsti**, **Richard Mercier**, **Brian Ungerhant** et **Jean-Guy Vaillancourt**.

Le secrétaire d'État aux Affaires extérieures, le très honorable **Joe Clark**, a récemment annoncé les noms des nouveaux membres du conseil. Ce sont **Beatrice Bazar**, de Montréal, autrefois présidente nationale de l'Association canadienne pour les Nations-Unies et présente-ment directrice de la Fondation canadienne des droits de la personne; **Lincoln Bloomfield**, de Boston, dont le nom est associé au *Massachusetts Institute of Technology* depuis de nombreuses années et qui s'intéresse plus particulièrement aux institutions et organismes internationaux; **Francine Fournier**, d'Ottawa, secrétaire générale de la Commission canadienne pour l'UNESCO; **Reginald Lane**, lieutenant-général à la retraite qui vit maintenant à Victoria et qui est actif au sein du *Koyal United Services Institute*; et **Ellenor Powell**, de la Colombie-Britannique, autrefois présidente des Médecins canadiens pour la prévention de la guerre nucléaire. M. Clark a également annoncé qu'après avoir consulté le conseil d'administration et les partis d'opposition, le gouvernement avait nommé **David Braide** à la tête du conseil pour une période de trois ans.

Le 8 juin, le Directeur général et les cadres supérieurs de l'Institut ont témoigné devant le Comité permanent des affaires étrangères et du commerce extérieur (Chambre des communes). Des députés de tous les partis ont eu une discussion animée avec le Directeur général sur un certain nombre de questions internationales et sur les projets et les analyses de l'Institut même. C'était la première fois que celui-ci déposait ainsi devant le Comité en tant que société de la Couronne pour discuter de ses plans.

«Chypre : visions d'avenir», tel était le titre du quatrième et dernier colloque faisant partie d'un projet que l'Institut mène depuis un an sur les origines du conflit chypriote et ses perspectives de règlement. Les participants ont alors mis l'accent sur les développements possibles plutôt que sur les problèmes du passé, et ils en sont venus à un consensus sur la nécessité pour les deux communautés de travailler ensemble afin de définir une seule et unique identité politique chypriote. Les deux chefs municipaux de la ville divisée de Nicosie, **M.M. Mustapha Akinci** et **Lellos Demetriades**, ont parlé de leurs efforts coopératifs pour régler des problèmes pratiques dans leur ville (par exemple, les réseaux d'aqueduc et d'égout). On a convenu qu'il fallait encourager l'application de mesures propres à accroître la confiance entre les deux communautés, et en élargir la portée. Les participants ont aussi discuté du rôle de la Force des Nations-Unies à Chypre (FNUC) et des efforts déployés par le Secrétaire général de l'ONU pour promouvoir le règlement de la situation. Ils ont recommandé que les contributions versées pour la FNUC soient uniquement sur le règlement, que les négociations sur le renou-

vellement du mandat de la Force de maintien de la paix de l'ONU deviennent des délais, et que la FNUC devienne plutôt une force d'observation capable de réagir rapidement au besoin.

À l'automne, deux nouveaux auxiliaires de recherche se joindront au personnel de l'Institut; ce sont **Marie-France Desjardins** et **Robin Hay**. Mme Desjardins est diplômée de l'école Norman Paterson (Université Carleton) et de l'Université de Québec à Montréal en histoire et en affaires internationales, et elle a publié divers articles sur la non-prolifération et les sous-marins à

aussi diplômé de la même école et il a fait ses études de premier cycle à l'Université d'Ottawa, en se spécialisant en histoire et en relations internationales. Ses publications ont trait principalement porté sur la limitation des armements. Les auxiliaires de recherche **Peter Gizewski** et **François Lafranière** ont quitté l'Institut. **Doug Hamlin**, membre associé au cours de la dernière année, est retourné au ministère des Affaires extérieures, et le mandat d'un autre membre associé, à savoir **Bruno Munier**, s'est également terminé à la fin d'août.

L'Institut a accueilli deux nouveaux membres associés à l'automne; il s'agit de **Ron Fisher**, de l'Université de la Saskatchewan, et de **Gordon Sharpe**, du ministère de la Défense nationale. Le lieutenant-colonel Sharpe est navigateur aérien et il étudiera des questions intéressant la surveillance aérienne. Quant à lui, le professeur Fisher se concentrera sur la socio-psychologie et le règlement des conflits internationaux.

**Fauzaya Moore**, qui était agent des subventions, a quitté l'Institut en juin pour aller travailler à l'Ins-

## Procédure relative aux subventions et échancier

■ L'Institut attribue des subventions deux fois par année. On est prié de communiquer avec lui pour obtenir des formulaires de demande et le texte à jour énonçant les critères à respecter. Veuillez prendre note des échéances suivantes :

le 30 juin, pour la sélection d'octobre

le 31 décembre, pour la sélection de mars

## NOUVELLES DE L'INSTITUT

l'Institut de coopération internationale et de développement, à l'Université d'Ottawa. **Rycharad Brulé** est rentre du Collège de la Défense nationale, où il a passé un an; la personne qui l'avait remplacé à l'Institut, **Marie-Andrée Lallonde-Morisset**, servira d'agent de relations avec les médias de septembre à décembre. **Michel Proulx**, gestionnaire du matériel, et **Suzanne Payant**, réceptionniste, retourneront à l'Université.

L'Institut a présenté divers colloques à la fin du printemps et pendant l'été : **Louis Krifberg**, de l'Université de Syracuse, a parlé de l'état actuel des études sur le règlement des conflits; **K.M. de Silva**, professeur d'histoire à l'Université de Colombo (Sri Lanka), a dirigé une discussion qui avait pour thème «L'éthnolittérature : les conflits et le développement : une perspective comparative»; **Rashid Khadiji**, de l'Université de Chicago, a dirigé un colloque sur l'*Intifada* et les développements actuels en Israël, dans la bande de Gaza et en Cisjordanie; **Edy Kaufman**, Directeur général du *Harry S. Truman Research Institute* et chargé de cours à l'Institut des études canado-américaines à Moscou, qui était au Canada dans le cadre d'un programme d'échanges, a tenu un colloque sur le mois qu'il venait de passer au Canada, mois où il a visité la Banque royale du Canada et la *Dominion Securities* à Toronto; **Gerald Steinberg**, professeur à l'Université hébraïque de Jérusalem et spécialiste de la limitation des armements, a dirigé une discussion sur la prolifération des armes de destruction massive au Moyen-

**Programme de bourses Barton**

■ L'Institut invite les personnes intéressées à faire leur demande dans le cadre de son programme de bourses, désigné par «Bourses Barton» en l'honneur de son premier président, M. William Barton, ancien ambassadeur du Canada à l'ONU. Le programme est accessible aux universitaires et aux autres personnes qui veulent entreprendre ou poursuivre des études sur la paix et la sécurité internationales. Le programme vise à favoriser l'accroissement des compétences et des connaissances de haut niveau dans ce domaine et en appuyant des Canadiens et Canadiennes qui souhaitent poursuivre des études dans des institutions au Canada ou à l'étranger.

L'Institut compte choisir dix récipiendaires et remettre ainsi deux bourses de chercheur de 30 000 \$ chacune au maximum et huit bourses d'étude valant 14 000 \$ au plus chacune. Un comité de sélection indépendant évaluera les candidatures et rendra ses décisions en mai 1990.

Les candidat(e)s doivent être des citoyen(ne)s canadien(ne)s dont l'expérience ou les compétences universitaires leur permettent de poursuivre des études supérieures.

Les candidatures pour l'année universitaire 1990-1991 doivent parvenir à l'Institut le 1<sup>er</sup> février 1990 au plus tard. Pour obtenir plus de détails et des formulaires de demande, prière d'écrire à l'adresse suivante :

sion. De plus, on critique désormais plus ouvertement les privatisages accordés aux militaires ou les erreurs commises par ces derniers, surtout depuis le début du désengagement en Afghanistan. On peut même affirmer aujourd'hui que les militaires soviétiques se trouvent sur la défensive et qu'ils doivent tenir compte en question la place qu'ils occupent en URSS.

Le contrôle du parti sur les militaires s'est accentué à notre avis depuis la fin de l'ère brejnevienne. L'équipe de Gorbatchev semble exercer un contrôle plus complet. Ceci n'est pas seulement évident dans la politique de maîtrise des armements du gouvernement mais aussi dans les initiatives unilatérales ajoutant que la nomination du ministre de la Défense, Dmitri Yazov, en 1987, et plus encore celle du nouveau chef d'état-major Moïseïev, en janvier 1989, constituent autant de démonstrations de ce contrôle, puisqu'il y avait plus grade et plus âge que ces deux généraux dans la hiérarchie militaire.

À ce chapitre, nous devons aussi préciser que l'ancien ministre de la Défense, Dmitri Oustinov, était en fait considéré par les militaires comme un civil chargé de les contrôler au nom du parti et que son intervention dans la lutte de succession en 1982 ne peut être comparée à celle de l'armée en faveur de Khrouchchev en 1957 comme le laisse entendre Duhamel. De plus, à la différence de l'autenr, nous d'affirmer que les militaires perdent complètement le monopole quasi graduellement le long de la mesure croissante de la maîtrise stratégique qu'ici en matière d'analyse stratégique ou de politique de maîtrise de l'explosion démographique des pays du tiers-monde. La deuxième partie doit composer avec la montée en importance des spécialistes civils en matières stratégiques. Gorbatchev consulte ces derniers plus qu'aucun autre secrétaire général avant lui, reprenant ainsi une pratique familière aux présidents américains depuis plusieurs décennies.

Cet ouvrage a le mérite de souligner le lien étroit qui existe entre nous est présente de façon fort convaincante comme un légitime, un matériau qui propose un retour aux valeurs fondamentales qui ont

# Un monde intolérable : le libéralisme en question

René Dumont  
*Éditions Le Seuil, Paris, 1988.*  
281 pages, 29,95 \$.

Un autre Dumont ; Peut-être le trentième, le premier ayant été publié au début des années 1930. Des répétitions ? Oui, bien sûr, c'est inévitable. Les allusions à des ouvrages antérieurs ne manquent pas mais leur pertinence ne fait jamais défaut. Autant de rappels, toujours aussi utiles, de la part de celui qui est le premier à regretter d'avoir eu raison dans ses mises en garde antérieures. «L'agronome de la faim», ainsi appelé depuis quelques années, n'avait-il pas prévu la sècheheresse dans les pays du Sahel dès la fin des années 1960 ? En 1974, à titre de candidat des Verts lors des présidentielles françaises, il souligna le danger grandissant des pluies acides. On ne le prit pas au sérieux... Son plus récent ouvrage commente grandement les effets pervers de la croissance économique des pays industrialisés et, encore une fois, de la prise de conscience de la première

«cathédrales dans le désert» que sont devenus les mégaprojets susceptibles d'accélérer l'industrialisation. Quant au continent indien, s'il a connu sa révolution verte, l'accroissement démographique risque fort de compromettre l'essentiel de ses retombées. Pas surprenant que Dumont se réjouisse du chapitre remporté par la Chine à ce chapitre et des progrès accomplis dans le secteur agricole. Comment ne peut-il pas faire de l'agriculture une priorité ? Pourquoi ne pas tenir compte de la stratégie économique qui a fait le succès de l'Angleterre du siècle dernier ? Une troisième partie, sûrement trop brève, souligne que «le libéralisme a fait son temps».

Chaque pays étudie dans ce livre sert à vérifier les sombres prévisions que le révérend Robert T. Malthus avait esquissées au tout début du 19<sup>e</sup> siècle en relation avec les conséquences du déséquilibre entre les moyens de subsistance. Nul penseur de cette époque n'a été plus injustement critiqué. À regret, Dumont lui-même donne raison. La situation est grave. Elle l'était il y a vingt ans, elle l'était il y a dix ans. Elle l'est encore davantage aujourd'hui.

La démonstration repose sur des chiffres très récents, la plupart rapportant aux deux ou trois dernières années. Elle se veut un cri de coeur d'un autenr qui se présente, certes, sous une triple étiquette : pacifiste, tiers-mondiste et écologiste. Si le sous-titre annonce, on le devine bien, une analyse très sévère d'un système encore porté aux nues par les disciples d'Adam Smith, il ne faut pas s'attendre à une apologie prononcée à la fin des années 1960 dans son livre «Développement et socialisme». Inutile pour lui d'y revenir même à l'heure de la pers-troika. L'allusion, hélas trop brève, à une social-démocratie à l'échelle mondiale termine son plaidoyer.

L'ouvrage se présente sous la forme empruntée par l'autenr il y a plus de vingt-cinq ans, et qui l'a fait connaître dans toute la Francophonie. On ne change pas une formule gagnante. Les données numériques abondent et ne sont pas toujours accompagnées de leurs sources mais l'argumentation et la réputation de l'autenr ne sont pas de nature à soulever les doutes. Les références bibliographiques sont suffisamment abondantes pour nous

convaincre de la solidité des informations fournies. Les recours à d'autres contributions servent surtout à mettre en évidence des situations que l'autenr est en mesure de commenter. Combien de fois est-il allé dans chacun des pays décrits ? Qui peut contester les connaissances techniques aussi nombreuses que variées que Dumont sait très bien agencer parmi ses connaissances générales ?

René Dumont a pu, encore une fois, bénéficier de la collaboration de la québécoise Charlotte Paquet. Le lecteur de la «belle province» trouvera donc sans surprise familiarité avec une description des moulins à papier en train d'épuiser les stocks de résineux.

Les hommes devraient très bien-tôt faire preuve d'imagination et surtout de détermination à la faveur d'actions concertées afin de donner un sérieux coup de barre à la marche périlleuse de la terre. Ici, un sérieux coup de barre à la lecture de son fameux livre «L'Afrique noire est mal partie» dénonce l'intolérable. Aux différents acteurs de mesure de l'avant-garde de la stratégie économique susceptibles de répondre aux besoins actuels ; La mise en valeur des ressources locales qui donne lieu à la création de petites entreprises affectées par le sous-emploi, partout en Occident, n'est pas sans enseignement utile pour le tiers-monde. Dumont espère toujours. Mais il est urgent d'agir. Il nous aura prévenu.

Fronts et frontières.  
Un tour du monde géopolitique

Michel Foucher  
Éditions Fayard, Paris, 1988.  
527 pages, 35 \$.

La notion de frontière n'est pas une idée neuve bien que sa généralisation à travers le monde soit récente. En effet, la moitié des 226 000 kilomètres des frontières terrestres du monde contemporain a été fixée à la fin du 19<sup>e</sup> siècle. L'ouvrage de Foucher est conçu comme un tour du monde géopolitique des frontières et s'attache à élucider les raisons, les acteurs et les effets des traces.

Quatre l'introduction et la conclusion, le volume se compose de quinze chapitres regroupés en quatre parties. La première partie explore l'invention des frontières dans le monde, analyse la mise en place du modèle géopolitique français, mesure le rôle des Européens dans le découpage du monde, et décrit le processus de formation des frontières et les tendances issues des représentations géopolitiques de l'Amérique latine. La deuxième partie est consacrée aux problèmes géopolitiques de l'Afrique : les conceptions frontalières héritées de la période coloniale, l'érosion du mailage territorial lié à l'organisation des régions en tant qu'unités politiques et la création de frontières en Afrique du Sud. Dans la troisième partie, l'auteur s'attache à décrire la diversité et la complexité des frontières asiatiques, marquées à l'Est par la rencontre entre la Chine, l'Inde et l'URSS, et à l'Ouest par un état de crise perpétuelle, tant les frontières paraissent ni sûres, ni reconnues. Cela permet à Foucher de s'interroger sur l'interaction qui existe entre les peuples, les territoires et les frontières. La quatrième partie de l'ouvrage étudie la dynamique de l'ouvrage étudie la dynamique de l'ouvrage étudie la

Amérique du Nord et les intérêts évolutifs des États-Unis sur le continent, le paysagisme géométrique et la péripétie de l'Union soviétique et les risques d'éclatement interne liés au monopole russe du pouvoir, et la nécessité de choix en matière de frontières suite au dessain géopolitique en cours en Europe de l'Ouest. L'ouvrage se termine par une réflexion sur le jeu des frontières et le jeu des représentations de l'espace. Il est important de souligner que le livre de Foucher est accompagné de neuf annexes, d'une bibliographie exhaustive, de deux index complets et d'un atlas comprenant deux tableaux et quarante-six cartes remarquables par la qualité de l'information véhiculée.

Ce boudin représente une contribution originale à la compréhension de l'histoire inscrite dans l'espace géographique et se compare très favorablement à des études géopolitiques, tant par son approche historique que par sa qualité de synthèse.

Ce n'est pas peu dire que de reconnaître que cette tâche, d'abord matérielle, (l'étude de 226 000 kilomètres de frontières terrestres et de 265 limites communes à deux États contigus du monde contemporain) a été réalisée avec méthode. Il importe aussi de souligner que l'auteur a su tirer une foule de résultats de son analyse.

Parmi ces observations, l'auteur démontre que : 1) 87 p. 100 de l'actuel découpage politique du monde était déjà réalisé avant 1945 et de ce fait n'a pas été fixé à Yalta, 2) les litiges et conflits frontaliers majeurs se localisent presque tous dans les États du tiers-monde, 3) le Néo-apartheid cherche à faire des Noirs urbains une nouvelle ethnie capable de s'opposer aux autres des radicaux en Afrique du Sud, 4) l'on assiste à la formation d'un anglo-latine issue d'une intersection nord de Panama, d'une Amérique centrale et les États-Unis, 5) la notion d'Eurasie créée par Mackinder en fonction de la sauvegarde de l'Empire britannique est inopérante.

Le système politique de l'Union soviétique

Luc Duhamel  
Éditions Québec-Amérique, Montréal, 1988.  
316 pages, 29,95 \$.

Depuis le début de l'ère soviétique, l'intérêt pour l'Union Soviétique n'a cessé de croître en Occident. En effet, depuis 1985, les grands projets ambitieux de restauration et de mobilisation d'une société nouvelle jusqu'à la signation d'un traité ou révéillé notre curiosité.

Luc Duhamel, auteur québécois bien connu pour ses nombreuses publications sur l'URSS, nous propose de combler un vide dans la documentation en langue française en nous offrant un ouvrage de référence sur le système politique de l'URSS. Son objectif est non seulement de nous présenter les changements qui ont cours présentement, mais aussi de nous faire comprendre «comment fonctionne ce régime communiste».

Dans un style accessible à un large public, l'auteur parvient à nous faire saisir les fonctions que nous fait le Parti communiste dans le système politique, à nous faire comprendre les grandes fonctions politiques, économiques et sociales dans leur perspective historique. Cette approche à l'avantage de bien faire ressortir les éléments de continuité et de discontinuité entre, par exemple, la période des tsars et celle de Lénine et l'époque contemporaine de la perestroïka.

La seule réserve que nous ayons, et elle est mineure, concerne le statut de l'armée dans le système politique. Ce statut est en train de se modifier et à même déjà changé sensiblement depuis la publication de ce livre, ce que l'auteur ne pouvait prévoir au moment de la rédaction. Il faut donc ici tempérer les constatations qui nous sont présentées. En effet, depuis l'automne 1988, la glasnost n'épargne plus tout à fait les militaires qui réagissent avec un certain décalage par rapport aux autres groupes de pression.

— Claude Contois  
l'actualité internationale, à tous ceux qui s'intéressent à la politique contemporaine et s'adressent à la recherche sur la géopolitique. Néanmoins, cet ouvrage demeure un outil précieux pour faciliter la discussion et la recherche sur la géopolitique internationale.

Le débat sur la défense : une réalité insaisissable

Dans «Tous pour un, un pour tous !» (*Paix et Sécurité*, printemps 1989), l'angle sous lequel le professeur K.R. Nossal explique l'absence de débats sur la défense aux élections fédérales de novembre dernier («Il n'y a aucune discussion sur les questions de sécurité nationale au Canada, parce qu'il n'y a rien à débattre») a dû surprendre les dizaines de milliers de militants pacifistes qui sont descendus dans la rue au début des années 1980, ainsi ont voulu obtenir autant de minutes d'antenne que les pacifistes pour faire valoir la perspective militaire, au milieu du débat sur les essais de missiles de croisière.

Je veux bien croire que le cercle des apôtres ardents qui débattent vigoureusement de la défense canadienne est restreint. Mais M. Nossal oublie de se demander si le processus décisionnel en matière de défense (processus qui se fait à l'abri de l'examen public, qui est très technique et qui aborde certains aspects désolants que la plupart des citoyens et citoyens préfèrent ne pas avoir à envier au quotidien) n'est pas en soi quelque chose qui empêche le débat public. L'argument de M. Nossal au sujet des «intérêts concrets» est plutôt restreint. (Franchement, j'aurais pensé que le souci de survie est quelque chose de relativement commun pour justifier sa conviction que «la plupart des Canadiens et Canadiennes ont en fait mesuré avec soin les conséquences qu'aurait une politique de défense de recherche», il n'est pas trompé peut-être !)

Le deuxième argument selon lequel, «si l'électorat canadien avait suffisamment voulu une politique de défense différente, il n'aurait pas permis que le NPD... languisse si longtemps dans les coulisses de la scène politique nationale», est également faible. En sa qualité d'auteur d'un ouvrage d'envergure sur la politique étrangère du Canada, le professeur Nossal devrait savoir qu'au Canada, comme dans de nombreuses autres démocraties occidentales, les questions de politique étrangère ne sont jamais des éléments déterminants dans les campagnes électorales; c'est pourquoi les résultats de celles-ci ne disent pas grand-chose sur les préférences du public en matière de politique étrangère.

Roger Hill nous met à juste titre en garde contre les dangers d'une intégration canado-américaine de la production de défense («Les périls de l'intégration de la défense», *Paix et Sécurité*, été 1989). Mis à part le fait qu'une telle intégration est déjà très avancée, ce qui a de sérieuses incidences sur l'autonomie de la politique canadienne en matière de sécurité, il convient de se demander si le pays d'une industrie nationale de défense plus développée (voire, plus spécialisée), n'est pas effectivement à l'origine du problème.

Le rapport du Groupe de travail du MDN, que M. Hill cite, est favorable à l'intégration et il fait

notamment valoir que, pour assurer sa sécurité, le Canada a besoin d'un solide industrie de défense qui l'aurait mobiliser en cas de crise et qui garantirait son approvisionnement en matériel militaire pendant les périodes de forte demande. Mais cela nous amène à la difficile question de savoir comment le Canada pourrait conserver une industrie militaire commercialement viable pendant les périodes de faible demande (c.-à-d. en temps de paix).

On reconnaît l'existence du problème dans un autre rapport sur l'industrie de défense préparé en 1987 par le ministère des Approvisionnements et Services et intitulé *Étude de l'industrie du matériel de défense*, ce document précise que le marché assez grand ni assez diversifié pour assurer la prospérité d'une industrie canadienne de la défense n'est pas un tel problème. Une telle industrie ne pourrait survivre grâce aux seuls achats militaires canadiens; c'est pourquoi les auteurs des deux rapports susmentionnés (MDN et ASC) insistent sur les exportations pour garantir la viabilité économique de l'industrie.

Voilà qui appelle une autre question : Où l'industrie trouvera-t-elle ses marchés d'exportation ? Le plus vaste marché ouvert au Canada demeure celui des États-Unis, mais l'accès en est encore menacé (malgré trente ans de partage officiel de la production de défenses) par le protectionnisme pratiqué au sud de la frontière. Et comme les commandes américaines vont inévitablement diminuer (à cause de la décade et des restrictions budgétaires), ce protectionnisme s'accroîtra sûrement, car les sociétés américaines voudront protéger leur marché, désormais moins mince. Le Canada doit donc trouver un moyen de conjurer le spectre du protectionnisme afin de maintenir un accès illimité au marché américain : et ce moyen, ce serait une intégration complète des industries et des marchés des deux

Si le Canada veut acquérir une certaine indépendance par rapport aux Américains, au chapitre de la production militaire, il ne peut avoir à compter sur des ventes de matériel militaire à des pays situés dans des zones de répression et de guerre, il lui faudra de l'aide pour établir une industrie militaire plus diversifiée et commercialement viable. Pour être véritablement autonome, une telle industrie devrait dépendre entièrement de ventes commerciales, et il lui faudrait accepter les coûts unitaires plus élevés allant de pair avec des cycles de fabrication plus courts. Voilà qui pourrait bien être pour le Canada la meilleure raison jamais vue pour réévaluer ses besoins en matière de sécurité et de matériel militaire !

## Le B-2 au milieu des controverses

Le 17 juillet, le bombardier indectable B-2 a pris son envol pour la première fois. Chaque exemplaire devant coûter 530 millions de dollars US (la facture totale, pour les 32 appareils que l'on voudrait acheter s'élèverait à 70 milliards), ce premier vol a suscité de fortes turbulences à Washington, où les législateurs discutaient du budget de 1990 et, plus généralement, de l'avenir des forces stratégiques américaines. En juillet, le House Armed Services Committee a décidé de réduire

discussions plus vastes menées entre le gouvernement Bush et le Congrès au sujet de la structure à venir des forces nucléaires stratégiques des Etats-Unis. En janvier, le président Bush a annoncé que les plans de modernisation des forces armées seraient réexaminés avant la reprise des négociations sur la limitation de ces armements avec les Soviétiques. Cet examen se fait attendu depuis déjà trop longtemps, mais la structure qu'auront les forces américaines au commencement de toute la fin se dessine à la faveur de la lutte acharnée qui se livre sans répit au Congrès.

En avril, le Pentagone et le Congrès en sont arrivés à un compromis selon lequel le missile *Midgetman* à charge simple, qui compte peu d'adeptes au Pentagone, serait réinscrit au budget de 1990, à condition que se poursuive le financement de la version mobile sur route du missile *MX* à dix ogives. À la fin de juillet, la Chambre des représentants a d'abord décidé de réduire de moitié les fonds affectés au déploiement du *MX*, puis d'annuler le programme du *Midgetman*. Ce double coup de poignard résultait des tractations politiques au Congrès, et non d'analyses stratégiques. Quand les démocrates ont décidé de limiter le budget du *MX*, les républicains ont proposé en votant avec les démocrates libéraux contre le programme *Midgetman*. Dirigée par les membres du Congrès représentant l'Etat de New York, lesquels sont résolus à sauver

usine Gramman archivé de long  
Island, la Chambre a cisaillé encore  
davantage le budget de défense du  
gouvernement en réservant de nou-  
veau des fonds pour le chasseur  
F-14 (un des seuls grands pro-  
grammes d'acquisition que le Secré-  
taire à la Défense, M. Richard  
Cheney, avait réussi à réduire dans  
son premier budget).  
Témoignant devant le Congrès,

les chefs du Pentagone ont fait valoir que, sans le B-2, les négociateurs américains à Genève devraient revoir leur position, voire se retirer complètement des pourparlers. Le président Bush, le disposant tout-à-fait pas des conclusions de son réexamen stratégique, a précédé qu'il avait élaboré un solide programme stratégique fondé sur le B-2, le *Midgeman* et le MX ainsi que sur la continuation de l'IDS. Ajoutant sa voix à tout ce hoch-

au cours d'une visite à Washington en juillet, où il a notamment moigné devant le House Armed Services Committee, le marchand Akhromeyev, conseiller spécial de M. Gorbatchev, a déclaré aux reporters que, si le B-2 était déployé, l'Union soviétique réagirait.

Ramasser les pots cassés à Ottawa

## Ramasser les pots cassés à Ottawa

En vertu du programme envisagé dans le Livre blanc, la Marine aurait

navires de combat, dont douze frégates, quatre destroyers et deux sous-marins à propulsion nucléaire. L'achat de ces derniers aurait notamment supposé l'annulation du plan portant sur l'acquisition d'une troisième série de six nouvelles frégates, lesquelles devaient entrer en service à la fin des années 1990. Avec l'abandon du programme des sous-marins nucléaires, les officiers de la Marine canadienne espèrent que la troisième série de frégates figurerait de nouveau dans les plans. Prenant la parole devant un comité des Communes en juin, le ministre de la Défense, M. William McKinnight, a annoncé ces espoirs en annonçant que ces frégates ne seraient pas construites. Aucune décision n'a encore été prise quant au remplacement des trois vieux sous-marins classiques. Sans la troisième série de frégates, le Canada disposera de seize navires de combat de surface à la fin du siècle, dont quatre auront alors vingt-cinq ans. Si l'on se contente de remplacer les trois sous-marins classiques, sans plus, la Marine canadienne pourrait bien voir arriver l'an 2000 avec moins de vingt bâtiments de combat.

Toujours en juin, M. McKinnight a déclaré à des reporters en Europe que le gouvernement prendrait à la fin de l'année une décision sur le remplacement d'un petit nombre de chars de combat pour les Forces canadiennes déployées là-bas. Entre-temps, Ottawa a abandonné les plans qui, dans le Livre blanc, concernaient l'expansion de nos forces armées en Europe, dont les effectifs seraient ainsi passés au niveau d'une division. Le Canada avait promis à l'OTAN de réaliser cette expansion, pour compenser l'annulation de l'engagement qu'il avait pris de renforcer le nord de la Norvège.

Enfin, le ministre de la Défense nationale (MDN) a décidé d'accroître sa flotte d'avions de patrouille à grande autonomie (les *Aurora*) en achetant trois autres cellules de Lockheed. Le nouveau avion (qui s'appellerait *Arctus*) ne sera pas muni du matériel perfectionné

## Un Mig s'écrase en Belgique

En juillet, les moteurs d'un Mig-23 soviétique ayant décollé d'une base en Pologne sont tombés en panne. Le pilote orienta son parapluie vers la Baïlique et actionna le système d'éjection; mais à ce moment-là, les moteurs se remettaient à fonctionner. L'avion tourna vers l'Otan et s'écrasa finalement en Belgique. Les Soviétiques ont insisté sur le fait que l'appareil n'avait pas de radar et qu'il était sans armes.

Un lac de béton

En juillet, des reporters occidentaux ont été autorisés à visiter l'immense complexe industriel de Kyshtym, l'est de l'Oural. C'est là que se trouve le principal complexe nucléaire de l'Union soviétique, où on y est d'ailleurs en train de construire de nouveaux réacteurs nucléaires soviétiques. Les Soviétiques ont commis de terribles erreurs pendant la manipulation de matières nucléaires à Kyshtym, et ils ont même tenté d'en cacher l'existence à l'extérieur du pays. Mais les Soviétiques ont rempli le lac de béton, et la liste des accidents nucléaires est des plus inquiétantes. Les matières nucléaires ont été mal gérées pendant longtemps, on vient de rendre public que pour la première fois, de sorte que le sentiment de confiance dans l'Union soviétique, répandu en Union soviétique, au Congrès des représentants du parti en juin, ceux-ci ont réclamé la poursuite des essais nucléaires en URSS. Après une interruption de presque cinq mois, le programme des essais nucléaires a repris le 8 juillet, quand les Soviétiques ont provoqué une explosion sous-marine à Semipalatinsk. □

## CONDENSE SUR LA LIMITATION DES ARMEMENTS

de négociations : ils ont proposé de mettre en oeuvre des mesures de vérification convenues, même avant que le texte final du traité soit achevé. Certains critiques ont vu là une manœuvre de retardement, mais les négociateurs soviétiques auraient, semble-t-il, réagi favorablement.

En bref...

La controverse qui sévissait au sein de l'OTAN au sujet des forces nucléaires à courte portée a connu son dénouement au cours du sommet des 29 et 30 mai, quand les Etats-Unis ont accepté d'amorcer des négociations sur une réduction «partielle» de ces armes, une fois que la mise en oeuvre d'un accord sur les forces conventionnelles «na-rait littéralement commencé». Le président Gorbachev a réclame des négociations

Il a donné du poids à son appel et il a montré que l'URSS représentait unilatéralement de 500 ogives l'arsenal qu'elle possède sur ce plan. Les porte-parole ont retourné que cela pesait très peu dans la balance, vu que le Pacte de Varsovie possède en tout environ 10 000 ogives de cette catégorie; ils ont souligné par ailleurs que l'OTAN avait unilatéralement réduit de plus de 2 400 ogives son propre arsenal depuis 1979.

L'URSS ont signé un accord sur la prévention des activités militaires dangereuses. Le document concerne les incursions involontaires d'aéronefs militaires dans le territoire d'un autre pays; l'usage dangereux des lasers; les opérations étant sources de perturbations dans les «zones spéciales où la prudence s'impose» (le golf Persique, par exemple); et l'interférence dans les réseaux de commandement et de contrôle.

Le 17 juillet, on a appris que les

Etats-Unis et l'URSS avaient réussi d'une Convention sur les armes chimiques, y compris sur un calendrier pour la destruction de ces engins et sur la procédure détaillée devant régir les inspections sur demande. Les recommandations seront présentées aux quarante pays membres de la Conférence du désarmement, à Genève. □

forces nationales stationnées à l'étranger et les forces présentes dans les sous-zones (le Pacte est en faveur, l'OTAN est contre); les paramètres géographiques des sous-zones et les plateaux qui s'y appliqueraient; la définition de certains équipements; et les chars et les pièces d'artillerie; et les calculs de chaque

Le 19 juin a commencé la onzième

nucléaires et spatiales (A.N.), après une interruption de sept mois pendant lesquels le nouveau gouvernement Bush a révisé la position américaine. Les résultats de cet examen ont dû de nombreux observateurs, car ce dernier a essentiellement confirmé d'anciennes positions et n'a favorisé aucune évolution sur des questions classiques telles que la limitation des défenses contre les missiles balistiques, les ICBM mobiles, et les missiles de croisière mer-sol. Néan-

très heureux que les arrangements antérieurs définis dans le projet de traité (document de 400 pages) aient été conservés. Le gouvernement Bush a rejeté des recommandations du Congrès qui aurait voulu qu'une interdiction des ICBM mobiles proposée par les États-Unis s'applique seulement aux missiles à ogives multiples. De nombreux avocats de la limitation des armements ont exhorté les États-Unis à renoncer entièrement à cette interdiction, en

aléguant que les missiles mobiles sont moins vulnérables et que, par conséquent, ils favorisent davantage la stabilité. Cependant, le gouvernement hésite à abandonner son projet d'accepter de financer ses deux programmes de déploiement d'ICBM mobiles, étant donné que les Soviétiques disposent déjà de tels engins. Les Etats-Unis ont introuvé un

Warsawie avait exigés. Le président Bush a demandé des réductions qui ramèneraient le nombre des avions de combat non embarqués et des hélicoptères à un plafond correspondant à 85 p. 100 du niveau actuel de l'OTAN, et il a aussi proposé de limiter à environ 275 000 membres

l'armée et de l'aviation. Pour arriver à ce niveau, les Soviétiques devraient retirer 325 000 soldats, comparativement à 30 000 du côté des Américains. Le ministre soviétique des Affaires étrangères, M. Chevardnadze, a dit des nouvelles propositions qu'elles étaient saines et constructives et qu'elles rejoignaient celles de son pays à bien des égards. M. Bush a dit s'espérer qu'un accord interviendrait d'ici six à douze mois et que les réductions seraient

Produits à tarifs nouveaux se sont produits avant la fin de la ronde. Le 29 juin, le Pacte de Varsovie a proposé de délimiter une nouvelle «zone», plus vaste, qui comprenait la Balgique et d'autres districts militaires de l'URSS occidentale, afin de dissiper les doutes de l'Ouest qui craint une accumulation de forces soviétiques dans des régions voisines de l'Europe centrale. Le 13 juillet, deux mois avant la date fixée, l'OTAN a présenté en détail les limites qu'elle propose d'im-

ères et qui se situeraient à 5 700 et à 1 900 respectivement, les plafonds nationaux étant quant à eux fixés à 4 200 et à 1 140 respectivement. L'Alliance occidentale devrait dès lors devoir envoir 1 000 aéronets, et le Pacte de Varsovie, 3 900 (d'après les calculs de l'O.N.A.). Des différends importants subsistent cependant quant aux types d'appareils qui seraient assujettis aux révisions. L'O.N.A. voudrait inclure tous les avions de combat, tandis

Parmi les autres points suscitant encore des désaccords citons les suivants : le Pacte insiste pour que les limitations visant le personnel s'appliquent à toute l'Alliance et aux forces des membres de l'OTAN, ce que les États-Unis qui sont habituellement en dehors de leur propre zone d'application ne souhaitent pas.

Armedements conventions

accomplis pendant la deuxième ronde des négociations sur les forces conventionnelles en Europe (FCE), du 5 mai au 13 juillet. Tout d'abord, le 18 mai, le Pacte de Varsovie a répondu à l'OTAN qui se plaignait du manque de ses propositions antérieures; il a en effet fixé des plafonds précis pour diverses catégories de matériels, plafonds qui seraient atteints d'ici 1997 grâce à des réductions successives. Les limites proposées sont les suivantes : 20 000 chars et

port de trouques (V.B.I.) de part et d'autre (chiffres identiques à ceux mentionnés) par l'OTAN dans sa proposition du 9 mars), et 24 000 pièces d'artillerie (l'OTAN avait proposé un seuil de 16 500). Ainsi, selon ses propres calculs, l'Est devrait retirer d'Europe ou mettre au rencart environ 40 000 chars, 47 000 pièces d'artillerie et 42 000 VBT au cours des huit prochaines années. Le Pacte préconisait aussi que chaque alliance limite ses effectifs à 1 350 000 hommes, 1 500 avions

A la fin de mai, le bloc de l'Est s'est rapproché encore davantage de la position occidentale, en acceptant notamment le principe des plafonds secondaires pour les forces d'un pays donné, les forces de tel ou tel pays postées en dehors de ses propres frontières, et les forces stationnées dans les « sous-zones » régionales (pour empêcher toute concentration). Par exemple, l'URSS pourrait posséder en tout 14 000 chars, 17 000 pièces d'artillerie et 18 000

BRIT, ce qui est à peine supérieur aux seuls qu'autoriserait l'OTAN. Sauvons cette ligne de conduite. L'URSS devrait retirer 17 500 chars, 24 775 pièces d'artillerie et 27 000 VBTT, toutes qu'elle devrait effectuer les réductions unilatérales annoncées par le président Gorbatchev en décembre dernier à l'ONU. Pendant le sommet qu'elle a tenu les 29 et 30 mai, l'OTAN a réagi en

## EN DIRECT DE LA COLLINE PARLEMENTAIRE

### Restrictions financières

Tout au long de la fonction publique, le budget du 27 avril, du côté de la Défense nationale, on a dû, à cause des coupures, réviser de fond en comble le volet maritime des Forces canadiennes, après l'annulation du plan concernant l'acquisition d'une flotte de sous-marins à propulsion nucléaire. D'autres options sont actuellement à l'étude. Le ministre de la Défense, M. McMillan, a par ailleurs donné à entendre le 7 juin, à la fin d'une visite qu'il faisait à la BFC Labrador en Allemagne de l'Ouest, que le Canada laisserait «pour le moment» ses 7 500 soldats actuellement déployés en Europe, mais que le gouvernement examinait les multiples rôles que le Canada assumait aujourd'hui.

En Chambre, constatant la montée en flèche des coûts estimatifs du projet de construction du brise-glaces *Polar 8*, des députés ont posé des questions sur le retard qu'accuse la mise à exécution des plans à cet égard. Le 8 mai, la députée néo-démocrate Audrey McLaughlin (Yukon) a demandé au ministre des Transports, M. Benoît Bouchard, ce qu'il avait fait pour accélérer la construction de ce brise-glaces. Le ministre a répondu qu'il avait fait tout ce qu'il pouvait pour accélérer la construction de ce brise-glaces. Il a ajouté qu'il avait fait tout ce qu'il pouvait pour accélérer la construction de ce brise-glaces.

### Des bouleversements en Chine

Le ministre des Affaires étrangères, M. Joe Clark, a pris la parole en Chambre presque chaque jour à partir du 5 juin, après que le gouvernement chinois ait commencé à servir contre les protestataires de la place Tian'anmen, à Beijing. Il a répondu à une multitude de questions de l'opposition et a annoncé peu à peu une série de mesures pour contrer les effets de la vague de répression défiant sur la Chine. Plus précisément, le Canada a rappelé son ambassadeur et a fait le premier pays occidental à ce que deux fois l'ambassadeur de Chine pour exprimer le profond désaccord de son gouvernement et de l'Esri, l'étude reprendra cet automne quand le Parlement siégera de nouveau. Le Comité communautaire international, en insistant tout particulièrement sur le cas de l'Afrique. Ces travaux n'empêcheront pas le CPACB de se pencher sur d'autres questions, selon les circonstances.

### Comités parlementaires

Le parlement a interrompu ses travaux pour l'être le 27 juin, et il les reprendra le 25 septembre. Le Comité permanent des affaires étrangères et du commerce extérieur (CPACB) a entrepris une étude d'envergure qui doit durer un an et porter sur les relations du Canada avec l'Union soviétique et l'Europe de l'Est; l'étude reprendra cet automne quand le Parlement siégera de nouveau. Le Comité communautaire international, en insistant tout particulièrement sur le cas de l'Afrique. Ces travaux n'empêcheront pas le CPACB de se pencher sur d'autres questions, selon les circonstances.

### En bref

Le premier ministre et le ministre des Affaires extérieures ont assisté au sommet de la Francophonie à Dakar (Sénégal) le 24 mai. Puis, ils se sont rendus au sommet de l'OAN à Bruxelles, les 29 et 30 mai; le ministre des Finances et son collègue du Commerce se sont joints à M. Clark pour assister, les 31 mai et 1<sup>er</sup> juin à Paris, à la réunion ministérielle de l'Organisation de coopération et de développement économiques (OCDE). Le premier ministre a participé au sommet économique des sept pays industrialisés, à Paris, du 14 au 16 juillet. Tant les vingt-quatre pays industrialisés de l'OCDE que le

gouvernement du Commonwealth (à Kuala Lumpur, en octobre).

Le parlement a interrompu ses travaux pour l'être le 27 juin, et il les reprendra le 25 septembre. Le Comité permanent des affaires étrangères et du commerce extérieur (CPACB) a entrepris une étude d'envergure qui doit durer un an et porter sur les relations du Canada avec l'Union soviétique et l'Europe de l'Est; l'étude reprendra cet automne quand le Parlement siégera de nouveau. Le Comité communautaire international, en insistant tout particulièrement sur le cas de l'Afrique. Ces travaux n'empêcheront pas le CPACB de se pencher sur d'autres questions, selon les circonstances.

Le 30 juin, le Ministre a fait une déclaration détaillée pour expliquer incidences sur l'environnement.

Le 30 juin, le Ministre a fait une déclaration détaillée pour expliquer incidences sur l'environnement.

# À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

Cyprine

De plus en plus, on croit que les deux adversaires dans le conflit chypriote progressent lentement vers le règlement de ce qui est devenu le différend le plus long et le plus désespérant dont le Conseil de sécurité ait jamais été saisi. Après des années d'efforts intermittents, on mise maintenant beaucoup sur les négociations amorcées entre le chef chypriote turc, Rauf Denktash, et le président de la République de Chypre, George Vasilou.

Dans l'espoir d'accélérer les pourparlers, le Conseil a émis une déclaration laconique le 9 juin, pendant une réunion ordinaire sur le renouvellement du mandat des forces de l'ONU à Chypre (FNUC) : « Les membres constatent que vingt-cinq ans se sont écoulés depuis la création de la FNUC... Ils regrettent qu'il ait été impossible, pendant tout ce temps, d'en arriver à une règle-cadre négociable de tous les aspects du problème chypriote. »

Le Canada a participé avec une intensité particulière à la rédaction de la déclaration. Il a insisté pour que l'on emploie des termes énergiques afin de bien faire comprendre que les pays fournissant les troupes commencent à s'impacienter devant des négociations qui n'aboutissent jamais. « Il s'agit de traduire notre sentiment de lassitude, la mission de maintien de la paix à bas dure depuis vingt-cinq ans, et nous ne voulons pas qu'elle se poursuive pendant un autre quart de siècle », a expliqué un diplomate canadien.

Le diplomate a ajouté que la dernière étape des pourparlers avait été la plus encourageante à avoir eu lieu depuis des années. Les deux adversaires sont censés définir le cadre d'un accord en septembre. Ils se réuniront ensuite avec le Secrétaire général de l'ONU pour régler les détails.

« Si les pourparlers échouent, on ne reviendra pas au statu quo axé

sur la FNUC, de dire le diplomate. Le Conseil de sécurité se dit frustré. Si les deux adversaires ne font pas de leur mieux, alors ils en subiront les conséquences. » Le diplomate n'a pas précisé ce que celles-ci pourraient être, mais il a donné à entendre que les pays fournissant des troupes envisageraient de réduire leurs contingents. Le désenchantement a conduit la Suède à retirer toutes ses troupes l'an dernier.

Les cotisations versées pour la FNUC le sont à titre volontaire, et cela inquiète le Canada, car le compte est actuellement à découvert de 165 millions de dollars. Pendant les consultations menées par le Conseil, le Canada a cherché une solution à ce problème en proposant d'instaurer une contribution obligatoire pour tous les membres de l'ONU, mais l'Union soviétique et la France s'y seraient opposées.

## Le Moyen-Orient

Comme dans le passé, la jonction israélienne a continué d'inquiéter profondément. En un mois, le Conseil a voté sur deux résolutions critiquant la façon dont Israël traite les Palestiniens dans les territoires occupés.

Le 9 juin, les États-Unis ont opposé leur veto à la première résolution qui « déplorait avec vigueur » les politiques et les pratiques israéliennes « qui violent les droits du peuple palestinien ». Les quatorze autres membres, dont le Canada, ont appuyé la résolution. Pour expliquer sa position, notre pays a déclaré qu'à son avis, Israël ne s'efforce pas suffisamment de respecter les dispositions de la Convention de Genève concernant la protection des civils dans les zones occupées par des militaires. En revanche, les autorités israéliennes ont mérité des éloges pour avoir tenu tête aux « justiciers » en Cisjordanie.

Dès négociations délicates ont précédé le débat sur la résolution. À l'origine, les auteurs du document avaient voulu employer des termes extrêmement incisifs et « conda-Canada et d'autres pays ont réussi à faire adopter un texte moins intrusif » la conduite d'Israël. Mais le sigeant qui « déplorait avec vigueur » l'attitude de Tel Aviv. « Nous avons essayé de trouver les mots les plus acceptables possible, de manière à donner un poids moral à la résolu-

tion, a précisé un diplomate canadien. Il ne faut pas donner l'impression que le Conseil de sécurité est divisé. » Les États-Unis ont malgré tout rejeté le document en faisant valoir qu'il manquait d'objectivité, car il ne mentionnait pas les actes de violence commis par les Palestiniens. Tout comme dans le cas de nombreuses résolutions antérieures qui critiquaient Israël, le veto opposé par les États-Unis a isolé ces derniers sur le plan diplomatique.

Le 6 juillet, cependant, Washington s'est abstenue d'utiliser son veto lors d'un vote sur une résolution qui exprimait une vive déception devant la conduite d'Israël qui continuait à déporter des civils palestiniens. Les États-Unis ont plutôt choisi de s'abstenir dans ce cas, de sorte que la résolution a été adoptée.

Dans d'autres dossiers intéressants du Moyen-Orient, le Conseil, au cours de l'un de ses plus courtes réunions jamais vues, a renouvelé le 30 mai le mandat de la force tampon de l'ONU (FNUOD). Le 31 juillet, le Conseil a renouvelé le mandat de la Force des Nations-Unies au Liban (FINUL).

## Autres questions à l'ordre du jour du Conseil

Le Conseil a continué de surveiller la scène namibienne. En dépit des difficultés ayant surgi au tout début de l'opération, les diplomates semblent croire que le processus est sur la bonne voie et que les élections auront lieu en novembre. Ils savent par ailleurs très bien que des « sous-entendus » risquent de se produire, pour reprendre les mots d'un diplomate.

Un incident s'est effectivement produit le 28 juin, quand le Secrétaire général de l'ONU, M. Javier Pérez de Cuellar, a attiré l'attention du Conseil sur un climat de peur et d'intimidation qui existait dans le nord de la Namibie et qui risquait d'empêcher la tenue d'élections équitables. Il a blâmé une unité contre-insurrectionnelle de la *South-West Africa Police Force*, en l'accusant d'avoir adoptée une conduite « inacceptable ».

Le Conseil s'est également penché sur la question du terrorisme. Dans une résolution adoptée à l'unanimité, les quinze membres du Conseil ont réclamé l'instauration d'un

régime international en vertu duquel les expositifs au plastique et en feuille porteraient des marques qui en faciliteraient la détection. Le Conseil a exhorté tous les États à intensifier la recherche pour prévenir les actes de terrorisme contre l'aviation civile.

Le 31 juillet, le Conseil a adopté une résolution présentée par le Canada et la Finlande; le texte condamnait quiconque prend des personnes en otage et il exhortait tous ceux et celles qui, dans le monde entier, détenaient des otages à les libérer. Bien qu'elle ne fût pas directement reliée à l'enlèvement d'un chercheur religieux libanais par Israël, la résolution a été adoptée le jour même où les fidèles de cet ecclésiastique ont affirmé avoir exécuté le lieutenant-colonel William Higgins, un officier américain servant dans les forces américaines au Liban. En apprenant la mort du militaire américain, le Conseil s'est dit profondément courbé et a exigé la libération de tous les otages et de toutes les personnes ayant été enlevées.

Le 27 juillet, le Conseil a tourné son attention vers l'Amérique centrale. Changement leur politique, les États-Unis ont appuyé une résolution qui demandait la dissolution des forces *contras* au Nicaragua, en tant qu'élément du plan de paix en Amérique centrale. Au cours des dernières années, les États-Unis avaient empêché tout débat sur cette question. Ils ont changé de cap parce que la résolution exhortait tous les pays à interrompre toute aide militaire aux forces de guérilla dans la région, ce qui faisait indirectement allusion au conflit salvadorien. La pays a continué d'accorder une aide humanitaire aux *contras*.

Onze jours après le vote, les cinq présidents centrafricains ont décidé, à la surprise de tous, d'appuyer la démobilisation des *contras*. Dès lors, des troupes onusiennes devaient surveiller le processus et protéger la frontière honduricaïne et les expéditions illégales d'armes. Toute opération de ce genre nécessitera la sanction du Conseil de sécurité, organe au sein duquel les États-Unis ont un droit de veto. □

— TREVOR ROWE

## NOTE DE LA DIRECTION

L'INSTITUT  
SE DONNE  
UN NOUVEAU  
CAP

À la fin du premier trimestre 1989, nous sommes en train de définir une orientation claire pour l'avenir.

En tant que nouveau Directeur général, j'ai profité de chaque occasion possible pour consulter mes collègues du conseil et les membres du personnel au sujet de l'expérience acquise avant mon arrivée, et j'ai entrepris un programme de consultations extérieures pour découvrir la perspective la plus équilibrée possible. Ainsi, je me suis entretenu avec les médias et d'autres interlocuteurs, j'ai tenu des discussions avec de petits groupes, et j'ai assisté à des séances de compte rendu, dans toutes les régions du pays, rencontrant de cette manière des Canadiens et Canadiennes de divers milieux qui suivent le travail de l'Institut et utilisent ses services.

Après d'autres consultations internes (auxquelles tout le personnel de l'Institut a participé), le conseil a examiné et adopté un ensemble d'orientations à moyen terme pour l'Institut, à sa réunion de deux jours à la mi-juin. Ces orientations ont permis de faire le pont entre le passé et l'avenir, car ce fut la dernière occasion pour le président fondateur et plusieurs autres distingués directeurs quittant le conseil de résumer leurs impressions et leurs idées. Les paragraphes qui suivent présentent sommairement nos principales conclusions.

### OUT D'ABORD, LE «CONTEXTE RÉEL» DANS

lequel l'Institut continue d'exercer son mandat d'abord, LE «CONTEXTE RÉEL» DANS lequel l'Institut continue d'exercer son mandat, à savoir «accroître la connaissance et la compréhension des questions relatives à la paix et à la sécurité internationales», est aujourd'hui rempli de défis, et la situation ne risque pas de changer de sitôt. L'extraordinaire amplification des relations Est-Ouest et les perspectives de progrès aux chapitres de la limitation des armements et du règlement des conflits engendrent *plus* de travail pour l'Institut et ses collaborateurs, et non moins. Toutes les questions «classiques» sont encore à l'ordre du jour, mais il nous faut aussi nous attacher à la tâche énorme et envahissante qui consistera à contribuer au travail de nouvelles institutions, à participer à des initiatives visant à résoudre les conflits et à en réduire le nombre partout dans le monde, et à faire face à de nouvelles menaces pesant sur la sécurité internationale — les changements climatiques d'envergure planétaire, par exemple. Pareil programme d'action pourrait facilement entraîner une surcharge

de travail, ou une diffusion et une dilution des efforts, c'est pourquoi l'Institut a cerné un certain nombre de domaines où il concentrera ses efforts dans le cadre d'une stratégie quinquennale souplée, tout en continuant l'analyse de thèmes plus généraux et en répondant aux questions soulevées à leur égard.

Le conseil a également convenu que, vu le mandat précédemment et les ressources que le Parlement et de faire des choix judicieux dans toutes ses entreprises, surtout s'il veut assurer de la «faire des études et proposer des idées et politiques». Autre principe de base, l'Institut continuera de collaborer avec toute une gamme d'autres institutions, de groupes et de particuliers pour réaliser ses objectifs clés, en stimulant et en finançant des activités appropriées de recherche, d'information et d'éducation. L'Institut se charge aussi de rendre les analyses sur la paix et la sécurité internationales accessibles à un public intéressé beaucoup plus vaste, aux décideurs et aux intervenants façonnant l'opinion, tant au Canada qu'à l'étranger. Afin d'atteindre cet objectif, il faut entretenir des relations de travail énergiques et professionnelles avec les médias qui jouent un rôle clé lorsqu'il s'agit de diffuser les connaissances et de favoriser la compréhension de ces thèmes avant-gardistes. Nous continuerons de surveiller l'évolution de la conjoncture dans tous ces domaines, de répondre aux questions soulevées à leur égard et de conserver un réseau de référence, chacun de nos chercheurs principaux s'occupant d'un secteur en particulier. L'Institut se souciera aussi de rester en communication avec le plus grand public possible grâce, notamment, à des instruments tels que le *Guide annuel*, le programme rationalisé de publications et les efforts dynamiques de diffusion déployés par les services d'information, par l'entremise des bibliothèques, des écoles et d'autres institutions. Au cours des deux à cinq prochaines années, l'Institut se concentrera *intensément* sur six grands thèmes-cadres :

la non-prolifération des armes de destruction massive;

la politique du Canada en matière de défense et de sécurité;

les mesures à prendre pour renforcer les systèmes internationaux d'établissement, de maintien et d'édification de la paix;

la création, le maintien et l'utilisation de réseaux d'experts s'intéressant à des conflits régionaux, particuliers, ou à des conflits potentiels;

### — BERNARD WOOD

□ influence mondiale.

Le renforcement de la coopération et de la sécurité internationales dans l'Arctique; l'étude de nouvelles menaces et de nouvelles formes pour promouvoir la sécurité internationale.

À bien des égards, les travaux qui concernent ces questions se fonderont sur des activités déjà bien lancées ou soutenues par l'Institut, tandis que d'autres thèmes ont déjà fait l'objet de nouvelles initiatives. Ainsi, l'examen de la politique canadienne en matière de défense et de sécurité s'amorce avec pour joie de fond une étude commune sur l'avenir des forces terrestres de notre pays et la table ronde qui s'est tenue à l'intention des médias au début de mai sur la défense. Quant à la politique étrangère et le budget fédéral. Quant aux mécanismes internationaux pour renforcer la paix, il s'agit d'un thème découlant de divers projets sur le maintien de la paix, la médiation et le règlement des conflits. En ce qui concerne l'analyse des conflits régionaux, nous tirerons des leçons du grand projet mené sur Chypre au cours de l'an dernier. L'Institut adoptera ainsi des formules telles que celle ayant permis de réaliser le programme actuel relatif aux élections et à la transition à un régime de paix en Namibie. L'approfondissement du thème de la coopération et de la sécurité dans l'Arctique supposera le regroupement de nombreuses études et l'établissement d'un vaste réseau national et international d'experts sur la question. De nouvelles voies vers la sécurité internationale font déjà l'objet d'un projet réalisé sous contrat par une équipe multi-universitaire.

En vertu de son mandat, l'Institut est censé étudier les questions relatives à la paix et la sécurité internationales «d'un point de vue canadien», mais il ne faut pas voir là un motif pour justifier un nationalisme étroit. En fait, notre programme doit plutôt être vaste et novateur, vu l'envergure mondiale des intérêts et des contributions potentielles du Canada, ainsi que ses ressources et les domaines qui excitent la curiosité de sa population. Par conséquent, pour décider de l'orientation de ses propres travaux analytiques et éducatifs, et de certains travaux qu'il entreprend avec d'autres, l'Institut cherchera plus explicitement à savoir comment le Canada pourra mieux renforcer la paix et la sécurité internationales à moyen terme. Le conseil et le personnel de l'Institut sont convaincus que ce sera en se spécialisant de la sorte que celui-ci pourra le mieux servir la communauté canadienne et acquiescer, grâce à ses travaux, une réputation et une

Bernard Wood est le Directeur général de l'Institut.

Parti sont issus de groupes sociaux aux attitudes silencieuses, y compris les femmes. Ils ne sont absolument pas disposés à renoncer à leur nouveau statut et ils continueront sans doute de lutter contre la résistance plutôt que de capituler devant elle. Avec un accroissement d'envergure de l'appui du communisme par le Pakistan sur la ligne de front, les forces de résistance de l'Union soviétique doivent être disposées à appuyer les processus représentatifs qui, de par leur nature même, conforteront clairement les communistes au statut d'une minorité. Moscou doit se tenir prête à insister pour que le régime Najibullah remette le pouvoir à un gouvernement provisoire si celui-ci est choisi à la faveur de processus fondés sur une représentation équitable. De la même manière, Washington manquera-t-il énormément de réalisme en attendant de Najibullah qu'il cède le pouvoir avant qu'un gouvernement d'unité nationale ait été choisi pour lui succéder. Beaucoup de représentants du gouvernement Bush doutent que les formules préconisées pour remédier pacifiquement à la situation communiste réussissent. Tous ces scénarios, font-ils valoir, supposent l'implication que l'infrastructure gouvernementale existant à Kaboul resterait en place, tout au moins au début. Il faudrait donc dissoudre toutes les forces armées, les corps de police et les services de renseignement, sans quoi ils renverseraient tout nouveau gouvernement. Il faut «repartir à zéro», comme le président Reagan le déclarait à une conférence de presse en novembre 1988.

De toute évidence, ce ne serait pas chose facile que de réorganiser les forces armées, la police et les services de renseignement ayant servi le régime Najibullah. Mais les dirigeants du nouveau régime auraient la force que leur conférerait la maîtrise de l'aide américaine, occidentale, onusienne et soviétique. Il est douteux que la discipline communiste subsiste très longtemps dans les services de sécurité, au milieu des réalignements politiques qui traitent de paix avec l'instauration d'un régime d'occupation

soviétique s'estompent, le nationalisme afghan se reflète sans doute, diluant et domestiquant peu à peu le communisme afghan.

À mon avis, une politique qui consisterait à «repartir à zéro» en Afghanistan comporterait des inconvénients moraux et politiques insupportables. Elle équivaudrait en effet à une lutte à mort, jusqu'au dernier Afghan, dans la poursuite peu judicieuse des objectifs géopolitiques attribués aux États-Unis, objectifs que ces derniers pourraient bien mieux atteindre par des moyens politiques et diplomatiques. □

Parti sont issus de groupes sociaux aux attitudes silencieuses, y compris les femmes. Ils ne sont absolument pas disposés à renoncer à leur nouveau statut et ils continueront sans doute de lutter contre la résistance plutôt que de capituler devant elle. Avec un accroissement d'envergure de l'appui du communisme par le Pakistan sur la ligne de front, les forces de résistance de l'Union soviétique doivent être disposées à appuyer les processus représentatifs qui, de par leur nature même, conforteront clairement les communistes au statut d'une minorité. Beaucoup de représentants du gouvernement Bush doutent que les formules préconisées pour remédier pacifiquement à la situation communiste réussissent. Tous ces scénarios, font-ils valoir, supposent l'implication que l'infrastructure gouvernementale existant à Kaboul resterait en place, tout au moins au début. Il faudrait donc dissoudre toutes les forces armées, les corps de police et les services de renseignement, sans quoi ils renverseraient tout nouveau gouvernement. Il faut «repartir à zéro», comme le président Reagan le déclarait à une conférence de presse en novembre 1988.

De toute évidence, ce ne serait pas chose facile que de réorganiser les forces armées, la police et les services de renseignement ayant servi le régime Najibullah. Mais les dirigeants du nouveau régime auraient la force que leur conférerait la maîtrise de l'aide américaine, occidentale, onusienne et soviétique. Il est douteux que la discipline communiste subsiste très longtemps dans les services de sécurité, au milieu des réalignements politiques qui traitent de paix avec l'instauration d'un régime d'occupation

respectés qui pourraient former un gouvernement capable de se valoir l'appui populaire. L'ancien vice-premier ministre Abdul Samad Hamed, l'ancien ministre de la Justice Abdul Sitar Sitar, l'ancien ministre de l'Agriculture Abdoul Wakil et l'ancien vice-premier ministre Ali Ahmad Popal comptent parmi les nombreux dirigeants expérimentés qui n'ont pas versé dans l'extrémisme intégriste, n'ont eu aucun rapport avec l'accusation de corruption, contrairement à la plupart des chefs de l'Alliance.

On ne peut pas simplement souhaiter que le Parti communiste disparaisse comme par magie dans l'Afghanistan de l'après-guerre, mais ce

hané les régimes successifs à Kaboul, à dominer la politique anti-pachoune de son prédécesseur, en préconisant l'instauration d'un gouvernement afghan d'unité nationale qui ne serait dominé ni par les communistes, ni par les fondamentalistes. Les intérêts du Pakistan exigent un tel gouvernement, à-t-elle précisé en juin 1988, car «la continuation de la guerre civile signifie la présence permanente de 3 millions de réfugiés chez nous». Dans un entretien accordé à un journal *The Nation* de Lahore, elle a fait une mise en garde plus explicite au sujet de tout effort qui viserait à installer à Kaboul un gouvernement satellite; ce serait la risquer d'aliéner les Pachounes : «Il est dangereux d'avancer sur la voie d'un grand Pakistan, car cela encourageait la revendication d'un grand Afghanistan» chez les Pachounes des deux côtés de la frontière.

Quand Mme Bhutto s'est rendue à Washington en juin, elle a exhorté les États-Unis à rechercher une solution politique à la guerre civile afghane en menant des négociations avec l'Union soviétique. Le gouvernement Bush a essayé de gagner la résistance une autre chance de renverser militairement le régime de Kaboul cet été et cet automne. Cependant, les porte-parole de Washington s'impénitent de plus en plus face aux piètres résultats militaires obtenus par la résistance jusqu'ici et à l'incapacité du gouvernement en exil d'élargir ses appuis. Si le régime de Kaboul est toujours en place à la fin des combats en octobre, ces porte-parole s'attendent à des démarcations plus poussées des divers intervenants pour trouver une solution politique.

Comment expliquer l'endurance manifestée par les forces communistes dans la bataille de Jalalabad ? Certes, le régime de Kaboul dispose de forces actives, contrairement à la résistance. Autre facteur militaire auquel on peut attribuer les pitoyables résultats obtenus jusqu'ici par la résistance dans les combats de Jalalabad : les rebelles n'ont pas l'expérience de la guerre classique. Mais un autre élément important et souvent oublié réside dans le fait que le Parti communiste compte dans ses rangs 40 000 militants endurcis et très motivés qui se perçoivent comme des nationalistes et des «modernisateurs» représentant la réforme que le roi Amanullah avait en vain tenté d'opérer entre 1919 et 1929. À l'occasion d'une visite à Kaboul en 1984 et pendant des réunions avec des dirigeants communistes par la suite, je me suis fait rappeler que le dévouement et le sentiment patriotique ne sont pas l'apanage des combattants de la résistance.

La rareté que représentait le soutien pakistanais et qui colle désormais au régime en exil de Peshawar a renforcé ce sentiment patriotique à Kaboul et permis aux communistes de rationner leurs états de service des dix dernières années où ils ont collaboré avec les forces d'occupation soviétiques. De nombreux militants du

les ressources allouées aux recherches spatiales

n'ont pas été touchées.

Dans son énoncé de politique, M. Beatty

reconnaissait l'importance de l'espace «qui sera

exploité sans cesse davantage à l'apogée d'objec-

tifs de défense nationale». Il annonçait que le

gouvernement avait autorisé des programmes de

recherche pour étudier des systèmes spatiaux

radars ou à infrarouge qui permettraient de dé-

tecker et de poursuivre les avions et les missiles

de croisière. Ces dispositifs spatiaux remplaceraient

radars terrestres du Système d'alerte du Nord, qui

deviendrait donc vétuste vers la fin du siècle.

MAIS LE VÉRIFIABLE ÉNONCÉ DE POLITIQUE CONCER-

nant le programme spatial militaire se retrouve

dans un document interne rendu public par le minis-

tère de la Défense nationale en juillet 1987, quel-

ques semaines après le dépôt du Livre blanc. C'est

dans ce document que les militaires précisent

leurs besoins techniques et stratégiques. Ils souli-

gent les trois principaux objectifs du programme :

■ permettre au Canada de respecter ses engage-

ments en matière de défense en utilisant la

technologie spatiale lorsque cette mesure est

appropriée et rentable;

■ favoriser l'utilisation de l'espace à des fins

pacifiques;

■ contribuer à l'économie canadienne.

Les militaires estiment que «si le Canada ne

s'engage pas suffisamment dans le domaine spa-

tial, il s'imposera des limites qui seront domi-

nables pour sa sécurité» et que «la gamme

de options militaires qui s'offriront dans l'avenir

pourrait être considérablement réduite, ce qui

risque de nuire aux intérêts canadiens en matière

de sécurité et de souveraineté».

La Défense nationale veut aller plus loin que le

respect des engagements envers l'OTAN et le

NORAD; en se dotant d'une infrastructure

spatiale, elle pourra rendre les forces armées

canadiennes totalement ou partiellement indépen-

dantes. Il n'est pas question d'une présence

armée mais d'une utilisation passive de l'espace.

Enfin, le secteur de la recherche et du développe-

ment (R et D) à la Défense nationale accorde

beaucoup d'importance à la politique gouver-

nementale qui veut offrir des retombées

économiques aux entreprises canadiennes.

Pour établir la présence canadienne dans l'espace

est très ambitieux. Les domaines d'intérêt des

militaires sont les suivants : la surveillance, les

communications, la navigation, la recherche et le

carottage et enfin, les vols spatiaux habités.

En 1986-1987, le ministère de la Défense na-

tionale a débouqué 46 millions pour la technolo-

gie du radar spatial et 48 millions pour celle des

circuitus rapides à ondes millimétriques. Ces deux

programmes de recherche, qui dureront cinq à

sept ans, fourniront suffisamment d'informa-

tion pour que les autorités compétentes puissent pren-

dre une décision quant à la nécessité de s'engager

à plus long terme dans ces deux domaines.

Le programme des radars spatiaux vise à mettre

en œuvre un système de surveillance des activités

aériennes, terrestres, maritimes et sous-marines.

Quant au programme

de communications à

ondes millimétriques, il

est d'une grande impor-

tance pour les forces ar-

mées. Pour les Forces

canadiennes, il est capital

de déployer un réseau de

communications sûr,

efficace et indépendant

afin d'assurer la liaison

entre leurs unités dans le

monde entier, notamment

à Chypre, en Europe et

au Moyen-Orient. Ac-

tuellement, le MDN doit

louer des lignes passant

par des satellites comme

ceux de la série ANIK C

et bientôt E, et il ne dis-

pose d'aucun satellite

militaire, contrairement

aux États-Unis.

Enfin, les militaires

sont engagés dans une

multitude de programmes tels que la moderni-

sation complète de tout le système de communi-

cation des forces armées, l'accès au réseau

américain NAVSTAR/GPS, le système SRSAT

de recherche et de sauvetage, la mise au point de

mesures de sécurité pour les satellites ANIK E, etc.

Le ministère de la Défense nationale ne dis-

pose pas d'un commandement unifié de l'espace

comme c'est le cas aux États-Unis. Sa Direction

été dissoute l'été dernier. Il n'y a aucun bureau

qui coordonne la politique militaire spatiale

comme le fait maintenant l'Agence spatiale dans

le secteur civil. Toutefois, il ne fait aucun doute

que la Défense nationale devra d'ici quelques

années se doter d'une pareille structure.

La part des spécialistes sont cependant

d'avis qu'au rythme où vont les choses, le budget

militaire spatial pourrait dépasser 150 millions de

dollars par an d'ici peu, même si l'on tient compte

du fait que le Canada ne fabrique pas ses propres

technologies de surveillance, de communication et de

navigation. Si, au contraire, le MDN reçoit le feu

vert pour ses ambitieux projets, ce budget pour-

rait facilement atteindre les 400 millions par an

d'ici la fin du siècle.

Il y a PRÉSENTEMENT PEU DE LIENS ENTRE LE PRO-

gramme civil et le programme militaire, sinon

les discussions qui se déroulent au Comité Inter-

ministériel de l'espace qui regroupe tous les inter-

venants gouvernementaux dans le domaine spa-

tial. Toutefois, deux questions viennent à l'esprit

lorsque l'on pense au futur. Va-t-on assister à une

libéralisation du programme civil comme c'est le

cas aux États-Unis ? Notre collaboration avec

notre puissant voisin du Sud va-t-elle nous en-

traîner dans cette direction ? Aux États-Unis, le

budget de la NASA est limité à 10 milliards de

dollars US par an tandis que celui concernant les

activités militaires spatiales frise les 15 milliards.

La comparaison ne peut pas encore être faite

au Canada, mais d'ici une dizaine d'années,

l'essorlement du

programme civil et le

lancement d'un vigo-

reux programme

militaire pourraient

deboucher sur une

politique spatiale «à

l'américaine».

La collaboration entre

les États-Unis et le Ca-

nada se retrouve à deux

niveaux : institutionnel et

privé. Dans le premier cas, le

Canada est lié aux États-Unis par

de nombreux accords militaires

et techniques intéressants le

NORAD, les systèmes de com-

munications et de navigation mili-

taires et la station orbitale. Lors

des négociations tenues à la signa-

ture d'une entente l'an dernier entre

les États-Unis et ses par-

tenaires européens, japonais

et canadiens, il a été con-

venu de construire cette

station pour des utilisations

pacifiques malgré les

objections du Pentagone qui ne voulait exclure

aucune option militaire. Toutefois, l'entente

ne spécifie pas quelles sont les activités

militaires interdites. De plus, les Américains

peuvent faire ce qu'ils veulent dans une très

grande partie de la station puisqu'ils en

possèdent 70 p. 100.

Du côté privé, l'industrie spatiale canadienne

exporte 70 p. 100 de sa production qui est

intégrée à toute une gamme de produits améri-

cains, tant civils que militaires. Advenant le

# À LA RECHERCHE D'UNE POLITIQUE DE L'ESPACE

Le gouvernement canadien devra faire un choix entre le programme spatial civil et le programme spatial militaire. *Qu'il emportera ?*

PAR JOCELYN COULON

La révolution spatiale qui le propulsera au XXI<sup>e</sup> siècle, grâce à une foule de programmes spatiaux, civils et militaires, actuellement en marche on sur les planches à dessins des scientifiques canadiens. Cela rendra possible le développement des communications civiles et militaires, la télédétection, la surveillance du territoire et l'avancement des sciences spatiales liées au développement économique, technologique et médical.

Huitième puissance spatiale du monde, le Canada devra toutefois faire des choix importants au début du siècle prochain. Ses activités spatiales civiles vont plafonner d'ici quelques années alors que les activités militaires pourraient bien prendre une part grandissante du budget spatial canadien. Le risque d'une militarisation du programme spatial n'est pas écarté, même si l'acte demeure assez lointain et sujet aux aléas de la politique internationale.

Le gouvernement consacrera quelque 3 milliards de dollars au programme civil d'ici l'an 2000. En mars dernier, il a créé l'Agence spatiale canadienne pour coordonner toutes les activités spatiales civiles qui était dispersées dans une demi-douzaine de ministères et d'instituts de recherche. Sur le plan militaire, c'est le ministère de la Défense nationale (MDN) qui s'occupe d'un minuscule programme spatial. Dans l'enfance de l'âge, ce programme est appelé à se développer considérablement si les militaires obtiennent ce qu'ils veulent.

Depuis le lancement du satellite *Alouette* en 1962, le Canada a surtout exercé des activités civiles en matière spatiale. La période faste des années 1960 et 1970, où huit satellites ont été mis en orbite et où l'industrie spatiale se développait au taux de 50 p. 100 par an, a été suivie d'un déclin pendant plusieurs années. Toutefois, le programme civil canadien a repris son envol à la fin des années 1980 avec le lancement de trois grands projets et d'une demi-douzaine d'autres de moindre importance. Selon un vaste plan élaboré par le gouvernement Mulroney en 1986, l'Ontario dépensera plus de 3 milliards de dollars d'ici l'an 2000 pour sa participation à la station orbitale américaine, à un système mobile de télécommunications (M-SAT) et à un satellite de télédétection avec un radar à antenne synthétique (RADARSAT) qui permettra de transmettre et de recevoir des signaux sur toute la planète, par temps nuageux ou dans l'obscurité. Le plan du

gouvernement fédéral inclut plusieurs autres projets à réaliser en collaboration avec l'Europe, le Japon, les États-Unis et l'Union soviétique. Dans les années 1980, le Canada a dépensé en moyenne quelque 160 millions de dollars par an pour ses activités spatiales civiles. Cette somme devrait atteindre 230 millions de dollars dans les années 1990. Le Canada reste loin derrière la France (1 milliard), le Japon (900 millions) et les États-Unis (10 milliards). Selon les données du ministère d'État chargé des Sciences et de la Technologie, 37 p. 100 du budget du programme civil sera consacrée à la station orbitale, 35 p. 100 à RADARSAT, 10 p. 100 à M-SAT et 18 p. 100 aux autres programmes.

L'ÉLEMENT CENTRAL DU PROGRAMME CIVIL EST LA participation canadienne à la station orbitale américaine, projet lancé par le président Reagan en 1984. Les Américains ont invité le Canada, le Japon et les pays membres de l'Agence spatiale européenne à participer à cette entreprise qui verra l'installation, entre 1995 et 1998, d'une base permanente dans l'espace, gérée par huit astronautes. Après trois ans de négociations, l'Ontario s'est engagé, en avril 1988, à investir 1,2 milliard de dollars pour une période de quinze ans dans un programme qui devrait coûter au total 40 milliards. Les États-Unis assumeront 69 p. 100 des coûts, l'Europe 18 p. 100, le Japon 10 p. 100 et le Canada 3 p. 100. Le Canada construira un centre d'entretien et de réparation mobile pour la station orbitale. Le centre sera équipé d'un nouveau bras *Canadarm*, déjà installé sur les nouvelles américaines, qui manipulera les satellites. En plus, un astronaute canadien travaillera six mois à tous les deux ans à bord de la station. Après plusieurs années de négociations, tous les partenaires liés à la station orbitale ont signé l'an dernier une entente définissant leur participation. La conclusion d'un accord bûit sur les conditions apposées par les Américains sur les aspects militaires des travaux à bord de la station. Nous y reviendrons plus loin.

Si le programme spatial civil est bien connu et largement accepté par la population canadienne, les activités militaires spatiales du pays restent obscures. En fait, elles sont encore très embryonnaires. Tout cela devrait changer dans quelques années lorsque le ministère de la Défense nationale aura terminé les multiples études qu'il mène dans les domaines des communications, de

la surveillance et de l'alerte. Le gouvernement devra ensuite prendre une décision pour libérer des fonds importants afin de doter le pays d'un véritable programme spatial militaire. Longtemps négligée au profit des activités civiles, l'utilisation militaire de l'espace est devenue une nouvelle préoccupation du gouvernement depuis le début des années 1980. Pourtant, les militaires canadiens ne découvrent pas l'espace; ils le redécouvrent. John Kirton, de l'Université de Toronto, écrit qu'à la fin des années 1950, la mise en place du programme spatial canadien était d'inspiration militaire. Le satellite *Alouette* a été construit au Centre de recherches sur les télécommunications de défense. L'universitaire canadien souligne que «jusqu'en 1966, les programmes spatiaux canadiens organisés sous l'égide des militaires représentaient 41 p. 100 du total des dépenses canadiennes dans ce domaine». Après une période où, pour des raisons politiques et commerciales, le programme spatial a été «démilitarisé», l'intérêt pour l'aspect militaire a refait surface. Représentant les réflexions exprimées par le Comité de gestion de la Défense en mai 1974, le Comité spécial du Sénat sur la défense nationale (1985) et le Livre blanc sur la défense (1987) ont relancé l'idée d'un programme militaire spatial indépendant. Après avoir tenu de longues audiences sur la défense (1987) ont relancé l'idée d'un programme militaire spatial indépendant.

Après avoir tenu de longues audiences sur la défense aérieenne du territoire canadien en 1985, les sénateurs ont recommandé au gouvernement de «créer son propre programme militaire spatial, de consacrer aux fonctions de surveillance et de communications nécessaires, la sécurité nationale». Les sénateurs ont établi, à partir de témoignages recueillis, que la Défense nationale aurait besoin de huit à douze satellites pour effectuer le travail requies et que le gouvernement devrait consacrer à ce programme au moins 150 millions de dollars par an pendant cinq ans, et 350 millions au cours des années 1990. Le rapport du Sénat canadien n'est pas resté lettre morte, puisque le ministère de la Défense nationale en a repris l'essentiel dans son Livre blanc sur la défense publié il y a deux ans. En juin 1987, un ambitieux programme de réarmement et de réalignement stratégique était annoncé par le Ministre, M. Perrin Beatty. La nouvelle politique de défense reposait sur l'acquisition d'une flotte de dix à douze sous-marins nucléaires. En avril dernier, le gouvernement a annoncé l'annulation du programme des sous-marins et une réduction de près de 3 milliards de dollars dans les dépenses de défense. Toutefois,

phère terrestre. Cet organisme pourrait, dans certains cas, prendre des décisions à la majorité (en cinq grandes puissances) et serait habilité à imposer les sanctions économiques obligatoires recommandées par la Cour internationale de justice sur «... les biens produits dans des conditions néfastes pour l'environnement». Cette autorité aurait également le pouvoir de recueillir des fonds afin de dédommager les pays pour lesquels l'observation des normes représenterait un fardeau injuste.

Ce nouveau «mode de pensée» de la part des gouvernements au sujet de la relation entre l'environnement et l'économie trouve des échos dans les résultats du sommet que le Groupe des sept vient de tenir à Paris en juillet. Les tiers du comité notamment l'accent sur les dilemmes transmutiques final est consacré à ce thème, et l'on y reste du monde) font face lorsque l'il s'agit de trouver des moyens d'améliorer la qualité de vie sans pour autant ajouter aux pressions s'exerçant déjà sur l'écologie planétaire. Les chefs du Groupe des sept, tout en évitant de citer des cas particuliers sur tous ces plans. Peut-être avons-nous, pour une fois, affiché à une de ces questions qui donneront à une puissance moyenne l'occasion de prendre les devants, d'autant plus que le Canada bénéficie d'une bonne crédibilité en tant que membre du Groupe des Sept et en tant qu'ami du tiers-monde (en dépit du récent budget de M. Wilson).

Mais il s'agit là de problèmes extrêmement complexes, et la conjoncture évolue très rapidement. Il va falloir mettre au point de nouveaux mécanismes pour que chaque pays puisse adopter, à la table des négociations, une position nationale, étant donné que les questions tendent à relever de la compétence de plusieurs ministères. Une fois le dialogue engagé, il va être difficile de résister à la tentation de rallonger l'ordre du jour, nous assisterons alors à une réédition du dialogue Nord-Sud qui a traîné en longueur pendant 1980, avant d'aboutir à une série de réunions peu concluantes. Mais cette fois, il est certain que nous avons plus d'atouts en main : une conscience du temps qui passe, les occasions que nous offrent la *glasnost* et l'ouverture récente de l'Europe de l'Est et, enfin, une opinion publique inquiète, mais qui se mobilise facilement. □

Nicholas Winton

déjà été mis de l'avant, dont une augmentation non négligeable de ce que l'on appelle les «trans-formations de la dette en remises en nature», ou encore une version adaptée du plan Brady pour permettre aux débiteurs de rembourser une partie de leur dette aux taux du marché s'ils acceptent de modifier leurs politiques et d'adopter des procédures pour favoriser une utilisation plus rationnelle de l'énergie, l'adoption de meilleures méthodes d'exploitation forestière, un accès élargi aux services de planification familiale, etc.

L'une ou l'autre de ces propositions, ou une combinaison de plusieurs d'entre elles, pourrait générer de très importantes sommes d'argent ou l'ordre d'au moins 20 à 30 milliards de dollars par année). Les projets ont maintenant atteint le stade de la discussion. L'ancien ministre néerlandais de l'Environnement a été chargé par son gouvernement de rédiger un ensemble définitif de propositions en prévision de la prochaine réunion préparatoire sur le climat, qui doit se tenir en octobre aux Pays-Bas.

PARALLÈLEMENT À CES PROPOSITIONS DE FINANCE-ment, certains ont réclamé une réforme des institutions du système international, laquelle mettrait à ce dernier de faire face à la nature transdisciplinaire de la menace. Nombreux sont ceux qui ont le sentiment qu'aucun des organismes des Nations-Unies n'a de mandat suffisamment vaste pour pouvoir s'attaquer à tous les problèmes. Les changements demandés vont d'un renforcement du rôle du Bureau du Secrétaire général (pour que ce dernier puisse réellement coordonner les activités du système des Nations-Unies), à un renouvellement ou un élargissement (pour l'environnement, en passant par des propositions comme celle de Maurice Strong, qui préconise de revoir la Charte des Nations-Unies pour faire renaître de ses cendres le Conseil de tutelle, désormais moribond, en l'investissant d'une nouvelle mission : surveiller la Terre. D'autres voudraient redéfinir la notion de «sécurité» pour renforcer les attributions du Conseil de sécurité. Ce sentiment d'urgence a conduit les gouvernements français, norvégien et néerlandais, lors des préparatifs du récent sommet de La Haye, à envisager la création d'une agence supranationale qui serait chargée de préserver l'atmos-

La déforestation dans les régions tropicales contribue à la production de CO<sub>2</sub>, ce qui aggrave le problème du réchauffement planétaire; de plus, la croissance de nouvelles forêts pourrait jouer le rôle de «trappe» emprisonnant une partie du gaz carbonique produit par la combustion. Depuis que les groupes écologistes occidentaux ont posé la question de la forêt tropicale humide, il est certain que les gouvernements du Brésil et d'autres pays abritent ce type de végétation ne feront pas grand-chose sans une contrepartie quelconque, qu'ils puissent «vendre» à leurs propres électeurs.

IL RÉSULTE DE TOUT CELA QUE LES GENS RÉCLAMENT plus que jamais une réforme du système international, et l'on en vient à ce que beaucoup ont qualifié de «compromis planétaire». Personne ne sait encore vraiment quelle forme prendrait ce compromis ou sous quelle égide il serait mis au point, mais voici quels en seraient apparemment les grands traits : les émissions de gaz provoquant l'effet de serre (dont les CFC) feraient l'objet de normes, qui imposeraient aux pays industrialisés des réductions dracونيennes et permettraient aux pays du tiers-monde certaines augmentations. Il faudrait modifier en profondeur les conditions des transferts de technologie pour que les pays en développement puissent utiliser, des leur commercialisation, les techniques non polluantes les plus récentes mises au point pour produire de l'énergie. Et dernière caractéristique de ce «compromis», il y aurait d'importants nouveaux transferts de ressources du Nord au Sud.

La conférence de Toronto a préconisé la création d'un «Fonds mondial de l'atmosphère terrestre», pour aider les pays en développement à limiter les répercussions des changements climatiques et à s'y adapter part des stratégies de développement viable. Diverses propositions ont été formulées relativement à l'édification de ce Fonds. Le premier ministre de la Norvège, Mme Brundtland, a proposé de fixer pour tous un pourcentage de 1,1 p. 100 du PNB. D'autres ont émis l'idée d'un «impôt sur le gaz carbonique» : différentes sortes de combustibles seraient alors taxées selon leur tendance à produire du gaz carbonique.

Lors de réunions récentes sur la dégradation de la couche d'ozone, les participants ont également reconnu la nécessité de fournir aux pays en développement les moyens financiers voulus pour renoncer plus facilement aux catégories nocives de CFC. La *US Environmental Protection Agency* (EPA) envisage de mettre en place un système comparable à celui proposé par le président Bush pour lutter contre les pluies acides. Le système consisterait, pour les États-Unis, à vendre aux Certains observateurs ont également souligné la nécessité de lier les mesures prises pour faire face au changement climatique avec les plans d'ajustement de la dette. À l'heure qu'il est, le monde en développement verse au Nord 43 milliards de dollars de plus qu'il n'en reçoit sous forme d'aide extérieure et d'apport de capitaux privés. Comment, dans ces conditions, s'attendre à ce que ces pays puissent infliger d'autres privations à leurs habitants au nom de la lutte contre les modifications du climat ? Divers plans ont

# LE MARCHÉ DU SIÈCLE

Face au risque très réel d'un effondrement du système environnemental mondial, même les plus entêtés des chefs de gouvernement s'affairent maintenant à trouver une solution.

PAR DAVID RUNNALLS

**P**L'année de l'environnement, la revue géoscientifique américaine, a fait de la Terre la planète de l'année (à se demander laquelle est sur presqu'un an prochain), et a consacré

questions d'environnement, mais aussi à la dimension internationale de l'environnement. Pour couronner le tout, *Fortune*, le concurrent plus huppé de *Time*, a dit de 1988 que c'était «l'année choisie par la Terre pour riposter».

Replaçons les choses dans leur contexte. On se souviendra que dix ans à peine ont passé depuis que Mme Thatcher a été élue premier ministre pour la première fois, avec une plate-forme électorale dont on pouvait dire qu'elle faisait large-

ment fi de l'environnement naturel et de ceux qui pour la première fois, avec une plate-forme électorale dont on pouvait dire qu'elle faisait large-ment fi de l'environnement naturel et de ceux qui s'en souciaient; au moment de son élection en 1980, Ronald Reagan était persuadé que les problèmes de pollution étaient dus aux arbres; et en 1984, au Canada, le gouvernement a pris le pouvoir avec la certitude de pouvoir réduire considérablement le budget et le personnel du ministère fédéral de l'Environnement, et cela en toute impunité. La Commission Nielsen a même envisagé sérieusement la suppression pure et simple du Ministère. À l'autre extrémité de l'échiquier politique, l'URSS continuait de prétendre que les problèmes environnementaux étaient essentiellement attribuables à la structure et au fonctionnement du capitalisme, et qu'ils étaient pour ainsi dire inexistant dans le système soviétique.

Tout a changé en l'espace d'une extraordinaire semaine du mois d'octobre, l'an dernier, avec le petit laïus sur l'environnement prononcé tout à tour par chacun des «acteurs» de la distribution suivante : George Bush (rappelez-vous quand il a déclaré «avoir toujours été un défenseur de l'environnement»); Michael Wilson (devant nul autre instance que la Banque mondiale et le Fonds monétaire international); Édouard Charbonneau (qui a dit, devant l'Assemblée générale des Nations-Unies, que l'Union soviétique considérait l'évolution de l'environnement mondial comme étant de loin la menace la plus grave pesant sur sa sécurité nationale); jusqu'à la redoutable Margaret Thatcher, dite la Dame de fer, qui a déclaré devant la *Royal Society* que les changements atmosphériques constituaient sans aucun doute le plus grand défi que les milieux scientifiques aient à relever en cette fin de siècle.

Pourquoi les dirigeants politiques des pays occidentaux (et de plus en plus des pays de la Commission souligne en effet que, dans les dix prochaines années, quoi que nous fassions, la population du globe va doubler et que, pour nous, vêtir et loger les habitants actuels et les 5 milliards qui nous auront rejoints, il faudra une production économique de cinq à dix fois supérieure à celle d'aujourd'hui. Une expansion de cet ordre exercerait une telle pression sur les écosystèmes qu'aux dires de la Commission, l'environnement naturel serait en train de devenir un facteur susceptible de limiter sérieusement la croissance économique.

L'exemple le plus frappant de la «tristesse» des écosystèmes planétaires réside dans les modifications que nous provoquons de façon de plus en plus évidente dans les climats du monde. L'année dernière, à Toronto, les participants à la conférence sur le climat ont fait remarquer, avec un ton de gravité, la chose suivante : «... Nous pourrions connaître, au cours du siècle prochain, des modifications climatiques nettement plus rapides et plus importantes que dans les 5 000 dernières années; une évolution aussi accélérée provoquerait tant de perturbations que, tout compte fait, aucun pays ne pourrait probablement en tirer parti.»

Les participants étaient allusion aux changements qui se produiraient si la couche d'ozone protégeant la Terre continue de s'amincir; cette détérioration est causée par les fluorocarbures chlorés (CFC), couramment utilisés dans les aérosols, les dispositifs de réfrigération et l'industrie électronique. Ils pensaient également à l'«effet de serre», c'est-à-dire le fait que l'accumulation de bioxyde de carbone (ou gaz carbonique) et d'autres gaz provoquerait un réchauffement climatique planétaire et, parallèlement, d'importantes hausses du niveau des océans au cours des quarante prochaines années.

LES NÉGOCIATIONS SUR L'ZONE VONT BON TRAIN depuis qu'on a découvert en 1986, que la couche protectrice était percée au-dessus de l'Antarctique. En septembre 1987, une conférence sur ce thème a eu lieu au Canada et elle a débouché sur

La rédaction du protocole de Montréal, qui prévoit une réduction de 50 p. 100 de la consommation de CFC d'ici la fin du siècle. Alors que le protocole n'était même pas encore complètement en vigueur, les États se sont livrés à un véritable ballet diplomatique dont les faits saillants ont été les réunions de Londres et d'Helsinki, plus tôt cette année; ils ont préconisé l'arrêt de la production des substances incriminées d'ici l'an 2000.

Le Canada a également ouvert le débat sur le réchauffement de la planète, en accueillant à Toronto, les participants à la conférence de 1988 sur le climat. L'objectif fixé à cette occasion a été une réduction d'au moins 20 p. 100 des émissions de CO<sub>2</sub> d'ici 2005. La conférence a été suivie, en février dernier, d'une rencontre de juristes à Ottawa, et de réunions préparatoires en prévision de la prochaine grande conférence mondiale sur le climat, prévue pour 1990 (la date exacte n'a pas encore été fixée). On espère d'ici là disposer

Il devient de plus en plus évident, toutefois, que rien de tout cela n'est suffisant. La modification climatique est véritablement un problème mondial, qui appelle des solutions mondiales et, admettant la nécessité de supprimer les produits chimiques qui détruisent la couche d'ozone, les pays sont confrontés à un autre problème : comment aider les pays en développement à respecter les nouvelles normes ? Des pays comme la Chine et l'Inde nourrissent l'ambitieux projet de «démocratiser» le réfrigérateur dans leurs très nombreuses populations; c'est là un objectif difficilement concevable. Pourquoi devraient-ils, argument-t-ils, réduire ces plans ou remplacer par des substituts plus coûteux le frêlon non marché utilisé à l'heure actuelle dans les réfrigérateurs ?

Il se pose là un problème d'équité, d'autant plus aigu dans le contexte du réchauffement planétaire. À eux deux, les États-Unis et l'URSS produisent près de 40 p. 100 du gaz carbonique dégagé par les matières fossiles en combustion. La Chine et les autres pays en développement ne produisent qu'une petite partie de ce gaz. Les plans de développement choisis prévoient, à moyen terme, la construction de quelque 200 nouvelles centrales électriques alimentées au charbon. Rares projets d'expansion pourraient facilement neutraliser le moindre progrès qui dé-

# L'ART DE TRANSFORMER LA POLITIQUE ÉTRANGÈRE DE L'URSS

En étudiant le discours des dirigeants soviétiques, on peut comprendre non seulement ce qui a changé mais aussi les motifs

des changements.

PAR PAUL MARANTZ

**J**à Mikhail Gorbatchev a tenu quelque peu de la schizophrénie. Il a de toute évidence séduit l'«imagination populaire. L'engouement pour «Gorby» et la «gorbatchévomanie» ont

balayé la majeure partie du monde occidental. Mais dans les corridors du pouvoir, la plupart des décideurs sont beaucoup plus prudents et sceptiques. Les sceptiques occidentaux aiment bien l'adage disant qu'un acte vaut mille belles paroles, et ils soutiennent que ni les actes ni les mois attribués à la politique étrangère soviétique ne prouvent hors de tout doute que M. Gorbatchev a rompu avec le passé de son pays.

D'autres sceptiques occidentaux déclarent que, même si le processus n'en est encore qu'à ses débuts et qu'il dépend de la survie de l'approche réformatrice de M. Gorbatchev, il revêt malgré tout une énorme importance pour l'orientation à venir de la politique étrangère soviétique et des relations Est-Ouest.

Que l'on ne comprime pas davantage à quel point M. Gorbatchev a déjà transformé la conduite de la politique étrangère de son pays atteste nettement de la rapidité avec laquelle les gens s'adaptent à de nouvelles circonstances et cessent d'être étonnés par l'extraordinaire. Imaginons un instant qu'en février 1986, quand M. Gorbatchev a pour la première fois préconisé l'adoption d'un «nouveau mode de pensée» en matière de politique internationale, qu'un observateur occidental sceptique ait voulu sonder le sérieux des intentions soviétiques. Supposons que cet observateur ait déclaré qu'il ne serait convaincu de l'authenticité des changements en Union soviétique qu'au moment où celle-ci aurait subi toute une série d'épreuves avec succès.

Les troupes soviétiques ont quitté l'Afghanistan; l'URSS a souscrit à l'option double-zéro proposée par les Américains pour l'élimination des forces nucléaires à portée intermédiaire en Europe; le Kremlin a accepté que des inspections dans ses installations militaires; l'Union soviétique a commencé d'elle-même à réduire ses troupes et retirant 20 p. 100 de ses chars; Moscou a autorisé la légalisation de Solidarité et lui a permis de constituer un parti d'opposition librement élu au parlement polonois; l'URSS a exercé des pressions pour faire observer un règlement politique des conflits qui sévissaient au Cameroun et en Angola; le brouillage des stations de radio occidentales qui diffusaient jusqu'en URSS

a pris fin. Andreï Sakharov et des centaines d'autres prisonniers politiques ont été libérés; des articles rédigés par des experts et des décideurs occidentaux ont commencé à paraître assez régulièrement dans la presse soviétique; et les tentatives à critiquer ouvertement les politiques étrangères de Staline, Khrouchchev et Brejnev. Si quelque un avait voulu soumettre les intentions soviétiques à un examen aussi poussé en 1986, les soviétologues occidentaux auraient presque tous objecté que les critères proposés pour évaluer la politique soviétique étaient beaucoup trop rigoureux et qu'il y avait peu de chances pour que Moscou y satisfaisait dans l'avenir.

De plus, la nature de la politique étrangère soviétique, mais à certains égards, l'inverse est vrai. Après tout, certaines actions (par exemple, le retrait des troupes soviétiques de l'Afghanistan) peuvent résulter de raisons fort diverses. Un renversement de la politique antérieure peut, somme toute, n'être motivé que par une faiblesse temporaire et un désir de dupier l'ennemi, ou, à l'inverse, il peut traduire une réévaluation fondamentale d'hy-po-thèses antérieures et une authentique conviction que des formes nouvelles et plus coopératives d'interaction internationale sont désormais possibles et nécessaires. En étudiant le discours des chefs soviétiques, nous pouvons arriver à mieux saisir comment ils envisagent les questions de politique étrangère se posant à eux.

Si la pensée soviétique au sujet de la nature des rouages politiques internationaux a vraiment changé, alors les initiatives fondamentales des quatre dernières années ont beaucoup plus de chances d'avoir un effet durable. En revanche, si les dirigeants de l'URSS n'ont pas modifié leur

perception de la politique internationale, il est plus probable que l'évolution dont nous avons été témoin repose sur des considérations tactiques temporaires, de sorte qu'un retour en arrière pourrait se produire sur bien des plans dès que l'URSS aura surmonté ses difficultés actuelles.

Voilà pourquoi il faut prendre en compte les actes et les paroles pour discerner non seulement ce qui a changé, mais aussi pourquoi les changements se sont produits.

QUATRE GRANDES TENDANCES SONT EN TRAIN DE modifier les points de vue de l'URSS sur la politique internationale. Tout d'abord, les décideurs soviétiques comprennent maintenant beaucoup mieux à quoi correspond ce qu'on a appelé le «phénomène d'action-réaction» dans les relations Est-Ouest. Depuis toujours, les Soviétiques pensaient que la politique étrangère de l'Occident était dictée par la société de classes caractérisant le régime capitaliste. À leurs yeux, les États capitalistes nourrissaient une hostilité implacable à l'égard de l'URSS non pas à cause des politiques étrangères adoptées par cette dernière, mais en raison de ce qu'elle était, c'est-à-dire un État

socialiste dont l'existence même montrait aux travailleurs du monde qu'il y avait une solution de rechange à l'oppression capitaliste. Se détournant carrément de ce point de vue traditionnel, les porte-parole soviétiques reconnaissent maintenant qu'en grande partie, les actions soviétiques ont déterminé la politique occidentale et que, dans sa conduite, l'Ouest est motivé par une crainte réelle, et non simulée, de l'agression soviétique.

En corollaire, M. Gorbatchev et ses collègues ont reconnu que, si l'URSS veut ralentir la course aux armements et promouvoir des entreprises coopératives entre l'Est et l'Ouest, elle doit tout d'abord modifier les politiques que l'Occident estime menaçantes. Un article paru récemment dans la presse soviétique fait à cet égard une observation significative :

Nous sommes habitués à des motivations telles que «Nous sommes l'avant-garde du monde», «L'avenir nous appartient», ou «Nous serons victorieux à l'échelle de la planète, et ce sera un fait historique». Mais avons-nous songé à nous mettre à la place de ceux qui, selon nous, forment l'arrière-garde, à qui l'avenir n'appartient pas et qui, toujours d'après nous, sont condamnés à être oubliés par l'histoire et à périr? Que doivent-ils penser de nous?... Ce n'est pas par hasard que les peuples de l'Ouest pensent maintenant que l'URSS est un pays qui cherche à conquérir le

Tom Mbo

exactement combien de temps cela durera, vu le caractère explosif de la conjoncture politique en Afrique du Sud !

Pretoria aurait, dit-on, les moyens de fabriquer des armes nucléaires, et elle a maintenant amorcé un programme de mise au point de missiles balistiques. Les dirigeants blancs du pays ont déclaré à maintes reprises qu'ils comptent bien conserver leur position de fondamentalisme dominant dans la région. Le signe le plus évident et le plus inquiétant de cette détermination se manifeste dans la modernisation et la renforcement des bases des armées de terre et de l'air situées dans le nord, le long de la frontière séparant l'Afrique du Sud du Botswana et du Zimbabwe. Et certaines des unités noires expérimentées qui ont participé à la guerre sur la frontière namibienne ont été dépêchées dans cette région.

Quant à lui, le Zimbabwe a étoffé ses défenses contre l'Afrique du Sud en achetant de nouveaux chasseurs MIG de l'URSS. Ce serait vraiment tragique pour l'Afrique australe si le règlement final de la question namibienne devait déboucher, le long de la rivière Limpopo, sur des affrontements désastreux semblables à ceux qui, depuis dix ans, déchirent la frontière anglo-namibienne. □

Défense nationale, à Ottawa; Stephen Fanning, chef de l'unité de surveillance de la police civile du GANUP, à Windhoek; Gordon Fairweather, président de la Commission de l'immigration et du statut d'officiers politiques spéciales; Neil Haffey, chef de la mission d'observation du Canada, à Windhoek; Gwen Lister, rédactrice de la publication The Namibian, à Windhoek; et James Mutambirwa, du World Council of Churches.

Les paragraphes qui suivent sont extraits d'un compte rendu de l'Institut intitulé Le processus électoral en Namibie : une table ronde internationale. On peut se procurer tout le document de dix-neuf pages en s'adressant à l'Institut. Les passages présentés ici portent exclusivement sur le problème le plus pressant auquel la Namibie et l'ONU devront faire face au cours des prochains mois : voir à la tâche complexe consistant à organiser et à tenir des élections libres et équitables.

Un a proposé de compléter rapidement les bulletins de vote sur place, puis de les transporter sous bonne garde jusqu'à la capitale pour un deuxième décompte. Par ailleurs, il faudrait réduire le plus possible le délai qui s'écoulerait entre l'heure de fermeture des bureaux de vote et celle où les résultats seront annoncés. La plupart des participants ont dit croire que toutes ces mesures réduiraient effectivement les risques de fraude.

Les discussions menées pendant la table ronde ont permis de formuler une recommandation : créer un Conseil des élections qui comprendrait des représentants de l'AG, du RS et de chaque parti politique briguant les suffrages. Selon le groupe des observateurs du Commonwealth qui pointait d'un doigt un organisme semblable mis sur pied lors des élections au Zimbabwe, le Conseil constituerait une tribune où l'on pourrait formuler des plaintes et résoudre les difficultés. De nombreux participants se sont dits favorables à la mise sur pied d'un tel conseil en Namibie, surtout que l'idée de constituer une commission électoriale indépendante paraissait désormais peu probable. □

## Le jour des élections et immédiatement après

■ Pendant la période de transition vers l'indépendance, la Namibie est gouvernée par l'Afrique du Sud, par l'intermédiaire de l'Administrateur général (AG), normalement M. Louis Riegan. Le Secrétaire général de l'ONU a nommé son représentant spécial (RS), M. Moritz Ahlstrom, pour s'assurer qu'à chaque étape, le processus électoral en Namibie serait libre et équitable. Ces deux dignitaires ont pour mission de collaborer ensemble pour mettre en œuvre la résolution 435. Les détails de chaque étape du processus électoral doivent convenir d'un et à l'autre. Il s'agit là d'un processus nouveau.

Il y aura deux membres du personnel électoral du GANUP et deux politiques de ce dernier dans chaque bureau de vote. Sur les bulletins de scrutin figurent également les symboles de tous les partis politiques, de manière que tous les électeurs, y compris les analphabètes, puissent voter sans difficulté. Après avoir voté, chaque électeur se trempera une encree indélébile, de façon qu'il ne puisse pas voter de nouveau.

La présence d'observateurs étrangers le jour des élections constitue un élément important du système visant à garantir des élections équitables et libres. Un ordre de dressé une liste détaillée des conditions proches de remplir pour que le vote se déroule comme il se doit. Par exemple : Y a-t-il une liberté de mouvement suffisante ? Tous les membres du personnel électoral suivent-ils des lignes directrices uniformes ? Les bureaux de vote sont-ils faciles à trouver, même pour les électeurs analphabètes ? Existe-t-il une bonne méthode à suivre pour résoudre tout différend qui surgirait sur place ?

Les participants ont exprimé d'autres inquiétudes : une fois les bureaux de vote fermés, les observateurs étrangers devront se prêter à la tâche de transporter toutes les urnes électrices jusqu'à Windhoek pour le décompte n'accroître-t-il pas les risques de falsification ?

■ Les participants ont exprimé d'autres inquiétudes : une fois les bureaux de vote fermés, les observateurs étrangers devront se prêter à la tâche de transporter toutes les urnes électrices jusqu'à Windhoek pour le décompte n'accroître-t-il pas les risques de falsification ?

E LONG DE L'AUTOROUTE droite comme une flèche qui mène à l'Owamboland, part-tout on aperçoit des landis de ciennes colonie allemande du Sud-Ouest africain. Un des nombreux auteurs qui ont essayé de définir l'existence troublée de cet immense désert habité par une minuscule population a écrit les mots suivants : «Quand Dieu a créé Hélas ! Il n'en a pas été ainsi, et le pays ne parviendra pas de sitôt à un tel anonymat. La principale cause de cette triste situation est une histoire mar-

temes, et des tentatives infructueuses de la part de la collectivité mondiale pour mettre de l'ordre dans tout cela. Le Sud-Ouest africain a été formé par suite de la dissection du continent noir par l'Europe au XIX<sup>e</sup> siècle. Ce fut la première colonie de l'Allemagne, et celle-ci l'a dirigée d'une main de fer. «Je connais ces tribus africaines», écrivait le général prussien chargé de réprimer une rébellion en 1904, elles sont toutes les mêmes; elles ne respectent rien d'autre que la force ... Mon intention était et est toujours de recourir à la force avec une terreur brutale, voire avec férocité. Je balais les tribus rebelles dans un torrent de sang et d'argent. C'est seulement en semant de la sorte que nous pourrions faire grandir quelque chose de nouveau, quelque chose de stable.

L'Allemagne ayant perdu la Première Guerre mondiale, le territoire passa sous la coupe de la Société des Nations. L'Empire britannique, parlant de sa colonie voisine d'Afrique du Sud, occupa le territoire jusqu'en 1920, année où le mandat attribué par la Société des Nations marqua le début de l'histoire tortueuse de la Namibie. L'Afrique du Sud continua d'administrer le protectorat, mais c'était pour elle un tel fardeau qu'elle déclara au parlement qu'il s'agissait en fait d'un «éléphant blanc» que l'on ferait mieux de rendre à l'Allemagne. Entre autres choses, les Sud-Africains tentèrent de percevoir une taxe auprès des propriétaires de chiens, mais les autochtones virent là un acte de persécution. «S'il y a des chiens, pourquoi ne pas payer une taxe à l'égard de leurs chiens, pourquoi en garder-ils ?», raisonna un représentant de Pretoria. Une série de rébellions, attisées par l'insensibilité de l'administration sud-africaine, enflamma le pays jusqu'à ce que l'effondrement de la Société des Nations et l'éclatement de la Seconde Guerre mondiale plongent de nouveau des Nations-Unies, les puissances mondiales refusèrent de laisser l'Afrique du Sud annexer la Namibie.

Une déclaration célèbre (qui ne se réalisa que vingt-quatre ans plus tard, dans le cas de la Namibie) a été intégrée à la Charte de l'ONU. Elle énonce les principes régissant les Membres des Nations-Unies qui assument la responsabilité d'administrer «des territoires non autonomes» : ces pays «accèptent comme une mission sacrée l'obligation de favoriser dans toute la mesure du possible [la] prospérité [des habitants] ... et ... d'assurer, en respectant la culture des populations en question, leur progrès politique, économique et social, ainsi que le développement de leur instruction, de les traiter avec équité et de les protéger contre les abus». Agissant *a contrario*, le gouvernement sud-africain contesta en 1949 l'autorité de l'ONU en invoquant l'argument juridique selon lequel le mandat avait expiré avec l'effondrement de la Société des Nations. Un dépit d'une décision rendue par la Cour internationale de Justice et l'établissement qu'en dernière analyse, l'ONU exerçait encore le contrôle sur la Namibie, l'Afrique du Sud passa unilatéralement outre aux dispositions du mandat et commença à gouverner la Namibie comme si c'était un de ses

# NAMIBIE

## LA RENAISSANCE D'UNE NATION

PAR PATRICK NAGLE

*Avec des élections à l'automne, la collectivité internationale essaie de rectifier les abus commis dans le passé.*

La progression des territoires, la progression de l'apartheid en Afrique du Sud, puis en Namibie, amena l'opinion mondiale à se détourner de Pretoria. En 1966, l'ONU déclara que l'Afrique du Sud avait foulé son mandat au pied, ce qui rendait illégitime sa présence en Namibie. Pretoria réagit en créant des zones économiques blanches et des «homelands» noirs qui divisèrent le pays en fonction de la race, et elle fit respecter ce régime en installant des garnisons policières et militaires. La South West Africa People's Organization (SWAPO) se dressa contre cette oppression et entreprit une lutte armée de vingt-trois ans qui aboutira au début de novembre prochain avec la tenue d'élections pour la formation d'une assemblée constituante. Voilà qui fait de Sam Nujoma, chef de la SWAPO, un autre élément clef de l'avenir de la Namibie ! Pendant des années passées en exil, il a été le champion de la cause de l'indépendance namibienne, mais en dépit de cela, il n'est pas bien connu des gouvernements occidentaux, qui n'ont pas d'opinion précise à son sujet. On a jamais associé directement à Nujoma la tentative infructueuse que des guerilleros armés de la SWAPO ont faite pour s'infiltrer en Namibie après le début de la période de transition décrite par l'ONU le 1<sup>er</sup> avril, car il ne se trouvait pas à la base de départ en Angola quand la manœuvre de pénétration a commencé. On ne pourra mesurer qu'au lendemain des élections l'ampleur du dommage causé à la réputation de la SWAPO par la contre-attaque réussie de l'Afrique du Sud et par la campagne de propagande qui a suivi.

IL N'Y A PAS À DOUBTER QUE L'ALÉA POLITIQUE DE LA SWAPO REMPORTERA plus de sièges au scrutin de novembre, lequel a pour but de créer une assemblée d'unité nationale qui sera chargée de rédiger une constitution en vue d'une élection nationale devant avoir lieu le printemps prochain. Les questions est de savoir si la SWAPO pourra remporter les deux tiers des sièges au premier tour. Si tel est le cas, elle compte réécrire le code de l'assemblée (ce qu'elle peut faire selon les règles du jeu) et assumer immédiatement le pouvoir comme gouvernement *de facto*.

Les partis d'opposition, appuyés essentiellement par la population blanche de Namibie, font des pichs et des mains pour éviter une telle éventualité. Maintenant qu'il a tous ses effectifs et qu'il fonctionne dans tout le pays, le Groupe d'assistance de l'ONU pour la période de transition (GANPT) doit expressément veiller à ce que l'élection soit effectivement «libre et équitable». Les Blancs, soutenus par les vestiges de l'administration territoriale sud-africaine, prétendent que l'ONU aide la SWAPO à fausser le scrutin, tandis que les Noirs, y compris la SWAPO, soutiennent que les autorités territoriales cherchent à les intimider.

Le texte de la résolution habituelle (résolution 435 de l'ONU) n'est pas assez précis pour empêcher les adversaires de s'accuser ainsi mutuellement. Personne ne fait confiance à qui que ce soit dans le camp de l'autre. Au contraire, les dirigeants politiques des divers partis semblent se faire concurrence quant à savoir lequel s'abaissera à la plus vile mesquinerie aux dépens du GANPT.

Comparativement, l'accord de Lancaster House qui fit de la Rhodésie le Zimbabwe contenait de nombreux mécanismes d'équilibre proposés par les deux camps. Et même si le président de ce dernier pays, M. Robert Mugabe, n'a jamais vraiment aimé certains éléments de l'accord, il en a toujours respecté à la lettre les dispositions, pour le plus grand bien de son pays qui, ainsi, a pu continuer de bénéficier de l'aide économique et militaire de la collectivité internationale.

Si les adversaires namibiens ne peuvent s'élever au-dessus de leurs affreux passe historiques et présenter un pays uni au monde, la Namibie sera toujours une mendicante à la table des nations. Pour commencer, l'Afrique

**The Election Process in Namibia: An International Roundtable**, 6-7 July 1989. A Summary Report Prepared by the Institute.

### REFERENCE WORKS (Published annually)

**The Guide to Canadian Policies on Arms Control, Disarmament, Defence and Conflict Resolution**, October 1989, 280 pages. The Guide provides a basic reference source on Canadian policies in the field of peace and security. It seeks to identify major policy issues to which Canada responded in the year, place them in context, and, where appropriate, cite a range of Parliamentary comment on these issues.

**Annual Report**, July 1989. The Annual Report sets out for the Parliament and the people of Canada the record of activities and financial statements of the Institute for each fiscal year.

**The Institute's Public Opinion Survey of Canadian Views on Peace and Security**, December 1989. The third in a series of surveys on Canadian opinions on international affairs.

## NOTE FROM THE EDITOR

On Monday November 13, two communiqués arrived by fax – one from the government of the Federal Republic of Germany, the other from the General Command of the El Salvadoran Farabundo Marti National Liberation Front (FMLN). On the surface their messages could not have been more different: Helmut Kohl spoke of the “utter joy” of German reaction to events at the Berlin wall; the FMLN listed the casualties it had inflicted that very weekend upon the military forces of the “genocidal” government of El Salvador.

In fact, the communiqués address the same predicament: when

is military power useful in achieving political ends? The two messages manifest different conclusions reached by different peoples. And while one method is clearly preferable, it is difficult for privileged, secure, people from rich northern countries – whose own histories are replete with massacres – to tell those who live in relative misery that they are wrong to kill and die for what they believe.

The Berlin Wall was the most tangible symbol of the potential for armed conflict in Europe – and both military alliances shamelessly touted it as such. With the Wall breached in such a deliriously cheerful way, the notion that the Soviets in their tanks might “come West” seems more remote than ever. If we’re lucky, a peaceable reorientation of Europe over the next decade will prove that the forty-five years of peace is not a fluke, not the product of nuclear terror, but rather represents a fundamental change in the way we manage our problems, in this part of the world at least. The nasty war being fought through the streets of San Salvador in November serves to remind us that we have a long way to go before all peoples feel secure enough to waive the right to use violence to

get what they want or keep themselves safe.

Our cover story this winter is an analysis by **Don Munton** of the Institute’s third annual public opinion survey on issues of international peace and security. The survey clearly reflects Canadians’ hopes and anxieties about a very uncertain world.

Also in this issue: an assessment by French journalist **Vincent Jacquot** of Cambodia’s future in the wake of August’s abortive peace conference in Paris; a West German specialist in international affairs, **Thomas Risse-Kappen**, looks at how Germany might be reunified and what its neighbours in Europe will make of such an eventuality; **Fen Hampson** jumps into a loud debate among American observers of international politics over whether or not life after the Cold War is worth living; and **G. Landau** presents a modest programme of action for Canada now that we are full members of the Organization of American States.

The Editors of are pleased to announce that **Charlotte Gray** has joined our editorial board. Ms. Gray is Ottawa Editor for *Saturday Night* magazine and has written on Canadian foreign policy.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

# UNCOMMON THREATS AND COMMON SECURITY

*Canadians are worried about many things  
in the world; dying in World War Three  
is only one of them.*

AN ANALYSIS  
BY DON MUNTON

**F**IVE DECADES AFTER WORLD WAR II, AND moving into the last decade of the twentieth century, Canadians are redefining their perceptions of global threats and security. The major international trends are clear: East-West relations are improving rapidly; arms control, both nuclear and non-nuclear, is progressing; many, though not all, local and regional conflicts – in Central America, in southern Africa, in southeast Asia – are ending or at least winding down. The focus of international politics is shifting from concern about armed aggression and military security, to more prosaic problems: trade protectionism, Third

World debt, refugees, the international drug traffic, and the deteriorating ozone layer – to cite some examples.

These trends and shifts have been discussed in meetings as disparate as those of the Economic Summit and the Commonwealth, and reflected in the front and business pages of the world's press. They have been discussed and advocated in various international reports by expert panels including the Brandt Commission report on international development prospects, the Palme Report on common security, and, more recently, the World Com-

mission on Environment and Development (the Brundtland report). What is less clear, is the manner in which, and extent to which, the broader public's perceptions of threats and security are also changing.

A new public opinion survey provides some of the first evidence that international security has come to mean something quite different to the present generation of Canadians, a set of concerns at once broader and more fundamental than physical security from military attack. The evidence suggests a declining concern with such conventional threats.

Previous surveys done for the Institute have shown that concerns about the Soviet threat have almost disappeared. Asked in each of the last three years, what is the greatest threat to world peace? Canadians have provided strikingly consistent responses (see Figure 1). A few see Soviet actions as the greatest threat; as many or more point to US actions. Most regard regional conflicts or nuclear proliferation as the primary threats. The only discernible trends over

the three Institute polls have been a steady, though not steep, decline in the numbers citing the super-power arms race as the greatest threat to world peace, and a steady rise in those citing nuclear proliferation.

In a similar vein, few perceive the USSR to be a growing military threat and a "real, immediate danger" to North America. Over 80% say it is not. A solid majority (57%) find the Soviet Union less of a threat than it was a few years ago. And the vast majority (79%) believe the Cold War is lessening.

The trend toward improved East-West relations evident in the now numerous Gorbachev summits with Western leaders (Reagan, Thatcher, Kohl, Mitterrand and, most recently, Mulroney) is also evident in the view of most Canadians (66%) that there will be increased cooperation among major countries in the future.

GIVEN THIS BACKGROUND, A PRIMARY PURPOSE OF THE 1989 Institute survey was to explore what Canadians now perceive to be the chief threats to international peace and security if the conventionally defined threats have diminished. The new evidence is still patchy but seems clear enough in general, and portrays a public looking to a fundamentally changed international system.

The respondents were asked to evaluate a list of specific international problems by ranking their importance as threats to Canada's security (see Figure 2). Major wars were afforded relatively low importance, perhaps because they are regarded as unlikely. Ranked more highly are trade conflicts, terrorism, and international financial and monetary instability. At the top of the list are global pollution, international crime and the spread of diseases.

There is ample evidence here for the observation of the 1980 Brandt Report that while "war is often thought of in terms of military conflict, or even annihilation,... there is a growing awareness that an equal danger might be chaos – as a result of mass hunger, economic disaster, environmental catastrophes, and terrorism."

These results are striking in a strictly Canadian context as well. In the aftermath of a raucous and deeply divisive election campaign dominated by the foreign policy issue of free trade – an election fought on both sides with arguments about the economic perils in which Canada finds itself – and amidst an on-going debate concerning the benefits and costs of the Free Trade Agreement, Canadians place trade matters and other economic concerns well down the list of international priorities.

Notably, the only problems on the list which, overall, ranked lower than major wars were human rights abuses, and poverty and hunger. Many Canadians may agree with the argument of the Brandt

*This is the third in an annual series of Institute for Peace and Security public opinion surveys. Designed by Don Munton in conjunction with Institute staff, the survey was conducted in September–October 1989 by the Longwoods Research Group with a national sample selected randomly from a panel of 30,000 households maintained by Market Facts Ltd. The survey was conducted by mail and comprised 890 respondents in all, with a response rate of 50%. The margin of error with a sample of this size is approximately +/- 3.5%, 95 times out of 100. The full descriptive results from the survey are available in an Institute Working Paper by Michael Driedger and Don Munton released concurrently with this article.*

Commission that mankind's survival raises not only "the traditional questions of peace and war, but also of how to overcome world hunger, mass misery and alarming disparities between the living conditions of rich and poor." At the same time, many do not see these problems as vital security threats to Canada.

When the evaluations of individuals are disaggregated and compared, four groupings of issues emerge. These groupings mean that people who regard one problem in a set as serious, tend also to regard the others as serious. The four categories are: military threats (ie. wars, but also to a lesser extent, terrorism); economic threats (financial and monetary instability, trade conflicts and protectionism); what might be called unconventional "deprivation-derived" threats (poverty, human rights abuses and terrorism); and what seem most appropriately termed common or "systemic" threats (global pollution, crime and disease).

These groupings describe one way in which these problems are interrelated in the public mind. It should be emphasized, however, that Canadians tend to regard them together, either as generally important or as generally not important, rather than regarding some as important and others as unimportant. (To put this in statistical terms, the ratings, given any two individual problems, were almost always positively and never negatively correlated.)

To force the question of relative seriousness, the respondents were also asked to rank three types of threat facing Canada internationally – military, economic and environmental (see Figure 3). The results were unambiguous. Economic and environmental challenges are generally rated as being more serious than military threats. Perhaps surprisingly, most Canadians, fully eight in ten (83%), rank military threats as the least serious of the three. Only a small minority, fewer than 10%, regard them as the most serious. On the other hand, most Canadians, not just a small band of environmentalists, give the highest priority to environmental issues. Slightly fewer give top rank to economic threats than to environmental ones (43% versus 51%).

When the relative importance of these three types of threat in ten years time is gauged, environmental problems emerge even more strongly. Almost two-thirds of the respondents to the survey rank these first, while fewer than one-third so ranked economic threats. Only a handful pointed to conventional military threats as being the most serious, in a decade from now. Moreover, the vast majority of Canadians believe that economic capabilities are now more important than military capabilities, in determining influence in today's international system. Both of these patterns are also evident in recent US polls.

THERE IS LITTLE DOUBT FROM POLLS OR ANY OTHER indicator that most Canadians are conscious of such familiar "Canadian" pollution problems as acid rain and toxic chemicals in the Great Lakes. It would appear as well, that they both recognize and accept the seriousness of a range of global environmental problems. Canadians appear to accept a key theme in the Brundtland Report, that "the whole notion of security

as traditionally understood – in terms of political and military threats to national sovereignty – must be expanded to include the growing impacts of environmental stress." Indeed, most probably agreed with John Fraser, a former environment minister and now Speaker of the House of Commons, when he said recently: "We are looking down the coming decades with the certain reality that if we do not change our ways we are not going to survive."

Canadians have not always ranked environmental issues so highly. By way of comparison, a 1984 poll carried out for the Department of External Affairs placed environmental protection a distant third in importance for Canada's foreign policy, behind world peace and economic growth.

Despite these changing perceptions of threat, fears of a nuclear disaster have not entirely dissipated. They no longer commonly arise, however, from the spectre of a Soviet nuclear attack. When the respondents were asked about the ways in which nuclear weapons might be used, three distinct scenarios emerged. One, the "unconventional" scenario, foresees their use by terrorists or by a non-great power involved in a regional conflict. This is regarded by most Canadians as the best (or worst) bet, with about three in four judging it likely or very likely to happen within their lifetimes. A second – the "accidental nuclear war" scenario – is the possibility of nuclear missiles being fired by mistake or as a result of a nuclear equipment failure. The third, or "super-

Figure 1: **Greatest Threat to World Peace**

Regional conflict	31	28	25

power" scenario, includes the Cold War possibilities – a surprise attack on Europe or the United States, and that of a regional conflict escalating into a super-power nuclear exchange. This is perceived to be the least likely chain of events, with fewer than one in three expecting it.

Consistent also with a changing definition of security, has been a growing confidence in the ability of both superpowers to deal with world problems. Whereas only about one in three expressed this level of confidence in the United States' ability in 1987, two in three now do so. And whereas only about one in four expressed considerable or great confidence in the Soviet Union in 1987, more than one in every [

two Canadians now does so. Most indicate that their confidence in the Soviet Union has increased lately.

The respondents were provided a series of characteristics and asked whether each applied more to the Soviet Union or to the United States, to both, or to neither. These were as follows: "wants to dominate the world;" "is willing to negotiate most disputes;" "is trustworthy in negotiations;" "and uses military force to achieve its goals." In each case, the largest group, one representing over 40%, believed that the statement applied equally to both.

The shift in Canadians' perceptions of the superpowers is strikingly evident here. The same set of questions was included in a 1984 poll conducted in

where these actions and motives are concerned. Many more think that the USSR uses military force and seeks domination than so characterize the US, and many more find the US willing to negotiate and trustworthy in negotiations than so find the USSR.

Canadians are yet to be convinced that the USSR is just an ordinary and peaceable power. More than two in every three respondents disagree or disagree strongly with the statement that "the Soviet Union is a peace-loving nation, willing to fight only if it thinks it has to defend itself." Nor is a European conflict unimaginable. Most (60%) disagree that a conventional war in Europe is now impossible. The rest (40%) agree it is impossible, but only a handful (5%) agree strongly.

Despite Gorbachev and despite the fact that in over forty years they have not attacked the West, the Soviets, to use the colloquial, are not entirely out of the Cold War woods yet. As a result, Canadians still support the traditional policies designed to meet this conventional military threat. Only a small minority (16%) do not regard Canada's participation in NATO as important. (Fully 90% claim to have heard of the alliance organization.) More significantly, support for maintaining Canadian forces in Europe is high, and there has been no decline in this support since 1987 when this question was last asked on the Institute for Peace and Security poll. About one in every four respondents argues that Canadian forces should be reduced or withdrawn; three in four support their being kept at present levels, or increased.

When asked whether these troops ought to be reduced in the event of an East-West agreement to reduce, significantly, conventional military forces in Europe, fully 40% say the Canadian force levels ought still to be maintained. (The wording noted but did not emphasize the point, argued by military experts, that substantial reductions in the numbers of Canadian soldiers might leave these units ineffective militarily.) About one-third (35%) favour reducing Canadian troops by the same proportion as the overall reductions, while one-quarter (24%) opted for complete withdrawal.

Moreover, Canadians are still willing to defend Europe if necessary. Almost six in ten (58%) say that the use of Canadian troops would be justified in the event of an invasion of Western Europe. Canadians seem to be defence policy traditionalists in another sense. They are skeptical about some of the newer ideas regarding defence policy such as "non-provocative" defence or "defensive-defence." These ideas, now very much debated in Europe, were described to respondents as aiming "to get rid of weapons that could be used to attack the other side and rely only on non-threatening weapons." About one in three (33%) thought the idea made sense; the rest (67%) thought it impossible to have weapons for defensive purposes only.

Figure 2: **Importance of International Problems** Index (Max 100)

Figure 3: **Three Types of Threat**

Canada by the United States Information Agency. At that time, only half as many respondents, fewer than one in four, thought that both the US and USSR were equally willing to negotiate or were trustworthy in negotiations. And significantly fewer similarly evaluated them as seeking world domination or using military force.

DESPITE THE TREND AWAY FROM BLACK-WHITE COLD War images of the two superpowers, documented in previous Institute polls, Canadians do not regard the two superpowers as completely equivalent, at least

Reductions in nuclear weaponry, on the other hand, are clearly favoured. Previous Institute polls, as well as the present one, show strong support for a comprehensive test ban treaty, to control or eliminate all testing of these weapons, and for the elimination of at least some of the existing stockpiles.

THE MULRONEY GOVERNMENT'S PLAN ANNOUNCED last spring to reduce future federal spending levels on both foreign aid and defence, met with little public outcry at the time, and the Institute poll suggests a very divided public with few strongly opposing the cuts. One question on the survey noted Ottawa's budget announcement and then asked whether the government should have reduced foreign aid expenditures rather than defence, reduced defence rather than aid, reduced both more, reduced both less, or made other cuts instead (see Figure 4). About one in four Canadians favours reducing defence rather than aid and about as many favour reducing aid rather than defence. Since a slightly higher proportion (29%) also favour greater reductions in both defence and aid, there is thus a slim majority agreeable to at least the announced cuts (if not greater cuts) in both the defence and aid budgets. Slightly more than one-quarter also prefer either lower reductions in both areas or other budget cutting measures instead; this group might be called the "internationalists," given their support for maintaining international activities of both a military and development assistance nature.

Canadians generally are consistent in these preferences. That is to say, those approving cuts in Canada's defence expenditures tend also to favour East-West disarmament, to reject the pursuit of military superiority, to believe that the Cold War is lessening, that "the Soviet threat" has declined, and that economic factors are more important than military factors in determining international influence. On the other hand, those supporting cuts in the aid budget rather than in the defence budget, generally take the opposite views.

Interestingly, the split between these two groups and two perspectives, though real enough, is a secondary one. More fundamental is the cleavage between those who strongly support both types of international activity and those who do not. (The latter group seems to include both those whose concerns are largely budgetary and fiscal, and those who prefer domestic expenditures over external ones.) The depth of this cleavage is shown by the fact that the correlation between supporting (or not) reductions in aid, and supporting reductions in defence, is overall a positive one; that is, more Canadians favour both or neither, than favour either one or the other. Thus a more pervasive debate in Canada than that between a "defence" community and an "aid" community, exists between the "internationalists" and what might be called the "fiscal nationalists."

Another reflection of the broad security perspective of Canadians now, is the extent to which attitudes on continued defence expenditures are related to concerns about the range of international problems discussed earlier. It might be expected, for example,

that those who are "pro-defence" regard the threat of war as serious, but not Third World poverty, abuses of human rights, or trade conflicts. Interestingly enough, it is not so. Those opposing the defence cuts (who tend also to oppose the aid cuts) generally attributed more importance to almost all of the international problems than those who favoured these cuts. The striking differences between Canadians are thus not so much ones between groups with competing international agendas, as between the many who believe there is a broad range of serious external challenges requiring action, and the few who do not.

THE EMERGING ERA, ONE OF EAST-WEST CONCORD rather than merely détente, has already given rise to broader, more encompassing, conceptions of security. While it is difficult to compare directly Canadians' present conceptions of security with those of a generation ago, for lack of data, there is little doubt that these conceptions are very different from those of, say, the 1960s.

Certainly today's conceptions are not fixed in any narrow definition of military security; they comprise

Figure 4: Reductions to Federal Spending

not only concerns, generally diminishing, about conventional military threats, but also concerns about the frailty of nuclear deterrence, about economic challenges, and about environmental dangers. They feature perceptions of new, as well as some traditional, threats and recognize the need for common, rather than just national, security in an interdependent world.

Canadians' "new thinking," however, does not abandon traditional policies; instead it incorporates those existing policies that address threats which, while in decline, have not entirely disappeared and probably will not disappear in the foreseeable future. Canadians may not share the "nostalgia for the Cold War" of which the Bush administration was recently accused, but neither have they merely adopted a new set of post-Cold War blinders. □

# CAMBODIA: ONCE AGAIN AT ZERO?

*In the wake of Vietnam's withdrawal and the collapse of the Paris peace conference, Cambodians fear for their future.*

BY VINCENT JACQUOT

IN AN IMPERIOUS NEWS RELEASE ISSUED IN Peking on 2 May, China and the USSR – who had agreed to settle their boundary disputes, in addition to the Afghan and Cambodian issues, as a first step toward full restoration of relations – reminded us in thinly veiled terms that any overall settlement in Asia would have to include them. The existence of a potentially very important market and an eventual rival to Japanese economic power are matters of no small importance to the other two countries with key roles in Asian politics. The Cambodian matter was but an opportunity for China, the USSR and the United States to come to a mutual understanding about and to accept, with certain conditions, Chinese leadership in this part of the world.

In his masterly book on China, Zbigniew Brzezinski pointed out that for the Chinese government it was essential that the international community acknowledge this situation. The Paris international conference on Cambodia in August, provided an unexpected opportunity. Although the conference ended in failure, China's goal had been to stake its claim as an essential player, (certainly not what those who convened the international conference had had in mind). And the supposedly unanimous condemnation by the international community of the events in Tienanmen Square in June in no way affected this intention.

Internationally there has been a general consensus, shared even by the occupying power, concerning the withdrawal of Vietnam's troops from Cambodia, and conditions seemed to be most favourable for the continued smooth progress of the peace process. Unfortunately, the terms of departure of the Vietnamese troops had not been negotiated in advance with the United Nations, which had made such a prior negotiation an absolute precondition to any re-examination of its position on Vietnam and Cambodia. As a number of observers noted, the proceedings of the commissions responsible for promoting the establishment of a provisional government, and the ways and means of bringing about a general reconciliation, soon came down to the issue of whether or not to replace the pro-Vietnamese government with a pro-Chinese one. It seems that the

Phnom Penh government, at the end of its tether, would have been ready to accept the Chinese solution, if the sharing of power four ways had not seemed to have underlying it a desire to paralyze the whole administration, thereby creating an explosive situation – easily exploited by anyone with a takeover in mind.

How could anyone envisage the return to power of the executioners and torturers, with no guarantees, but once again wearing the cloak of governmental legitimacy behind which they committed their murders? If Phnom Penh's delegation (the Hun Sen government) still entertained doubts about the possible conversion of the Khmer Rouge, the malevolent performance of Khieu Samphan at the Paris conference sufficed to dispel them. He may on a very few occasions have acknowledged some "errors," but at no time did he express any regret or remorse about his crimes. Proportionately speaking, the Cambodian holocaust would have claimed 65 million victims if it had occurred in the United States. Perhaps not all holocausts are worthy of the same consideration. They were only Cambodians, after all.

COULD THE OUTRIGHT, SYSTEMATIC MASSACRE of all Cambodian officials, intellectuals, specialists, students, and their mothers, spouses and children, and the murder of city-dwellers – solely because they had been corrupted by the city – really have been part of a struggle against all forms of foreign influence? In 1970 Lon Nol, even with American aid, could get rid of that ubiquitous figure in Cambodian politics, Norodom Sihanouk, only by urging the Khmers in Phnom Penh to massacre the Vietnamese population of Cambodia, who were at the time supported by Sihanouk. Today, this same Sihanouk seeks to get rid of Hun Sen and his government by calling for the "continuation of the struggle against the Vietnamese."

■ *Vietnamese in Cambodia.* Prior to 1970 there were about 400,000 Vietnamese in Cambodia and they enjoyed considerable influence. Prominent in the professions and the university, they comprised the majority of the officials in the bureaucracy. Most of the self-employed

craftspeople were Vietnamese. Some had been awarded concessions and were involved in forestry or fisheries operations on the Tonlé Sap. They lived in their own communities, seldom marrying Cambodians – religion was an additional factor separating the two profoundly hostile communities.

Many of the Vietnamese left Cambodia after the Lon Nol-directed massacres, but returned in large numbers with the Vietnamese army in 1979. The first to return were those whose roots in Cambodia go back several generations; others did not resume the same positions they had held before. These people were to be found primarily in the small trades and crafts, but also among the seasonal migrant communities of rice farmers and fishermen.

The recent departure of Vietnamese troops and administrative personnel has certainly not encouraged the Vietnamese nationals, now deprived of protection, to prolong their stay in Cambodia. If the figure of 90,000 Vietnamese nationals put forward at the Paris Conference seems to be on the low side, the one million or more cited by Sihanouk is obviously exaggerated. It is very likely that Heng Samrin's army does contain some Vietnamese officers, just as there are Chinese "advisers" and military "technicians" trained in China among the Khmer Rouge.

*Chinese in Cambodia.* Before 1970 there were probably fewer Chinese nationals than Vietnamese in Cambodia, but as there were many Chinese-Cambodians, the total number of people of Chinese origin was much larger. They were to be found in the civil service and the small manufacturing and food industries, and primarily in local trade and the import-export sector, as well as in banking and credit institutions. Since 1970 the Chinese have not suffered the same persecution as the Vietnamese; they are wealthy and it is because of this, not their ethnic origin, that they are worried. They are once again as numerous as before 1970 and that they have resumed all of their traditional activities.

Until 1970 Cambodians, as a group, achieved political power only if they had money. While there were many foreigners in the senior civil service and even more in trade,

industry and handicrafts, Cambodians were relegated to a quasi-servile status as rice farmers and stock breeders, and largely confined to the small trades and low-paying jobs. The departing Vietnamese leave a void; the military protection they provided until recently, and the important roles they played in most aspects of life in Cambodia, will be gone. They will be replaced, but by whom? Pol Pot said in 1977: "...even if only a million Cambodians are left, the Chinese will provide me with the population I need...." The regime in Cambodia has changed again and again, but the "invaders" always remain – and they are not necessarily Vietnamese.

Even if there is success in the efforts to get Cambodia's neighbours – both the closest ones and those further removed – to leave this unfortunate country in peace, the issues not only of political independence but also of economic and cultural dependence, will remain. These factors will be determined by the amount and quality of the aid provided to Cambodia to help it reconstruct its economy and educate its youth, but above all by the degree to which the aid comes with few or no strings attached.

For ten years the government installed by Vietnam in Phnom Penh has been carrying out what is at once the most difficult and the easiest of tasks: starting from zero, to ensure the rebirth of the country at all levels by whatever meagre means it can contrive. But these means are now beyond reach. Material and economic gains are promptly absorbed by a runaway population explosion, the war effort and the need to replace equipment and an infrastructure that were themselves salvaged from debris. Apart from a mass return of the unfortunate refugees from the camps in Thailand, it is unlikely that the Cambodian diaspora is contemplating a return to the country in significant numbers. On the whole, the Cambodian emigrants have settled once and for all in the countries that, for the most part, warmly welcomed them. They have prospered; only rarely do their children speak Cambodian, and it would be difficult for them to return to the country even if peace were to be reestablished. Besides, Cambodians know only too well that they have never been masters in their own house.

*The Military Stalemate.* Recent military activity by the anti-government Coalition (CGDK) confirms that the Vietnamese

troops have indeed left Cambodia. In the past, their presence in the region was, of course, the major obstacle to the wider deployment of the anti-Hun Sen "resistance" forces. The current fighting is occurring because of the rainy season when conditions favour guerrilla operations. Is the purpose of these operations to provide the CGDK, at last, with a politically and militarily indispensable national territorial base?

Two objectives are being pursued simultaneously. The seizure of Battambang or Angkor in the west, which would allow the Coalition to set up a government to rival the one in Phnom Penh, would have considerable international repercussions. Already, the occupation of a few villages in the Thai border zone, and the disappointing and well-publicized reimposition of the curfew in the capital, have given the impression abroad that the situation of the Hun Sen government has suddenly deteriorated. However, given the nature of the terrain in particular, it is hard to imagine that a sizeable military operation is imminent and that the current engagements could soon result in a decisive advantage for any of the forces. Each side denies it is firing on the villages, but then what about the landmines? The population is mobilized against its will, and the refugees from the

camps are being used as porters for crossing the minefields.

Up to now the tactic used by the Phnom Penh government has been to protect the most important positions with very dense minefields. If these positions are overrun, an effort is made to re-take them with the use of long-range artillery bombardments. However, the enemy is generally able to withdraw, taking with it the prisoners and equipment it has seized. Mobilization and recruitment are generally conducted by coercion. Soldiers fight with great courage but without particular aggressiveness. They are quick to abandon their positions. This is typical of the game of war in this part of Asia – a war between combatants of the same race. It was Mao Tse-tung who wrote that the art of winning a battle is to always leave intact a bridge across which the enemy can flee when hard pressed, and to avoid leaving him no alternative but desperate resistance, which risks the outcome of the battle.

THE OVERALL IMPRESSION IS ONE OF ABSURDITY: refugees and the civilian population are once again paying the cost and, with the exception of the Khmer Rouge and foreign-trained professionals, the combatants are unwilling participants. The fighting will continue, primarily because of its media impact on international public opinion. At issue in this struggle is the control of territory, with each party seeking to keep, obtain or balance its claims to legitimacy. It is unlikely that the conflict can be definitively settled on the battlefield and despite appearances, all sides seem convinced of this.

The parties are said to be sounding each other out over a possible resumption of negotiations. A "balanced" future for Cambodia, buried as it is between Thailand and Vietnam, can only be guaranteed by the dominant regional power – China. While the international community, lost in the Cambodian impasse, has neither the will nor the capacity to initiate a settlement, it would be hypocritical to pretend that there is any way other than by relying on China's magnanimity as the major force in the region. Paying the appropriate homage could, moreover, have a calming influence. It would be a disaster if the parties to the settlement of the Cambodian problem, at least those which have paid the costs so far, were to meet only on the battlefields – even if they are only Cambodians. □

## CAMBODIA – CHANGES AT THE TOP SINCE 1975

IN APRIL 1975 THE KHMER ROUGE captured the capital Phnom Penh, routed the Lon Nol government and established Democratic Kampuchea. Under Pol Pot's leadership, more than one million Cambodians were executed, or died of disease and starvation. In December 1978 Vietnam invaded Cambodia, pushed out the Khmer Rouge, created the People's Republic of Kampuchea (PRK), and installed Heng Samrin as president and Hun Sen as prime minister.

Between 1975 and 1982, the Khmer Rouge represented Cambodia in the UN. While loath to support the Khmer Rouge because of their flagrant human rights abuses, many UN members were also reluctant to approve Vietnam's overthrow of Kampuchea's government. In 1982, with the encouragement of China and the countries of the Association of South East Asian Nations (ASEAN), the Khmer Rouge joined with other non-communist opposition and guerilla groups active against the Vietnamese-backed regime – the Armée nationale sihanoukiste (Prince Norodom Sihanouk's guerilla force, ANS) and the Khmer People's National Liberation Front of Son Sann (KPNLF) – to form the Coalition Government of Democratic Kampuchea (CGDK). The UN now recognizes the CGDK as the legitimate government of Cambodia even though occupying the UN seat is about the only governmental action it carries out.

# REFLECTIONS ON THE GERMAN PUZZLE

*The prospect of a reunified Germany in the centre of Europe is supposed to scare everyone; but who really cares?*

BY THOMAS RISSE-KAPPEN

THE "GERMAN QUESTION" HAD SEEMED settled. After all, a unified Germany in the middle of Europe failed twice in this century; it was deeply involved in causing World War I and it brought about World War II. There would be no third chance. Even in the midst of widespread political instability in Eastern Europe, the division of Germany, at least, appeared solid. Furthermore, there seemed to be no reason to believe that Germans – East or West – had a hidden agenda regarding reunification. The famous West German *Ostpolitik* – the policy improving the relationship with Eastern Europe, the German Democratic Republic (GDR), and the Soviet Union, was possible only on the basis of the territorial and political status quo in Europe. Moreover, one could argue that the generation with personal experience of a unified German state was about to lose control over the two Germanies and that younger Germans, in both East and West, lacked any emotional attachment to a greater Germany.

The events of this fall, however, challenged the conventional wisdom. All of the sudden, the German question was back on the international agenda. First, there was the mass exodus from East Germany accompanied by unprecedented scenes on television: refugees in the Prague West German embassy crying "freedom" when Foreign Minister Genscher announced the deal he had cut with the GDR to allow them to leave for the West; thousands crying "Deutschland" (Germany) when finally arriving in West Germany, just having left East Germany; and in the midst of it all, the East German "Socialist Unity Party" (SED), celebrating forty years of "victorious socialism" over the capitalist West, lining up with the China's leadership against the "imperialist campaign to eradicate socialism."

Second and even more important, those who decided to stay in the country, spoke out. Supported and protected by the Protestant church, the political opposition got organized and staged the largest (spontaneous and unofficial) mass demonstrations East Germany has ever seen (including the events of 1953

when much smaller protests were violently suppressed). Hundreds of thousands gathered in East Berlin, Dresden, and Leipzig.

The political opposition – which had existed prior to these recent events, but could for the first time attract open, mass support – sees democratic socialism, not capitalism, as the answer to the GDR's problems. In short, these East Germans do not want to remain the leftovers of Stalinism in an era of reform in Eastern Europe and the Soviet Union. They want the German Democratic Republic to live up to its name.

Whatever the communist party's real intentions are, a strategy of mere rhetoric and buying time will not work. There is a democratic revolution underway, and only genuine political reforms will relieve the pressure on the East German system and prevent a further mass exodus.

WHAT DO THESE EVENTS MEAN FOR THE TWO Germanies in a post-Cold War European order? The following considerations are tentative, for if anything is certain these days, it is uncertainty about the future. To begin with, the argument that a reformed GDR would lose its *raison d'être* as an independent state is seriously flawed. This proposition is put forward by hard-liners in East Berlin who resist reforms and, ironically, by some Westerners who cannot imagine that a democratized East Germany might choose an alternative to Stalinism other than Western-style capitalism. It is argued that if the Germanies become indistinguishable in their political, economic, and social systems, the trend towards reunification would be irresistible. According to this logic there should, therefore, be a strong tendency for Austria and the Federal Republic to unify. Austrians and West Germans speak the same language, have similar political and economic systems, and there are lots of cultural bonds between the two countries. Yet, nobody talks about an Austrian-German unification.

Moreover, one should not forget that in all of German history since the middle ages, a unitary German state existed for only seventy-four years – between 1871 and 1945.

Indeed, it is conceivable that the GDR would in fact gain in identity as it embarks on a process of political reform. Right now, the East German state has only a borrowed legitimacy as Eastern Europe's Stalinist front-line, which has constantly to distance itself from the Federal Republic. If there is any East German self-identification at all, it is defined in contrast to West Germany. For the past forty years, the presence of Soviet troops in the country has had to substitute for this lack of legitimacy. When Gorbachev told Honecker during his visit to East Berlin that decisions about the

*J. K. Olson*

GDR have to be made in East Berlin and not in Moscow, he was making clear that those days are over. The regime can no longer count on the USSR to back it against its own people.

Democratizing the system might be the only way – and the last chance for the current leadership – to gain support from East Germans. Here it should be noted that unlike

Poland and the Soviet Union, East Germany is still in relatively good economic shape, with the per capita income roughly comparable to Italy's. The recent exodus was apparently triggered as much by political frustration as economic factors.

IF IT IS FAR FROM CERTAIN THAT A REVAMPED East Germany would disappear as an independent state, what about its Western cousin? The cacophony of voices rising from the Federal Republic these days might suggest that West Germans are taking advantage of a long-awaited opportunity to promote reunification. There have been press reports, for example, that the Federal government wants to put the German question back on the East-West agenda. Some conservatives have even reopened the issue of the Poland's Western frontier, the Oder-Neisse line, which was supposedly settled once and for all with the West German-Polish treaty of 1970.

A good deal of the noise is an understandable reaction to the surprising events in East Germany. A lot of the rest originates in West German domestic politics. The emergence of a reactionary right-wing party, the *Republikaner*, seriously threatens the power base of the governing Christian Democrats (CDU/CSU). If the present trend continues, the CDU might be out of power as a result of next year's federal elections. Thus, Chancellor Kohl has obviously

on the other hand, which used to maintain close contacts with the East German SED, does not want to be perceived as "soft" on East Berlin these days.

Behind these dissonant voices, however, is a fairly broad consensus in Bonn ranging from the centre-right to the centre-left: first, that democracy and freedom are more important than German unity – hence the urging for reforms in the GDR; and second, that the German question cannot be separated from the larger issue of the future of Europe and the two alliance blocs. Thus, there is overwhelming agreement among the FRG's foreign policy elite – and obviously among the opposition groups in East Germany, too, not to mention the current regime – that the idea of the two Germanies leaving their respective alliances and gaining a neutralist, reunified status is neither desirable nor feasible. It follows, then, that Germany will remain divided as long as NATO and the Warsaw Pact continue to exist, and that both German states accept this.

WHERE DOES ALL THIS LEAVE THE GERMAN question? More important still, what precisely is the German question? For forty years the issue has had both internal and external dimensions. The internal part concerned human rights, democracy, and self-determination for people in both Germanies. Political reforms in the GDR would take care of this aspect of the question. After all, if the Cold War was about democracy and freedom in Eastern Europe and the Soviet Union, then the German question is about the same for East Germany.

By comparison, the external feature of the question – the nature of the relationship between the two states – is of secondary importance. Possible solutions are to be found between two extremes. On the one hand, the two countries could deal with each other as fully sovereign and independent states. For the Federal Republic, this would require formal recognition of the GDR and a change of its constitution which still commits the country to German unity. Both are unlikely.

Moreover, there has always been a special relationship between West and East Germany. Even at the height of the Cold War, certain contacts between the two states were maintained, especially in the areas of trade and of access to West Berlin. To treat inter-German relations like any other state-to-state relationship is to ignore the political, economic, social, and cultural ties between the two countries which are still strong, even after forty years of division.

On the other hand, the creation of a unitary German state is not necessarily a solution for overcoming the division, and certainly not the most desirable one. Even the West German constitution does not require it. And there are the legitimate worries of Poland, France, the

Netherlands, the Soviet Union, and other countries about a unified Germany, which have to be taken into account.

WHAT THIS BOILS DOWN TO IS THAT THE German issue should be dealt with in the context of the larger post-Cold War European order. Assuming things work smoothly (hardly guaranteed), a new European order which unites the continent is conceivable within the next ten to twenty years. It should be built upon the process started in Helsinki in 1975 (the Conference on Security and Cooperation in Europe – CSCE). The advantages of the CSCE, as compared to other European institutions, are that it is multilateral and not bloc-to-bloc, that both superpowers and Canada are part of it, and that the European non-aligned and neutral countries participate. These features would have to be preserved in any new European order which provided security for its members primarily by non-military, cooperative arrangements, and mutual guarantees, and which reduced military forces to very low levels. Both NATO and the Warsaw Pact would be needed to manage the transition, and as they subsequently lose their significance as the organizing factors in the European order, might wither away.

In such a context, German unity would appear less threatening to the rest of the world. National sovereignty in the traditional sense would be largely obsolete anyway, since many issues which used to be decided on national levels, would be transferred to international institutions like the European Community or CSCE. It would then be almost irrelevant whether the two Germanies continued to exist as independent states or decided to form a confederation of some kind.

CAN WE GET THERE FROM HERE, GIVEN THE present turmoil in the Eastern bloc? It is the economic condition of these countries that is the crucial factor. While it is mainly up to the East Europeans and the Soviets to prevent the situation from reaching catastrophic dimensions, the West has its responsibilities too. Why not embark upon Marshall Plan-type aid for Eastern Europe in order to help stabilize their economies? Why not strike comprehensive arms control deals achieving deep cuts in the conventional and nuclear arsenals? Deep cuts are an essential precondition for achieving a European peace order in which the German question can be settled in a satisfactory way for Germans and for their neighbors. And should the situation become acutely unstable, substantially lower levels of military forces would make any crisis less dangerous for everyone. □

Jerry Kobacz

decided to step up the rhetoric on reunification in order to appeal to conservative voters. Moreover, his party's right wing has its own agenda. The Social Democratic Party (the SPD, the Federal Republic's left opposition),

# THE END OF HISTORY? NYET!

*While American pundits argue about whether the future will be boring or not, events in Eastern Europe promise interesting times. Perhaps the right people aren't paying attention.*

BY FEN OSLER HAMPSON

**T**HE FOREIGN POLICIES OF WESTERN GOVERNMENTS are in disarray as officials wrestle with the thorny implications of developments in Eastern Europe and the Soviet Union. Barely a day passes without news of economic reform, political change, ethnic unrest, demands for autonomy, or refugees fleeing repressive governments. History is again on the march at a dizzying pace. So dramatic are these developments that most knowledgeable observers and pundits have been caught off guard.

Into this vacuum recently stepped Francis Fukuyama, deputy-director of policy planning in the US Department of State (and former analyst at the Rand Corporation), with an article entitled "The End of History?", published in *The National Interest* last summer. Fukuyama's article has generated widespread debate – a debate which is long overdue as the West grapples with the momentous changes taking place in the Eastern bloc. But Fukuyama's answers are less than satisfactory and he displays a surprising lack of concern about the implications of these changes for Western security interests. His views can be summarized as follows.

The 20th Century is ending with the "unabashed victory of economic and political liberalism." This "triumph" of Western thinking manifests itself in the "total exhaustion" of communism and socialism.

Recent events in China and the Soviet Union "have put the final nail in the coffin of the Marxist-Leninist alternative to liberal democracy.... What has happened in the four years since Gorbachev's coming to power is a revolutionary assault on the most fundamental institutions and principles of Stalinism."

The possibility of "large-scale conflict" between "large states still caught in the grip of history" is diminishing as the members of the communist world embrace Western liberal economic and political values.

The "worldwide ideological struggle" which has gripped humanity for most of this century and that "called forth daring, courage, imagination and idealism" will be replaced by "centuries of boredom" – a future governed by

"economic calculations, the endless solving of technical problems, environmental concerns, and the satisfaction of sophisticated consumer demands."

ACCORDING TO *THE NEW YORK TIMES*, FUKUYAMA crystallized what many would like to believe, but ignored the rise (and challenge) of Japan. *Time* magazine's Strobe Talbott called the article "The Beginning of Nonsense," and accused Fukuyama of "arrogance" and "short-sightedness." Yes, all of this is true. Just as troubling, however, are the policy implications of Fukuyama's "history is inevitable" thesis.

Fukuyama sees political change as ineluctable and irreversible thereby substituting one kind of historical determinism (neo-Hegelianism?) for another (Marxism-Leninism). This is dangerous thinking and a poor substitute for the inaction of most Western governments in the face of the changes that are occurring in the Soviet Union and Eastern European countries. There is nothing automatic about recent developments. The modest political and economic reforms achieved by some Eastern bloc countries have been hard won. Still, there is a long way to go and the risk of failure runs high. In the Soviet Union, the depth of political resistance to Gorbachev's reforms suggests, if anything, that he is floundering.

The potential reversibility of recent events urges upon the West the need to formulate an effective political strategy to help consolidate and reinforce liberalizing trends and reforms. The place to begin is not with theories about history but with the right questions:

What will the future of socialism look like – that is to say, what kinds of scenarios can we draw to get some idea of the evolutionary change that may occur in the economies and political systems of Eastern Europe, the Soviet Union, and China?

What can the West do to facilitate the reform process? What are the implications of these domestic political and economic reforms for the future of the Warsaw Pact?

What kinds of political and economic reforms in the German Democratic Republic

(GDR) would set in motion irresistible pressures for reunification and how should the West and the Eastern bloc deal with this issue?

What are the implications of current developments and future scenarios for Western security interests and NATO? Is the prospect of military confrontation between the two blocs diminishing as many believe? What factors or forces might derail détente and raise tensions, and how can this be prevented? Where do arms control and defence fit into this broader political picture?

THIS IS A TALL ORDER AND THERE ARE SURELY other issues which should be addressed as well. Unless the West begins to tackle these questions soon it will find itself riding history much like the "headless horseman." Or as Mark Twain once warned, "if you don't know where you are going any road will take you there." Here is a rough guide to the questions just posed.

Future prospects. There are a number of different possible scenarios for Eastern Europe and the Soviet Union as we look towards the future.

*Westernization and democratization.* Hungary is closest to this development with the recent decision to dissolve the communist party and move to a competitive party system. *Latin Americanization.* Here, politics oscillate between repression, democracy, and modernization within an authoritarian tradition. The Soviet Union might follow this path. *Sinification or the China model* – characterized by a strong communist state with a liberal, market-oriented economy. This was communist party leader Jaruzelski's initial vision for Poland. *Ottomanization or Balkanization.* This is sometimes called the Soviet empire's "decomposition scenario" – the result of liberalization, and resurgent ethnicity and nationalism within the Soviet Union and parts of Eastern Europe. *Africanization.* This describes the situation prevalent in some African countries where we see the destruction of the economy and the state, and an inability of key socio-economic groups to take collective action. Indeed, this describes the situation in Poland today.

These scenarios suggest that political change is likely to be neither linear nor uniform; that the potential for continuing political upheaval and protest in some countries is considerable; and that things are likely to get worse in some countries – Poland for example – before they get better. The worst-case scenarios are Balkanization and Africanization. While a return to the pre-1914 situation in Europe is unlikely, a sudden and rapid breakup of the Soviet empire would be enormously destabilizing for all concerned.

Implications for the Warsaw Pact. The Iron Curtain is rusty. As Warsaw Pact countries liberalize their economies and seek stronger ties with the West, pressures within the Pact for reductions in military spending and weaker security ties with Moscow will grow. There is some danger that major conventional arms cuts will weaken the Pact system. The use of force to keep the socialist bloc together is probably out as an option for now, but the Soviet Union (with or without Gorbachev) is unlikely to relinquish control completely or permit changes which undermine security linkages with Eastern Europe.

The future of the two Germanies. The West's support for German reunification (a no-cost policy during the Cold War since the chance of its actually happening was nil) will be tested by political developments in the East. The spectre of German reunification, raised by refugees from, and recent protest movements in, the GDR, is already making people nervous on both sides of the East-West divide. Pressures for democratic reform and liberalization in the GDR will grow, and if successful they will accelerate political pressures for further reconciliation perhaps leading to an eventual German reunification.

The West must begin to develop a policy in anticipation of these events, no matter how difficult this may be politically. Otherwise we will be led willy nilly by centripetal forces already at work in the two Germanies. Soviet interests, and those of other Eastern European countries, will also have to be taken into account in addressing the German question. The allergy to a reunified Germany, given the legacy of Barbarossa and the Second World War, is perhaps greater in the East than in the West.

The future of NATO and Western security interests. Predictable, orderly change that can be accommodated within (and by reform of) existing political and institutional structures is clearly in Western interests. Whatever happens, stability is necessary to assure the West's own economic and political future. There is a real danger that change in the Eastern bloc will occur much faster and more unpredictably than

anticipated. This makes it all the more important that the West seriously ponder the future and assess the long-term implications of recent developments for Western security. NATO and other Western economic and political institutions like the European Community, the General Agreement on Tariffs and Trade, and the International Monetary Fund have a major role to play in promoting orderly change through the provision and re-scheduling of loans and a general reduction in barriers to trade, commerce and the flow of capital. So do the arms control and confidence-building measures currently under negotiation in various European fora.

The possibility of a totally integrated Europe with a united Germany at its centre is remote. What is more likely is a continuation of the current system of alliances – NATO and the Warsaw Pact – but there will be a variety of different systems of government, and perhaps growing rivalries within Eastern Europe as a result.

Major uncertainties. The impact of resurgent ethnicity and nationalism will affect potential stability throughout the Eastern bloc, and in the Soviet Union where this problem is linked to Gorbachev's own political fortunes. If the Baltic states achieved independence this would seal Gorbachev's fate since the Ukraine could well follow next. He would then be presiding over the breakup of the Soviet empire and there are lots of Russians who don't want to see this happen.

Market reforms in Eastern Europe will have asymmetrical costs and benefits and will result in clear "winners" and "losers." Unemployment will increase before economies get better, which will in turn fuel political discontent and jeopardize the reform process. The *ancien régime* will resist change because its members will lose their privileges in the conversion to a market economy.

Arms control and defence. There is a clear need to locate Western arms control and defence policies and interests within the broader purview of these political and economic developments, including the 1992 creation of a free-trade zone within the European Community.

East-West relations are too important to be left to the arms controllers and strategists. Arms control and defence policies must be linked to a political and economic strategy which promotes political reform and an orderly transition in Eastern Europe. Western governments also need to have a better understanding of the forces behind the changes now taking place.

IT IS IMPORTANT NOT TO OVERSTATE the role the West can play in Eastern Europe and the Soviet Union; our margin of influence is limited. There are obvious dangers if the West is seen to be too active in promoting political change or undermining Soviet influence. Nevertheless, there is an even greater danger that failure to take effective action and provide assistance, will impede the reformers who have acquired power in countries like Poland and Hungary.

The West obviously can and should do more to help: food aid, debt re-scheduling, and the provision of technical and development assistance are all possibilities. Assistance with technical

matters such as financial management and control, and the legal complexities of private ownership, is especially important if these countries are to transform their economies. This sort of help is also cheap. The decisions of Canada and other Western governments to provide additional loans and credits to Poland and Hungary are a good start and there are further encouraging signs from Washington that it sees a new "window of opportunity" to forge a new relationship with the Soviet Union. Nevertheless, a larger and more coordinated response is called for.

We are not at the end of history. We stand on the threshold of a new world marked by the ending of the Cold War – a world in which the opportunities and benefits to be gained from change are just as great as the risks, uncertainties, and potential costs of failure. There is a great deal left to do.

## ARMS CONTROL DIGEST

### Nuclear and Space Arms Talks

After a relatively unproductive eleventh round of Nuclear and Space Arms Talks ended in Geneva on 7 August, the prospects for a Strategic Arms Reduction (START) Treaty improved significantly the following month. Just prior to a meeting with Soviet Foreign Minister Shevardnadze in Wyoming on 22 and 23 September, US Secretary of State Baker announced that Washington would drop its proposed ban on mobile ICBMs, provided that Congress approved funding for US missiles of this type. Upon his arrival in the US, Shevardnadze transmitted a letter from President Gorbachev to President Bush outlining a number of significant new Soviet proposals intended to break the logjam in the negotiations. These included Soviet willingness to sign and implement a START Treaty even without an agreement on Defence and Space Arms (restricting the US Strategic Defence Initiative), and agreement to a long-standing US demand for the dismantling of a large radar at Krasnoyarsk (which Shevardnadze later admitted had been an "open violation" of the ABM Treaty).

All of these points were embodied in a joint statement issued at the end of the Wyoming meeting, which also included agreement on a number of other strategic arms issues. Perhaps the most important of the latter was a rather vague and little-noticed reference to a Soviet suggestion that sea-launched cruise missiles (SLCMs) "could be limited outside of the text of a START treaty on the basis of reciprocal obligations." Some observers took this to mean that the Soviets might be willing to defer final agreement on the troublesome SLCM issue until after a START Treaty had been signed. Other points of

agreement at Wyoming included Soviet acceptance in principle of US-proposed trial inspections prior to the Treaty's signature; an agreement to provide advance notice of strategic exercises; and some progress on definitional and verification issues.

Soviet and American officials in Wyoming refused to predict that a START agreement would be fully completed in time for the major Bush-Gorbachev summit planned for late spring or early summer 1990. However, a few days later President Bush told reporters that there was "a good likelihood" of a START Treaty being signed in 1990.

### Conventional Arms Control

Progress continues to be made at the Conventional Armed Forces in Europe (CFE) talks in Vienna, although President Bush's goal of an agreement by mid-1990 remains in some doubt. During the third round, lasting from 7 September to 19 October, both sides presented further details of their verification and "stabilization" proposals. NATO's "stabilization" package, tabled 21 September, would allow just one military activity involving more than 40,000 troops or 800 main battle tanks every two years (and then only with twelve months advance notice). The Warsaw Pact's package, presented 19 October, provides for the stationing of permanent monitors at European "entry and exit" points. NATO members have been unable to agree among themselves on this matter, with some West European states fearful of revealing sensitive information about their arms exports.

Some movement occurred on the key issue of aircraft limits. The Pact agreed for the first time to restrict aircraft other than ground-attack planes, including some types of fighter, reconnaissance, and electronic warfare aircraft. It proposed a ceiling for each alliance of 4,700 such aircraft (compared to NATO's proposed ceiling of 5,700), but would

exempt 1,800 interceptors that it insists are necessary to defend against US strategic bombers and air-launched cruise missiles, as well as planes based on aircraft carriers. The Pact would also not limit training aircraft, which NATO wants included as combat-capable. Its proposed ceiling of 1,900 helicopters is identical to NATO's proposal, however.

On other issues, the two sides are reported to have agreed on a definition of artillery (as including cannons, howitzers, mortars and rocket launchers of over 100 mm, but not anti-tank weapons). However, they had failed to achieve agreed definitions of tanks and armoured troop carriers. New proposals introduced by the Warsaw Pact included a ban on the construction of foreign bases in Europe, a restructuring of front-line units to reduce their offensive potential, and a summit meeting of the heads of state of the twenty-three participating states in the latter half of 1990, to finalize a treaty.

### Open Skies

Among other agreements reached at the Baker-Shevardnadze meeting in Wyoming was endorsement "in principle" of President Bush's May 1989 proposal for "Open Skies." Prime Minister Mulroney subsequently offered to host a conference of NATO and Warsaw Pact foreign ministers to lay the groundwork for such an agreement, which would allow unarmed aircraft from participating states to fly over each other's territory to assure each that no surprise attack is being planned. As of the end of October, it was intended that an initial meeting be held in Ottawa early in 1990, to be followed shortly after by a second meeting in a Warsaw Pact capital, probably Budapest. At the UN in September, Foreign Minister Shevardnadze accepted the Canadian offer to hold the first meeting, and assured Secretary of State for External Affairs Clark that the USSR would "work actively for its success." It was reported a few days

later that Canada had notified Moscow informally of its willingness to provide logistical facilities for Soviet aircraft as part of an "Open Skies" arrangement.

### Chemical Weapons

President Bush unveiled a much-heralded initiative on chemical weapons in a speech to the UN General Assembly on 25 September. He proposed that the US and USSR reduce their CW stocks to a level eighty percent below that currently held by the US, even before signature of a global Convention. American critics of the offer described it as an empty gesture, since Congressional legislation already required the US administration to destroy all of its old CW stocks by 1997. Bush also pledged to destroy ninety-eight percent of the US stockpile in the first eight years of a CW Convention, if the USSR did likewise, but indicated that a complete ban would require the signature of all states capable of building chemical weapons.

The next day, Soviet Foreign Minister Shevardnadze welcomed Bush's announcement, but urged the US to go further. He proposed that the superpowers destroy all of their stocks prior to conclusion of the Convention, if Washington would join Moscow in ceasing its current production (in 1987 the US resumed CW production after an eighteen-year moratorium, while the USSR announced suspension of its production). The Soviet proposal was rejected the following day by President Bush, citing a US need for deterrence of, and leverage over, other chemical weapons-capable states. Finally, in mid-October, US officials confirmed reports that President Bush had decided to retain the option to continue producing CW even after a Convention takes effect, contrary to the current negotiating text in Geneva. The US had earlier agreed to prohibit such production. □

— RON PURVER

IN ONE OF HIS FIRST FOREIGN policy speeches since becoming president, George Bush proposed on 12 May 1989, that the US and the Soviet Union – along with their respective allies – enter into discussions on a system of “Open Skies.” Open Skies envisages an arrangement in which those countries involved have the right to carry out mutual, unarmed aerial reconnaissance of each others’ territory. The system gives those countries the opportunity to monitor the military activities and installations of other member countries. Unlike satellite surveillance, aerial reconnaissance can be carried out whenever necessary over a given area, thus providing greater flexibility and openness.

Open Skies was first proposed by President Eisenhower at a summit meeting in Geneva in July 1955, and was at the time seen as a way of testing the seriousness of the Soviet Union on disarmament, and an attempt to get around the heavy secrecy that surrounded Soviet military activities. The new Bush proposal is a confidence-building measure which aims to consolidate the new openness in Soviet society and new Soviet willingness to accept intrusive verification. It would also monitor the political and military changes in Europe that are occurring as a result of that openness.

The Canadian government provided very early support to the Bush proposal. At a meeting in Washington prior to the Bush speech, Prime Minister Mulroney encouraged President Bush to put forward the idea. Afterwards, Prime Minister Mulroney publicly announced his support for Open Skies and stated that Canada would be willing to open up its territory to such surveillance.

At the meeting between US Secretary of State James Baker and Soviet Foreign Minister Eduard Shevardnadze in Wyoming in September, the Soviet Union agreed to negotiations on the proposal. Multilateral negotiations involving the twenty-three member

states of NATO and the Warsaw Pact are due to be held in Ottawa in February 1990.

### Historical Background

In preparation for a summit meeting in July 1955 involving France, Great Britain, the Soviet Union and the US, a group of American experts, known as the Quantico Panel, suggested that the US propose a system of unlimited aerial reconnaissance of US and Soviet territory as a way of testing whether the Soviet Union was serious enough about disarmament to implement the intrusive measures that would be needed for verification. The proposal received little support within the administration but was embraced by Nelson Rockefeller, a special advisor to the president, who made an effort to get the president and other officials on side.

The proposal was not approved until the night before Eisenhower was to make his speech. John Foster Dulles, the Secretary of State, had been a final holdout but was won over by the “drama and substance” of the proposal in a situation in which it was highly unlikely the Soviet Union would agree to the idea. Indeed, Soviet officials quickly labelled Open Skies as a one-sided US attempt to spy on the Soviet Union and questioned the rationale for implementing inspection measures without any accompanying measures of disarmament.

The Soviet negative position remained firm until November 1956 when Khrushchev sent a letter to Eisenhower picking up on an earlier US idea to implement the system in a limited geographical zone and suggesting Europe as that zone. The Arctic was proposed by

the US as an alternative – an attractive area to begin because it contained relatively few sensitive military installations. With this shift in emphasis there was also a shift in goals. Open Skies was now being treated as a confidence-building measure whose main purpose was to ease fears of surprise attack, rather than testing verification methods and Soviet willingness to permit intrusive inspection.

However, there was tremendous difficulty in reaching agreement on the zone’s boundaries, and the negotiations, along with other issues at the UN Disarmament subcommittee, slid increasingly into stalemate. Open Skies enjoyed a resurgence of interest in the UN Security Council in 1958 when the US proposed an aerial inspection system to cover all of the Arctic (including Canada and the other Nordic countries). In spite of support from all other members of the Security Council, and an unusual intervention by the UN Secretary-General, the proposal was defeated by a Soviet veto.

Given Canada’s geographical location between the two superpowers, Canadian territory would be important to whatever arrangement might be made. Canada offered the Arctic and all of Canadian territory as part of an Open Skies system. The Canadian government also offered to help with training and equipment. After Open Skies faded from the superpower agenda in the late 1950s, Canada continued its interest in the idea. In private correspondence with Khrushchev at the time, Prime Minister Diefenbaker offered to undertake a reciprocal

inspection arrangement with the Soviet Union. However, this was never taken up by the Soviet Union.

### Current Considerations

Several important issues relating to the details of the system to be established will need to be addressed before it will be clear how far the proposal will advance. A full Open Skies system involving all the territory of all twenty-three countries would mark a major change in thinking for both alliances. A less comprehensive system – with restricted areas or time frames – still offers the advantage of giving Canada and the US a chance to support their Western European allies in the kind of intrusiveness that would be required for verifying conventional force reductions in Europe.

At present the proposal suggests that the system will work on an alliance-to-alliance basis rather than bilaterally only between the US and USSR or in a twenty-three nation free for all. It is not yet clear what types of overflight arrangements individual countries might enjoy. The use and flow of information gathered will also be important: will information be available to all members of the alliance carrying out the inspection? How will the data be shared? What sort of restrictions will there be on its use? And of particular interest to Canada – will the Soviet Union require bases in North America in order to carry out its reconnaissance of the US?

Although the US is advocating an unrestricted Open Skies system, during the negotiations for the Intermediate-range Nuclear Forces Treaty the US backed away from its own intrusive verification proposals once they had been accepted by the Soviet Union. Elements within the US administration, especially the intelligence services, were reluctant to accept the implications of Soviet inspectors at sensitive military installations. The type of intrusiveness involved in Open Skies may prove equally difficult to swallow. L

– JANE BOULDEN

## DEFENCE NOTES

### Peacekeeping Developments

The 1987 Defence White Paper appeared to play down the role of peacekeeping in Canadian defence policy. Since then, however, there have been growing demands for peacekeeping operations. Following the deployment of Canadian troops to monitor the Iran-Iraq cease fire, both Canadian troops and police have participated in the UN Transition Assistance Group (UNTAG) in Namibia. While these operations have stretched the UN Secretariat thinly, they have not apparently discouraged Secretary-General Pérez de Cuellar from embarking on another bold initiative.

On 11 October 1989 the Secretary-General submitted a recommendation to the Security Council for the establishment of a United Nations Observer Group in Central America (ONUCA). The rugged terrain and long borders in Central America pose difficult challenges to a UN observer force. ONUCA is envisaged as a small force (some 260 military personnel with civilian support) but with considerable mobility. This would be provided by cross-terrain vehicles, and helicopters. In addition, the Secretary-General proposed that ONUCA have eight fast patrol boats for use in the Gulf of Fonseca, and light speedboats for navigable rivers.

The five Central American Governments have expressed the wish that the member states of ONUCA should include West Germany, Spain and Canada. Since the Organization of American States (OAS) has cooperated

closely with the United Nations in developing ONUCA, Canadian participation seems likely.

### The US Defence Budget

At the end of October, after several months of negotiation, the Congressional Conference Committee negotiating to settle the differences between the Senate and House versions of the 1990 military programmes bill, appeared to have reached a mutually acceptable compromise. At issue are virtually all the central strategic military programmes of the Bush administration.

On Star Wars, the conferees agreed on a budget of US \$3.5 billion – considerably less than the Senate figure of \$4.3 billion, which was close to the actual request from the Bush administration, but more than the \$2.8 billion proposed by the House. The lack of protest from the White House, particularly the absence of any threat to veto the agreement, appeared to confirm that the Bush administration, while determined to press ahead with Star Wars research, is less enthusiastic than its predecessor about early deployment, and not likely to make it the centrepiece of its strategic plans.

The future of the B-2 Stealth bomber also remains unresolved. The US Air Force has vigorously defended the B-2 against criticisms that it was inferior in range to the existing B-1B. Declassifying information previously regarded as top secret, in October the Air Force released comparative data for the B-1B and the B-2 on weapons load, fuel capacity and range which appear to confirm the advantages of the B-2. Congress, however, remains skeptical. The Conference Committee proposed to slow the pace of the B-2 programme, while indi-

vidual Congressmen continue to query the exact missions of the stealthy bomber and the cost (US \$530 million) of each aircraft.

Finally, the Committee appeared to have turned the problem of choosing between the MX missile and the Midgetman back to Secretary of Defense Richard Cheney. By not specifying the allocation of funds between the two missiles, Congress appears willing to allow Cheney to proceed with both. Such discretion may come as a surprise to the Secretary. Congress has resolutely refused to cancel the two tactical aircraft programmes which Cheney himself wants to scrap: additional F-14s and the V-22 Osprey helicopter/aircraft. Both have survived the Congressional compromise.

### Soviet Military Doctrines

During the past year Soviet military spokesmen have de-

scribed in principle the changes in military doctrines and structures that would accompany conventional force reductions in Europe. The general concept of “defensive sufficiency” is said to entail the restructuring of Soviet armed forces in such a way that they could not be used to undertake large-scale offensive operations, but only the defence of national territory and that of allies.

In October in Ottawa, Major-General Anatoli Bolyatko told a Canadian meeting that revised manuals were now in use in Soviet military academies instructing Soviet tank officers in the primacy of defensive tactics. The force structure that would follow from these changes, however, is still not clear. Bolyatko emphasized the Soviet view that the best offensive weapon is the tank, and the best defensive weapon is the tank. In comments some months earlier to the US House Armed Services

### ACQUIRING BALLISTIC MISSILES

In late October Bush administration officials confirmed that there is evidence of cooperation between Israel and South Africa in ballistic missile technology. On 5 July, South Africa tested the booster of a medium-range ballistic missile which, Western experts believe, could be used either to boost a satellite into orbit, or as a missile carrying a nuclear warhead.

The comments on 26 October by administration spokesmen indicated that the United States had identified the booster plume from the South African test as closely resembling that from the Israeli-built Jericho II rocket. The Israeli government reaffirmed its policy not to conclude new defence contracts with South Africa, but did not deny that ballistic missile technology might be transferred under existing contracts signed before March 1987.

The debate about Israeli-South African cooperation drew attention once again to the lengthening list of countries seeking to add ballistic missiles to their defence forces. According to recent reports from the Congressional Research Service and the Stockholm International Peace Research Institute (SIPRI), at least thirteen “non-major military powers” have acquired or are seeking to build ballistic missiles. The military value of these missiles lies primarily in their ability to deliver nuclear warheads. Most of the states involved are believed to be capable of building nuclear weapons.

In the Middle East, the Israeli Jericho II is thought to have a range of up to 1,400 km and can deliver a nuclear warhead. Egypt and Iraq have cooperated with Argentina in the development of the Condor II, which

Committee, Marshal Akhromeyov stated that the Soviets produce 1,700 tanks each year, but that production would be reduced by forty percent by the end of 1990.

### NATO's Future Force Structure

In an October interview at the Pentagon, General John R. Galvin, Supreme Allied Commander Europe, defined NATO defence priorities in the event that deep cuts in conventional forces are negotiated at Vienna.

Galvin reaffirmed the NATO doctrine of flexible response, and indicated that force modernization would be required to maintain flexible response if there are major reductions in conventional forces. His top priority is a short-range nuclear missile to succeed the Lance, and an air-to-surface missile which would be nuclear capable. (The Lance has a range of only 130 kilometres, whereas the INF Treaty leaves it open to both sides to deploy short-range missiles with ranges up to five hundred kilometres.)

Galvin also suggested that future NATO forces would emphasize flexibility and mobility in

order to compensate for reduced numbers. This would include long-range air forces and mobile ground forces capable of disrupting enemy attempts to concentrate and move forces quickly. It would also require greater ability to mobilize reserves promptly, and, therefore, a willingness on the part of NATO governments to make early decisions about mobilization. For this reason, Galvin suggested that high priority should go to improved reconnaissance capabilities able to give early and unambiguous warning of troop build-ups.

While all of these developments would be expensive, aircraft reductions now under discussion in Vienna will provide NATO with an opportunity to modernize its forces by transferring late-model aircraft. Since all member countries would be required to reduce their European-based aircraft, there will be opportunities to phase out older aircraft such as the Alpha jet and the F-4 Phantom, and replace them with more capable F-15s and F-16s. Discussions are underway to ensure that, within NATO as a whole,

the least capable aircraft are eliminated first.

The prospect of significant reductions in numbers of aircraft and tanks is also reviving discussions about specialized roles and missions within NATO. In Washington, influential commentators have suggested, for example, that at some future point the US might specialize in the air defence of Europe, implying that most if not all ground forces would be provided by the Europeans.

### The Senate Special Committee Report

Such discussions, although tentative, could have a strong influence on the future structure of Canadian defence forces. In October, the Special Committee of the Senate on National Defence released its report on Canada's Land Forces.

The Report recognizes that, in reality, the commitments made in the 1987 White Paper have been dropped. The White Paper determined that Canada would abandon its commitment to send a brigade to Northern Norway, and consolidate its ground forces in southern Germany at the existing Canadian base at Lahr. The new Canadian commitment was to be an armoured division, of which one brigade and division-strength equipment would be based in Germany, with one brigade in Canada prepared for rapid deployment to Germany. This commitment would have involved an increase of about 2,000 personnel in Germany, and, among other equipment requirements, the purchase of some two hundred and fifty main battle tanks.

Recognizing that these changes will not take place, the Senate Report investigates alternative force commitments for Canada. It begins by emphasizing the importance of the current conventional force negotiations, and the need, therefore, not to create difficulties through unilateral withdrawal from Europe. At the same time, the conjunction of Canada's search for a credible defence policy and the changes imminent in Europe offer an opportunity to re-

duce "the disparity between stated land force commitments in Europe and actual capabilities."

The Report explores two possibilities. The first is to restructure for "defensive defence." In this approach Canada would provide a front-line, light-armoured division based on six flexible "manoeuvre elements." Only two of these elements would have tanks in Europe. The other elements would emphasize battlefield mobility and anti-tank defensive operations. The Report suggests that such a force would require only about 3,500 troops permanently deployed in Europe, with the other elements air transportable from Canada.

The second force commitment considered is an air-mobile reserve force which might continue to be based at Lahr. Although such a force would be compatible with current NATO thinking, the Report recognizes that the helicopters and other equipment required would involve an awkward transition from the present structure and require initially large commitments to purchase new equipment. By contrast, the light division concept would require relatively few new weapon systems.

The mandate of the Senate Committee did not lead it to review the broader question of specialization which might, for example, suggest that either the land commitment or the air commitment to Europe be abandoned. The Report is nevertheless timely in contributing to the review of Canadian defence policy. It seems evident that major decisions about the future of Canadian defence forces will depend in part on the broader debate within NATO. On the other hand, changing force commitments within the alliance may soon offer the Canadian government a second opportunity to define a credible defence policy. □

— DAVID COX

is estimated to have a range of up to 1,000 km and will be deployed in the mid-1990s. Missiles with shorter ranges have been supplied to a number of Middle East countries by the Soviet Union, China, and (in the case of the Lance missile to Israel) the United States.

In South America the Argentinean development of the Condor has been matched by Brazil, which, in April 1989, successfully tested the Sonda IV with an estimated range of 1,000 kilometres. In South Asia, India successfully tested the Agni medium-range missile (potential range of 2,500 km) in the Bay of Bengal, in May 1989. Pakistan announced earlier in the year that it had developed a rocket booster with a range of 600 kilometres.

The apparently inexorable spread of ballistic missile technology and production has taken place despite an agreement among seven leading Western countries (including Canada) to limit exports and prevent the transfer of technology. The Missile Technology Control Regime established in April 1987 was applicable to missiles able to carry a payload in excess of 500 kg (the smallest payload for a nuclear weapon) over 500 kilometres. All of the missiles described above are in this category. Over the past two years the United States and the Soviet Union have held discussions on further steps that might be taken to curb the spread of ballistic missiles, including the possible participation of the Soviet Union in the Control Regime. The United States began a strategic review of missile proliferation in mid-1989, the results of which have not yet been disclosed.

## REPORT FROM THE SECURITY COUNCIL

During the month of October, Canada assumed the presidency of the Security Council. While there were no major crises, Ambassador Yves Fortier did have to contend with a number of complex issues – Namibia being the most notable.

### Namibia

The problems of implementing the Namibian independence plan percolated throughout the late summer. On 16 August the Council met at the request of the African Group and the Non-aligned States to discuss "South Africa's non-compliance with the requirements of Security Council Resolution 435" – the resolution that laid the groundwork for Namibia's transition to independence.

The key complaint concerned the activities of the South African-trained paramilitary force known as *Koevoet*, which had been "integrated" into the ranks of the South West Africa Police. African diplomats charged that *Koevoet* was intimidating rural inhabitants thereby threatening the prospects for free and fair elections in November. On 29 August, the Council unanimously adopted Resolution 640 which demanded strict compliance with the terms of the Namibian peace plan, especially by South Africa, and the disbandment of all paramilitary forces, "in particular, *Koevoet*."

But even before Resolution 640 was adopted, South Africa, in an effort to deflect the criticism, announced it would remove *Koevoet* from the ranks of the territorial police and demobilize the force. In a speech to the Council, Ambassador Fortier welcomed the announcement. At the same time, he was critical of the South West African People's Organization (SWAPO) forces in Angola: "Canada remains concerned that less than fully reli-

able information on SWAPO combatants remaining in Angola has contributed to instability more than once. The recent reduction of tension in northern Namibia, which we welcome, should be complemented by a corresponding increase in transparency in Angola," Fortier told the Council.

The criticism of SWAPO reflected the desire by Canada to be perceived as fair and balanced. As an architect of the Namibian independence plan, Canada has striven to remain credible to both South Africa and the Namibian combatants.

It has been a complicated task, given the impatience of African states combined with the erratic and aggressive behaviour of South Africa. For months the African states complained that there were not enough UN forces in Namibia to ensure a fair election. Anger increased on 6 October when Secretary-General Javier Pérez de Cuellar reported to the Council that the South African-trained Namibian police force had withheld information and denied UN officials the right to visit people in detention. He also charged that the police were delaying investigations.

On 18 October African states asked for an urgent Council meeting. They accused South Africa of failing to disband *Koevoet* and other ethnic forces and commando units. Initially, they demanded that sanctions be imposed on South Africa. It was up to ambassador Fortier to try and find a compromise between African states and those members (mainly Western countries) opposed to such harsh language and measures. Fortier said his main task as president was "trying to ensure a consensus and to have the Council speak with one voice."

The underlying concern was that if a resolution was introduced that was perceived to be unbalanced in its criticism of South Africa, it might be voted against by a number of countries. This would make the Council appear divided at a

time when it was felt that the Council would be most effective speaking with a single, impartial voice, so as not to threaten the impending elections.

The Council agreed on 31 October to adopt a mild resolution that demanded "full and strict compliance by all parties concerned, particularly South Africa," and called for the complete disbandment of *Koevoet* and the South West Africa Territorial Force.

### Central America

The Secretary-General submitted a report to the Council on 11 October outlining the creation of a United Nations Observer Group in Central America (ONUCA). Its function would be to conduct on-site verification of the cessation of aid to irregular forces and insurrectionist movements in the area, and the "non-use of the territory of one state for attacks on other states."

The report was the outgrowth of the 1987 Esquipulas agreement signed in Guatemala by the five Central American presidents. But ONUCA, which would be made up of troops from various countries including Canada, initially faced a number of hurdles. One was uncertainty over immediate US backing. As well, the Secretary-General noted that the ability of ONUCA to carry out its mandate would depend "to a large extent" on the cooperation of the irregular forces and insurrectionist movements in the area.

On 11 August the Council heard a complaint by Panama that US military manoeuvres had violated established procedures. The US responded by saying that its military activities were in complete accord with the Panama Canal treaties. It added that it was the regime of General Antonio Noriega that had violated the treaties on almost 900 occasions. The Council agreed to continue discussion of the complaint at a later, undetermined, date.

### Middle East

On 15 August the Council "urgently" appealed for an immediate

cease fire by all parties in the Lebanese conflict and expressed its support for the efforts of the Tripartite Committee of the Arab Heads of State to settle the Lebanese crisis. As fighting in Lebanon continued, the Council issued a similar statement of support on 20 September.

On the issue of the Israeli Occupied Territories, the Council on 20 August adopted a somewhat sterner resolution than the one it had voted for nearly a month before. The latest document "deplores" the continuing deportation of Palestinian civilians from the territories. Fourteen countries including Canada voted in favour of the resolution; the US abstained.

Diplomatic efforts to persuade Iran and Iraq to agree to a comprehensive settlement of their dispute continued to bear no fruit. On 29 September, the Council called on them to implement Resolution 598, which forms the basis of the UN sponsored peace plan; and extended the mandate of the Iran-Iraq Military Observer Group for a further six months.

### Other Issues Before the Council

In October, five new rotating members joined the Council. They include Cuba, elected for the first time since Fidel Castro came to power in 1959.

In its recent bid to make greater use of the UN, the USSR proposed that the world body be given a greater role in preventing conflicts. On 4 October Deputy Foreign Minister Vladimir Petrovsky urged that the Security Council become more active in safeguarding peace. During a news conference, he proposed authorizing the president of the Council to mediate between countries heading toward a dispute, as well as creating a chain of "war risk reduction centres" around the world. Mr. Petrovsky's proposals were submitted to the Secretary-General. So far, the Council has not formally addressed them. □

— TREVOR ROWE

## REPORT FROM THE HILL

The 34th Session of Parliament resumed on 25 September, after its summer recess. There was no major discussion of foreign or defence policy in the House of Commons in the fall, but the main themes of official international security policy were laid out by Secretary of State for External Affairs Joe Clark when he addressed the 44th session of the United Nations General Assembly on 26 September.

### Clark at the United Nations

In that speech, Clark welcomed the changes in East-West relations, stressing "the turning towards democracy and the expansion of the market place" in Eastern bloc countries. Noting the remarkable progress in many regional conflicts, he described himself as encouraged by the situation in South Africa and welcomed Egyptian President Mubarak's ten-point plan for peace in the Middle East. He also indicated that the International Conference on Cambodia (see below) had served a positive purpose for identifying "international control mechanisms and reconstruction processes which can be brought into play once a settlement is reached."

### Policy on Cambodia

After a month of meetings, the Paris Conference ended in failure on 31 August. With India, Canada had co-chaired a special committee charged with developing a framework for the establishment of an International Control Mechanism. Mr. Clark, who attended the opening, as well as the Ministerial Session from 28 to 30 August, indicated in response to a question in the House on 3 October as to why the government refused to recognize the Hun Sen government in Cambodia, that both

throughout the proceedings and afterwards, Canada has searched for a means "by which there could be a coalition government or an interim authority that could speak for all of the Cambodian people" and which would "minimize the role of the Khmer Rouge." He also indicated Canada's willingness to consider participating in a peacekeeping force once a settlement was reached.

### Southern Africa

Mr. Clark chaired the fourth meeting of the Commonwealth Committee of Foreign Ministers on Southern Africa, which met in Canberra, Australia, 7 to 9 August. The Committee had been created at the October 1987 Commonwealth Heads of Government Meeting in Vancouver to provide high level impetus and guidance of further Commonwealth objectives on Southern Africa. At the end of the meeting, Clark sent a letter to South African Foreign Minister Pik Botha, which contained a defence of continuing sanctions, and which addressed aspects of the situation in neighbouring Namibia during its transition period to independence.

In early September, a five-member, all-party group of parliamentarians visited Namibia to observe the pre-election process, led by Walter McLean, MP, who is also Special Representative of the Government for Southern Africa and Commonwealth Affairs. At the end of their visit, the MPs issued a brief report indicating their general reassurance that the election itself would be "free and fair," but stressing the longer-term — both the process of transition between the election and actual independence, as well as the need for generous development aid to Namibia after independence in 1990.

From 17 to 24 October both the Prime Minister and the External Affairs Minister attended the Commonwealth Heads of Government meeting in Malaysia. Following the general conference statement of 22 October in which

all the leaders agreed that, although there were signs of change, sanctions should not yet be relaxed, Prime Minister Margaret Thatcher of Great Britain, in a surprise move, issued a separate declaration in which she called for a more positive outlook towards Pretoria. On 23 October Prime Minister Mulroney told the press that he was angered by British procedures, which could, in his view, undermine future Commonwealth cooperation.

### Parliamentary Committees

The Special Committee of the Senate on National Defence tabled its fifth report, *Canada's Land Forces*, on 31 October. The Committee had begun work on the report in 1987, but was delayed by the dissolution of the 33rd Parliament, as well as by the rapid changes in East-West relations and the cutbacks in defence spending announced by the government in the 27 April budget. The report rejected both withdrawal from Europe and continuation of the status quo for Canadian Forces in Europe. The latter would involve, according to the report, substantial expenditures on equipment that is unusable elsewhere.

Instead, without laying out a precise alternative, the Committee suggested a couple of options that would involve a substantial restructuring of forces in Europe. One was an air mobile brigade, which could be deployed if need be in locales other than Europe, and the other was for "defensive defence," as a response to the less offensive force structures envisaged for Europe by the Soviet Union.

The Commons Standing Committee on External Affairs and International Trade (SCEAIT) began hearings on its major study of the year, Canada's relations with the Soviet Union and Eastern Europe. The committee plans to visit the region in the spring of 1990 and issue its report later in the year.

In the meantime, the Committee held a hearing on 2 November on the \$42 million economic as-

sistance package for Poland and Hungary that the government had announced on 12 October. It also heard in early November from officials and outside experts concerning a positive agenda for Canada to adopt in the Organization of American States (OAS) following the government's decision to join. Also in November, the Committee struck a sub-committee on international debt under the chairmanship of Walter McLean.

The House of Commons Defence Committee visited bases on both the east and west coasts during October in its on-going study of maritime sovereignty.

### Short Notes from the Hill

Margaret Mason was appointed Ambassador for Disarmament in August, succeeding Douglas Roche. Ms. Mason, a lawyer by training, was legal advisor to the Canadian Advisory Council on the Status of Women (1980-1981), Policy Adviser to Joe Clark and Eric Nielsen when they were in the opposition (1981-1984) and Policy Adviser to Mr. Clark as Secretary of State for External Affairs since 1984 with responsibility for security issues, East-West relations, and export controls policy, among other items.

de Montigny Marchand, was named Under-Secretary of State for External Affairs on 18 October, succeeding James H. Taylor who will become Ambassador to Japan. Most recently Ambassador to the United Nations in Geneva, Mr. Marchand has also served as Deputy Minister of Communications and as Deputy Minister of Energy, Mines and Resources.

On 27 October at a meeting of leaders in Costa Rica honouring the country's one hundred years of democracy, Prime Minister Mulroney announced that Canada would be joining the Organization of American States (OAS). Canada has restricted itself to observer status in the organization since 1972. □

— GREG WIRICK

## NEWS FROM THE INSTITUTE

**Bernard Wood** spent three weeks during September and October in Namibia as part of a high-level observer team appointed by the Commonwealth Foreign Ministers to report to the Heads of Government Meeting about the election and the transition to independence in that country.

In mid-September the Secretary of State for External Affairs, the Right Honourable **Joe Clark** announced the appointment of **Claude Julien** as a member of the Institute's board of directors. Mr. Julien, who lives in Paris, France, is currently Editor and Director of *Le Monde Diplomatique* and president of the Centre d'études et de recherches sur l'Amérique latine. He has pursued an extensive career in journalism, primarily with *Le Monde* and *Le Monde Diplomatique*, and is the author of nine books which deal largely with international affairs and politics, including *Le Canada, dernière chance de l'Europe* in 1965.

In late September **David Braide** spoke to the founding meeting of the Defence Associations Network in Ottawa on the subject of the Institute and its role in the peace and security debate, especially given the changing contexts of East-West relations in the past five years.

**Vladimir Petrovsky**, Deputy Foreign Minister in the Soviet Union, visited the Institute during October to discuss Soviet views of international organizations and multilateral approaches to foreign policy questions. Mr. Petrovsky spoke about Soviet initiatives at the UN in regard to the notion of comprehensive security, the development of those ideas and the

reactions of other states to them. Prospects for multilateral actions in several fields are much improved in recent years, and Mr. Petrovsky urged further academic study on approaches, ways and means.

"East-West Economic Cooperation and the Prospects for Security" was the subject of a keynote address given by **Bernard Wood** to an international seminar at the NATO Defence College in Rome in late October. The Director's Report on page 21 covers some of the major themes he raised there, central as they are to the current global debate.

At the end of September the US Mission to NATO and the War College of the National Defense University in Washington sponsored a conference in Brussels on the changes in Eastern Europe and their implications for Western security. **Fen Hampson** was a participant, along with other academics and policy makers from both sides of the Iron Curtain. Later in the fall, Dr. Hampson gave a paper on "A New Role for the United Nations" at a conference in Lisbon sponsored by the Portuguese Institute for Strategic and International Studies on the subject of European security in a multi-polar world.

**Keith Krause** of York University was sponsored by and reported to the Institute at a conference organized by the Quaker Office at the United Nations on the subject of arms transfers. Professor Krause, who wrote a conference report for the Institute on the same subject, gave a paper to academics and senior diplomats from states sponsoring resolutions on the subject at the UN.

There were several seminars in the Current Issues series organized by the Research section of the Institute during the fall. **Peter**

**Beck** from the Kingston Polytechnic in Surrey, England, spoke on "The Relevance of the Antarctic Treaty System to Canada and the Arctic." **Itamar Rabinovitch** of Tel Aviv University led a discussion on "The Israeli-Syrian Relationship as Part of a Regional Settlement." **Fred Axelgard** of Georgetown University spoke on the "Arab Israeli Peace Process and the US Involvement." **Kamel Abu Jaber** of the University of Jordan led a discussion on "The Concept of State in the Middle East."

In late October **Heribert Adam** of Simon Fraser University and **Kogila Moodley** of the University of British Columbia, organized and led a seminar at the Institute on Canadian policy towards Southern Africa. The seminar was part of a major research project the two professors are undertaking for the Institute. **Alex Boraine**, Executive Director of the Institute for Democratic Alternatives in South Africa, began the discussion with an overview of the recent socio-political developments in South Africa. Participants turned their attention to the various analyses of the constitutional and economic alternatives, and compromise formulas. The seminar concluded with an examination of the implications for Canadian policy, including the impact of trade sanctions, disinvestment, loans, diplomatic isolation, academic and cultural boycotts, and the role of non-governmental organizations.

At the end of October **Gail Osherenko** and **Anne Fikkan** addressed a research seminar at the Institute on Arctic Environmental Challenges. Ms. Osherenko is a research fellow in the Environmental Studies Programme and a project director at the Institute of Arctic Studies at Dartmouth College. Ms. Fikkan was

a special adviser on environmental research in the Norwegian Ministry of the Environment and visiting research scholar at Dartmouth. The Arctic environment is threatened by pollution originating in the mid-latitudes and carried by air and ocean currents as well as by hydrocarbon development in the Arctic region. In addition, increased military activity in the Arctic, mineral extraction, hydroelectric development, and even tourism, increasingly damage Arctic ecosystems, wildlife and habitat. Ms. Osherenko and Ms. Fikkan discussed the extent to which international cooperation is necessary to prevent and cope with these threats, whether such cooperation should be confined to the ice states or whether the issues should be handled in broader international fora, if cooperation among Arctic nations on environmental matters will affect issues of military security, and whether regional cooperation on Arctic environmental issues threatens the Western Alliance.

**Nancy Gordon** participated in a meeting of experts in New York in September organized by the Friedrich Ebert Foundation and the UN Centre for Science and Technology for Development. The purpose of the meeting was to address crucial problems faced by the global community in the areas of environment, economic development, and disarmament, in order to formulate and suggest initiatives to the Secretary-General of the United Nations which will complement his efforts on the political front. Specifically, the meetings addressed issues of climate, information technology and economic conversion, focussing on the following questions: what are the core scientific and technical facts and questions of concern to policy makers around the world, and what are the political consequences and problems of translating scientific insight into specific political action? What are some

practical first steps toward political resolutions of current impasses? The group drafted recommendations for presentation to the Secretary-General.

On Friday 13 October, the Institute launched the 1989 edition of *The Guide to Canadian Policies on Arms Control, Disarmament, Defence and Conflict Resolution*. Members of the Board, staff, officials and journalists celebrated the publication of "this essential reference work," and paid tribute to the writers, editors and staff members who produce the book each year.

In early November **Bernard Wood** gave the Gerald Savory Memorial lecture at the University of British Columbia. He spoke on "The International System of the 1990s: Canadian Opportunities and Risks." Prior to that Mr. Wood gave a lecture at Queen's University entitled "Rethinking North American Relationships." And following his appearance at UBC he spoke in Whitehorse, Yukon, on the programmes of the Institute and their evolution.

**Brad Feasey** gave presentations to high school teachers at a professional development day in Brandon, Manitoba in mid-October. Later in the month he participated in the Ontario History and Social Sciences Teachers Association in Toronto. On both occasions he gave workshops on teaching issues of peace and security at the high school level, drawing from the *Teachers' Handbook on Peace and Security*, the revised edition of which the Institute will publish in the spring.

**Roger Hill** gave a presentation on "Le rôle de l'Institut et des groupes de pression," at the colloquium on "Le processus de démocratisation en matière de défense et de contrôle des armements," at the Centre québécois de relations internationales, 25 to 26 October 1989, in Québec.

**Ron Purver** attended a Nordic Peace Conference at Concordia University in Montreal in September, and a conference on

"Strengthening Canada-USSR Relations: Cooperation in the Arctic" in Ottawa in late October. He also addressed a group of senior US Naval leaders on "Restricting

University Service of Canada (WUSC). **Norma Salem** chaired a session of the conference of the Middle East Studies Association in Toronto in November 1989.

---

### Barton Awards Programme

---

The Institute invites applications for its Awards Programme, now designated the Barton Awards in honour of the first Chairman, former UN Ambassador William Barton. The programme is open to both academics and non-academics who wish to enter or continue studies in the field of international peace and security. The programme is intended to encourage expertise and scholarship in that area by supporting Canadians who wish to pursue their studies at institutions abroad or in Canada.

The Institute expects to make ten awards, two senior fellowships valued at up to \$30,000 and eight scholarships at up to \$14,000. Applications will be assessed by an independent selection committee and decisions will be announced in May 1990.

Applicants must be Canadian citizens whose experience or academic qualification enable them to pursue advanced study.

The deadline for applications for the 1990-1991 academic year is 1 February 1990.

For further information and application forms please write to:

The Barton Awards Programme  
Canadian Institute for International Peace and Security  
360 Albert, Suite 900  
Ottawa, Ontario K1R 7X7

---

### Grants Procedures and Deadlines

---

*The Institute allocates grants twice a year. Contact the Institute for a copy of updated criteria and application forms. Please note the following deadlines:*

---

30 June for an October decision

---

31 December for a March decision

---

Naval Operations," at a workshop at the Center for Naval Analysis, in Alexandria, Virginia, on 8 November. **Roger Hill** and **Michael Bryans** attended the annual meeting of the Centre québécois des relations internationales in Quebec City. The subject of the conference this year was the changes within the Soviet Union and Eastern Europe and their implications for foreign policy. **Margaret Bourgeault** participated in the Group of 78 meeting in Ottawa which also discussed developments in the Soviet Union.

**Brad Feasey** and **Nancy Gordon** attended a roundtable discussion on the election and future developments in Namibia, sponsored by Oxfam-Canada and World

**Bernard Wood** attended, in mid-November, a meeting at Wilton Park, UK, for the heads of research institutes, organized by the Institute of Strategic Studies in London. The Institute for Research on Public Policy, along with Chatham House and a number of British groups organized a colloquium in the UK on Canadian-British relations in light of the changing relationships within Europe and North America. Mr. Wood gave a paper on North-South relations.

**Sergei Danilov**, a member of the Institute for the USA and Canada in Moscow, was a guest of the Institute during November as part of the exchange arrangement between the two Institutes.

Dr. Danilov, whose field of study is Canadian political parties and elections, interviewed a number of academics, officials and politicians in Ottawa and spent some time at the National Library and Archives. He also met Canadian specialists in Kingston, Toronto and Montreal. Dr. Danilov is the author, along with Dr. Alexei Cherkasov, of "12 Faces of Canada: Canadian Provinces and Territories", published in Moscow in 1987. His next book, a biography of Pierre Trudeau, will be published in Moscow in the near future.

Visitors to the Institute during the fall included **Walter Stock** of the Institute for International Relations in Potsdam, GDR, and **Humberto Avaria**, the representative in Canada of the Farabundo Martí National Liberation Front (FMLN) in El Salvador. **Gary O'Dwyer**, a high school teacher in Coburg, brought a group of veterans from Vietnam and Afghanistan to the Institute for an exchange of views with staff members. The group had spent some time earlier with Mr. O'Dwyer's history students in Coburg. **Gwynne Dyer**, who visited the Soviet Union as part of the exchange agreement between the Institute for Peace and Security and the Institute for the USA and Canada in Moscow, led a discussion with Institute staff on his research in the USSR.

Members of the Eurogroup panel, an organization of the twelve European members of NATO, visited the Institute in mid-October. **Lt. General Huttel** of West Germany, **Dr. R. Veremis**, a Professor of International Relations at the University of Athens, and **Dr. J. Bartes**, Director-General of Political Affairs in the Ministry of Defence in the Netherlands, met with Institute staff to discuss security and defence in the context of the Atlantic Alliance, as well as questions of burden-sharing amongst NATO members.

RESOURCES

The primary focus of this new page from Information Services will be a bibliography covering the four areas of the Institute's mandate — arms control, disarmament, defence and conflict resolution. Items selected are from the Institute library's in-house database of its holdings, and will have been received within the last quarter.

The selection emphasizes materials that are unique and not always found readily in standard readings. Items will be chosen for their strength of analysis, for their uniqueness of perspective (geographical or ideological), or for their unpublished origins. Non-academic items, or items advocating different points of view will also be included if their substance adds to a fuller understanding of an issue. In addition, this page will keep readers informed of Information Services' resources and activities, and include items on various aspects of information resources.

Profile of the Institute Library

■ The Institute library was set up in 1985. It contains a specialized collection of materials, including government, embassy and international organizations documents; ephemeral and unpublished items; and publications from organizations worldwide. An in-house computerized database covers the library's holdings, plus a variety of other bibliographies related to the areas of the mandate. Computer searches are done on request. There is no charge.

The library is located at 360 Albert Street, 9th Floor, in Ottawa; and is open to the public from 8:30 a.m. to 5:00 p.m., Monday through Friday. The collection is only available on the premises, although photocopies can be mailed, and books can be borrowed through interlibrary loan. Requests are taken in person, by telephone, mail and electronic mail (Envoy: CIIPS, Web: CIIPS, Inet: C.I.I.P.S.).

The Peace and Security Thesaurus was developed to provide a subject terminology to use in classifying materials in the collection. It is freely available to groups wishing to use it to catalogue their own peace and security collections. Please address inquiries to: Thesaurus, Information Services, c/o the Institute.

## FROM THE DIRECTOR

### A FRAMEWORK FOR EAST-WEST ECONOMIC COOPERATION

*In late October, Bernard Wood gave the keynote address to an international seminar for opinion leaders on "East-West Economic Cooperation: Opportunities and Limitations" at the NATO De-*

*fence College in Rome. The following article carries forward some of the main points of that presentation especially relevant in the light of current Canadian interest in East-West relations.*

IN MY JUDGEMENT, THE MAGNITUDE OF THE changes that Mr. Gorbachev has wrought in his country's international behaviour and domestic practices now calls for wholehearted recognition by Western leaders, and whatever tangible encouragement it is possible and wise to give. While he still has a very long way to go in Soviet domestic affairs, there is surely no responsible outsider who would dare to prescribe an alternative strategy for him to follow, or to suggest that any conceivable alternative leadership would be preferable.

What we need to do as a minimum is to repeal any measures, beyond the most essential strategic protections, having the character of economic sanctions or discrimination against the Soviet Union and Eastern European countries undertaking such basic reform. Most of our countries have already done much of this, but to open up a well-publicized return to normal economic relations would be symbolically and materially helpful.

Two of the Soviet Union's most important legal changes in the domestic economy which have an impact on East-West economic cooperation are the 1987 Law on the State Enterprise, which set out to give enterprises full economic independence from central authorities; and the 1988 Law on Cooperation, which allows essentially private partnerships – able to employ full-time, unlimited numbers of contract employees – to operate in any sphere of the economy. By the beginning of October 1988, some 770,000 people were estimated to be working in cooperatives.

CHANGES HAVE ALSO OCCURRED IN THE WAY foreign trade is administered. The state no longer has direct control over a large proportion of foreign commerce. Not only can enterprises decide what type of products they will sell on the world market, as of last April, they are allowed to compete on the foreign market on their own. This eliminates the previous structure whereby all foreign trade was conducted through a state foreign trade intermediary.

Enterprises are now allowed to keep a share of hard-currency earnings. Foreign exchange auctions are also envisioned, giving enterprises greater control over their import decisions. A new exchange rate system has been adopted which will allow for the devaluation of the ruble. The 1986 decision to allow joint ventures in the Soviet Union, and the subsequent revision to the law in 1988, has radically altered the possibilities for direct foreign investment. Joint ventures have brought quintessentially capitalist enterprises into the heart of the socialist economies.

Soviet interest in international economic organizations has never been higher. In 1986, the Soviet Union applied to the GATT (General Agreement on Tariffs and Trade) secretariat to participate in the upcoming "Uruguay Round." While its application was rejected, the USSR continues to express interest in joining GATT and is making preparations for formal negotiations. Ivan Ivanov, Vice Chairman of the State Commission for Foreign Economic Relations, expects that reforms currently underway in the foreign trade sector will make the Soviet Union's trade policy compatible with GATT. He admits, however, that it will take at least two years before Soviet price and tariff reforms will be advanced enough for formal talks.

OR ALL OF THE POTENTIAL OPPORTUNITIES IN East-West economic cooperation there also exist some very real limitations. Gorbachev faces a massively complex task in trying to pull the Soviet economy out of its state of stagnation. Not the least of the problems are the major dislocations which occur as the economy takes on more of the attributes of a free market.

Among these are the resistance of bureaucrats to relinquishing their authority to interfere in the economy; confusion caused by changing guidelines as the reform struggles to find the correct course; problems of insufficient foreign exchange and lack of convertibility of the ruble; and a fundamental change of social norms, as citizens who have been used to full employment and equality face up to the prospect of unemployment and growing wage differentials.

Not only does inertia in the system limit the speed with which the reform process as a whole can proceed, it also inhibits the potential for the expansion of East-West economic cooperation. Numerous anecdotes attest to the frustration of Western entrepreneurs trying to do business with the Soviet Union and Eastern Europe, including problems of bureaucratic attitudes, constantly changing rules, inexperienced Eastern partners and antiquated or non-existent infrastructure.

East and West also have different priorities for cooperation. A major goal of the Soviet Union and Eastern Europe is for their economies to produce internationally competitive exports. This requires technologically up-to-date equipment and know-how from the West. Western businesses, on the other hand, hope mainly to exploit the large Eastern market and are limited in their ability to sell advanced technology to the East. But there is possible common ground in joint venture production

ALL OF THESE LINKAGES ARE THE REFLECTION of normal market responses to opportunities being opened up by reform and regulatory change. There is immense potential for Western traders and investors every time an Eastern European government makes a sensible policy modification. However, I believe that the West will have to exercise great caution in undertaking any special measures of economic cooperation that go beyond the logic of the market, which is, after all, one of the key benefits that we seek to share. This is no pretext for inaction and no insensitive ideological prescription; it is the course suggested by pragmatism and realism.

While there is a compelling ring to the recent suggestion that Eastern Europe "must have a Marshall Plan or it will have martial law," I believe it is badly misleading. The challenge faced by these countries is not of digging themselves out and rebuilding from the rubble of war, but of disentangling themselves from decades of red tape. The need is not for an infusion of capital goods, money, or raw materials, but for the political will, capacity and know-how to dismantle the myriad obstacles to productive economic activity. This obviously cannot be accomplished overnight nor can it be deferred until a more stable time. Stability itself can come only from successful change.

As one who has spent a large part of his career working on issues of development aid, I am persuaded that no Marshall Plan for Eastern Europe would be desirable or even possible. Although a great deal of good can be done with substantial amounts of "bridging" aid, until the basic changes are in place, the bureaucratized economies of Eastern Europe could quite literally be a bottomless pit for Western aid. It would be disastrous for the West to create a relationship of dependency, and equally disastrous to create expectations which we cannot possibly fulfill.

– BERNARD WOOD

## REVIEWS

### Breaking with History The Gorbachev Revolution: An Eyewitness Account Lawrence Martin

Doubleday Canada Limited, Toronto,  
1989, 356 pp., \$26.95 cloth

The eyewitness to the Gorbachev "revolution" is the *Globe and Mail's* first correspondent in Moscow, Lawrence Martin. He was fortunate to be able to watch as the Soviet Union transformed itself from Brezhnevian stagnation into Gorbachevian activism.

Those first three or four years of Mikhail Gorbachev's leadership have probably been the most exciting times in Soviet history since the Second World War and Martin brings out clearly and vividly the stimulating atmosphere and the stunning changes he witnessed. That these changes are revolutionary, as radical as anything that has happened in that vast country since the October revolution, is the principal point of "Breaking with History."

Since Gorbachev's appearance on the Soviet scene there have been so many outside observers and American Kremlinologists who have doubted his intentions, pooh-poohed his reforms, and predicted his imminent demise, that it is refreshing to have a Canadian eyewitness who believes what he sees and reports it as honestly as he can. Martin is obviously not a naive Gorby fan and he reports how difficult it is, and will be, to turn around a society where three or four generations have been brought up under the deadening constraints and fears of a totalitarian system.

Gorbachev, he writes, though a product of that system, that establishment, was set apart "by his exposure to the West, his education, his youth, his openness, his perspective." His insistence on open-

ing up a secretive society, his *glasnost* policy, was essential for revolutionizing Soviet political institutions, for changing attitudes to human rights, for supporting his new foreign and defence policies, and for attempting to make his essential *perestroika* policy for restructuring the economy, work.

Martin describes the difficulties Gorbachev has had, the unexpected concessions he has made, to persuade that other superpower, the United States, to halt the arms race, to seek nuclear disarmament, and conventional force reductions – an opportunity still not fully grasped by a suspicious US administration. Aside from his pertinent vignettes of life in Gorbachev's Soviet Union, his encounters with earnest activists and *lumpen* disbelievers, Martin outlines the great obstacles.

The USSR is a superpower, in its 70th year of the Great Revolution and the second year of the Gorbachev reformation, that can produce the world's biggest nuclear missiles and its best tanks, but can't produce enough toothpaste, sugar, meat, potatoes, porridge oats, wallpaper and writing paper, ball bearings or hearing aids to meet its peoples' needs. The necessities of life still come second to the sinews of war, despite Gorbachev's serious efforts to curb the arms buildup and divert its industries to peaceful pursuits. It has been his least successful revolution.

It is little wonder that he has unleashed a volcano of unrest – economic, social, and ethnic – and why so many wonder whether this Russian Martin calls "a man of moral vision" can survive. Yet can they put his revolutionary genie back in the bottle now? Martin seems to think not, and his informative book is a most useful introduction to the biggest story of the nineties. – John R. Walker

### A Nation Forged in Fire: Canadians in the Second World War 1939–1945

J.L. Granatstein and  
Desmond Morton

Toronto: Lester and Orpen Dennys,  
320 pp., \$35.00 cloth

J.L. Granatstein and Desmond Morton have inherited the C.P. Stacey mantle; by now one expects a book a year from them on some aspect of Canadian military history. Unlike Stacey they have become popularizers, on the whole a good thing. However, both Granatstein and Morton have written far more thought provoking works on Canada and war than *A Nation Forged in Fire*. Professor Granatstein's *Broken Promises: A History of Conscription in Canada* should be required reading in a country that suffers from split-brain memory – neither English nor French Canadians have a complete and accurate memory of the war.

This book is the Canadian "book of lists" about the Second World War. It begins to make sense, after a fashion, when you remember that this is an anniversary book, rather like a high school yearbook for the alumni of 1939–1945 – there are lots of pictures and snappy quotes.

The first lists are about the woeful inadequacy of the armed forces, and since this is early in the book, it takes three or four more before you recognize the pattern:

Before the war, Canadian shipbuilding had been insignificant, but between 1939 and 1945, 391 cargo vessels, 487 escorts and minesweepers, and 3,600 specialized craft came down the ways. The story was the same for military vehicles: at the peak of production in 1944, 4,000 trucks and 450 armoured vehicles a week were built. In the aircraft industry....

Employment statistics for women, records of what women collected in salvage campaigns, and inventories of food parcels follow, as well as long lists of casualties. But somehow a sense

of horror at all the destruction and death is lacking. The language used to describe battles in reminiscent of the Boy's Own Annual: "the assault at Puys saw the Royal Regiment and the Black Watch destroyed by withering fire ..." "there was much heroism at the charnel-house of Dieppe." And Canadian corvettes "eventually packed a wallop" (a very small one).

In spite of the authors' awareness that the country went to war because of "ties of sentiment, blood and culture" on the part of English Canadians – and despite a great deal of attention to the issue of conscription – this is essentially another book written about English Canada's war. Of course French Canadians play a role, but the voice is from Toronto, fifty years ago.

This book is strongest as a visual reminder of the transmuting effects of war. A picture really is worth a thousand words, particularly Alex Colville's drawing of bodies in a concentration camp, Miller Brittain's "Night Target, Germany" and Lawren P. Harris's paintings of Ortona. The large number of photographs and paintings give this book its emotional depth, but they cannot make up for the sketchy treatment of a number of subjects – from the Enigma codes to the treatment of the Hong Kong prisoners of war. This is a book for the initiated and for the war buffs; for the uninitiated there is both too much and too little. – Tina Viljoen

Ms. Viljoen is the co-author with Gwynne Dyer of a book forthcoming from McClelland and Stewart, *The Defence of Canada: In the Arms of the Empire*.

### Cold Water Politics: The Maritime Strategy and Geo- politics of the Northern Front Ola Tunander

London: Sage, 1989,  
194 pp., £22.50 cloth

This is a difficult book, not suitable for the general reader, but

ultimately rewarding for those with a special interest in Nordic security, maritime strategy, geopolitics, or the international politics of "signalling" (what Tunander refers to as the "body language of the superpowers"). The heart of the book concerns the US Maritime Strategy and its impact on northern Europe, but it also touches on Nordic security policies more generally, Swedish defence doctrine in particular, and the well-publicized incidents of Soviet submarine intrusions into Swedish waters.

The author – a young Swede at the International Peace Research Institute, Oslo – demonstrates a deep knowledge of all of these matters, as well as some of the more arcane fields of international relations theory, geopolitics, and semiotics. The book itself suffers somewhat from a rather heavy academic style, sometimes opaque language, repetition, and cluttered, computer-generated graphics that are less than pleasing to the eye. But none of this should deter serious readers from perusing it to their benefit.

Mr. Tunander is no great fan of the Maritime Strategy, but his examination of it is balanced and fair. He identifies three main functions of the strategy's emphasis on threatening Soviet ballistic missile submarines (SSBNs): altering the nuclear balance, protecting the Atlantic sea lanes (by forcing the Soviets to devote all of their energies to defending their home waters), and deterring Soviet attack in areas vital to the West, such as the Persian Gulf. Of these, he rejects the "technical credibility" of the first two but accepts that of the third. In his view, uncertainty about the US threat to Soviet SSBNs should "underline the importance of Soviet restraint in other parts of the world."

What makes the book unique, however, is its extended discussion of the Maritime Strategy from a European – particularly a North European – perspective. The Norwegians, he points out, have been ambivalent about the strategy, on the one hand welcom-

ing an increased US presence off their coasts, while on the other hand fearing the export of a super-power conflict in the Third World to Northern Europe.

According to Tunander, Moscow will do all it can to avoid a conflict in such a strategically sensitive (and vulnerable) area, but if it believes a US attack is imminent, as a result of its action somewhere else in the world, it is likely to strike hard at Scandinavia. Furthermore, he interprets more provocative Soviet submarine activity in Swedish waters in recent years as a signal, aimed primarily at Washington, of its ability and willingness to do so.

Tunander shows how the North Europeans, who once sought to insulate themselves from the rivalries and tensions of Central Europe, now seek to link themselves more closely to what they consider to be a comparative oasis of stability and detente there. They are also, as he points out, increasingly seeking to extend the arms control measures being implemented on the European continent to the less clearly-defined Northern sea areas.

In this respect, he is remarkably optimistic, given his account of the deep-rootedness of the Maritime Strategy. Despite the latter, he foresees the extension of arms control measures to the sea as inevitable, driven by such factors as fiscal constraints, an increasing unwillingness on the part of the superpowers to jeopardize the survivability of key naval assets in forward areas, and gradual US awareness of the counterproductive impact of the Maritime Strategy on ally and foe alike.

### **Wartime: Understanding and Behaviour in the Second World War** Paul Fussell

*New York: Oxford University Press, 1989, 330 pp., \$24.95 cloth*

Two books written during the last decade have permanently altered the standards for acceptable writing in the English language on the subject of large-scale combat:

*The Face of Battle* by John Keegan and the first book on warfare by Mr. Fussell, *The Great War and Modern Memory*. Between them, the effect has been to render shallow and foolish any writer about war who resorts to words like "the fallen" and "sacrifice," or who does not attempt to enter into the combat experience with a complete and sympathetic understanding of the soldier's physical and emotional world.

Unlike his earlier work which was scholarly in approach (Fussell is a professor of English literature), *Wartime* is an angry and often bitter assault on what he sees as a widespread public complacency, as well as a wholly sanitized "and Norman Rockwellized, not to mention Disneyfied" view of the soldiers' experience – especially in the last great war. And Fussell minces no words about what he set out to do: "For almost the past fifty years the Allied war has been sanitized and romanticized almost beyond recognition by the sentimental, the loony patriotic, the ignorant and the bloodthirsty. I have tried to balance the scales." For his ammunition he draws upon his own grim experience as a junior officer in the US army in Europe, and his formidable talents and knowledge as social critic and cultural historian. It is a potent and wrenching combination.

The book proceeds methodically to explore every crevice and crack in the yawning gap between what a combat soldier in WWII was told he would find before arriving at the front, what he actually experienced when he got there and what the public at home was told about it all. Through high culture and low, in film, in newspapers and on the radio, the home front was fed sheer nonsense about the unfolding horror on the battlefields. The aim, of course, was to keep up morale, but Fussell contends that the endless "boy scoutism" of official and unofficial propaganda only made the soldiers' lives more miserable and it made them angry – they had to live with the daily idiocy and terror of military life on the front lines.

He reserves particular venom for the *Time-Life* book series on WWII which, in his view, has done "more than perhaps any other popular account of the war to ascribe clear, and usually noble, cause and purpose to accidental and demeaning events." Fussell devotes a whole chapter to accidental killings and foolish blunders that made one's own army as dangerous to life and limb as the enemy's.

Much of Fussell's account is darkly funny. Chapters on "chickenshit" – "behaviour that makes military life worse than it need be" and which can be "recognized instantly because it never has anything to do with winning the war"; and the suffering caused by constant deprivation and danger, "Drinking Far Too Much, Copulating Too Little," will cause open laughter.

Indignation runs throughout, but surfaces as barely controlled fury in the final chapter "The Real War Will Never Get in the Books." Fussell tries to convey the real war here, complete with graphic description by himself and others of what even today remains unsaid and unseen in mass media treatment of combat – modern war conducted with explosives kills people by dismembering them. It is what every soldier fears, and should he escape being wounded himself, must watch and smell and touch.

Combat is, of course, madness and so it drives people crazy. Even armies have learned this, which is why in Vietnam soldiers were not sent for the duration, as in WWII, but for a fixed term of a year – "the American military learned ... that men will inevitably go mad in battle and that no appeal to patriotism, manliness, or loyalty to the group will ultimately matter."

– Michael Bryans

*Mr. Bryans is editor of Peace & Security and co-creator of the NFB film series War.* □

Reviews of French language publications can be found in the *Paix et Sécurité* "Livres" section.

THE ORGANIZATION OF AMERICAN STATES (OAS) is an institution in quest of a purpose. It is definitely not the effective instrument for hemispheric cooperation it purports to be. Its importance as a forum is marginal. For the US it is of residual value – more of a hindrance to unilateral action than a willing tool of US foreign policy towards Latin America. For the countries of the region, it has been superseded by the Latin American Economic System (SELA) as a caucus for collective action vis-à-vis the North on economic issues, and is less than effective in the solution of regional conflict. Therefore, from Canada's viewpoint as a new member of this body, the question is: what needs to be done to give the OAS a new lease on life?

The Organization's activities are grouped into three areas: legal, political and security; developmental; and cultural. Progress has been very uneven on these various fronts. In the face of a dwindling budget and mounting deficits, the deliberative bodies of the OAS have continued to add functions and assign programmes to a harassed and technically insufficient staff. The result is wholesale internal demoralization and a growing irrelevance of the institution for most member countries, despite the strenuous efforts of the current Secretary-General, Baena Soares.

The principle of one country, one vote, with the presence of an array of micro-States, has led to an often irresponsible voting pattern, reminiscent of the UN General Assembly but without the safeguards provided by the Security Council. Multilateralism in international affairs has receded under the onslaught of unbridled unilateralism: the institutions that have survived are those able to display a technical proficiency that cannot be matched by the member states, or those blessed with charters enabling them to adapt without trauma to the evolving requirements of their members.

In the case of the OAS, neither condition was fulfilled. A charter reform is therefore necessary to meet the challenge, and tactically this can only be achieved if one member country – in this case the newest member, Canada – lobbies diplomatically for the adoption of the broad parameters of a new design, and succeeds in obtaining a consensus. The following attempts to shed some light on a basic outline for reform.

THE FUNCTION OF THE OAS AS A FORUM FOR negotiations on political and economic development issues between the US and Latin

# CANADA INSIDE THE OAS

*We've taken the plunge, so now what?  
At least one Latin American who ought to know  
believes we could be essential to reviving  
a moribund institution.*

BY G. LANDAU

America-the Caribbean has been overtaken by events: it has failed to prevent unilateral action by the US (for example in Grenada), it has not been able to resolve festering regional conflicts (Central America, Panama), it has not resulted in new policy directions for the most profound economic crisis in the hemisphere (debt and its corollary of social disintegration, drugs). Despite the ponderous machinery for policy-making, the OAS has failed to come to grips with the most relevant issues facing the regional community.

There is in the Americas a centrifugal tendency, with countries divided on many issues – the treatment of external debt for example – on which logically there should be convergent positions. Rather than a gradual expansion of sub-regional integration arrangements, we are witnessing their disintegration. For the Caribbean nations associated with the European Community through the Lomé Convention, the magnet of economic aid from Brussels pulls them ever farther away from their Latin American brothers.

To sum up, there is a need for a genuinely regional institution that, without evoking the danger (and taboo) of political interference in the internal affairs of the hemisphere's republics, would provide a forum and the attendant technical infrastructure to achieve closer cooperation – a sort of Organization for Economic Cooperation and Development (OECD) for the Americas.

THIS IDEA IS NOT QUITE ORIGINAL. IT WAS PUT forward in 1971 by the then Chairman of the Inter-American Committee on the Alliance for Progress (CIAP), Carlos Sanz de Santamaria. At the time, the disarray within the OAS was already such that the proposal was not acted upon at all. The essential concept is that the OAS be converted into an organization where the supreme body would be a Council of Ministers representing all the member states, and where the Ministers, sitting ex officio, would be rotated according to the portfolio being dis-

cussed; thus, there would be a Council consisting of foreign ministers, or ministers of agriculture, or transport, or whatever other subject might come under scrutiny.

LIKE THE OECD AND ITS DEVELOPMENT Centre, the OAS should devote itself primarily to policy formulation on hemispheric cooperation and the research function underpinning it. A careful evaluation should be made of the continued need for some of the specialized agencies, such as the Inter-American Defense Board, the Children's Institute and analogous

bodies. The powers of the Secretary-General should be strengthened, notably as regards the right of initiative.

The Organization should be streamlined, made tighter, more productive, and above all, more relevant to its membership. In this context, certain functions could be added. The old Pan American Union, until 1948, filled an important role as the drafter and trustee of a large number of technical covenants among its member states. In Europe, a similar function has been performed for the last forty years by the Council of Europe, whose seminal role in the development of both human rights and a network of technical conventions, is widely recognized. There is a pressing need for legal harmonization in Latin America and the Caribbean, and the OAS could be entrusted with this responsibility.

I have attempted here to chart a course for the OAS that would restore its legitimate and important role in the Inter-American system – loosely patterned after the OECD, with some ideas based on the past performance of the Council of Europe. There is no substitute for creativity and imagination, but sober realism must preside, lest the exercise succumb (as have so many other attempts at the management of hemispheric relations), to an overdose of fantasy and unfounded expectations.

Canada has a pragmatic, self-interest in making a significant intellectual contribution to a revised structure for the regional system. In the event Canada succeeds in developing a consensus for such a blueprint, at the end of the exercise we may be able to say – like Balboa in his letter to the King of Spain upon reaching the shores of the Pacific Ocean – “Hasta que en fin, Señor, hemos descubierto algo nuevo!” Finally, sir, we have discovered something new! □

*Mr. Landau, a Brazilian, is a senior international civil servant and formerly worked in Canadian-OAS affairs. The views expressed are his own and do not represent those of any organization.*

# LE CANADA

PAR G. LANDAU

*Au moins un Latino-américain, qui parle en connaissance de cause, croit que le Canada pourrait bien avoir un rôle essentiel à jouer dans la revitalisation d'une institution moribonde.*

Etats membres; les ministres y siègeraient d'office, et la composition du conseil changerait en fonction de la nature des questions débattues. Ainsi, il y aurait un conseil des ministres des Affaires étrangères, ou de l'Agriculture, ou des Transports, et ainsi de suite, selon le thème qui serait à l'étude.

Tout comme l'OCDE ET SON CEN- tre du développement, l'OEA devrait surtout se consacrer à l'élaboration des politiques intéressant la coopération hémisphérique et aux recherches que cela supposerait. Il conviendrait aussi de s'interroger à fond pour savoir si certains organismes spécialisés sont toujours nécessaires; citons ici la Commission interaméricaine de défense, l'Institut interaméricain de l'enfance, et d'autres éléments analogues. Il faudrait renforcer les pouvoirs du Secrétaire général, notamment en ce qui concerne le droit d'initiative.

Il importe de rationaliser et d'affiner les structures de l'Organisation, il faut la rendre plus productive et, par-dessus tout, plus utile à ses membres. Dans un tel contexte, d'autres fonctions pourraient lui être confiées. L'ancienne Union panaméricaine (1910-1948) a joué un rôle important en tant que rédactrice et depositaire de nombreuses ententes techniques entre ses membres. Outre-Atlantique, le Conseil de l'Europe remplit une fonction semblable depuis quarante ans, lui qui a, on le reconnaît largement, monté la voie pour l'avancement des droits de la personne et l'élaboration de nombreuses conventions techniques. L'import d'harmoniser de toute urgence les régimes juridiques en Amérique latine et dans les Caraïbes, et ce pourrait être la tâche à confier à l'OEA.

J'ai tenté ici de tracer pour l'OEA un plan qui lui rendrait son rôle légitime et important au sein du système interaméricain, et qui reprend en gros la structure de l'OCDE, certaines idées s'inspirent de la fiche de route du Conseil de l'Europe. Rien ne saurait remplacer la créativité ni l'imagination dans des exercices de ce genre; un réalisme réfléchi doit l'emporter, fût-ce au quel un excès d'utopie et de trop nombreuses attentes non fondées risqueraient de faire échouer toute la démarche (comme ce fut le cas de tant d'autres tentatives faites pour gérer les relations hémisphériques).

D'un point de vue pragmatique, le Canada a tout intérêt à apporter une contribution intellectuelle importante à la révision structurelle du système régional. S'il réussit à susciter un consensus au sujet d'une telle réforme, on pourra peut-être dire à la fin de l'exercice, tout comme Balboa dans la lettre qu'il adressait au roi d'Espagne après avoir atteint les côtes de l'océan Pacifique : « Hastia que en fin, señor, hemos descubierto algo nuevo! » Enfin, sûr, nous avons découvert quelque chose de nouveau! □

M. Landau, qui est Brésilien, occupe un poste supérieur dans la fonction publique internationale, et il a déjà travaillé dans le domaine des affaires intéressant à la fois le Canada et l'OEA. Il exprime ici ses opinions personnelles et il ne parle au nom d'aucun organisme en particulier.

ORGANISATION DES ETATS

américains est une institution qui se cherche une raison d'être. Chose certaine, elle n'est pas dans l'hémisphère l'insuffisamment efficace de coopération qu'elle prétend être. En tant que tribune, elle n'a qu'une importance secondaire. Pour les Etats-Unis, elle ne sert pas à grand-chose; c'est plus un obstacle à l'action unilatérale qu'un exécutant bien disposé de la politique étrangère américaine à l'endroit de l'Amérique latine. Pour les pays de la région, elle a été supplantée par le Système économique latino-américain (SELA), en tant que centre de coordination de l'action collective face au Nord au sujet des questions économiques, et elle ne contribue pas beaucoup au règlement des conflits dans la région. Aux yeux du Canada qui vient de se joindre à l'Organisation, la question est donc de savoir ce qu'il faut faire pour lui redonner vie.

L'Organisation a trois grands champs d'activité : la sécurité et les questions juridiques et politiques; le développement; et la culture. Les progrès accomplis dans ces trois domaines ont été très inégaux. Avec un budget en baisse et des déficits croissants, les organes délibérants de l'OEA ont confié des fonctions et des programmes toujours plus nombreux à un personnel somme toute ne possédant pas toutes les compétences techniques voulues. Il en résulte un découragement interne généralisé et la perception, chez la plupart des pays membres, que l'institution ne sert plus vraiment à grand-chose, en dépit des efforts continus du Secrétaire général actuel, M. Baena Soares.

Vu la présence de toute une gamme de petits Etats, le principe « à chaque pays une voix » a donné lieu, au moment de voter, à des habitudes irresponsables qui rappellent le cas de l'Assemblée générale de l'ONU, sauf qu'il n'y pas à l'OEA les garanties offertes par le Conseil de sécurité. Dans les affaires internationales, le multilatéralisme a reculé devant les assauts répétés de l'unilatéralisme; les institutions qui ont survécu sont celles qui ont pu afficher une compétence technique dépassant les capacités des Etats membres, ou celles qui ont su se doter d'une charte leur permettant de s'adapter sans heurt aux exigences changeantes de leurs membres. L'OEA ne fait partie ni de l'une ni de l'autre catégorie. Une réforme de la charte s'impose donc et, du point de vue tactique, cela n'est possible qu'à un pays membre (dans le cas qui nous occupe, le membre le plus récent, soit le Canada) exerce des pressions diplomatiques pour faire admettre les grands paramètres d'une nouvelle structure et s'il réussit à obtenir un consensus. Nous essaierons donc ici d'expliquer en gros en quoi la réforme devrait consister.

EN TANT QUE TRIBUNE POUR LA NÉCESSAIRE DES questions affectées à la politique et au développement économique entre les Etats-Unis, l'Amérique latine et les Caraïbes, l'OEA n'a pas été à la hauteur des événements : elle n'a pas pu

offerts, des statistiques, des cartes, des cartouches et des bibliographies, offrent un produit de qualité que le lecteur peut consulter aisément. Les auteurs ont rédigé une centaine d'articles qui touchent à presque tous les aspects de la vie dans le tiers-monde. L'accent est cependant été mis sur les problèmes sociaux et économiques, en faveur des Etats du tiers-monde. Un dossier spécial est consacré au travail des Etats du tiers-monde, au travail des organisations non gouvernementales. Dans la section, «Le tiers-monde tel qu'il est», Michel Clément souligne qu'aucune religion, qu'aucune idéologie ne constitue automatiquement un moteur pour le progrès, alors que Thierry Paquot constate que la modernité occidentale rend à s'imposer partout, tant bien que mal. On lira avec intérêt un article sur l'éducation où, en dépit des efforts réalisés, l'univers des non-scolarisés a tendance à s'accroître. Même constatation inquiétante en ce qui a trait aux problèmes du logement, de la santé et de l'environnement. Grâce à cette nouvelle édition de *L'état du tiers-monde*, les auteurs nous font prendre conscience de l'ampleur des défis qu'on relève les Etats du Sud depuis trente ans et du travail qu'il reste à faire. A lire et à relire. — Jocelyn Coulton

publiés en anglais dans la rubrique  
Reviews de Peace&Security.*

Enfin, ce livre ne passe pas sous silence les dangers qui guettent l'Etat hébreu aux prises depuis toujours avec une obsession pour le secret. *Israel ultra-secre* devrait être abordé pour ce qu'il a de mieux à offrir, à savoir une multitude de détails et de révélations sur les acteurs et les pratiques des différents services de renseignement israéliens. Pour ce, le boudin présente un intérêt particulier, car on peut douter que la version officielle des histoires secrètes d'Israël soit sous peine libérale.

Marie-France Desjardins

Marie-France Desjardins est assistante de recherche à l'Institut canadien pour la paix et la sécurité internationales.

L'état du tiers-monde  
Collectif  
Éditions La Découverte, Paris, 1989.  
320 pages, 24,95 \$

Le verser-monde n'a jamais été facile à définir et encore moins à expliciter. Il fut un temps, certes, où une certaine mode imposa un vision homogène de cet ensemble de notions. Mais, aujourd'hui, on ne peut plus d'ailleurs invoquer la similitude des problèmes comparables et, de ce point de vue, les solutions

ant la réalité. La Chine n'était pas le Burkina Faso et le Costa Rica ne partageait pas les mêmes problèmes que la Birmanie.

On sait maintenant que le tiers-monde n'est pas uniforme et que son entrée dans la modernité se fait à des vitesses et par des moyens différents, tant politiques qu'économiques. Le collectif d'auteurs qu'a réuni Serge Corbellier présente, dans cette deuxième édition de *L'état du tiers-monde*, la diversité et la complexité des sociétés du Sud. Il a choisi pour ce faire un véhicule qui connaît un succès retentissant dans le monde francophone : la série d'ouvrages intitulée « L'état », en plus de la publication annuelle de *L'état du monde*, les Editions La Découverte ont déjà publié *L'état de la France*, *du Japon*, *de la Chine*, *des sciences et de la religion*. La formule, qui rassemble des articles

devoilà encore plus.  
Fort en rebondissement, *Israël ultra-secrète*, nous présente les plus grands coups et les plus grandes bavures enregistrés par les services secrets israéliens au cours des onze années précédant le début de *l'infidélité* dans les territoires occupés. Il nous présente les hommes politiques, diplomates, généraux et traîtres de toutes sortes qui se côtoient dans des cercles fermés où un seul mot d'ordre est de rigueur : la fin justifie les moyens. Comme toute bonne enquête journalistique, le récit de Derogy et Carmel est d'apprendra qu'en dépit de ses très mauvaises réputation, la communauté d'investissement israélien n'avait

Si ce genre d'ouvrage peut trouver un auditoire assez large, il faut insister pour souligner qu'il ne

S'agit-il d'une étude approximative des services secrets israéliens et, en core moins, d'une analyse détaillée des problèmes de sécurité auxquels est confronté Israël. Ainsi, sans nier le rôle important que joue la communauté du renseignement pour la sécurité de l'Etat hébreu, on aura de la difficulté à parager la conclusion des auteurs voulant que quelles que

tiennne, « les clés de la paix ou de la guerre restoront finalement entre les mains de ces diplomates de l'ombre... ». De la même façon, il faudra se méfier de pouvoir déchiffrer l'aventur de ce pays à travers la simple lecture des exploits et de fail-lances de ses services secrets. À cet égard, les auteurs ont pris un parti qu'ils ne pouvaient tenir.

Ceci dit, l'ouvrage a tout de même le mérite de bien présenter la multiplicité des missions des ser-vices secrets israéliens. Par le choix d'un aspect unique de l'espionnage israélien qui consiste, comme nous le rapporte les auteurs « à conduire des opérations de renseignements sur des intentions belliqueuses des États arabes entourant Israël et, simultané-ment, y rechercher des parre-naires pour amorcer le processus de la paix ». Notons aussi que certains

depuis 1979, notamment, l'ONU reconnaît une Convention des droits de l'enfant, laquelle varie énormément selon les pays. Si cette convention était conclue, les pays signataires seraient liés par traité, mais on ne sait pas grand-chose des mécanismes d'application prévus. Seul conflit pour lequel l'auteur ne se contente pas de camper les accents, la révolution iranienne est présentée de façon simpliste et réductrice. D'autres reproches peuvent aussi être adressés à ce livre :

plusieurs points : son volume

ce, de façon étonnante, avec de nombreuses photographies. Enfin, l'auteur a parsemé son texte de nombreux exemples historiques concernant l'utilisation des enfants dans la guerre, de l'Antiquité aux Croisades, des guerres napoléoniennes à la *Holier Jugend*, montrant ainsi que le phénomène n'est guère récent — Annie Bourel

«Le sceau du secret ne cesse de marquer la vie d'Israël. En une seule décennie, le long bras de l'Etat hébreu l'a vengé du massacre de ses athlètes aux Jeux olympiques de Munich, a anéanti la première centrale nucléaire arabe à Bagdad, détruit les fusées soviétiques au Liban, sauvé les juifs d'Éthiopie, pris contact avec le service égyptien au Maroc, prévenu un attentat aérien au Grande-Bretagne, vendu des missiles à l'Iran de Khomeiny, exécuté le numéro 2 de l'OLP à Tunis...» et ce n'est que le début, car Jacques

## LIVRES

### De la balkanisation : histoire d'une modernité incomplète

Georges La Décroix  
Éditions La Découverte, Paris, 1989.  
381 pages, 39,95 \$

Ce nouveau livre de Georges

Corn condense et met à jour une pensée politique déjà amorcée dans *La Proche-Orient éclairé* (1983) et *Géopolitique du conflit libanais* (1986). Cette pensée prend la forme d'une enquête scientifique sur les rapports entre l'Occident et l'Orient, un sujet qui a déjà fait couler beaucoup d'encre et de sang ! Mais, de l'avis de l'auteur, la plupart des solutions déjà proposées pour désamorcer la poudre du Proche-Orient n'ont débouché que sur un dialogue de sourds. C'est que les intervenants abordaient souvent la problématique avec des partis pris, des préjugés, voire en utilisant un discours enflammé.

Consentent des traquenards qui le gâtent, l'auteur, économiste et sociologue libanais, s'abstient donc, dès le départ, de culpabiliser l'Europe en lui imputant tous les torts, comme l'avait fait plusieurs de ses contemporains. Il récusé du même coup l'incompréhension de certains orientalistes qui appliquent des grilles européennes dans les analyses portant sur le Proche-Orient ou qui occultent des faits historiques. Corn a cherché à comprendre les causes de la violence au Proche-Orient en élargissant son analyse. Il souligne la parallèle entre la violence en Europe centrale au début du siècle qui conduisit à la balkanisation de la région et, maintenant, la «libanisation» du Machrek. Pour lui, ces deux processus ont une origine

commune : l'effondrement des empires austro-hongrois et ottoman. «Ces événements sont à l'origine des situations du Proche-Orient que la culture européenne vit si mal aujourd'hui», écrit-il.

Le narcissisme européen, sa complaisance dans l'exotisme de bas étage et ses blocages de perception ont contribué à déchirer les peuples du Proche-Orient arabe après avoir au préalable démembré l'empire austro-hongrois. Par la suite, la balkanisation n'a pas tardé à s'étendre à l'est du bassin méditerranéen pour s'attaquer au plus petit État de la région, le Liban. Comment peut-on espérer dès lors, se demande l'auteur, que ces mêmes forces de désintégration changent leur fusil d'épaule et se mettent à corriger l'imbricolage dont elles sont les premières responsables ?

Tout d'abord, soutient l'auteur, il faut leur montrer qu'il y a de leurs intérêts. Une guerre régionale peut facilement dégénérer en conflats mondiaux apocalyptiques. Ensuite, il faut leur rappeler que la création de l'État d'Israël, produit de la victoire européenne aux conférences de la paix, a pas fluents de l'antisémitisme, n'a réglé le problème des juifs. Et, en dernier lieu, il faut dénoncer le concept d'État-nation avec tout ce qu'il comporte de contradictions et d'ambiguïtés. À preuve, le Liban, qui remette la clé du salut du Liban exclusivement entre les mains des Libanais. Une telle affirmation a besoin d'être nuancée du fait que l'auteur souligne l'interdépendance de facteurs endogènes et du contexte international. L'intervention syrienne y est présente comme l'aboutissement logique de la création du Grand Liban par la force mandataire en 1920.

*L'Europe et l'Orient* est une vaste enquête menée par un politologue averti, qui s'appuie sur une documentation considérable et qui fait preuve d'une réflexion lucide et objective. S'il est vrai qu'il agit par-

fois des sonnettes d'alarme, c'est qu'il cherche à sensibiliser l'opinion à l'urgence de trouver une solution à la crise au Proche-Orient.

### Gosses de guerre

Alain Louyot  
Éditions Robert Laffont, Paris, 1989.  
252 pages, 23,65 \$

Dans un style journalistique,

Alain Louyot traite du pénible sort des enfants soldats. En vingt-deux courts chapitres, il arrive à couvrir toutes les dimensions du phénomène, soient : l'entraînement en traitement, les missions sur le champ de bataille, le traitement des prisonniers, les séquelles de l'expérience du combat et la réinsertion sociale, ainsi que les lacunes en matière de droit international.

Le plus souvent, le recrutement des garçons s'effectue par des rafles dans les écoles ou les villages, et Louyot accuse, entre autres, le gouvernement éthiopien, la guérilla du RENAMO au Mozambique et les Soviétiques en Afghanistan d'avoir pratiqué ces exactions. Les cas d'entraînement volontaire semblent avoir pour origine les pressions exercées par des prêtres, comme en Iran, ou une scolarisation orientée. À l'emploi, l'exercice d'analyse

exposera tous les juifs des pays arabes, qu'on propose aux enfants syriens de l'école primaire. Quant aux filles, on les retrouve plutôt dans les armées régulières (Syrie et Inde) que dans la guérilla.

Lors de la guerre du Golfe, les officiers français envoyaient leurs soldats adultes, gardiens de la révolution, Louyot affirme que plus de 100 000 enfants de moins de treize ans ont participé aux combats entre l'Irak et l'Afghanistan, des enfants qui avaient suivi un entraînement de deux mois espionnaient les rebelles

pour le compte des Soviétiques. En Colombie, les enfants sont utilisés pour perpétrer des assassinats politiques et au Guatemala, les «patrouilles sociales» permettent aux soldats de l'armée de savourer le repos du guerrier.

L'entraînement vise souvent à aiguiser la cruauté et le sadisme des jeunes soldats, souligne l'auteur avec des exemples comme les enfants khmers rouges et les recrues de la RENAMO, torturés lors de leur stage de formation.

Brûlés vifs en Afghanistan, les jeunes prisonniers connaissent, dans quelques-uns, la torture. Louyot signale des cas isolés en Turquie, au Chili, aux Philippines et en Ouganda. En Afrique du Sud, plus d'un millier d'adolescents ont été emprisonnés en 1986, et de nombreux khmers rouges ont fait de mauvais traitements et de tortures, notamment par décharges électriques. En Irak, on réserve aux petits prisonniers un traitement plus doux, en se contentant de les ex-

hiber devant la presse occidentale pour discréditer l'Iran. Quel avenir est réservé à ces anciens combattants de seize ans ? A cause de leur expérience militaire, la réinsertion civile s'avère très difficile. Ces adolescents présentent des réactions antisociales très fortes, par exemple, celle de tuer une autre personne pour régler une dispute. Moins spectaculaires, les autres séquences de cette militarisation pré-

sentent des enfants civils en temps de guerre depuis longtemps, la notion d'enfant soldat n'apparaît qu'en 1978 dans les Protocoles additionnels de la Convention de Genève.

se penchent sur ces cas. Louyot souligne aussi les nombreuses lacunes du droit international à propos des enfants soldats. Alors qu'on s'est préoccupé du sort des enfants civils en temps de guerre depuis longtemps, la notion d'enfant soldat n'apparaît qu'en 1978 dans les Protocoles addition-

nels de la Convention de Genève.

## NOTE DE LA DIRECTION

UN CANEVAS

POUR FAVORISER

LA COOPÉRATION

EST-OUEST

À la fin d'octobre,  
M. Bernard Wood a  
prononcé l'allocation  
d'ouverture à un col-  
loque international de  
leaders d'opinion, au  
Collège de la défense de  
l'O.T.A.N., à Rome, le  
thème était «La

coopération économique entre l'Est et l'Ouest :  
perspectives et limitations». Le présent article en  
représume certains des principaux points offrant le  
plus de pertinence, vu l'intérêt que le Canada  
porte aux relations Est-Ouest.

MON POINT DE VUE, LES DIRIGEANTS OCCIDENTAUX se doivent maintenant de reconnaître sans réserves l'ampleur des changements que M. Gorbatchev a provoqués en l'URSS même et dans le comportement de ce pays sur la scène internationale, et il leur incombe aussi de statuer sur les mesures concrètes d'encouragement qu'il est possible et sage de prendre.

À tout le moins, nous devons rejeter toute mesure (hormis celles qu'exige absolument la protection stratégique) qui s'apparenterait à des sanctions économiques ou à de la discrimination contre l'Union soviétique et les pays d'Europe de l'Est ayant entrepris une telle réforme fondamentale. La plupart de nos pays ont déjà sensiblement progressé dans la bonne direction, mais en attendant davantage ce retour à des relations économiques normales, nous ferions un geste symbolique fort utile.

Deux des plus importants changements d'ordre légal survenus dans l'économie nationale de l'URSS et ayant une incidence sur la coopération économique entre l'Est et l'Ouest prennent la forme de lois : la Loi de 1987 sur les entreprises d'Etat, qui vise à libérer complètement les entreprises de l'emprise économique des autorités centrales; et la Loi de 1988 sur la coopération, qui autorise les sociétés essentiellement privées (après à embaucher des employés en nombre illimité) à fonctionner dans n'importe quel secteur de l'économie.

AR ALLÉURS, LE COMMERCE EXTÉRIEUR N'EST plus administré comme avant. L'Etat n'exerce désormais plus de contrôle direct sur une bonne part du commerce extérieur. Non seulement les entreprises peuvent décider de genres de produits qu'elles vendront sur le marché mondial, mais depuis avril dernier, elles ont le droit d'aller elles-mêmes soutenir la concurrence à l'étranger. Voilà qui élimine la structure antérieure, en vertu de laquelle tout le commerce extérieur se faisait par l'intermédiaire d'un agent de l'Etat.

Les entreprises peuvent maintenant garder une partie de leurs revenus en monnaies fortes. On songe aussi à procéder à des ventes aux enchères de devises pour permettre aux entreprises de se rendre d'importation. Un nouveau système des échanges a été adopté qui rendra possible la déval-

luation du rouble. La décision prise en 1986 d'autoriser les coentreprises en Union soviétique et sa révision ultérieure en 1988 ont profondément changé les conditions régissant les investissements directs en provenance de l'étranger. De telles entreprises conjuguées ont favorisé l'implantation de sociétés essentiellement capitalistes au coeur même des économies socialistes.

Jamais les Soviétiques ne se sont autant intéressés aux organisations économiques internationales. En 1986, l'URSS a demandé au secrétaire général sur les tarifs douaniers et le commerce) la permission de participer à la ronde de négociations qui allait avoir lieu en Uruguay. Le GATT a rejeté sa demande, mais Moscou continue à manifester son désir d'adhérer à cet organisme, et le pays se prépare à amorcer des négociations officielles à cet égard. M. Ivan Iva-

nov, vice-président de la Commission nationale pour les relations économiques extérieures, croit que les réformes s'opèrent actuellement dans le secteur du commerce extérieur rendront la politique que commercialise de son pays comparable avec les exigences du GATT. Il précise, cependant, qu'il faudra au moins deux ans avant que les réformes visent les prix et les tarifs techniques soient suffisamment avancées pour que des pourparlers officiels puissent commencer.

OUTES SORTES DE PERSPECTIVES DE COOPÉRATION économique s'ouvrent maintenant entre les deux blocs, mais il existe aussi des limitations très concrètes. Une tâche d'une énorme complexité attend M. Gorbatchev, lui qui veut arracher l'économie soviétique à la stagnation. Les grands bouleversements qui surviennent à mesure que l'économie adopte de plus en plus les structures d'un marché libre comptent parmi les problèmes les plus ardu.

Citons à cet égard la résistance des bureaucrates peu enclins à renoncer à leur pouvoir d'intervention dans les affaires économiques; la confusion créée par les nouvelles lignes directrices, tandis que la réforme cherche la bonne orientation à suivre; le manque de devises étrangères et la non-convertisibilité du rouble; et l'avènement de normes sociales radicalement différentes, alors que les citoyens habitués au plein emploi et à l'égalité font connaissance avec le chômage et des disparités salariales de plus en plus grandes. Non seulement l'inertie du système ralentit l'expansion de la coopération économique entre l'Est et l'Ouest. De nombreuses anecdotes attestent la frustration des entrepreneurs occidentaux cherchant à transiger avec l'Union soviétique et l'Europe de l'Est; il y a notamment les attitudes qui ne sont jamais les mêmes d'une fois à l'autre, des associations sans expérience et une infrastructure vétuste, voire non existante.

Par ailleurs, les motifs de coopération sont très différents selon qu'il s'agit de l'Est ou de l'Ouest. L'URSS et l'Europe de l'Est veulent que leurs

économies produisent des biens concurrentiels sur les marchés étrangers. Mais pour cela, il leur faut obtenir de l'Ouest du matériel moderne et le savoir-faire. Quant aux entreprises occidentales, elles souhaitent exploiter le vaste marché des pays de l'Est, mais elles ne peuvent vendre, comme elles le voudraient, la technologie de pointe à ces derniers. Mais les coentreprises de production offrent peut-être une solution de compromis.

OUS CES PHÉNOMÈNES TRADUISENT DES RÉACTIONS normales du marché face à de nouveaux horizons qu'ouvrent la réforme et la modification des règlements. D'immenses possibilités s'offrent aux entrepreneurs et aux investisseurs occidentaux chaque fois qu'un gouvernement est européen modifie rationnellement sa politique. Toutefois, je crois que l'Occident devra faire preuve d'une grande prudence s'il veut prendre des mesures de coopération économique spéciales alliant au-delà de la logique du marché, laquelle est, après tout, un des principaux avantages que nous cherchons à partager. Ce n'est pas à un préfixe d'inaction, ni une froide prescription idéologique; c'est l'orientation que proposons le pragmatisme et le réalisme.

D'aucuns ont récemment déclaré que l'Europe de l'Est devait bénéficier d'un plan Marshall. Faute de quoi elle tomberait sous le coup de la loi martiale, et c'est certes là une observation percutante, mais je crois qu'elle est fort trompeuse. Pour ces pays, le défi ne consiste pas à sortir de sous les ruines de la guerre ni à reconstruire sur des cendres, mais plutôt à s'extirper des dédales bureaucratiques mis en place au cours de nombreuses décennies. Ce n'est pas de capitaux, d'argent, ni de matières premières qu'ils ont besoin, mais bien de la volonté voulus pour démanteler une myriade d'obstacles à une activité économique productive. Voilà qui, de toute évidence, ne peut se faire du jour au lendemain, mais le processus ne peut attendre non plus une époque plus stable. La stabilité en soi ne peut découler que d'une

évolution réussie.

J'ai consacré une bonne partie de ma carrière au dossier de l'aide extérieure et, en cette qualité, je suis persuadé qu'il n'est pas souhaitable ni même possible de dresser un quelconque plan Marshall pour l'Europe de l'Est. On peut certes établir beaucoup de bien avec des sommes considérables d'aide «de relais», mais tant que les formes fondamentalistes n'auront pas eu lieu, les économistes bureaucratiques des pays de l'Est risquent de devenir des abîmes qu'aucune quant-

ité d'aide occidentale ne pourra combler. Il serait de dépendance, et tout aussi réfractaire de susciter des attentes auxquelles il n'est tout simplement pas à même de répondre. □

— BERNARD WOOD

Dans cette nouvelle rubrique, les Services d'information visent à fournir une bibliographie sur les quatre volets du mandat de l'Institut, à savoir la limitation des armements, le désarmement, la défense et le règlement des conflits. Les titres mentionnés dans chaque numéro proviennent de la base de données Nous chercherons surtout à indiquer des documents uniques, qu'on ne trouverait pas facilement dans des bibliographies ordinaires. Les critères de sélection seront la rigueur de l'analyse, l'unicité de la perspective (géographique ou théologique) adoptée par les auteurs, ou le caractère inédit. Des ouvrages non produits par des experts, ou des documents présentant des points de vue différents figureront aussi dans la rubrique si leur contenu nous semble une meilleure compréhension d'une question donnée. En outre, la rubrique renseignera les lecteurs sur les ressources et activités des Services d'information, et elle traitera de divers aspects des ressources informationnelles.

## Profil de la bibliothèque de l'Institut

La bibliothèque a été créée en 1985. Elle contient une collection d'ouvrages spécialisés, y compris des documents émanant de gouvernements, d'ambassades et d'organismes internationaux; des ouvrages d'intérêt passagers et non publiés; et des données produites par des organismes du monde entier. Une base de données informatisée contient le fonds documentaire de la bibliothèque ainsi que diverses autres bibliographies afférentes aux volets du mandat. Des recherches par ordinateur sont faites sur demande et sans frais. Orwa, et elle est ouverte au public de 8 h 30 à 17 h, du lundi au vendredi. On doit consulter les ouvrages sur place, mais on peut se faire envoyer des photocopies par courrier; il est également possible de commander des ouvrages grâce aux prêts inter-bibliothèques. On peut faire une demande en personne, ou encore par téléphone, par courrier ordinaire ou par courrier électronique (Envoy: CHIPS, Web: CHIPS, Inet: C.I.I.P.S.).

Le Thésaurus sur la paix et la sécurité a été dressé pour offrir une terminologie thématique à employer afin de classer les ouvrages de la collection. Il est librement accessible aux groupes qui voudraient s'en servir pour cataloguer leurs propres collections sur la paix et la sécurité. Prière d'adresser ses demandes à : Thésaurus, Services

d'information, aux soins de l'Institut.

actuelles ? Le groupe a rédigé des recommandations en vue de les présenter au Secrétaire général. Le vendredi 13 octobre, l'Institut a lancé l'édition 1989 du *Guide sur les politiques canadiennes relatives à la limitation des armements, au désarmement, à la défense et à la solution des conflits*. Les membres du conseil, le personnel, des dignitaires et des journalistes ont célébré la parution de cet «ouvrage de référence essentiel» et ils ont félicité les rédacteurs, révisés et membres du personnel qui le produisent chaque année.

Au début de novembre, **Bernard Wood** a prononcé, lors de la remise du prix Gerald-Savory, un exposé à l'Université de la Colombie-Britannique. Il a choisi pour thème «Le système international des années 1990 : les perspectives du Canada et les risques qu'il court». Aparavani, il avait présenté à l'Université Québécoise une allocution intitulée «Repenser les rapports nord-américains». Après son passage en Colombie-Britannique, il s'est rendu à Whitehorse (Yukon) l'Institut et de leur évolution.

**Brad Feasey** a fait des exposés devant des professeurs du niveau secondaire, pendant une journée pédagogique à Brandon (Manitoba), à la mi-octobre. Plus tard au cours du même mois, il a participé à une assemblée de l'Ontario *History and Social Sciences Teachers Association* à Toronto. Dans les deux cas, il a dirigé des ateliers sur l'enseignement des questions de paix et de sécurité au niveau secondaire, et il s'est pour cela inspiré du *Teachers' Handbook on Peace and Security*, américain, parlé de la limitation des opérations navales, pendant un atelier qui s'est tenu le 8 novembre au *Centre for Naval Analysis*, à Alexandria (Virginie). **Roger Hill** et **Michael Bryan** ont assisté à l'assemblée annuelle du Centre québécois de relations internationales, à Québec. Cette année, la conférence a porté sur les changements survenus en Union soviétique et en Europe de l'Est et sur leurs conséquences pour la politique étrangère. **Margaret Bourgeault** a participé à Ottawa à la réunion du Groupe des 78 qui s'est aussi intéressé à l'évolution de la conjoncture soviétique. **Brad Feasey** et **Nancy Gordon** ont assisté à une table ronde sur les élections nationales et l'avènement de ce pays; cette activité avait été organisée par Oxfam-Canada et l'Entraide univers-

itaire mondiale Canada (EUMC). **Norma Saleem** a présidé une séance de la conférence de la *Middle East Studies Association*, à Toronto, en novembre 1989.

**Programme de bourses Barton**

L'Institut invite les personnes intéressées à faire leur demande dans le cadre de son programme de bourses, désormais appelé «Bourses Barton» en l'honneur de son premier président, M. William Barton, ancien ambassadeur du Canada à l'ONU. Le programme est accessible aux universitaires et aux autres personnes qui veulent entreprendre ou poursuivre des études sur la paix et la sécurité internationales. Le programme vise à favoriser l'accroissement des compétences et des connaissances de haut niveau dans ce domaine, en appuyant des Canadiens et Canadiennes qui souhaitent poursuivre des études dans des institutions au Canada ou à l'étranger.

L'Institut compte choisir dix récipiendaires et remettre ainsi deux bourses de fellow de 30 000 \$ chacune au maximum et huit bourses d'étude valant 14 000 \$ au plus chacune. Un comité de sélection indépendant évaluera les candidatures et rendra ses décisions en mai 1990. L'expérience ou les compétences universitaires leur permettent de l'expérience ou les compétences universitaires leur permettent de poursuivre des études supérieures.

Les candidatures pour l'année universitaire 1990-1991 doivent parvenir à l'Institut le 1<sup>er</sup> février 1990 au plus tard.

Pour obtenir plus de détails et des formulaires de demande, prière d'écrire à l'adresse suivante :

Programme de bourses Barton

**Procédure relative aux subventions et échéancier**

L'Institut attribue des subventions deux fois par année. On est prié de communiquer avec lui pour obtenir des formulaires de demande et le texte à jour énonçant les critères à respecter. Veuillez prendre note des échéances suivantes :

le 30 juin, pour la sélection d'octobre  
le 31 décembre, pour la sélection de mars

L'*Institute of Strategic Studies* de Londres a organisé à Wilton Park (R.-U.) une réunion à l'intention des chefs d'Institut de recherche; **Bernard Wood** y a assisté à la mi-novembre. L'Institut de recherches politiques, la *Chatham House* et divers groupes britanniques ont mis sur pied au Royaume-Uni un colloque sur les relations canado-britanniques dans le contexte de l'évolution des rapports en Europe et en Amérique du Nord. M. Wood a fait un exposé sur les relations Nord-Sud.

**Sergei Danilov**, membre de l'Institut des études canado-américaines à Moscou, a été reçu par l'Institut en novembre, dans le cadre du programme d'échanges entre les deux organismes. M. Danilov, qui étudie

en particulier les partis politiques canadiens et le processus électoral, a interrogé des universitaires, des fonctionnaires et des hommes et femmes politiques à Ottawa, et il a passé un certain temps à la Bibliothèque nationale et aux Archives. Il s'est par ailleurs réuni avec des experts canadiens à Kingston, à Toronto et à Montréal. M. Alexei Cherkasov, de l'ouvrage intitulé *12 Faces of Canada: Canadian Provinces and Territories*, qui a paru à Moscou en 1987. Son prochain ouvrage, qui est une biographie de M. Pierre Trudeau, sera bientôt publié à Moscou.

Au cours de l'automne, diverses personnalités ont visité l'Institut, dont **Walter Stock**, de l'Institut des relations internationales de Potsdam (RDA), et **Humberto Avaria**, représentant au Canada du Front Farabundo Martí de Libération (FMLN). Salvador O'Dwyer, professeur dans une école secondaire de Coburg (Ontario), a amené un groupe d'anciens combattants des guerres du Vietnam et d'Afghanistan à l'Institut, pour qu'ils échangent des idées avec les membres du personnel. Un peu plus tôt, le groupe avait passé un certain temps avec les étudiants d'histoire de la Défense, se sont entretenus avec des membres de

l'Institut et de leur évolution. **Brad Feasey** a fait des exposés devant des professeurs du niveau secondaire, pendant une journée pédagogique à Brandon (Manitoba), à la mi-octobre. Plus tard au cours du même mois, il a participé à une assemblée de l'Ontario *History and Social Sciences Teachers Association* à Toronto. Dans les deux cas, il a dirigé des ateliers sur l'enseignement des questions de paix et de sécurité au niveau secondaire, et il s'est pour cela inspiré du *Teachers' Handbook on Peace and Security*, américain, parlé de la limitation des opérations navales, pendant un atelier qui s'est tenu le 8 novembre au *Centre for Naval Analysis*, à Alexandria (Virginie). **Roger Hill** et **Michael Bryan** ont assisté à l'assemblée annuelle du Centre québécois de relations internationales, à Québec. Cette année, la conférence a porté sur les changements survenus en Union soviétique et en Europe de l'Est et sur leurs conséquences pour la politique étrangère. **Margaret Bourgeault** a participé à Ottawa à la réunion du Groupe des 78 qui s'est aussi intéressé à l'évolution de la conjoncture soviétique. **Brad Feasey** et **Nancy Gordon** ont assisté à une table ronde sur les élections nationales et l'avènement de ce pays; cette activité avait été organisée par Oxfam-Canada et l'Entraide univers-

itaire mondiale Canada (EUMC). **Norma Saleem** a présidé une séance de la conférence de la *Middle East Studies Association*, à Toronto, en novembre 1989.

**Programme de bourses Barton**

L'Institut invite les personnes intéressées à faire leur demande dans le cadre de son programme de bourses, désormais appelé «Bourses Barton» en l'honneur de son premier président, M. William Barton, ancien ambassadeur du Canada à l'ONU. Le programme est accessible aux universitaires et aux autres personnes qui veulent entreprendre ou poursuivre des études sur la paix et la sécurité internationales. Le programme vise à favoriser l'accroissement des compétences et des connaissances de haut niveau dans ce domaine, en appuyant des Canadiens et Canadiennes qui souhaitent poursuivre des études dans des institutions au Canada ou à l'étranger.

L'Institut compte choisir dix récipiendaires et remettre ainsi deux bourses de fellow de 30 000 \$ chacune au maximum et huit bourses d'étude valant 14 000 \$ au plus chacune. Un comité de sélection indépendant évaluera les candidatures et rendra ses décisions en mai 1990. L'expérience ou les compétences universitaires leur permettent de l'expérience ou les compétences universitaires leur permettent de poursuivre des études supérieures.

Les candidatures pour l'année universitaire 1990-1991 doivent parvenir à l'Institut le 1<sup>er</sup> février 1990 au plus tard.

Pour obtenir plus de détails et des formulaires de demande, prière d'écrire à l'adresse suivante :

# NOUVELLES DE L'INSTITUT

**Bernard Wood** a passé trois

semaines en Namibie, en septembre et octobre, en tant que membre d'un groupe d'observateurs de haut niveau. Ces derniers étaient chargés, par les ministres des Affaires étrangères du Commonwealth, de faire alliance un compte rendu sur les élections dans ce pays et sur le passage de ce dernier à l'indépendance.

À la mi-septembre, le secrétaire d'Etat aux Affaires étrangères, le très honorable **Joe Clark**, a annoncé la nomination de **Claude Julien**

au conseil d'administration de l'Institut. M. Julien, qui vit à Paris (France), est actuellement rédacteur en chef et directeur du périodique *Le Monde Diplomatique*, ainsi que président du Centre d'études et de recherches sur l'Amérique latine. Il a poursuivi une longue carrière de journaliste, surtout avec les équipes des journaux *Le Monde* et *Le Monde Diplomatique*; il a publié neuf livres qui traitent surtout des affaires internationales et de politique. Citons notamment l'ouvrage intitulé *Le Canada, dernière chance de l'Europe* (1965).

À la fin de septembre, **David Brada** a pris la parole pendant l'assemblée de fondation du Réseau des associations de défense à Ottawa: il a alors parlé de l'Institut et de son rôle dans le débat sur la paix et la sécurité, notamment à la lumière de l'évolution que les relations Est-Ouest ont connue au cours des cinq dernières années.

**Vladimir Petrovsky**, sous-ministre des Affaires étrangères en URSS, a rendu visite à l'Institut en octobre pour discuter des points de vue soviétiques sur les organismes internationaux et sur le multilatéralisme dans l'étude des questions de politique étrangère. M. Petrovsky a parlé des initiatives de son pays à l'ONU relativement à la notion de sécurité globale; il s'est penché sur le développement des idées exportées dans cette tribune et sur les réactions qu'elles ont provoquées

dans d'autres pays. Les perspectives d'actions multilatérales dans plusieurs domaines se sont considérablement améliorées au cours des dernières années, et M. Petrovsky a exhorté les spécialistes à prendre pour renforcer cette tendance.

«La coopération économique Est-Ouest et les perspectives de sécurité», tel était le titre d'une allocution-thème que **Bernard Wood** a prononcée pendant un colloque international, au Collège de la défense de l'OTAN, à Rome à la fin d'octobre. Le rapport du Directeur général, à la page 21, aborde certains des principales questions qu'il a alors traitées et qui constituent des éléments essentiels du débat mondial actuel.

À la fin de septembre, la Mission américaine auprès de l'OTAN et le *War College of the National Defense University* à Washington ont parrainé à Bruxelles une conférence sur les changements qui s'opèrent en Europe de l'Est et sur leurs conséquences pour la sécurité occidentale. **Fen Hampson** y a participé avec d'autres experts et décideurs des deux grandes alliances multinationales. Plus tard au cours de l'automne, M. Hampson a présenté un exposé sur le nouveau rôle des Nations-Unies, dans le cadre d'une conférence qui se tenait à Lisbonne sous les auspices de l'Institut portugais d'études stratégiques et internationales, et qui avait pour thème la sécurité européenne dans un monde multipolaire.

**Keith Krause**, de l'Université York, a représenté l'Institut à une conférence sur les transferts d'armes organisée par le Bureau des «Quakers» aux Nations-Unies. Le professeur Krause, qui a rédigé un compte rendu de conférence pour l'Institut sur le même sujet, a fait un exposé devant des spécialistes et des diplomates de niveau supérieur qui représentaient des États participant à l'ONU des résolutions sur cette question.

Pendant l'autonomie, la direction de la Recherche a organisé plusieurs colloques dans le cadre de sa série «Actualité». **Peter Beck**, du *Kingston Polytechnic Institute*, à Surrey

(Angleterre), a parlé de l'intérêt que le Traité sur l'Antarctique présente pour le Canada et l'Arctique. **Imar Rabimovitch**, de l'Université de Tel Aviv, a dirigé une discussion sur les rapports israélo-syriens dans le cadre d'un règlement du conflit au Moyen-Orient. **Fred Axelgard**, de l'Université de Georgetown, s'est penché sur le processus de paix arabo-israélien et sur le rôle des États-Unis dans ce contexte. **Kamel Abu Jaber**, de l'Université de Jordanie, a dirigé un débat sur le concept d'État au Moyen-Orient.

À la fin d'octobre, **Herbert Adam**, de l'Université Simon Fraser, et **Kogila Moodley**, de l'Université de la Colombie-Britannique, ont organisé et dirigé à l'Institut un colloque sur la politique du Canada à l'égard de l'Afrique australe. Le colloque faisait partie d'un grand projet de recherche que les deux universitaires ont entrepris pour le compte de l'Institut. **Alex Boraine**, Directeur général de l'Institut for *Democratic Alternatives in South Africa*, a amorcé la discussion en brochant un tableau des récents survenus en Afrique du Sud. Les participants se sont penchés sur les diverses analyses des options constitutionnelles et économiques et des formules de compromis. Le colloque s'est terminé par un examen de ce que la conjoncture sud-africaine suppose pour la politique canadienne, y compris l'incidence des sanctions commerciales, le désinvestissement, les boycotts universitaires et culturels, et le rôle des organismes non gouvernementaux.

À la fin d'octobre, **Gail Osherenko** et **Anne Fikkan** ont pris la parole devant des chercheurs réunis en colloque à l'Institut on *Arctic Environmental Challenges*. Mme Osherenko est chargée de recherche dans le cadre du Programme des études environnementales et de recitric de projet à l'Institut des études archiques au Collège de Dartmouth. Mme Fikkan est conseillère spéciale en matière de recherche environnementale auprès du ministre norvégien de l'Environnement, et elle est actuellement chercheur invité à Dartmouth. Le milieu arctique est menacé par les exploitations pétrolières dans l'Arctique

même et par la pollution issue des latitudes moyennes et transportée par les courants aériens et océaniques. En outre, la militarisation de l'Arctique, la construction de barrages hydroélectriques et même leournisme mettent de plus en plus en péril les écosystèmes, la faune et l'habitat de cette région du globe. Mme Osherenko et Fikkan ont abordé diverses questions: dans quelle mesure la coopération internationale est-elle nécessaire pour prévenir de telles menaces et y faire face? Pareille coopération doit-elle être limitée aux États circum-polaire, ou faut-il, au contraire, traiter des questions pertinentes dans des tribunes internationales plus vastes? La coopération entre les pays arctiques sur des questions environnementales aura-t-elle une incidence sur la sécurité militaire? Et enfin, la coopération régionale relative-représente-t-elle une menace pour l'Alliance occidentale?

**Nancy Gordon** a participé, en septembre, à une réunion d'experts organisée à New York par la *Friedrich Ebert Foundation* et le Centre des Nations-Unies pour la science et la technique au service du développement. Les intervenants des domaines de l'environnement, du développement économique et de développement, afin de formuler et de proposer des initiatives au Secrétaire général des Nations-Unies, lesquelles complèteront les efforts plus précisément, le groupe s'est intéressé au climat, à la technologie et à la conversion de l'information et à la technologie

économique, en mettant l'accent sur les questions suivantes: en matière scientifique et technique, quels sont les faits et les sujets de préoccupation fondamentaux pour les décideurs du monde entier, et à quels problèmes et conséquences politiques s'expose-t-on en essayant de traduire des connaissances scientifiques en actions politiques bien concrètes? Quelles pourraient être certaines des premières étapes pratiques à franchir pour sortir, politiquement parlant, des impasses

# EN DIRECT DE LA COLLINE PARLEMENTAIRE

La 34<sup>e</sup> session du Parlement a repris le 25 septembre, après le congé d'été. Aucune discussion d'importance n'a porté sur la politique étrangère ou la politique de défense à la Chambre des communes et l'autonomie, mais le secrétaire d'Etat aux Affaires extérieures, M. Joe Clark, a énoncé les grands thèmes de la politique officielle intéressant la sécurité internationale, quand il a pris la parole à la 44<sup>e</sup> session de l'Assemblée générale des Nations-Unies le 26 septembre dernier.

## M. Clark à l'ONU

Dans son allocution, M. Clark s'est réjoui des changements survenus dans les relations Est-Ouest, et il a notamment cité le cas des pays de l'Est qui se tournent peu à peu vers la démocratie et qui ouvrent leurs marchés au reste du monde. Evoquant les progrès remarquables accomplis dans de nombreuses conflits régionaux, il s'est dit encouragé par la conjonction sud-africaine et il a accueilli favorablement le plan de paix en dix points que le président Mubarak d'Egypte a proposé pour régler le conflit au Moyen-Orient. M. Clark a aussi souligné que la Conférence internationale sur le Cambodge (voir plus bas) avait contribué à définir les mécanismes internationaux de contrôle et les processus de reconstruction que l'on pourra faire intervenir une fois le conflit réglé.

## La politique sur le Cambodge

Après un mois de pourparlers, la Conférence de Paris a échoué le 31 août. Le Canada a présidé, avec l'Inde, un comité spécial chargé d'élaborer un cadre pour l'établissement d'un mécanisme international de contrôle. M. Clark, qui avait assisté à l'ouverture de la Conférence, ainsi qu'à la séance ministérielle du 28 au 30 août, a indiqué, en répondant en Chambre le 3 octobre à la question de savoir pourquoi le gouvernement refusait de reconnaître le Canada avait cherché une façon de constituer un gouvernement de coalition ou un régime provisoire qui pourrait parler au nom de tout le peuple cambodgien et dans lequel le rôle des Khmers rouges serait réduit au minimum. M. Clark a aussi fait savoir que le Canada envisagerait de participer à une force de maintien de la paix desquels un règlement interviendrait.

## L'Afrique australe

M. Clark a présidé la quatrième réunion du Comité des ministres des Affaires étrangères du Commonwealth pour l'Afrique australe, qui a eu lieu du 7 au 9 août à Canberra (Australie). Le Comité avait été créé à la réunion des chefs de gouvernement, à Vancouver, en octobre 1987, afin de fournir des conseils et un élan susceptibles d'aider le Commonwealth à atteindre ses objectifs à l'égard de l'Afrique australe. À la fin de la réunion, M. Clark a envoyé à M. P. Botha, ministre sud-africain des Affaires étrangères, une lettre qui expliquait les motifs du maintien des sanctions et qui abordait certains aspects de la conjoncture namibienne pendant la période de transition à l'indépendance.

Au début de septembre, un groupe multipartite de cinq parlements, dirigé par le député Walter McLean qui est aussi représenté dans le processus pré-électoral. À la fin du processus, les députés ont émis un bref rapport dans lequel ils disaient en général croire que l'élection en soi serait effectivement «libre et équitable», mais où ils insistaient aussi sur la conjoncture à plus long terme (le processus de transition entre les élections mêmes et l'accession à l'indépendance, ainsi qu'à la nécessité d'accorder une aide généreuse à la Namibie, après l'indépendance en 1990). M. Clark a aussi fait savoir que le Canada avait cherché une façon de constituer un gouvernement de coalition ou un régime provisoire qui pourrait parler au nom de tout le peuple cambodgien et dans lequel le rôle des Khmers rouges serait réduit au minimum. M. Clark a aussi fait savoir que le Canada envisagerait de participer à une force de maintien de la paix desquels un règlement interviendrait.

## Les comités parlementaires

Le 31 octobre, le Comité spécial du Sénat sur la défense nationale a déposé son cinquième rapport, qui s'intitule *Les forces terrestres du Canada*. Il avait amorcé ses travaux à cet égard en 1987, mais ceux-ci avaient été retardés par la dissolution de la 33<sup>e</sup> législature, par les changements rapides survenus dans les relations Est-Ouest, et par la réduction des dépenses de la Défense annoncée par le gouvernement dans le budget du 27 avril. Le rapport rejette tant le retrait des troupes canadiennes d'Europe que le maintien de celles-ci. Cette dernière option supposerait, d'après le rapport, des dépenses importantes pour l'achat d'équipement qui ne pourrait servir nulle part ailleurs. Sans enoncer une solution de rechange précise, le Comité a proposé quelques options qui entraîneraient une restriction profonde des forces en Europe; c'est, par exemple, la constitution d'une brigade aéroportable qui pourrait être déployée au besoin ailleurs qu'en Europe, ou encore l'adoption d'un régime de «défense défensive» que l'URSS envisage de donner à ses forces en Europe.

Le Comité permanent des affaires étrangères et du commerce extérieur (CPAEC) a commencé à tenir des audiences sur son principal thème de l'étude de l'année, à savoir les relations du Canada avec l'Union

soviétique et l'Europe de la déclaration commune du 22 octobre, dans laquelle tous les chefs d'Etat convenaient que, même s'il existait des signes de changement, il ne fallait pas encore assouplir les sanctions. Mme Margaret Thatcher, à la suite de sa déclaration distincte dans laquelle elle recommandait l'adoption d'une attitude plus positive à l'égard de Pretoria. Le 23 octobre, le premier ministre Mulroney s'est publiquement dit outre du comportement de la Grande-Bretagne, et il a ajouté qu'une telle attitude risquerait dans l'avenir de miner la coopération au sein du Commonwealth.

Malaysia. Après la diffusion de la déclaration commune du 22 octobre, dans laquelle tous les chefs d'Etat convenaient que, même s'il existait des signes de changement, il ne fallait pas encore assouplir les sanctions. Mme Margaret Thatcher, à la suite de sa déclaration distincte dans laquelle elle recommandait l'adoption d'une attitude plus positive à l'égard de Pretoria. Le 23 octobre, le premier ministre Mulroney s'est publiquement dit outre du comportement de la Grande-Bretagne, et il a ajouté qu'une telle attitude risquerait dans l'avenir de miner la coopération au sein du Commonwealth.

## En bref

Mme Margaret Mason a été nommée ambassadrice du Canada au désarmement, en août, et elle a ainsi succédé à M. Douglas Roche. Mme Mason est avocate et elle a été conseillère juridique auprès du Conseil canadien de la situation de la femme (1980-1981) et conseillère en politiques auprès du secrétaire d'Etat aux Affaires extérieures, et elle s'occupait, entre autres, des questions de sécurité, des relations Est-Ouest et de la politique concernant le contrôle à l'exportation.

M. de Montigny Marchand a été nommé sous-secrétaire d'Etat aux Affaires extérieures le 18 octobre; il succédera à M. James H. Taylor, qui deviendra ambassadeur du Canada au Japon. M. Marchand, qui était tout récemment ambassadeur de notre pays aux Nations-Unies, à Genève, a par ailleurs déjà été sous-ministre des Communications et sous-ministre au ministère de l'Énergie, des Mines et des Ressources.

Le 27 octobre, à une réunion de chefs d'Etat qui avait lieu au Costa Rica pour célébrer le centième anniversaire de l'instauration de la démocratie dans le pays, le premier ministre Mulroney a annoncé que le Canada adhérerait à l'Organisation des Etats américains (OEA). Notre pays se contentait du statut d'observateur depuis 1972, au sein de cette tribune.

## Les efforts de maintien de la paix

Le Livre blanc sur la défense (1987) semblait minimiser le rôle du maintien de la paix dans la politique

de garnisons au Canada. Depuis lors, cependant, les contingents de maintien de la paix sont de plus en plus de soldats canadiens sur la ligne de cessez-le-feu entre l'Iran et l'Iraq, des troupes et forces de police canadiennes se sont jointes au Groupe d'assistance des Nations-Unies pour

en Namibie. Toutes ces opérations ont surchargé le Secrétariat de l'ONU, mais cela ne semble pas avoir empêché le Secrétaire général,

M. Pérez de Cuellar, de se lancer dans une autre entreprise hardie.

de sécurité de créer un Groupe

personnel civil de soutien) qui

grande mobilité, grâce à des véhicules tous terrains et à des hélicoptères. En outre, le Secrétaire général a proposé de doter le Groupe de huit vedettes de patrouille, pour les opérations dans le golfe de Fonseca et de hors-bord rapides pour circuler sur les rivières navigables.

Les cinq gouvernements centraux ont dit souhaiter que les contingents du GONVAC proviennent de l'Allemagne de l'Ouest, d'Espagne et du Canada. Comme l'Organisation des États américains (OEA) a collaboré étroitement avec

les Nations-Unies pour constituer le Groupe, il est probable que le Canada en fera partie.

## Le budget de la Défense

A la fin d'octobre, après

plusieurs mois de pourparlers, le *Conférence* *Comité* *le*, qui a mené des négociations pour résoudre les différends opposant le Sénat et la Chambre relativement au projet de loi sur les programmes militaires de 1990, semblait être parvenu à un compromis acceptable aux yeux des deux parties. Presque tous les programmes militaires stratégiques clés du gouvernement Bush sont remis en question.

étolies, les intervenants se sont entendus sur un budget de 3,5 milliards de dollars US (ce qui est sensiblement moins que le chiffre de 4,3 milliards préconisé par le Sénat), somme qui se rapprochait de celle effectivement demandée par le gouvernement Bush, mais qui

proposé par la Chambre. La Maison-Blanche n'ayant pas protesté ni même menacé d'opposer son veto, les événements ont semblé confirmer que le gouvernement actuel, tout résolu qu'il soit à faire progresser la recherche sur la guerre des étoiles, tient moins que l'administration précédente à réaliser tel un déploiement qui ne sera sans doute pas le dernier.

plans stratégiques.

L'avenir du bombardier «furtif» B-2 demeure lui aussi incertain. L'Aviation militaire américaine a vigoureusement réjoui les critiques voulant que le B-2 ait une autonomie inférieure à celle du B-1B. Après avoir déclassifié de l'informa-

tion jusqu'à la considérée comme très secrète, la USAF a divulgué en octobre des données comparatives sur les deux appareils, données qui portaient notamment sur l'armement, la capacité des réservoirs et l'autonomie et qui semblaient

confirmer la supériorité du B-2. Le Congrès demeure toutefois sceptique. Le *Conference Committee* a proposé de ralentir le rythme d'extension du programme du B-2, tandis que des membres du Congrès con-

## LA PROLIFÉRATION DES MISSILES BALISTIQUES

Celui des pays allies. Pendant une réunion qui se tenait à Ottawa en octobre, le major-général Anatoli Bolyaiko a déclaré que des manuels révisés étaient désormais en usage dans les académies militaires soviétiques et que les officiers tankistes y étaient sensibilisés à la prépondérance de la défensive. Cependant, on ne sait pas encore précisément quelle structure de forces résulterait de ces changements. Le général Bolyaiko a réitéré le point de vue de l'URSS que le char est à la fois la meilleure arme offensive et la meilleure arme défensive. Devant le Comité des forces armées de la Chambre des représentants, le maréchal

## Les doctrines militaires soviétiques

Le Congrès parait disposé à laisser M. Cheney les poursuivre tous les deux. Voilà qui suspendra peut-être le Secrétaire ! Le Congrès a carté-  
général Anatoli Bolyarko a déclaré que des manuels révisés étaient désormais en usage dans les académies militaires soviétiques et que M. Cheney lui-même veut abandon-  
ner l'achat d'autres F-14 et l'élit-  
copère-avion V-22 Osprey. Les deux programmes ont survécu, en dépit du compromis adopté par le Congrès.

le point de vue de l'URSS que le

de forces résultant de ces change  
encore précisément quelle structure  
défensive. Cependant, on ne sait pa  
bilises à la prépondérance de la

offensive et la meilleure arme défensive. Devant le Comité des forces armées de la Chambre des représentants, le maréchal

À la fin d'octobre, des porte-parole du gouvernement Bush ont confirmé qu'il n'existait entre Israël et l'Afrique du Sud une coopération en matière de technologies des missiles balistiques. Le 5 juillet, l'Afrique du Sud a mis à l'essai le lancement d'un missile balistique à moyenne portée qui pourrait, selon des experts occidentaux, mettre un satellite en orbite ou transporter une ogive nucléaire.

Le 26 octobre, des porte-parole américains ont attesté par leurs propos que la traînée du lanceur sud-africain ressemblait beaucoup à celle de la fusée *Jericho II* de conception israélienne. Israël a réaffirmé sa volonté de passer à d'autres contrats de défense avec Pretoria, mais il n'a pas précisé que des connaissances technologiques sur les missiles balistiques pourraient être transmises à l'Afrique du Sud, en vertu de contrats conclus avant mars 1987.

Le débat au sujet de la coopération entre Tel Aviv et Pretoria a de nou-

Le nouveau rapport attire l'attention sur la liste des pays cherchant à ajouter des missiles balistiques à leurs arsenaux, liste qui continue de s'allonger. Selon des rapports récents émanant du Congressional Research Service et de l'Institut international de recherches pour la paix de Stockholm (SIPRI), au moins quatre puissances militaires secondaires ont acquis des missiles balistiques, pour chercher à en construire. L'importance militaire de ces engins réside principalement dans le fait qu'ils peuvent emporter des ogives nucléaires. La plupart des pays en question auraient déjà les moyens voulus pour fabriquer des armes nucléaires.

Au Moyen-Orient, le missile israélien *Jericho II* aurait une portée maximale de 1 400 km; il peut emporter une ogive nucléaire. L'Égypte et

## CONFÉRENCE SUR L'OUVERTURE DES ESPACES AÉRIENS –

CANADA, 1990

Au début de 1990, le Canada accueillera les ministres des Affaires étrangères des vingt-trois pays de l'OTAN et du Pacte de Varsovie pour discuter d'une nouvelle version d'une mesure de limitation des armements qui a été proposée pour la première fois il y a plus de trente ans.

Commission Quantico, a proposé que les États-Unis présentent un régime en vertu duquel les territoires américains et soviétiques seraient assujettis à une surveillance aérienne illimitée. Le gouvernement de la zone, de sorte que les négociations, tout comme les pourparlers sur d'autres questions étudiées par le sous-comité du désarmement (ONU), glisseraient peu à peu dans l'impasse. L'idée d'ouvrir les espaces aériens reprit de la vigueur au Conseil de sécurité, en 1958, quand les États-Unis proposèrent d'instaurer un système d'inspections aériennes au-dessus de tout l'Arctique (y compris le Canada et les autres pays nordiques). En dépit de l'appui accordé par tous les autres membres du Conseil de sécurité, et d'une intervention inhabituelle du Secrétaire général de l'ONU, l'URSS opposa son veto, et la proposition fut rejetée.

Nu que, géographiquement parlant, le Canada est situé entre les deux superpuissances, son territoire représenterait une considération importante dans tout accord qui pourrait intervenir. Notre pays a offert d'ajuster tout son territoire et des espaces aériens, et de fournir de l'aide en matière de formation et d'équipement. Quand, vers la fin des années 1950, les superpuissances relâchèrent plus ou moins aux oubliettes l'idée d'ouvrir les espaces aériens, le Canada continua de s'y intéresser. À la faveur d'une correspondance privée échangée avec Khrouchtchev pendant cette période, le premier ministre Diefenbaker a offert d'instaurer un régime d'inspections réciproques avec l'URSS, mais celle-ci n'a jamais donné suite à la proposition canadienne.

### Considérations actuelles

Avant de savoir exactement jusqu'où ira le débat sur la proposition

de l'ouverture des espaces aériens, il faudra se pencher sur plusieurs aspects importants afférents aux détails du régime à établir. L'instauration d'un régime complet d'ouverture des espaces aériens des vingt-trois pays marquerait un changement fondamental dans le mode de pensée des deux alliances. Un régime moins global (qui comporterait des zones ou des périodes restreintes) présenterait malgré tout un avantage pour le Canada et les États-Unis, car ils auraient la chance d'épauler leurs alliés européens dans l'application des méthodes indisciplinées de vérification qui s'imposeraient pour confirmer que les réductions des forces conventionnelles en Europe s'opèrent effectivement.

À l'heure actuelle, la proposition donne à penser qu'il s'agira d'un régime inter-allié, plutôt que d'un dispositif bilatéral américano-soviétique, ou encore d'ententes libres entre les vingt-trois pays touchés. On ne sait pas encore exactement de quelles modalités de survol chaque pays bénéficierait. L'utilisation et la circulation de l'information recueillie importeront elles aussi : les renseignements seront-ils accessibles à tous les membres de l'alliance effectuant l'inspection ? Comment le partage des données se fera-t-il ? À quel genre de restrictions l'usage de ces dernières sera-t-il assujéti ? Et, d'ailleurs, les renseignements recueillis par les États-Unis proposèrent d'instaurer un système d'inspections aériennes au-dessus de tout l'Arctique (y compris le Canada et les autres pays nordiques). En dépit de l'appui accordé par tous les autres membres du Conseil de sécurité, et d'une intervention inhabituelle du Secrétaire général de l'ONU, l'URSS opposa son veto, et la proposition fut rejetée.

Quant à la surveillance, le territoire serait disposé à assujettir son espace aérien et que son pays appuyait le régime d'ouverture des espaces aériens, le premier ministre Mulroney l'a encouragé à faire valoir son idée. Plus tard, le chef d'État canadien a déclaré qu'il appuierait le régime d'ouverture des espaces aériens et que son pays serait disposé à assujettir son territoire à la surveillance qui en découlerait.

Quand le secrétaire d'État américain James Baker et le ministre soviétique des Affaires étrangères, Eïssenhov pour reprendre une idée de la négative jusqu'en novembre 1956, quand Khrouchtchev écrivit à Eisenhower pour reprendre une idée que les Américains avaient formulée auparavant relativement à l'application d'un régime dans une zone géographique limitée, et pour demander que l'Europe fut choisie à cette fin, que Washington proposa plutôt l'Arctique comme zone d'essai, surtout parce que cette région renfermait relativement peu d'installations militaires stratégiques. Les buts changèrent en même temps que l'intention de la proposition. On considérait dès lors le régime d'ouverture des espaces aériens comme une mesure de confiance dont l'objectif principal était de calmer la crainte d'une attaque surprise, plutôt que comme un moyen de mettre à l'épreuve les méthodes de

M. George Bush a proposé, le 12 mai 1989, que son pays et l'URSS, de concert avec leurs alliés respectifs, amorcent des pourparlers sur l'ouverture des espaces aériens. Il s'agit d'une politique en vertu de laquelle les avions de reconnaissance non armés de chaque pays concerné pourraient librement survoler le territoire des autres. Parallèlement, les activités et les installations militaires des autres nations visées. Contrairement à ce qui est le cas de la surveillance par satellite, les vols de reconnaissance pour garantir l'efficacité des mesures de confiance ne font pas partie de la confiance. La démarche de M. Bush est vaine à renforcer la nouvelle ouverture qui se manifeste dans la société soviétique et la volonté nouvelle, chez l'URSS, d'accepter des méthodes indisciplinées de vérification. Le gouvernement canadien a très rapidement entériné la proposition de M. Bush. À une réunion qui avait lieu à Washington avant le discours du président américain, le premier ministre Mulroney l'a encouragé à faire valoir son idée. Plus tard, le chef d'État canadien a déclaré qu'il appuierait le régime d'ouverture des espaces aériens et que son pays serait disposé à assujettir son territoire à la surveillance qui en découlerait.

### Contexte historique

Outawa, en février 1990. Les membres de l'OTAN et du Pacte de Varsovie sont censés se tenir à

Tandis qu'il se préparait à une réunion au sommet prévue pour juillet 1955 entre les États-Unis, la France, la Grande-Bretagne et l'Union soviétique, un groupe d'experts américains, connu sous le nom de

## Pourparlers sur les armes nucléaires et spatiales

Après une ronde d'entretiens relativement peu productifs dans le cadre des Pourparlers sur les armes nucléaires et spatiales, ronde qui s'est terminée à Genève le 7 août, les chances d'en arriver à un Traité stratégiques (START) se sont considérablement améliorées le mois suivant. Juste avant une réunion à l'Assemblée générale des Nations Unies, le ministre soviétique des Affaires étrangères, M. Egorov, a déclaré, au Wyoming les 22 et 23 septembre, le secrétaire d'Etat américain, M. Baker, a annoncé que Washington renouvellerait son soutien à la poursuite des négociations relatives à la réduction des missiles ICBM, à condition que le Congrès approuve le financement du programme relatif à ces missiles. A son arrivée aux Etats-Unis, M. Chevardnadze a remis au président Bush une lettre du président Gorbatchev, dans laquelle celui-ci décrivait un certain nombre de nouvelles propositions visant à faire sortir les négociations de l'impasse: l'URSS s'y disait prête à signer et à mettre en œuvre un Traité START même si aucun accord n'intervenait sur les armes défensives et spatiales (accord qui restreindrait l'initiative de défenses stratégiques des Etats-Unis), et à céder devant Washington tout ce qui réclamait depuis longtemps le démantèlement du gros radar de Krasnoyarsk (M. Chevardnadze a dit dans un discours qu'il s'agit d'une « violation flagrante » du Traité ABM).

Tous ces points ont été consignés dans une déclaration conjointe diffusée à l'issue de la réunion du Wyoming, déclaration qui faisait état d'ententes sur diverses autres questions intéressantes: armes stratégiques. Le plus important élément de cette déclaration était sans doute une allusion, plutôt vague et peu remarquable, à une idée soviétique, à savoir que les missiles de croisière mer-sol (SLCM) pourraient faire l'objet de limitations en dehors d'un traité START moyen

Certains observateurs en ont déduit que l'URSS accepterait peut-être de reporter un accord final sur l'épineuse question des SLCM. Jusqu'après la signature d'un traité START. Au Wyoming, l'URSS a également accepté en principe l'exécution d'inspections qui auraient lieu à titre d'essai avant la signature du Traité, comme l'avait proposé les États-Unis. Les dignitaires soviétiques et américains réunis au Wyoming n'ont pas voulu dire si la rédaction du texte complet d'un accord START serait complètement terminée d'ici le sommet Bush-Gorbachev prévu pour la fin du printemps ou le début de l'été 1990.

## La limitation des armements conventionnels en Europe

A Vienne, les pourparlers sur les forces conventionnelles en Europe (CFCE) continuent de progresser, bien que la conclusion d'un accord à cet égard n'est pas à l'ordre du jour. J'avais souhaité le président Bush, soit quelque peu douteux. Pendant la troisième ronde qu'il s'est tenue du 7 septembre au 19 octobre, les deux camps ont détaillé les dommages et les propositions sur la vérification et la «stabilité». Le plan de l'OTAN, déposé le 21 septembre, n'a tout-

Les deux alliances à exécuter une manœuvre militaire faisant intervenir plus de 40 000 soldats ou 800 chars de combat (et encore, après un avis de douze mois). La proposition du Pacte de Varsovie, présentée le 19 octobre, prévoit la mise aux points d'entrée et de sortie de l'Europe. Les membres de l'OTAN ont été incapables de s'entendre sur cette question, certains États ouest-européens craignant de révéler de l'information secrète sur leurs exportations d'armements. Un certain déboilage s'est pro-

duit sur la question de la limitation du nombre d'avions. Le Pacte accéptait pour la première fois d'assujettir à des limites des avions autres que les appareils d'attaque au sol, y compris certains types de chasseurs et d'avions de reconnaissance et de guerre électronique. Il a proposé que chaque alliance se limite à 4 700 appareils (l'OTAN avait fixé le plafond à 5 700), mais il exempterait

I 800 intercepteurs qui, souligne-t-il, sont nécessaires pour assurer la défense contre les bombardiers

Par ailleurs, les deux camps se partageraient l'OTAN, devraient figurer dans la catégorie des avions de combat. Au chapitre des hélicoptères, les deux alliances s'entendent sur un nombre maximum de 1 060.

nonnelles de plus de 100 mm, mais non ni ne convenir d'une définition des armes anti-chars), mais il s'agit de ce qui constitue un char et un véhicule blindé de transport de troupes. De nouvelles propositions déposées par le Pacte de Varsovie abordraient notamment les aspects suivants : une interdiction de construire des bases étrangères en Europe; une restructuration des unités de la ligne de front, pour en réduire le potentiel offensif; et la tenue d'un sommet auquel participeraient les chefs des vingt-trois pays participants, dans la deuxième moitié de 1990, pour mettre la dernière main à un traité.

## L'ouverture des espaces aériens

Parmi les diverses ententes conclues au sommet Baker-

Chévaradze au Wyoming, citons l'accord «de principe» intervenu sur la proposition dite de l'ouverture des espaces aériens formulée par le président Bush en mai 1989. Le premier ministre Mulroney a par la suite offert de recevoir au Canada des membres des Affaires étrangères des ministres des deux alliances pour jeter les bases d'un accord en ce sens, lequel permettrait aux astronautes non armés d'un Etat participant de surveiller le territoire de l'importateur des autres, de manière à s'assurer qu'aucune attaque surprise ne se prépare. À la fin d'octobre, on comptait organiser une première réunion à Ottawa au début de 1990, et une autre aurait lieu peu après, dans une des capitales du bloc de l'Est, probablement Budapest. On a appris que le Canada avait fait officiellement savoir à Moscou qu'il était disposé à fournir des installations logistiques

## Les armes chimiques

Le président Bush a dévoilé une initiative très annoncée sur les

armes chimiques, dans un discours prononcé devant l'Assemblée générale de l'ONU le 25 septembre. M. Bush a proposé que les deux superpuissances réduisent leurs arsenaux chimiques à un niveau inférieur de 80 p. 100 à celui atteint aujourd'hui par les États-Unis, et même avant la signature d'une convention mondiale. Les critiques américains ont dit qu'il s'agissait là

du Congrès obligeant déjà le gouvernement américain à déjouer d'ici 1997 tous ses vieux stocks d'armes chimiques. M. Bush s'est aussi engagé à détruire 98 p. 100 de l'arsenal américain dans les huit ans qui suiviront immédiatement l'adoption d'une convention sur les armes chimiques, si l'URSS faisait de même, mais il a précisé que la signature de tous les États à même de fabriquer de tels engins serait nécessaire pour qu'une interdiction totale puisse être instaurée.

Le lendemain, le ministre soviétique des Affaires étrangères a accueilli favorablement l'annonce de

Bush, mais il a exhorté Washington à aller plus loin. Il a proposé que les superpuissances dénucléarisent leurs arsenaux avant l'adoption de la Convention, Washington devant cependant se joindre à Moscou et cesser toute production (en 1987, les Etats-Unis ont recommencé à fabriquer des armes chimiques après une interruption de dix-huit ans, tandis que l'URSS a annoncé qu'elle suspendait la production). Le président Bush a rejeté la proposition soviétique le lendemain, en alléguant la nécessité pour son pays de disposer d'une influence et d'un élément de dissuasion face aux autres Etats dotés d'engins chimiques. Enfin, à la mi-octobre, des porte-parole américains ont confirmé des rapports voulant que le président Bush ait décidé de conserver l'option de continuer à fabriquer de telles armes, même après l'entrée en vigueur d'une convention, ce qui est contraire au texte actuellement négocié à Genève. □

par exemple, avant de s'améliorer. Les pires scénarios sont la balkanisation et l'africanisation. Si un retour à la situation d'avant 1914 en Europe est improbable, un brusque morcellement de l'empire soviétique serait extrêmement désastrieux pour tous ceux qu'il concernerait.

Les conséquences pour le Pacte de Varsovie. Le rideau de fer est noué. A mesure que les pays du Pacte de Varsovie libéraliseront leurs économies et chercheront à renforcer leurs liens avec l'Occident, les pressions grandiront au sein du Pacte pour que les dépenses militaires soient réduites et que les liens avec Moscou en matière de sécurité se relâchent. Diminuer la quantité des principales armes classiques risque d'affaiblir le système du Pacte. Le recours à la force pour empêcher une scission du bloc socialiste est probablement hors de question aujourd'hui, mais on imagine mal l'Union soviétique (avec ou sans Gorbachev) renoncer totalement à son autorité ou permettre des changements qui saperaient les liens de sécurité avec l'Europe orientale.

L'avenir des deux Allemagnes. Les événements politiques de RDA vont mettre à l'épreuve la position favorable de l'Occident face à la réunification de l'Allemagne (politique qui ne coûtait rien pendant la Guerre froide, car la réunification était utopique). Le spectre de la réunification allemande, brandi par les réfugiés et pendant les récents mouvements contestataires en RDA, rend déjà des gens nerveux à l'Est comme à l'Ouest. Les pressions pour une libéralisation et une réforme démocratique vont en s'accroissant en RDA, et si elles réussissent, elles activeront des pressions politiques pour une réconciliation plus poussée, qui pourrait conduire à une réunification. L'Occident doit commencer à élaborer une politique en prévision de ces événements, si difficile que ce soit politiquement. Autrement, nous serons dirigés, bon gré mal gré, par les deux Allemagnes. Quand l'heure de régler la question allemande viendra, il faudra aussi tenir compte des intérêts soviétiques et de ceux d'autres pays de l'Est.

L'aversion que suscite l'idée d'une Allemagne réunifiée, étant donné les suites de l'opération Barrouse et de la Seconde Guerre mondiale, pourrait être plus profonde à l'Est qu'en Occident.

L'avenir de l'OTAN et la sécurité occidentale. Il est évidemment dans l'intérêt occidental que les changements qui se produiront soient prévus et méthodiques et qu'ils puissent s'intégrer dans des structures politiques et institutionnelles existantes (qu'ils réformeront). Quoiqu'il arrive, la stabilité est nécessaire pour assurer le propre avenir économique et politique de l'Occident. Les changements risquent de survenir beaucoup plus vite et de manière bien plus imprévisible qu'on ne le pense. D'où l'importance primordiale pour l'Occident de réfléchir sérieusement à l'avenir et d'évaluer les conséquences à

long terme des événements de ces derniers temps pour la sécurité occidentale. L'OTAN et d'autres organisations politiques et économiques occidentales, comme la Communauté européenne, le GATT et le Fonds monétaire international (FMI), ont, tout comme la limitation des armements et les mesures propres à accroître la confiance qui se négocient actuellement dans différentes instances européennes, un rôle à jouer pour favoriser des changements méthodiques grâce à des prêts, au réaménagement de la dette et à une réduction générale des barrières aux échanges, au commerce et à la libre circulation des capitaux.

Si il y a peu de chances de voir une Europe entièrement intégrée avec une Allemagne unifiée en son centre, il est plus probable que le système d'alliances actuel – l'OTAN et le Pacte de Varso-

Les grandes incertitudes. L'impact des révoltes ethniques et nationalistes se répandra sur la stabilité potentielle de l'Europe de l'Est tout entière, et sur celle de l'Union soviétique, où ce problème est lié aux fortunes politiques de Mikhail Gorbachev. Si les républiques baltes obtiennent leur indépendance, le destin de ce dernier sera scellé, car l'Ukraine pourrait bien présider alors au démantèlement de l'empire soviétique, et nombreux sont les Russes carrément opposés à cette perspective.

Les réformes économiques en Europe de l'Est auront des coûts et des avantages asymétriques, et il en ressortira indiscutablement des « vainqueurs » et des « vaincus ». Le chômage s'aggravera avant que les économies se ressaisissent, ce qui alimentera le mécontentement politique

L'an-cien régime résistera au changement parce que ses membres perdront leurs privilèges dans la transition à une économie de marché.

La limitation des armements et la défense. Il est manifestement nécessaire de situer les politiques occidentales de limitation des armements et de défense dans le champ plus vaste de ces évolutions politiques et économiques, y compris la création, en 1992, d'une zone de libre-échange à l'intérieur de la Communauté européenne. La limitation des armements et les politiques de défense doivent se rattacher à une stratégie politique et économique qui encourage des réformes politiques et une transition méthodique en Europe de l'Est. Il faudrait aussi que les gouvernements occidentaux comprennent mieux les forces qui motivent les changements se produisant actuellement derrière le rideau de fer.

IL IMPORTE DE NE PAS EXAGÉRER LE RÔLE que l'Occident peut jouer en Europe de l'Est et en Union soviétique. Notre marge d'influence est limitée. Il y a certes des dangers évidents à ce que l'Occident paraisse encourager trop activement les changements politiques ou mette trop de zèle à saper l'influence soviétique. Mais il y a un risque plus grand encore à ne pas agir efficacement et à ne pas prêter assistance : celui de nuire aux réformateurs qui ont pris du pouvoir dans des pays comme la Pologne et la Hongrie.

De toute évidence, l'Occident peut et doit aider davantage ; or, l'aide alimentaire, le rééchelonnement de la dette et l'apport d'une assistance technique et d'une aide au développement sont autant de moyens de le faire. Pour que ces pays puissent transformer leur économie, il est particulièrement important qu'ils reçoivent une assistance technique en ce qui concerne, par exemple, la gestion et le contrôle financier ainsi que les complexités juridiques alliant de pair avec le droit à la propriété privée. De plus, elle n'est pas onéreuse. La décision du Canada et d'autres gouvernements occidentaux d'accorder des prêts et des crédits supplémentaires à la Pologne et à la Hongrie est un bon début. D'autres signes encourageants du côté de Washington sont que le gouvernement américain est conscient de la nouvelle occasion s'offrant à lui pour nouer de nouveaux liens avec l'URSS. Mais c'est une réponse politique et s'impose.

Nous ne sommes pas arrivés au terme de l'Histoire. Avec la fin de la Guerre froide, nous nous trouvons aujourd'hui à l'aube d'un monde meilleur, d'un monde où les horizons et les avantages que les changements apporteront seront tout aussi grands que les risques, les incertitudes et le coût potentiel d'un échec. Il y a encore beaucoup à faire ! □

# LA FIN DE L'HISTOIRE ? NIET !

Tandis que les pontifes américains se demandent si l'avenir sera ou non ennuyeux, les événements en Europe de l'Est annoncent une époque intéressante. Si seulement les responsables accordaient à ce phénomène toute l'attention qu'il mérite !

PAR FEN OSLER HAMPTON

« une suscité audace, courage, imagination et idéalisme » sera remplacée par « des siècles d'ennui » — la résolution constante de problèmes techniques, par des préoccupations environnementales et par la satisfaction d'exigences subtiles des consommateurs ».

Les implications politiques de la thèse de M. Fukuyama, à savoir que « l'Histoire est inépuisable », sont troublantes. Considérant que le changement politique est inévitable et irréversible, M. Fukuyama remplace une forme de déterminisme historique (le néo-légalisme) par une autre forme (le marxisme-léninisme). C'est une idée dangereuse et une piètre façon de pallier l'inaction de la plupart des gouvernements occidentaux face aux changements qui se produisent en Union soviétique et dans les pays de l'Europe de l'Est.

Il n'y a rien d'automatique dans les événements récents. Les modestes réformes politiques et économiques russes par certains pays de l'Est un long chemin à parcourir, et le risque d'échec est grand. En Union soviétique, la résistance politique intense aux réformes politiques et économiques de M. Gorbatchev laisse entendre que ce dernier a, en tout cas, du mal à les imposer.

LE RISQUE DE RENVERSEMENT DES RÉCENTS événements oblige l'Occident à formuler une stratégie politique efficace qui aide à consolider et à renforcer les tendances et les réformes libérales. Il faut commencer non pas par honorer des théories de type historique, mais plutôt par poser les bonnes questions :

Quel avenir attend le socialisme — c'est-à-dire quels types de scénarios pouvons-nous imaginer pour avoir une idée du genre d'évolution que connaîtront peut-être les économies et les systèmes politiques de l'Europe de l'Est, de l'Union soviétique et de la Chine ?

Que peut faire l'Occident pour faciliter le processus de réforme ? Quelles sont les incidences de ces réformes politiques et économiques intérieures pour l'avenir du Pacte de Varsovie ? Quels types de réformes politiques

irrésistibles pour une réunification, et comment allemande (RDA) déclencherait des pressions économiques en République démocratique

actuels en Europe de l'Est et en Union soviétique pour les intérêts de leurs pays. Il se passe à peine un jour sans que les journaux annoncent une réforme économique, un changement politique, une forme économique, un changement politique, une réforme démocratique, des troubles ethniques ou des demandes d'autonomie dans les pays de l'Est, ou l'arrivée de réfugiés qui fuient des gouvernements répressifs de cette partie du monde. L'Histoire s'est remise en marche à un rythme vertigineux. Ce qui arrive est tellement spectaculaire que la plupart des observateurs et des pontifes bien informés ont été pris au dépourvu. Récemment, avec un article intitulé *The End of History* [la fin de l'Histoire], qui a paru l'été dernier dans *The National Interest*, M. Francis Fukuyama, directeur adjoint de la planification politique au Département d'Etat américain (et ancien analyste de la *Kand Corporation*), a mis en évidence ce manque de perspicacité occidentale.

Son article a suscité un très large débat — un débat qui aurait dû avoir lieu depuis longtemps, puisque l'Occident essaie maintenant de comprendre les changements considérables qui interviennent dans le bloc communiste. Mais les réponses de M. Fukuyama sont moins que satisfaisantes, et il se préoccupe étonnamment peu, semble-t-il, des conséquences de ces changements pour les intérêts de la sécurité occidentale. Sa pensée peut se résumer comme suit.

Le 20<sup>e</sup> siècle se termine sur la « victoire indiscutable du libéralisme économique et politique. » Ce « triomphe » de l'idéologie occidentale se manifeste dans l'« épuisement complet » du communisme et du socialisme.

Les récents événements en Chine et en Union soviétique « ont signé l'arrêt de mort de l'alternatif marxiste-léniniste à la démocratie libérale. » Depuis l'arrivée de M. Gorbatchev au pouvoir il y a quatre ans, les institutions et les principes les plus fondamentaux du stalinisme ont subi un assaut révolutionnaire.

Le risque d'un « conflit sur une grande échelle » entre de « grands États encore aux prises avec l'Histoire » diminue à mesure que les membres du monde communiste embrassent les valeurs de l'Histoire libérale de l'Occident.

La « lutte idéologique mondiale » qui a tenu l'humanité pendant presque tout le siècle et qui

l'Occident et le bloc de l'Est devraient-ils abandonner la question de la réunification allemande ? Quelles sont les conséquences des événements actuels et des scénarios d'avenir pour la sécurité occidentale et pour l'OTAN ? Les risques d'une confrontation militaire entre les deux blocs diminuent-ils, comme beaucoup le croient ? Quels facteurs ou quelles forces pourraient troubler la détente et provoquer des tensions, et comment empêcher que cela arrive ? Où se situent la limitation des armements et la défense dans le vaste paysage politique ?

Il y a là amplement matière à réflexion et il reste certainement d'autres questions à poser. Si l'Occident tarde trop à s'attaquer aux premières, il se laissera emporter par l'Histoire tel le « cavalier sans tête ». Voici quelques précisions sur les questions que nous venons de formuler.

Scénarios d'avenir. Si nous regardons l'avenir, il existe un certain nombre de scénarios différents possibles pour l'Europe de l'Est et pour l'Union soviétique. *L'occidentalisation et la démocratisation*. C'est la Hongrie qui se rapproche le plus de ce genre d'évolution, la décision ayant été prise récemment de dissoudre le Parti communiste et d'adopter un régime multipartite. *La latino-américanisation*. Ici, le processus politique socialiste entre la répression, la démocratie et la modernisation à l'intérieur d'une tradition autoritaire. Il se peut que l'Union soviétique choisisse cette voie. *La « sinification »*, ou le modèle chinois, qui se caractérise par un Etat communiste fort, doté d'une économie de marché de type libéral. C'est ainsi que le général Jaruzelski, chef du Parti communiste polonais, voyait son pays au départ. *L'ottomanisation ou balkanisation*, qu'on appelle parfois « scénario du démembrement de l'empire soviétique » et qui découle d'une hybridation et d'un réveil ethnique et nationaliste en Union soviétique et dans certaines parties de l'Europe de l'Est. *L'africanisation*. Ce scénario décrit la situation qui existe dans certains pays africains où l'on assiste à la destruction de l'économie et de l'Etat et où des groupes socio-économiques importants se révèlent incapables d'agir collectivement. En fait, c'est ce qui se

Ces scénarios montrent que le CHANGEMENT politique ne sera probablement ni linéaire ni uniforme; que le risque de troubles et l'agitation politiques se poursuivra dans certains pays est considérable; et que les choses empireront probablement dans quelques pays, en Pologne,

passé en Pologne aujourd'hui.

en France, aux Pays-Bas, en URSS et dans d'autres pays, la perspective d'une Allemagne

unitée.

Ce qui revient à dire que la question allemande devienne l'élément central de la coopération en Europe ou du moins un des éléments centraux. Les avantages de la CSCE, par comparaison avec d'autres institutions européennes, sont qu'elle est multilatérale et non pas bloc à bloc, et que les deux superpuissances et le Canada y participent, ainsi que les pays européens non alignés et neutres. Il faudrait, dans tout nouvel ordre européen, préserver ces éléments qui ont assuré la sécurité des membres principalement par des accords de coopération non militaires et par des garanties mutuelles, et qui ont permis de réduire les forces militaires à des niveaux très bas. La participation de l'OTAN et celle du Pacte de Varsovie seraient nécessaires au bon déroulement de la transition, après quoi les deux alliances perdant peu à peu leur raison d'exister en tant que facteurs d'organisation dans l'ordre européen, pourraient se dissoudre.

Dans un tel contexte, l'unité allemande semblerait être traitée dans le contexte plus vaste de l'ordre européen d'après la Guerre froide. Si les choses se passent bien (ce que rien ne garantit vraiment), un nouveau ordre européen s'établissant est envisageable d'ici dix à vingt ans. Il devrait se constituer à partir du processus entamé à Helsinki en 1975 (la Conférence CSCE). Les avantages de la CSCE, par comparaison avec d'autres institutions européennes, sont qu'elle est multilatérale et non pas bloc à bloc, et que les deux superpuissances et le Canada y participent, ainsi que les pays européens non alignés et neutres. Il faudrait, dans tout nouvel ordre européen, préserver ces éléments qui ont assuré la sécurité des membres principalement par des accords de coopération non militaires et par des garanties mutuelles, et qui ont permis de réduire les forces militaires à des niveaux très bas. La participation de l'OTAN et celle du Pacte de Varsovie seraient nécessaires au bon déroulement de la transition, après quoi les deux alliances perdant peu à peu leur raison d'exister en tant que facteurs d'organisation dans l'ordre européen, pourraient se dissoudre.

La souveraineté nationale au sens traditionnel du terme serait largement dépassée de toute façon, puisqu'il y a beaucoup de questions que l'on régalait au niveau national seraient confiées à des instances internationales comme la Communauté européenne ou la CSCG. Peu important alors que les deux Allemands continuent d'exister en tant qu'Etats indépendants, ou qu'ils décident de former une confédération quelconque. Peut-on en arriver là, vu les bouleversements actuels dans le bloc de l'Est ? C'est la situation économique de ces pays qui est le facteur décisif. Si l'est principalement du ressort des Européens de l'Est et des Soviétiques d'empêcher qu'elle se dégrade de manière catastrophique, les Occidentaux ont aussi leur part de responsabilité. Pourquoi ne pas lancer un plan Marshall d'aide à l'Europe de l'Est pour en favoriser la stabilisation économique ? Pourquoi ne pas conclure des accords généraux de limitation des armements qui réduiraient de beaucoup les arsenaux classiques et nucléaires ? Des réductions considérables sont un préalable à la création d'un ordre européen pacifique au sein duquel la question allemande pourrait être réglée de manière satisfaisante pour les Allemands et pour leurs voisins. Par ailleurs, si la situation devenait extrêmement instable, le monde aurait moins à craindre en cas de crise si les forces militaires avaient été nettement réduites au préalable. □

«revanche, le parti socio-démocrate (le SPD, l'opposition de gauche en RFA), qui gardait des liens étroits avec le SED est-allemand, ne veut pas égarer de Berlin-Est. Derrière ces voix dissonantes, cependant, un

centré droit au centre gauche, d'abord sur le fait que la démocratie et la liberté importent plus que l'unité allemande (d'où l'exportation à des réformes en RDA), puis sur l'idée que la question allemande ne peut être séparée de la question plus vaste de l'avenir de l'Europe et des deux alliances. Ainsi, la grande majorité des spécialistes de la politique étrangère en RFA (et, de toute évidence, des groupes d'opposition est-allemands aussi, sans parler du régime actuel) s'accordent à penser que l'idée des deux Allemands quittant leurs alliances respectives pour adopter un statut neutre en tant que nation unifiée n'est ni souhaitable ni réalisable. L'Allemagne restera donc divisée aussi longtemps que l'OTAN et le Pacte de Varsovie continueront d'exister, et que les deux États allemands accepteront cette réalité.

Avec tout cela, où en est la question allemande ? Plus important encore, qu'est-ce au sujet que la question allemande ? Pendant quarante ans, le sujet a eu des dimensions à la fois intérieures et extérieures. La partie intérieure : l'autodétermination pour les populations des régions allemandes. Des réformes politiques en RFA devaient régler cet aspect du problème. Après tout, si en Europe de l'Est et en URSS, la Guerre froide avait la démocratie et la liberté pour objets, la question allemande a les mêmes racines en Allemagne de l'Est.

En comparaison, l'aspect extérieur de la ques-

« Les États, est secondaire. C'est entre deux extrêmes qu'il faut rechercher des solutions possibles. D'un côté, les deux pays pourraient se considérer mutuellement comme des États pleinement souverains et indépendants. Pour Bonn, cela signifie la reconnaissance officielle de la RDA et l'abolition de l'unité allemande comme condition préalable à la réunification. Ce sont là deux perspectives peu

En outre, les deux Allemagnes ont toujours entretenu des rapports particuliers. Même en pleine Guerre froide, Bonn et Berlin-Est maintenaient certains contacts, notamment en ce qui concerne le commerce et l'accès à Berlin-Ouest. Traiter les relations interallemandes comme l'importe quelles relations internationales revient à ne pas tenir compte des liens politiques, économiques, sociaux et culturels toujours forts qui unissent les deux pays, même après quarante années de partition. D'un autre côté, créer un Etat allemand unique

division, et ce n'est certainement pas la solution la plus souhaitable. Même la constitution fédérale l'exige pas. De plus, il faut prendre en compte les inquiétudes légitimes que suscite en Pologne

dirigeants actuels) de gagner le soutien des Allemands de l'Est. Il faudrait d'ailleurs noter que, contrairement à celle de la Pologne et de l'Union soviétique, l'économie de l'Allemagne de l'Est est encore en relativement bon état, avec un revenu par habitant comparable, en gros, à celui de l'Italie. Il semblerait que le récent exode ait été déclenché autant par la frustration politique que par des facteurs économiques.

S'il est très douteux qu'un Allemand de l'Est réorganise et disparaisse en tant qu'État indépendant, que dire de sa cousine occidentale ? L'acrophonie de voix qui s'élève en RFA ces jours-ci donnerait à penser que les Allemands d'Ouest prolifrent d'une occasion longtemps attendue pour promouvoir l'idée d'une réunification. Ainsi, la presse a fait savoir que le gouvernement fédéral venait de rinscrirc la question allemande à l'ordre du jour des pourparlers Est-Ouest. Certains conservateurs ont même réouvert la question de la frontière polonaise occidentale (la ligne Oder-Neisse), que le traité de 1970 entre la RFA et la Pologne était censé avoir réglé une fois pour toutes.

infinuable à une réaction compréhensible face aux événements étonnants qui ont lieu en Allemagne. Les mécanismes de la politique nationale ouest-allemande expliquent le reste en grande partie. L'émergence d'un parti de droite réformateur, le *Republikaner*, menace sérieusement la base politique des chrétiens démocrates (CDU et CSU) au pouvoir. Si la tendance actuelle

July 1997

se maintenant, le CDU risque de perdre le pouvoir aux élections fédérales de l'an prochain. Le chancelier Kohl a donc décidé, manifestement, d'évoquer de plus en plus la réunification pour attirer les électeurs conservateurs. En plus, l'alle droite de son parti a son propre programme. En

# UNE ALLEMAGNE, OU DEUX ?

La perspective d'une Allemagne réunifiée au centre de l'Europe est supposée effrayer tout le monde, mais cela importe-t-il encore vraiment ?

PAR THOMAS RISSE-KAPPEN

1 « QUESTION ALLEMANDE » PARAISSAIT régie. Après tout, deux fois au cours de ce siècle, une Allemagne unifiée au milieu de l'Europe avait abouti au désastre; elle avait été en grande partie responsable de la Première Guerre mondiale et elle avait déclenché la Seconde. Même en pleine instabilité politique

l'Allemagne, elle au moins, semblait solide. Du reste, il n'y avait apparemment aucune raison de croire que les Allemands, de l'Est ou de l'Ouest, tenaient un calendrier secret concernant une réunification éventuelle. La célèbre *Ospolnik* ouest-allemande (politique visant à améliorer les rapports avec l'Europe de l'Est, la République démocratique allemande [RDA] et l'Union soviétique) n'a été possible que moyennant un statu quo territorial et politique en Europe. Par ailleurs, on pourrait affirmer que la génération ayant connu un Etat allemand unifié est sur le point de perdre la maîtrise des deux Allemagne et que les Allemands plus jeunes, tant à l'Est qu'à l'Ouest, ne sont pas attachés sentimentalement au concept d'une grande Allemagne.

Cependant, les événements de cet automne ont remis en question la sagesse conventionnelle. Tout à coup, la question allemande revient à l'ordre du jour international. D'abord, il y a eu l'exode massif des Allemands de l'Est, accompagné de scènes télévisées sans précédent : des réfugiés qui, dans l'ambassade d'Allemagne de l'Ouest à Prague, craient « libérés » au moment où le ministre des Affaires étrangères de la RFA, M. Genscher, révélait l'accord qu'il venait de conclure avec la RDA pour les laisser passer à l'Ouest; des milliers qui, les larmes aux yeux, criaient « Deutschland » (Allemagne) en arrivant enfin en Allemagne de l'Ouest, à peine avaient-ils franchi la frontière de l'Allemagne de l'Est; et au milieu de tout cela, le « Parti socialiste unifié » est-allemand (SED) qui était quarante années l'Occident capitaliste et qui prenait fait et cause pour les dirigeants chinois contre « la campagne impérialiste visant à faire disparaître le socialisme ».

Ensuite, événement plus important encore, ceux qui ont décidé de rester dans le pays se sont exprimés haut et fort. Souvenez-vous que l'Eglise protestante, l'opposition politique s'est organisée et a déclenché les plus grandes manifestations

festations (spontanées et non officielles) jamais vues en Allemagne de l'Est (y compris pendant les événements de 1953 au cours desquels des manifestations de bien moindre ampleur avaient été réprimées dans la violence). Des centaines de milliers de personnes se sont rassemblées dans Berlin-Est, à Dresde et à Leipzig. L'opposition politique, qui existait avant ces récents événements, mais qui est pour la première fois à même d'attirer un soutien franc et massif, voit la réponse aux problèmes de la RDA dans le socialisme démocratique et non dans le capitalisme. Bref, ces Allemands de l'Est ne veulent pas rester les oubliés du stalinisme dans une ère de réforme en Europe de l'Est et en Union soviétique. Ils veulent que la République démocratique allemande se montre digne de son nom. Quelles que soient les véritables intentions du parti communiste, il ne lui suffira pas de faire de beaux discours et de gagner du temps. Une révolution démocratique a été déclenchée et seules de vraies réformes politiques soulageront le système est-allemand des pressions s'exerçant sur lui et empêcheront que l'exode massif se poursuive.

QUE SIGNIFIENT CES ÉVÉNEMENTS POUR LES DEUX Allemagnes, dans l'ordre européen d'après la Guerre froide ? Les considérations suivantes ne sont que des suppositions, car s'il y a quelque chose de certain ces temps-ci, c'est l'incertitude de l'avenir. Pour commencer, l'argument selon lequel une RDA reformée perdrait sa raison d'être en tant qu'Etat indépendant présente de sérieuses failles. Ce sont des intransigeants opposés aux réformes à Berlin-Est et, ironiquement, quelques Occidentaux incapables d'imaginer une Allemagne de l'Est démocratisée choisissant de remplacer le stalinisme par autre chose qu'un

idé. Ils soutiennent que, si les Allemands deviennent impossibles à différencier dans leurs systèmes politiques, économiques et sociaux, on ne pourra résister à la tendance favorable à la réunification. Selon cette logique, l'Autriche et l'Allemagne fédérale devraient être fortement tentées par l'unification. Les Autrichiens et les Allemands de l'Ouest parlent la même langue,

troupes soviétiques dans le pays a servi à palier ce manque de légitimité. Quand, au cours de son récent passage à Berlin-Est, M. Gorbatchev a déclaré à M. Honecker que les décisions concernant la RDA doivent se prendre à Berlin-Est et non à Moscou, il disait clairement qu'une époque était révolue. Le régime ne peut plus compter sur l'appui de l'URSS pour se justifier face aux habitants du pays.

Il se peut que la démocratisation du système soit la seule façon (et la dernière chance pour les

ont des systèmes politiques et économiques similaires, et de nombreux liens culturels unissent leurs pays. Pourtant, personne ne parle d'une unification germano-autrichienne. En outre, il ne faudrait pas oublier que, dans toute l'histoire allemande depuis le Moyen-Âge, il n'a existé d'Etat allemand unitaire que pendant soixante-quatorze ans, soit entre 1871 et 1945. À dire vrai, on peut concevoir que la RDA renforcera, de fait, son identité en se lançant dans un processus de réforme politique. Pour l'instant, l'Etat est-allemand ne possède qu'une légitimité d'emprunt en tant que fer de lance du stalinisme en Europe de l'Est, elle qui doit constamment se démarquer de la République fédérale. L'identité de l'Allemagne de l'Est se définit par opposition à celle de l'Allemagne de l'Ouest. Ces quarante dernières années, la présence de

laisse au moment de leur départ, une place qui ne se mesure pas seulement à la protection mili-taire qu'ils assurent encore récemment, mais à l'importance des activités qu'ils exerçaient dans la plupart des domaines et dans lesquels ils seront rattachés, mais pas qui ? Pol Pot disait en 1977 : «... même si je ne reste qu'un million de Cam-bodgiens, les Chinois me fourniront la population dont j'aurai besoin ...». Le Cambodge a changé plusieurs fois de régime, mais «l'envahisseur» (ce n'est pas forcément le Vietnam) est resté. Même si l'on parvient à obtenir des voisins rapprochés ou plus lointains qu'ils laissent enfin en paix ce malheureux pays, ce n'est pas seule-ment son indépendance politique mais aussi sa dépendance économique et culturelle qui seront en cause. Elle sera fonction de l'importance et de la qualité, mais surtout du degré de désintéresse-ment de l'aide et de la coopération qui seront apportées au Cambodge pour lui permettre de re-construire son économie et de former sa jeunesse. Depuis dix ans, le gouvernement installé à Phnom Penh, remplit la plus difficile et la plus facile des tâches : assurer à partir de zéro, la renaissance du pays sur tous les plans en utilisant tous les moyens qu'il faut s'in-pauvres moyens qu'il faut s'in-génier à trouver ou à créer. Ceux-ci sont maintenant hors de portée. Les acquis matériels et économiques sont immédiatement absorbés par une démographie galopante, par l'effort de guerre et par la nécessité de pourvoir au remplacement d'un matériel récupéré jusque dans les décharges.

La situation militaire. L'activité militaire récente de la Coalition confirme bien que les troupes viet-namiennes ont effectivement quitté le Cambodge. Auparavant, leur présence dans la région était cer-tainement l'élément qui dissuadait le plus le déploiement des forces de la «résistance». L'activité actuelle la saison des pluies, qui favorise les opérations de la guérilla. S'agit-il d'opérations visant à donner enfin au gouvernement de Coalition une

base territoriale nationale, indispensable, sur les plans politique et militaire ? Deux objectifs sont poursuivis simultanément. La prise de Battambang ou d'Angkor qui permettrait à un autre gouvernement cambodgien de se poster en rival de celui de Phnom Penh aurait une répercussion internationale considérable. Déjà, l'occupation de quelques villes dans la zone frontalière et le relâchement, à contre-temps et à grands renforts de publicité, du courant-feu dans la capitale donnerait à l'étranger l'impression que la situation du gouvernement de Hun Sen s'est subitement détériorée. Par contre, comme tenu notamment de la nature du terrain, il est difficile d'imaginer actuellement qu'une opération d'en-vergure soit imminente et que les combats actuels puissent rapidement tourner à l'avantage décisif de l'une des parties. De chaque côté, on se défend de tirer sur les villages, mais que dire des mines ? La population est mobilisée contre son gré, et les réfugiés des camps sont utilisés comme porteurs pour la traversée des champs de mines. Jusqu'ici, la tactique utilisée par Phnom Penh, a consisté à protéger les positions les plus impor-

AU PLAN INTERNATIONAL, LE RETRAIT DES TROUPES vietnamiennes du Cambodge faisait l'objet d'un consensus général, y compris celui de l'occupant. Les conditions les plus favorables à l'enchaînement sans à-coups des mouvements d'une mécanique de paix déjà lancée paraissaient exister. Malheureusement, les conditions du départ des troupes vietnamiennes n'avaient pas été préalablement négociées à l'ONU, qui en avait fait la condition absolue d'un réexamen de sa position à l'égard du Vietnam et du Cambodge. Comme certains observateurs ont pu l'écrire, les travaux des commissions chargées de promouvoir la mise en place d'un gouvernement provisoire, ainsi que les voies et les moyens de la réconciliation générale, se seraient rapidement et finalement limités au remplacement ou non d'un gouvernement provisoirement par un autre. Il semble que, dans son immense lassitude et son grand dénuement, le

ment modifié cette volonté.

Dans son livre magistral sur la Chine, M. Z. Brzezinski soulignait que pour le gou-  
vernement chinois il était essentiel que la collec-  
tivité internationale reconnaisse cette situation. La  
fin d'une conférence internationale sur le  
Cambodge offrait une occasion inespérée. Bien  
que la conférence du mois d'août se fût soldée  
par un échec, l'objectif de la Chine avait été d'af-  
firmer que rien n'était possible sans elle (ce n'est  
certainement pas dans cette intention que la Con-  
férence internationale de Paris avait été convo-  
quée). La condamnation, précédemment unanime,  
survenue en Chine en juin 1989 n'avait aucune-

ANS UN ARROGANT COMMUNIQUE PUBLIE  
le 2 mai 1989 à Beijing, la Chine et  
l'URSS, dont on savait que, pour retenir  
complètement leurs relations, elles  
avaient convenu de régler préalablement les pro-  
blèmes de la délimitation de leurs frontières, la  
question algériane et le dossier cambodgien,  
avaient rappelé en des termes à peine voilés que  
leur régime en Asie devait passer par elles. Un  
marché économique potentiellement très impor-  
tant et un équilibrage éventuel de la puissance  
japonaise ne pouvaient laisser indifférents les  
deux pays qui jouent un rôle clef dans la politique  
asiatique. Le dossier cambodgien n'était que l'oc-  
casion pour la Chine, l'URSS et aussi les Etats-  
Unis de se donner mutuellement des gages en  
acceptant, à certaines conditions le leadership  
chinois dans cette partie du monde.

reprirent du pouvoir. Pouvait-on envisager le retour, au sein du gouvernement cambodgien des boureaux et des tortionnaires, sans autres garanties que celle de les trouver à nouveau rangés sous la bannière et la caution qu'il avait déjà utilisées en 1975 pour commettre leurs meurtres ? Si la délégation de Phnom Penh nourrissait encore quelques doutes sur une éventuelle « conversion » des Khmers rouges, les prestations haineuses de Khieu Samphan (représentant des Khmers rouges) à la Conférence de Paris aura suffi à les dissiper. Autrement, celui-ci a pu en rares occasions admettre quelques « erreurs », mais il n'a jamais exprimé ni regrets ni remords au sujet de ses crimes. Toutes proportions gardées, l'holocauste du Cambodge aurait fait 65 millions de victimes s'il avait eu lieu aux Etats-Unis. Tous les holocaustes ne sont-ils pas dignes de la même considération... ? Il ne s'agissait que de Cambodgiens ; Le massacre absolu, systématique de tous les cadres cambodgiens, de tous les intellectuels, de leurs mères, de leurs épouses et de leurs enfants, des étudiants, et seulement parce que la ville les avait corrompus entraînait-ils vraiment dans le cadre d'une lutte contre toute forme d'influence

gouvernement de Phnom Penh aurait finalement accepté la solution chinoise, si le partage du pouvoir entre les quatre parties n'avait paru procéder de la volonté de paralyser entièrement l'administration et de contribuer ainsi à créer une situation explosive, susceptible d'être utilisée en vue de la

Après l'échec de la Conférence de Paris et le retrait des troupes vietnamiennes, les Cambodgiens et les Cambodgiennes ont peur que les hommes de Pol Pot reviennent.

PAR VINCENT JACQUOT

«internationnalistes» et ceux qu'on pourrait appeler les «nationalistes en matière fiscale». La perception que les Canadiens et Canadiennes ont généralement de la sécurité aujourd'hui se reflète également dans la mesure où les attitudes face aux budgets de défense maintenus sont liées aux préoccupations ex-primées au sujet de problèmes internationaux évoqués plus haut. On pourrait s'attendre, par exemple, que ceux qui sont partisans de la défense considèrent la menace de guerre comme étant grave, mais non la pauvreté dans le tiers-monde, ni les violations des droits de la personne, ni les conflits commerciaux. Pourtant, ce n'est pas le cas. Les opposants aux compressions des budgets de la défense (ceux qui ont aussi tendance à dénoncer les réductions de l'aide au développement) attribuent généralement plus d'importance à presque tous les problèmes internationaux que ceux qui appuieraient ces compressions. Les différences frappantes ne sont donc pas tant des différences entre des groupes aux priorités opposées qu'entre les nombreuses personnes selon qui il existe une vaste gamme de défis extérieurs sérieux réclamant une action, et les quelques-unes qui ne le croient pas.

L'ÉMERGENCE D'UNE CONCORDE ENTRE L'EST ET L'OUEST plus que d'une simple détente, suscite déjà des conceptions que l'aide extérieure pluri que

Diagramme 4 La réduction des dépenses fédérales

À peu près une personne sur trois (33 p. 100) trouvent l'idée bonne; les autres (67 p. 100) pensent qu'il est impossible d'avoir des armes à des fins uniquement défensives.

Les réductions des arsenaux nucléaires, en revanche, sont très favorablement accueillies. Les sondages passés de l'Institut, et celui-ci aussi, révèlent que la population appuie fermement l'idée d'un traité d'interdiction totale des essais nucléaires qui limiterait ou éliminerait tout ou moins des arsenaux existants.

QUAND LE GOUVERNEMENT MURLONEY A ANNONCÉ, AU printemps dernier, son intention de réduire les dépenses fédérales en matière de défense et d'aide extérieure, le public a peu protesté sur le moment. Cependant, à en croire le sondage de l'Institut, la population est très divisée sur le sujet, et très peu de gens s'opposent fortement aux coupures budgétaires. Dans une de ses questions, le sondage évoquait le nouveau budget fédéral, puis demandait si le gouvernement aurait dû réduire l'aide extérieure plutôt que les budgets de défense, réduire les derniers plutôt que l'aide extérieure, réduire les deux davantage, réduire les deux moins, ou procéder à d'autres compressions à la place (voir le Diagramme 4). Environ un(e) Canadien(ne) sur quatre préfère une réduction qui toucherait la défense plutôt que l'aide extérieure, et à peu près autant favorisent le contraire. Puisqu'une proportion légèrement supérieure (29 p. 100) appuie également de plus grandes coupures dans les budgets de la défense et de l'aide extérieure, il y a donc une mince majorité qui se dit d'accord avec les compressions annoncées au moins (si ce n'est plus) dans les budgets de la défense et de l'aide extérieure. À peine plus d'un quart préfèrent soit des réductions moins dans les deux domaines, soit d'autres compressions budgétaires à la place; ce groupe pourrait être qualifié d'internationaliste, vu la façon dont il appuie le maintien d'activités internationales intéressantes aussi bien le domaine militaire que l'aide au développement.

En général, la population canadienne est conséquente dans ses préférences. En effet, les personnes qui approuvent les compressions des dépenses militaires canadiennes ont aussi tendance à soutenir le désarmement à l'Est et à l'Ouest, à rejeter la recherche d'une supériorité militaire, et à croire que la Guerre froide s'estompée, que la «menace soviétique» recule et que les facteurs économiques contribuent davantage à déterminer l'influence qu'un pays exerce sur la scène internationale que les facteurs militaires. En revanche, celles qui sont plus favorables à des compressions du budget de l'aide au développement qu'à des réductions du budget de la défense pensent généralement l'inverse.

Fait intéressant, la division entre ces deux groupes de perspectives, bien que très réelle, est seconde. Ce clivage apparaît dans le fait que la corrélation entre le soutien (ou l'opposition) à des réductions touchant la défense est positive dans l'ensemble; c'est-à-dire plus de Canadiens et de Canadiennes favorisent les deux types de réductions, ou n'en favorisent aucun, qu'il n'y en a à accorder préférence à l'un ou à l'autre. Il y a donc, au Canada, un débat plus généralisé que celui qui oppose les «partisans de la défense» et «partisans de l'aide au développement» : il s'agit de celui qui oppose les

Dans la logique d'une nouvelle définition de la sécurité, les gens croient de plus en plus les superpuissances capables de régler les problèmes mondiaux. D'une personne sur trois seulement qui, en 1987, croyait aux capacités des États-Unis en la matière, on passe aujourd'hui à deux personnes sur trois. Et, alors qu'une finace à l'Union soviétique en 1987, aujourd'hui, c'est plus d'un Canadien ou Canadienne sur deux qui le fait. La plupart des gens précisent que leur confiance en l'URSS s'est accrue dernièrement.

Dans le questionnaire, on a énuméré une série de caractéristiques et demandé aux personnes interrogées si chacune d'elles s'appliquait plus à l'URSS qu'aux États-Unis, aux deux pays, ou si elle ne valait pour

Diagramme 2 L'importance des problèmes mondiaux (indice (max. 100))

Diagramme 3 Trois types de menaces

aucun des deux. Ces caractéristiques étaient les suivantes : « veut dominer le monde ; est disposé à négocier sur la plupart des différends » ; et « utilise la force militaire pour atteindre ses objectifs ». Dans chaque cas, plus de 40 p. 100 pensaient que l'affirmation s'appliquait également aux deux pays.

Les changements dans la façon dont la population canadienne perçoit les superpuissances sont particulièrement frappants ici. Le même jeu de questions figurait dans un sondage réalisé en 1984 au Canada par la United States Information Agency. À l'époque, la moitié des gens, soit moins d'un sur quatre, pensaient que les États-Unis et l'URSS avaient la même volonté de négocier ou étaient aussi dignes de confiance l'un que l'autre dans des négociations. Et beaucoup moins encore estimaient qu'ils cherchaient à dominer le monde ou qu'ils étaient prêts à employer la force.

Bien que l'on s'éloigne des images catégoriques de la Guerre froide, les Canadiens et Canadiennes, comme l'on montre des sondages précédents de l'Institut, ne considèrent pas que les deux superpuissances se valent exactement, du moins dans leurs actions et dans leurs motivations. Beaucoup plus de gens pensent que c'est l'URSS, et non les États-Unis, qui emploie la force militaire et cherche à dominer le monde, et beaucoup plus aussi estiment que les États-Unis se montrent plus disposés à négocier que l'URSS et qu'ils sont plus dignes de confiance que cette dernière dans des négociations. Les Canadiens et Canadiennes ne sont pas encore convaincus que l'URSS n'est qu'une puissance ordinaire et pacifique. Plus de deux personnes interrogées sur trois ne sont pas d'accord ou pas du tout d'accord avec l'affirmation selon laquelle l'Union soviétique est une nation pacifique, qui ne souhaite se battre que si elle pense devoir se défendre. Elles ne trouvent pas non plus qu'un conflit européen soit inimaginable. La plupart des gens (60 p. 100) jugent qu'une guerre classique reste possible aujourd'hui en Europe. Le reste (40 p. 100) pense qu'elle est impossible, mais une poignée de gens seulement (5 p. 100) sont convaincus qu'elle l'est réellement.

Malgré M. Gorbatchev et en dépit du fait qu'en plus de quarante ans, ils n'ont pas attaqué l'Occident, les Soviétiques, pour parler familièrement, ont encore un pied dans la Guerre froide. Par conséquent, les Canadiens et Canadiennes soutiennent toujours les politiques traditionnelles conçues pour faire échec à cette menace militaire classique. Seule une petite minorité (16 p. 100) estime que la participation du Canada à l'OTAN n'est pas importante (90 p. 100 au moins affirment avoir entendu parler de l'Alliance atlantique). Fait plus révélateur encore, beaucoup de gens se disent favorables au maintien de forces canadiennes en Europe, et ce soutien n'a pas faibli depuis 1987, année où la question a été posée pour la dernière fois dans le sondage de l'Institut. Environ une personne interrogée sur quatre déclare que les forces canadiennes devraient être réduites ou retirées, trois sur quatre souhaitent leur maintien au niveau actuel, sinon leur accroissement.

À la question de savoir si ces troupes devraient être réduites au cas où l'Est et l'Ouest conviendraient de réduire sensiblement les forces militaires classiques stationnées en Europe, au moins 40 p. 100 des personnes interrogées ont déclaré que les effectifs canadiens devraient être maintenus à leur niveau actuel. (Le libellé précisait, mais sans assez insister au gré des experts militaires, que des réductions importantes du nombre des soldats canadiens risquaient de faire perdre aux unités visées leur efficacité militaire.) Un tiers environ (35 p. 100) des gens sont favorables à une réduction des troupes canadiennes dans une proportion égale à celles du reste des troupes stationnées en Europe, alors qu'un quart des gens (24 p. 100) préfèrent un retrait total. En outre, la population canadienne se dit toujours disposée à défendre l'Europe s'il le fallait. Les six dixièmes des Canadiens et Canadiennes ou presque (58 p. 100) affirment que l'emploi de troupes canadiennes se justifierait si l'Europe occidentale était envahie. En matière de politique de défense, les Canadiens et Canadiennes semblent traditionnalistes dans un autre sens. Ils sont sceptiques quant aux nouvelles idées, comme la défense « non provocatrice » ou la « défense défensive ». Les personnes interrogées pensent que ces idées, dont il est beaucoup question en Europe aujourd'hui, visent à « nous débarrasser d'armes qui pourraient servir à attaquer la partie adverse et seules des armes non menaçantes resteraient des lors en service ».

indicateurs, que la plupart des Canadiens et Canadiennes sont conscients des problèmes de pollution «canadiens» aussi familiers que les pluies acides et la présence de produits chimiques toxiques dans les Grands Lacs. Il semblerait aussi qu'ils recommandent la gravité, à l'échelle planétaire, d'une série de problèmes environnementaux. Apparemment, la population canadienne adhère à un thème clé du rapport Brundtland, à savoir qu'il faut élargir l'entière notion de sécurité dans son acception traditionnelle (axée sur les dangers politiques et militaires menaçant la souveraineté nationale) pour y englober les préoccupations croissantes des tensions environnementales. La plupart ont certainement été d'accord avec M. John Fraser, ancien ministre de l'Environnement et aujourd'hui président de la Chambre des communes, quand il a déclaré dernièrement que nous abordons les décennies à venir en sachant pertinemment que si nous ne changeons pas nos modes de vie, nous ne survivrons pas.

Les Canadiens et Canadiennes n'ont pas toujours accordé une telle priorité aux questions d'environnement. Ainsi, dans un sondage d'opinion réalisé en 1984 pour le ministère des Affaires extérieures, la protection de l'environnement arrivait nettement troisième par ordre d'importance comme thème de la politique étrangère du Canada, derrière la paix et la croissance économique mondiale.

Malgré ces changements dans la perception des menaces, la crainte d'un désastre nucléaire ne s'est pas entièrement dissipée. Cependant, ce n'est en général plus

Diagramme 1 La plus grande menace à la paix mondiale

	1989	1988	1987	%
Les actions soviétiques	5	5	5	%
Les actions des E.-U.	9	11	8	%
La course aux armements	21	23	27	%
La prolifération nucléaire	40	32	29	%
Les conflits régionaux	25	28	31	%

le spectre d'une attaque nucléaire soviétique qui l'alimente. Quant à la question de savoir dans quelles conditions des armes nucléaires pourraient être employées, trois scénarios différents se sont dégagés des réponses fournies. D'abord, dans un scénario «peu conventionnel», ce sont des terroristes ou une petite puissance engagée dans un conflit régional qui les utiliseraient. La plupart des personnes interrogées optent pour ce scénario, trois sur quatre estimant qu'il y a plus ou moins de chances, ou plutôt de risques pour que cela se produise de leur vivant. Ensuite, il y a le scénario de la «guerre nucléaire accidentelle», c'est-à-dire la possibilité que des missiles nucléaires soient lancés par erreur ou par suite d'une défaillance du matériel nucléaire. Enfin, le scénario des «superpuissances», qui reprend les possibilités de la Guerre froide : une attaque surprise contre l'Europe ou les Etats-Unis, ou un conflit régional dégénérant en un échange nucléaire entre les superpuissances. Ce dernier scénario apparaît comme le moins probable, moins d'une personne sur trois croyant à son éventualité.

cielles et les autres préoccupations économiques très bas

Fait remarquable, les seuls problèmes de la liste que dans la liste des priorités internationales.

Les gens ont en général classés après les grandes guerres sont les violations des droits de la personne, la pauvreté et la faim. Il se sent que beaucoup de Canadiens et Canadiennes approuvent l'argument du rapport Brandt selon lequel la survie de l'humanité évoque non seulement les questions traditionnelles de guerre et de paix, mais aussi les mesures à prendre pour résoudre les problèmes de la faim dans le monde, de la misère générale et des disparités alarmantes entre les conditions de vie des riches et celles des pauvres. Mais beaucoup aussi estiment que ces problèmes ne constituent pas des menaces essentielles pour la sécurité du Canada.

Si l'on décompose les classements individuels et qu'on les compare entre eux, les questions se regroupent en quatre catégories; cela signifie que des gens selon qui un des problèmes est sérieux ont tendance à considérer que les autres le sont également. Les quatre catégories sont les suivantes : les menaces militaires (c.-à-d. les guerres mais aussi, dans une moindre mesure, le terrorisme); les menaces économiques (l'instabilité financière et monétaire, les conflits commerciaux et le protectionnisme); ce qu'on pourrait appeler les menaces peu conventionnelles «issues de privations» (la pauvreté, les violations des droits de la personne et le terrorisme); et ce qu'on semble fort justement appeler les menaces courantes ou «systémiques» (la pollution de la planète, le crime et les maladies).

Ces ensembles décrivent donc une des façons dont ces problèmes sont intimement liés dans l'esprit du public. Il serait bon de souligner, toutefois, que les Canadiens et Canadiennes ont tendance à les voir collectivement, comme étant généralement importants, ou comme ne l'étant généralement pas, et non pas en accordant à chacun un degré d'importance. (D'un point de vue statistique, les classements, pour deux problèmes distincts quelconques, sont presque toujours liés positivement, jamais négativement.)

POUR APPROPRIER LA QUESTION DE LA GRAVITE relative, on a demandé aux personnes interrogées de classer trois types de menaces auxquelles le Canada est confronté à l'échelle internationale, à savoir des menaces militaires, économiques et environnementales (voir le Diagramme 3). Les résultats sont sans équivoque. Les défis économiques et environnementaux semblent généralement plus sérieux que les menaces militaires. Fait probablement étonnant, la plupart des Canadiens et Canadiennes, soit au moins huit sur dix (83 p. 100), plaçant les menaces militaires au dernier rang de trois. Seule une petite minorité, inférieure à 10 p. 100, estime que ce sont les plus graves. En revanche, la majorité des personnes (51 p. 100) et non pas seulement une petite bande d'écologistes, donnent la priorité aux questions environnementales. À peine moins classent en premier les menaces économiques (43 p. 100).

Si l'on évalue l'importance relative qu'autont ces trois types de menaces au cours des dix prochaines années, les problèmes environnementaux dominent incontestablement. Presque les deux tiers des personnes interrogées pour le sondage les placent en premier, alors qu'un tiers à peine citent les menaces économiques en tête. Seule une poignée de gens ont déclaré que les menaces militaires classiques seraient les plus graves dans dix ans. En outre, la grande majorité de la population canadienne pense qu'aujourd'hui, les capacités économiques déterminent davantage l'influence d'un pays dans le système international actuel que les capacités militaires. Ces deux schémas apparaissent aussi dans de récents sondages américains.

EN 1989

LE SONDAGE  
D'OPINION RÉALISÉ  
PAR L'INSTITUT

# DES MENACES PEU CÔMUNES ET UNE SÉCURITÉ COMMUNE

La majorité des Canadiens et Canadiennes ne partagent plus des points de vue typiques de la Guerre froide, mais ils sont malgré tout en faveur de l'Alliance occidentale et de la défense classique.

UNE ANALYSE DE  
DON MUNTON

Ces perceptions de la sécurité mondiale et des menaces qui pèsent sur la planète. Les principales tendances internationales sont claires : les relations Est-Ouest s'améliorent rapidement; on progresse dans la limitation des armements; tant nucléaires que non nucléaires; de nombreux, sinon tous les conflits régionaux et locaux (en Amérique centrale, en Afrique australe, en Asie du Sud-Est) se terminent ou, du moins, tirent à leur fin. Après s'être focalisé sur les risques d'agression armée et sur la sécurité militaire, la politique internationale se concentre sur des problèmes plus prosaïques : le protectionnisme commercial, la dette du tiers-monde, le trafic international de la drogue et la détérioration de la couche d'ozone, pour citer quelques exemples.

Ces tendances et ces changements de pôles d'intérêt ont été évoqués à des réunions aussi diverses que celles du Sommet économique et du Commonwealth, et ils ont occupé les premières pages de la presse du monde entier. Ils ont été discutés et défendus dans divers rapports internationaux rédigés par des groupes d'experts, comme le rapport de la Commission Brandt sur les perspectives de développement international, le rapport Palme sur la sécurité commune et, plus récemment, le rapport Brundtland de la Commission mondiale sur l'environnement et le développement. Ce qui est moins clair, c'est comment, et dans quelle mesure, la perception qu'ont les habitants de la planète des menaces et de la sécurité change elle aussi.

Un nouveau sondage d'opinion fournit les premiers éléments attestant que la sécurité internationale prend un sens assez différent pour les Canadiens et Canadiennes d'aujourd'hui et qu'elle représente à leurs yeux un ensemble de préoccupations à la fois plus vastes et plus fondamentales que la sécurité physique face à une attaque militaire. Les réponses laissent entendre, qu'on s'inquiète de moins en moins de ce genre de menaces classiques. Des sondages antérieurs réalisés pour l'Institut ont montré que la peur de la menace soviétique a pratiquement disparu. À la question, posée ces trois dernières années, de savoir quelle est la plus grande menace qui pèse sur la paix mondiale, la population canadienne a répondu de façon étonnamment uniforme (voir le Diagramme 1). Quelques-uns considèrent que ce sont les actions soviétiques qui constituent la plus grande menace; autant de personnes, sinon plus, estiment que ce

sont celles des États-Unis. La plupart pensent que les principales menaces viennent des conflits régionaux ou de la prolifération nucléaire. Les seules tendances discernables sur trois ans sont un déclin régulier, quoique peu marqué, du nombre de personnes citant la course aux armements entre les superpuissances comme étant la plus grande menace à la paix mondiale, et une augmentation régulière du nombre de celles qui mentionnent à cet égard la prolifération nucléaire.

Dans le même ordre d'idées, peu de gens pensent que l'URSS constitue une menace militaire croissante et un «danger réel et immédiat» pour l'Amérique du Nord. Plus de 80 p. 100 des personnes interrogées disent que non. Une bonne majorité (57 p. 100) trouve l'Union soviétique moins menaçante qu'elle ne l'était il y a quelques années. Quant à la grande majorité (79 p. 100), elle pense que la Guerre froide s'atténue.

L'amélioration des relations Est-Ouest, évidente dans les rencontres au sommet desomains nombreuses entre M. Gorbatchev et des dirigeants occidentaux (MM. Reagan, Kohl et Mitterrand, Mme Thatcher et, dernièrement, M. Mulroney) semble également évidente aux yeux de la plupart des Canadiens (66 p. 100) selon qui les grands pays coopéreront de plus en plus entre eux dans l'avenir.

DANS CE CONTEXTE, UN DES OBJECTIFS ESSENTIELS DU sondage de l'Institut en 1989 était d'étudier ce que la population canadienne considère maintenant comme étant les grands dangers menaçant la paix et la sécurité internationales, si les menaces dites classiques diminuent. Les nouveaux éléments d'information sont encore incomplets, mais ils semblent assez clairs en général et ils donnent l'image d'un public qui voit un système international fondamentalement modifié.

On a demandé aux personnes interrogées de classer une série de problèmes internationaux particuliers par ordre d'importance en tant que menace à la sécurité du Canada (voir le Diagramme 2). Elles ont accordé relativement peu d'importance à de grandes guerres, sûrement parce qu'elles semblent improbables. Les conflits commerciaux, le terrorisme et l'instabilité financière et monétaire internationale ont été classés plus haut dans la liste fournie, dont les premiers rangs sont occupés à la pollution planétaire, au crime international et à la propagation de maladies.

Le sondage de 1989 corrobore largement le rapport Brandt, en 1980, on affirmait dans ce document que, si dans l'esprit des gens, le mot «guerre» est souvent synonyme de conflit militaire, voire d'agrandissement, ils perçoivent de plus en plus comme un danger aussi grave le chaos qui naîtrait d'une grande famine, d'un désastre économique, de catastrophes écologiques et d'actes terroristes.

Les résultats sont tout aussi surprenants dans un contexte purement canadien. Au lendemain d'une campagne électorale bruyante et profondément divisée qui a été dominée par une question de politique extérieure, à savoir le libre-échange — une élection pendant laquelle on s'est servi des deux côtés d'arguments relatifs aux périls économiques qui guettent le Canada — et alors même que le débat continue quant aux avantages et aux inconvénients de l'Accord de libre-échange, les Canadiens et Canadiennes placent les questions commu-

Le présent article est le troisième d'une série annuelle de sondages d'opinion menés pour l'Institut pour la paix et la sécurité. Le sondage, conçu par Don Muntion en collaboration avec le personnel de l'Institut, a été réalisé aux mois de septembre et octobre 1989 par le Longwoods Research Group sur un échantillon sélectionné au hasard parmi un groupe de 30 000 foyers répertoriés par Market Facts Ltd. Il s'est fait par courrier auprès de 890 personnes en tout, représentant 50 p. 100 des individus à qui le questionnaire avait été envoyé. Avec un échantillon de cette taille, la marge d'erreur approximative est de plus ou moins 3 p. 100, 95 fois sur 100. Les résultats descriptifs complets du sondage figurent dans un document de l'Institut signé par Michael Driedger et Don Muntion et publié en même temps que le présent article.

## NOTE FROM THE EDITOR

Momentous events are supposed to be few and far between — that's what makes them stand out. We need to locate them in our own lives: "I was at the dentist when I heard about..." These days momentous events between nations are like so much cheap jewelry and the experts, like everybody else, are left shaking their heads. In just the past two weeks (early February) the following modest list of unprecedented happenings is immediately relevant to the articles and regular departments in this issue of *Peace & Security*:

"Prisoners as Presidents" by **Heribert Adam** — as of 11 February and after some twenty-seven years, Nelson Mandela was no longer a prisoner and began immediately to demonstrate with masterful intelligence and dignity why the president's office seems an entirely natural place for him to be.

"Arms Control Digest" and "Defence Notes": researched and written by Institute Research Associate **Ron Purver**, and Queen's University professor **David Cox**, respectively, these columns are compiled late in the life of each issue in order to be as current as possible — generally three to four weeks before publication. In the international atmosphere that prevailed until not too long ago where, for example, the opposing European alliances took sixteen years around the negotiating table in Vienna to agree on how many soldiers the other side had or even agree on what the definition of a soldier was, this lag was not a problem.

However, in the few days since those columns were completed the superpowers decided to dispose of the major part of their chemical weapons, even before there is a multilateral treaty; a

serious obstacle in the way of a strategic nuclear weapons treaty was eliminated; in Ottawa the twenty-three members of both alliances committed themselves to signing an Open Skies agreement by the middle of May; and while in Ottawa, the Soviets, after thinking about it for a fortnight (a nano-second in military-diplomatic time) said "sure, that's fine" to an American proposition to reduce total troop levels in central Europe by several hundred thousand.

Our cover story, "Time for Change," is an excerpt from a soon-to-be published book of the same name by free-lance writer **Boyce Richardson**. The product of a two-year study conducted under the auspices of the Institute and organized by our Director of Public Programmes, **Nancy Gordon** and Research Associate, **Fen Hampson**, the book brings to bear the collective wisdom of half a dozen disciplines on the global problems that confront Canada.

The Editors are pleased to announce that beginning with this issue, articles in *Peace & Security* will be indexed by the *Canadian Periodical Index*.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

# TIME TO CHANGE

## CANADA'S PLACE IN A WORLD OF CRISIS

*Drawing together the knowledge and expertise of a dozen research institutes, government departments and universities, the Institute for Peace and Security has produced a critical new book on how Canada might face the major emerging threats to international security.*

BY BOYCE RICHARDSON

IN THE LAST YEARS OF THE 1980s people everywhere have begun to understand the scale of the immense changes that lie ahead for human society. Of course we are always changing; but often these changes have crept up and overtaken us without most people realizing what was under way. The era of satellite communications has ended that. Nations that only ten years ago were closed off to the major intellectual and technological influences sweeping much of the globe now recognize that they can no longer hide behind guarded borders, while in more fortunate parts of the world, long-held, comforting notions of technical and economic superiority have been fatally undermined.

In the late eighties this has brought cataclysmic upheavals to some countries, such as the million-strong public demonstrations for change in Beijing 1989. In Eastern Europe old bonds have been shaken loose with a rapidity that people accustomed to the rigidities of the Cold War still find hard to believe. And in those nations that have long enjoyed the fruits of industry and technology – mostly North America and Europe – old certainties about the inevitability and permanence of progress have been eroded.

There are many reasons for this. Populations are more volatile than ever before. Our world is increasingly polarized between rich and poor. The evidence is accumulating that our globe cannot sustain the present headlong methods of economic development. Even the people who seem to have everything – Canadians among them – have become very uneasy about the future.

What was new in the eighties was that these perceptions of the need for big changes in the way the world was going penetrated to the mass of people – or, at least, became the common currency of political dialogue in nations with widely differing ideologies and systems of government.

Leaders almost everywhere now recognize the need for change, and those who do not – the aging leaders who have re-imposed their authority so ruthlessly on China are the perfect symbol – are recognized as social dinosaurs who are heading towards extinction.

Two major influences have produced these changed perceptions: first, the rapid easing of the East-West tensions that have dominated international relations since the end of the Second World War, and second, the growing understanding that our Earth's resources are finite, and human beings are plundering them at a rate and in a manner than cannot be continued without irrevocable damage to the processes on which all life depends.

Together these two influences have led people everywhere to rethink their very notion of what constitutes security. Security has always been a fundamental concern of human groups; and in the years since the Second World War we have poured immense resources into defending ourselves against perceived military threats to our security. In the last few years, however, people

*This article is excerpted from Time to Change: Canada's Place in a World of Crisis by Boyce Richardson, to be published in March 1990 by Summerhill Press. Available in paperback from bookstores for \$14.95.*

almost everywhere have begun to realize that long-term changes to the basic elements on which all life depends may prove to be as threatening to human security as the nuclear war and military aggression against which we have been so assiduously defending ourselves.

THE SPEED WITH WHICH THE NEW PERCEPTION HAS GATHERED MOMENTUM is a remarkable commentary on the power of our new systems of mass communications. The publication in 1987 of the report of the World Commission on Environment and Development to the United Nations General Assembly (known as the Brundtland report) dramatized fears and concerns that had been growing for several decades. Within two years tens of thousands of copies of this report had been sold in dozens of countries – more in Canada than anywhere else – and it quickly became necessary for political leaders to pay attention.

Since the environment became a matter of widespread concern in the late 1960s, most political leaders have acted as if environmental matters – clean water and air, fertile soil, vigorous forests – are peripheral to the real business of running their countries. And in fact, it was because of this lack of political urgency that the enterprise of writing this book was launched, late in 1987. We felt that Canadian governments were reacting too sluggishly to the challenges thrown out by these dramatic new developments. The federal government seemed reluctant to seize opportunities offered by these changes.

The contrast between the Brundtland vision of the future, and that of the Canadian government, as revealed in its 1987 Defence White Paper, was simply too great to be ignored. Brundtland suggested the need for a changed vision of the future, and a rapid reallocation of resources to meet entirely new challenges to our long-term security, both as Canadians and as citizens of the globe. But the Defence White Paper ignored this dimension entirely, confronting Canadians with a vast programme of proposed rearmament, based on what appeared (more and more with each passing day) to be the outmoded clichés of Cold War thinking.

We felt it important to try to stimulate public dialogue on these vital issues. But an interesting thing then happened: coincidentally, between the conception of this book and its publication eighteen months later, some sort of sea-change occurred in public perceptions. Perhaps the exceptionally hot summer of 1988 had something to do with it. As the world's climatologists gathered in Toronto to discuss the prospect of long-term, man-induced climate change that could potentially swamp dozens of major cities, decimate forests, diminish cropping lands – in short, revolutionize human life – the city sweltered under its highest temperatures for many years, and many people had difficulty breathing the smog-laden air.

One day it was revealed that all five of the hottest years experienced in this country since records began a century ago had occurred in the 1980s. It began to seem that climate change was no longer a prospect for the distant future, but was actually upon us.

In the six or nine months that followed that hot summer we were inundated by mass media accounts of dramatic and horrendous possibilities for the future: of dreadful environment-destroying incidents through Eastern Europe, South America and Africa. For a time it almost seemed there was a competition to discover the most irresponsible country: Ethiopia with its massive soil erosion; the Soviet Union with its

disastrous water diversions; Czechoslovakia, China, or Poland with their dreadful air pollution; Brazil, with its insensate destruction of the rainforest; the United States or Canada, spreading deadly poisons throughout the countryside and oceans in the name of industrial progress – these became the stuff of everyday stories in our mass media, which, having discovered the subject, appeared to delight in scaring us all to death.

NO SOONER HAD THIS OUTBURST OF SCARY INFORMATION BEGUN TO subside with the onset of winter than the biggest oil spill ever known in North America decimated the pristine ocean and beautiful shorelines of southern Alaska. This incident exposed in the most brutal way how worthless are the soothing assurances of environmental concern propagated by the world's biggest companies through television and magazine advertising. These companies are major decision-makers; but the spectacle of the oil-strewn Prince William Sound demonstrated that we cannot depend on these decision-makers unless they are subject to constant prodding and vigilance from an informed and concerned public. There is no doubt that millions of people got this message.

Within two years of the publication of the Brundtland report, a number of other things happened that testify to the remarkable influence of the report on public discourse around the world:

President George Bush recognized the existence of acid rain, and moved to do something, however inadequate, about it.

Margaret Thatcher actually sponsored an international conference on climate change.

The European Economic Community adopted an environmentally-conscious agricultural policy, to encourage organic methods and discourage industrial agriculture.

The Dutch government became the first in the world ever to be defeated on an environmental issue, when a governing coalition broke up over a far-reaching new plan to solve Holland's environmental crisis in one generation by doubling environmental spending in the next four years.

The Green Parties improved their position in the elections to the European Parliament, in England winning as much as fifteen percent of the vote.

In Canada the government dropped its rearmament programme, thus clearing the way for more attention to be paid to longer-term problems. Brian Mulroney was even given an environmental award by an American business group for his rousing speeches to international conferences.

That so many of our leaders should have jumped on the bandwagon after decades of indifference indicates the head of steam that is now driving the engine of environmental concern. To keep pace these leaders have had to pay at least lip-service to the idea that humans can have a secure future only if we manage to build an environmentally sustainable global economy. Lip-service, of course, is not enough: a group of Canadian activists followed Prime Minister Mulroney to a conference in Europe and denounced him before the world's press. They said that in spite of his vigorous speeches favouring sustainability, his government cut spending on alternative energy projects while investing enormously in climate-changing energy megaprojects. His actions, they said, spoke louder than his words.

From all of this we discovered that there is a considerable gap between getting political leaders to endorse sustainability and getting them to implement the measures needed. No doubt many years of ferocious political debate and struggle lie ahead in this effort to create a new international order.

Thus, though the underlying premise with which we began this work is more widely accepted than it was, we feel that the need to clarify facts and options is at least as great. Our leaders began to change their attitudes because in the late 1980s a consensus developed among scientists, forecasters, and the general public about the urgency of the growing environmental threat. Since the Club of Rome published its famous Limits to Growth study in the sixties, many analysts have been at work, and half a dozen points have emerged that are now agreed by all major forecasters and global modellers.<sup>1</sup>

1. Population and physical capital cannot continue to grow forever on a finite planet.
2. There is so far no reliable complete information about the degree to which the planet can absorb all the wastes created by human wants.
3. Unless changed, present policies will lead to an increasing gap between rich and poor, among nations as among individuals. Even vastly increased foreign aid cannot significantly redress these global inequities.
4. Whereas technology can help, by itself it is not the answer.
5. Interdependence among peoples and nations is much greater than has been commonly realized. In other words, actions taken in one part of the world can often have profound consequences elsewhere.
6. For this reason, policy changes made sooner are liable to be more beneficial than those made later.

THIS LIST IMPLIES THAT, IF WE ARE TO SURVIVE, big changes will have to be made in the way things are organized. It doesn't follow that governments will make those changes, because so far the people who bother themselves with such questions lack real influence with most governments. If the Canadian case is typical, they tend to be enthusiastic civil servants and researchers who beaver away at their studies in isolated offices, get together for seminars to discuss their troubling insights, and produce a rain-shower of far-sighted documents that seldom penetrate the protective shell behind which ministers shelter.

These general propositions agreed by futurists offer us little comfort when they are applied to the major global issues of the contemporary world. They posit a future of danger, shortages, and deteriorating standards. For example, here are the five issues that one futurist says will define the world in 1994 – a mere half decade away:<sup>2</sup> the potential for nuclear war, severe food shortages, the deterioration of the biosphere, the imbalance in the distribution of wealth, and shortages of material and energy.

Underlying these issues is the sense that economic development and environment are two sides of the same coin, both of crucial importance to our future; and that we must find a way to make all future development sustainable in environmental and resource terms.

This concept of sustainable development was launched into the global marketplace of ideas in 1981 with the publication of a ground-breaking report under the somewhat bureaucratic title of the World Conservation Strategy (WCS). This document was prepared by the United Nations Environment Programme (UNEP), the International Union for the Conservation of Nature, and the World Wildlife Fund. The document was an effort to meet the objections that citizens of Third World countries had made to the alarm expressed about the state of the globe at the Stockholm Conference on the Human Environment in 1972.

At that time the predominant idea was that economic development was ruining much of the natural world, and this carried a strong implication that development was bad. Not unnaturally, people from countries desperate for development rejected the whole thesis, and even considered it something of a white man's plot to prevent the destitute people in the world from gaining their place in the sun.

The WCS came to grips with this problem for the first time. It recognized that the planet's capacity to support people is being reduced through poor land management, profligate use of resources, and the poverty that in many places forces people to destroy the resources they need if they are to survive. The document agreed with environmentalists that it is essential to maintain Earth's ecological processes and life-support systems, and to preserve genetic diversity. The WCS went further: it recognized that human activities will continue to depend on the use of other species and entire ecosystems, and it added that

Nature must be used on a basis that can be sustained into the distant future.

SUSTAINABLE DEVELOPMENT BECAME THE ideology animating the United Nations Environment Programme (UNEP), and it has since won rapid acceptance – as an idea. By treating both development and environment as essential to the continuance of human life on this planet, the document helped to take the curse off the environmental analysis of the human situation for the developing countries. Confronted by the WCS challenge, many governments formally took the pledge to put their affairs on a sustainable basis, promising to draw up and follow national conservation strategies to guide all their future development.

Unfortunately, so far it has been mostly talk. In one country after another finance ministers and their economic advisers have remained oblivious to environmental thinking. Warnings given by scientific advisers and global thinkers

have been ignored. Environment ministers have had low status and little influence in cabinets.<sup>3</sup>

Yet not all the prognosis is bad. The lip-service that leaders have begun to pay to environmental concerns has a firm and real cause, namely, the dramatic change that has occurred throughout the Western world in public attitudes. Many opinion polls suggest that electorates are changing their minds about the real threats to security. Canadians, as judged by such polls, appear to be ready for action to deal with the emerging, long-term threats (though they may not yet have accepted the need for higher taxes to pay for such action).

In the days of the Cold War the Soviet Union was regarded as the enemy and the number one world problem, in Canada as elsewhere in the Western world. This perception has greatly diminished. Indeed, a poll published in 1987 by the Ottawa-based North-South Institute, indicated that the fear of Soviet aggression is almost the last thing on the minds of Canadians when they think about the world.

CANADIANS DO SEE THE WORLD AS A TROUBLING PLACE, TO BE SURE, BUT the things that trouble them now are of a different kind, such as (in order of priority, according to this poll):

- pollution and the environment
- major world diseases
- poverty and hunger
- the possibility of nuclear war
- apartheid and human rights
- world economic collapse

All of these, as well as erratic United States foreign policy, world population growth, and Third World debt, rank higher in the concerns of Canadians than the fear of Soviet aggression. And this low ranking of the Soviet threat was confirmed a few months later by an in-depth study of Canadian opinion on peace and security issues conducted by the Canadian Institute for International Peace and Security.

From these polls it appears that the issues now concerning Canadians most deeply are difficult long-term problems that are beyond the control of any one nation or group of nations. They cannot be solved within the five-year (or even shorter) time-frame of any government, and tend to be overlooked when governments decide how to spend their money.

Environmental degradation, disastrous global climate change, growing poverty in the midst of increasing affluence, the rickety imbalances in the international economy, the rapid pace of population growth – these are the real security problems of the future, and more and more people have come to recognize it. These problems have the potential to threaten not merely the immediate security of many nations, but even the continuing viability of human society in the coming decades.

In fact they have already plunged some countries into crisis; for others, the crisis may be a decade or two ahead. But in all nations the warning signs are at hand of very severe future difficulties, tougher to handle than anything we have had to deal with in the past.

THE NEW CHALLENGES BEFORE US AS CITIZENS of this globe present Canada with great opportunities for constructive action and leadership. It would be foolish to suggest that we can save the world; but what we can do is to put our own house in order to meet these future challenges, and seek allies with whom we can move the world in a constructive direction that will hold out hope for the future of the human race.

The purpose of this book is to stimulate public interest in and debate about these important issues, leading on, we would hope, to action. Fundamentally the issues that we explore have to do with Canada's changing relationships with the rest of the world. We have not kept pace with many of these changes, and are scarcely prepared for their probable impact on us.

*First, the economy:* Though we are one of the richest and most fortunate nations on Earth, and a member of the club of the seven most powerful industrialized countries, our traditional dependence on the export of raw materials has not fitted us particularly well for the dramatic changes that are now occurring in the world. There is no doubt that everything else we might wish to do to create a decent and improved life for our own citizens (as well as those elsewhere) depends on our maintaining a viable and productive economy, but there are indications that the way ahead will be very much more difficult than the last forty years.

In spite of these problems, if we are to give a lead to halting man-made climate-change, we will have to give teeth to the now-accepted idea that our Canadian economy must become indefinitely sustainable in environmental and resource terms. First of all this means extremely difficult – one might almost say, revolutionary – decisions about energy use.

*Second, our own society:* We cannot remain indifferent to the changing demographic situation. Vast populations of people, excluded from their share of the world's goods, are ready to move, and it is not an option for us to turn away. We will continue to receive increasing num-

bers of Third World immigrants, and too little thought is being given to the likely implications of our changing population for our social relationships. But if it is (as some Canadians believe) a possibility that this fortunate country might provide an example of tolerant and decent living to the rest of the world, certainly we cannot expect that example to spring to life without immense effort, ingenuity, and the conscious building of bridges between different peoples.

*Third, the environment:* No one in the world can any longer avoid the environmental warning signs. We belong to that segment of the world's population that is making far too heavy demands on Earth's resources, and we are deeply responsible for trying to find a way to overcome the problems of air pollution, water, and soil degradation, ocean despoliation, and atmospheric changes that are leading to almost certain modifications in global climate. We have to start thinking about these matters.

As a nation we have to become more economical and less wasteful in our style of life, and we will soon have to start to divert resources into measures that will begin to solve these problems.

But that is only half of it: we must contribute more than we are doing now to helping the under-endowed majority in the world improve their lives, and to bring to a halt their destruction of the landscapes they depend on. To the extent that we are responsible for this, through our economic and trading policies, we have to take corrective measures by applying what the Brundtland commissioners called "a foreign policy for the environment."

For example, it is now accepted that the people of the world cannot afford to allow the tropical rain forests to be destroyed. Yet it is not enough simply to exhort tropical countries not to cut their forests. A considerable transfer of resources will be needed to make it possible for these impoverished countries to save these forests. And there is no sign yet that our governments are ready to make that necessary commitment. We have to find a way to look at

the world with a proper sense of our ecological interdependence, to set our sights on long-term survival rather than short-term prosperity.

*Fourth, the international sphere:* Canadians, placed on the globe midway between the United States and the Soviet Union, have a particular stake in helping the world maintain peace, reduce the threat of nuclear war, and bring new military technologies under international control. Many believe that Canada could get a bigger bang for its buck by spending whatever spare billions it has on reinforcing international organizations, strengthening international cooperation, and helping to keep the peace around the world, than by becoming fixated on the evidently impossible task of defending our huge coastlines from our largely imaginary adversaries.

Peace, order, and good government have always been Canadian ideals, and we should work to make them global. □

1. This list has been compiled by Eric Solem, of the Operational Research and Analysis Establishment, Directorate of Strategic Analysis, Department of National Defence, Ottawa, in his interesting monograph *Futures of the International System*, Project Report No. 143, May 1980, p. 49.

2. Theodore Gordon, quoted by Eric M. Roher, on page 2 of his monograph *Planning in the Modern State*, No. 139 in the series of Project Reports issued by the Operational Research Establishment of the Department of National Defence.

3. These conclusions were reached by 450 international experts who gathered in Ottawa in 1986 to examine the progress made towards sustainable development in the five years following the publication of the World Conservation Strategy report in 1981. Their overall conclusion was that there had been almost no discernible change in government attitudes.

# CHINA'S ORDEAL

*Decentralization may be China's last best hope, but in the current repressive atmosphere talking about it is a dangerous occupation.*

BY HEPING\*

UNABLE TO MAKE THE SPRING 1989 student movement disappear, the Chinese authorities are instead attempting to obscure and trivialize it. As usual, the methods used to minimize the scope of the social unrest hint at what they are actually trying to conceal. Turned into to a simple case of self-defence, the chronology of last June's events has been reduced to caricature; the government's version lacks all credibility. The only persons killed were "some blood-thirsty rioters...", there were no deaths among the students, including those who were forced to withdraw.<sup>1</sup>

This is the classic language of propaganda. It reflects a Confucian kind of benevolent paternalism aimed at co-opting the intellectuals – those who were at the head of the popular movement and did not understand that they were being exploited by "a handful of counter-revolutionaries," who were in turn being manipulated from abroad.

ONE COULD DEBATE FOREVER THE COMPETING versions of how the repression was unleashed on the night of 3 June. However, this would simply add more confusion to what is already an unendurable tragedy. Nevertheless, a precise reconstruction of the events will some day assist historians in answering the questions many Chinese are asking themselves. In the first place, to what degree was the pro-democracy movement planned? Who inspired the students of Beida University, back in April, to use the occasion of the death of the former General Secretary Hu Yaobang to take to Tiananmen Square in a noisy expression of their democratic aspirations? Why did the government systematically provoke the students by accusing them of being counter-revolutionaries?

Chen Yizhi, a close collaborator of Zhao Ziyang, the former General Secretary of the Chinese Communist Party, told *Le Monde*:

At first the students were calm ... but each time they wanted to evacuate Tiananmen Square, Li Peng [the present Premier] provoked them. For example, after Zhao's

speech on 4 May, almost everyone had returned to classes. Li Peng then summoned the university authorities to denounce the attacks on public order and the illegality of the demonstrations. Shortly after this, the students again went into the streets and began their hunger strike.

In China no one believes in the spontaneity of political movements, and the most Machiavellian theories crop up in conversations. This is to be expected in a closed society where "well informed" people get their information from rumors that can seldom be verified. It is hard, nonetheless, not to credit the theory that the government deliberately "planned" things to culminate in an exemplary punishment. Although inured to the supreme penalty, the Chinese people (above all the people of Beijing) did not anticipate this level of repression. Until the last hours, no one really believed it would happen, so when the first shots were fired, some students in the residences of Beida University refused to believe the news they had just received – "We had faith in the uprightness of our army."

"THE CHICKEN IS KILLED TO FRIGHTEEN THE MONKEY" is the Chinese expression used most often to explain how deliberate military intervention was designed to serve as an example. Of course, this fear on the part of the government was exacerbated by the international political climate as well as the upheavals in other socialist countries, but its underlying motives were and are essentially Chinese.

The regime felt endangered because it had not anticipated the scope of the movement. Easily persecuted and as well, readily "co-opted," intellectuals have been effectively marginalized since 1949. So in April, once again, the authorities underestimated the influence that might be wielded by a few thousand students in Tiananmen Square. While the strength of the movement surged back and forth, in denouncing the economic hardships, it won the support of the population of Beijing.

Testimony from various sources confirms the disarray of the government – the indecision among its ranks, and the secret political strug-

gles that ended with the rout of the more moderate elements, and the resignation of the communist party General Secretary, Zhao Ziyang. The line that won out is clearly the one that clings to the certainty that all can be reformed without being excessively transformed.

Since 1979 the government has carefully nurtured a host of paradoxes, asserting, for example, that it is possible to open up the country while closing it off, or that China can foster the development of a market economy within a Marxist-Leninist political structure. The maxim "one country, two systems" helps to reassure foreigners and, within China, legitimizes all of the most visible contradictions.

THIS MERGING OF CONTRADICTIONARY IDEAS FOLLOWS a traditionally Chinese logic; a logic that lives on in the minds of leaders who are the overconfident heirs of a successful revolution and a profoundly self-centered nationalism. Political discourse here always reverts to the assertion that China is a large country that has managed to secure for its one billion people a standard of living better than that of other Third World countries. And it is true that in China one does not queue for a bar of soap or a pair of shoes. China long practised a "primitive communism" that many Third World countries have sought to emulate. In Mao's day, the oft-repeated saying was: "Whatever food there is, everyone eats; whatever clothes there are, everyone wears; whatever work there is, everyone does."

To be sure, nationalism, or rather the chauvinism of the Chinese people – the Han majority in particular – is a basic factor relied on by the Party and the government to absolve their errors. It has always been relatively easy to resort to traditional Chinese xenophobia and lay the blame for internal problems on the outside world. There are repeated examples to show that even some of the harshest critics of the present regime remain vulnerable to talk of the external enemy.

All of these certainties the government has banked on have been shaken by the radical

\* Pseudonym of a close observer of Chinese politics.

change among a large section of Chinese youth. Some thirty-seven percent of the population is under twenty years old, and in the cities particularly, this generation of "only children" is demanding everything, and demanding it right now. Proud of being Chinese, they flamboyantly proclaim their love for the fatherland – sentiments expressed thousands of times over, in a multitude of ideogrammatic styles, in Tiananmen Square. As far as they are concerned, the Empire is humiliated by the affluence of Taiwan and Hong Kong. These young people want China to be respected for its economic prosperity and they are convinced that the recipe for success is to be found in the West. Faced with this wave of demands, the regime has retreated to the hard line, doing what it can to seal up the cracks.

But China is a more porous country today than it once was. Even the peasants listen to the Chinese-language short-wave broadcasts from abroad. The government has few effective means of parrying this invasion of messages, and by affirming over and over that its policy remains one of openness, the government is now caught in a crisis it can no longer manage.

THE CHINESE ARE WELL BEYOND BELIEVING IN the existence of a genuine socialist programme. Nor is the government promising anything other than gradual development requiring patience, hard work and sacrifice. But here again, the rejection of any substantial political reform condemns China to improvisation. "We are groping our way across the river step by step," Deng Xiaoping is quoted as saying, an expression which evokes the disorientation and genuine hardship involved in making one's way toward a shoreline that is not even in sight.

Lacking a convincing programme, and held back by inertia, the government falls back on old practices. The most common of these is the isolation of each social class and group within its own environment, institutions and structures. The greatest danger for the government lies in the cities; an alliance between intellectuals and workers must be avoided at all costs.

Throughout the events of the spring the workers' sympathy with the students was unflagging. On several occasions the author witnessed workers climbing down from construction scaffolds to applaud processions of students. Everywhere, there was factory slowdowns and absenteeism "on account of demonstrations" was widespread. On the other hand, the workers' support never had significant impact. Lacking trade unions organized as a genuine political force, the working class of Beijing was unable to translate its sympathy into action. A few days after the tragic night of 4 June, the first counter-revolutionaries to fall under the bullets of the execution squads were

workers in Shanghai – a fact that did not take long to sink in.

WHAT DOES THE FUTURE HOLD FOR CHINA NOW? In Beijing, as in the other cities, patience is the unspoken watchword. Desperate for news from the outside, the urban population attempts to stave off despair by concocting one scenario after another. The bolder ones await the return of Zhao Ziyang, while the more realistic watch the political maneuvering in the Central Committee and anticipate, for the short term, ever tighter control by the army. All the while, the President of the Republic, Yan Changkun, installs members of his family in key govern-

ment positions, convincing many Chinese observers that the military dictatorship will cease bothering to hide its real intentions once Deng Xiaoping is out of the way.

It is clear that the army has lost the confidence of a good part of the population. The "serve the people" mythology of the People's Liberation Army has taken some hard knocks. Chinese have regained their traditional fear of soldiers, and many soldiers are likewise having a hard time enduring the contempt with which they are now treated.

Although there are few hard facts known about the divisions that developed within the army in June, there is nevertheless considerable evidence that discontent runs deep. But the Romanian scenario of the army passing over completely to the side of the people does not seem plausible. Too many military units remain faithful to a regime that has granted them many privileges, and they would hold out a long time before throwing in their lot with a potential mass opposition movement. Many dissidents, however, are still convinced that a major part of the ranks would come over fairly rapidly to a movement that had sufficient strength, and the more radical among them hope for change even if it means civil war.

This kind of talk underscores a profound

despair, for of the vexing questions Chinese continually ask themselves about their future, the main one remains: what direction would a radical change in Chinese society take? Apart from a minority of intellectuals imbued with Western culture, no one foresees the establishment of a genuinely democratic system. Forty years of communism have scarcely shaken the profoundly feudal social and political structures. Many people I talked to are convinced that a new regime would have no choice but to resort to force once again in order to impose a more "liberal" design.

Quite apart from other considerations, any analysis of alternatives inevitably runs up against the overwhelming problem of demographics. The sheer weight of population is not just an economic impediment, it defines the nature of the discussion about political and economic options. Chinese analysts search in vain for useful models from outside the country; they are forced to recognize that no regime in history has had to provide political and democratic leadership to a country of a billion people. China's entire history has been an urge towards centralization, and the notion of reversing course creates rising panic.

THE POSSIBLE BREAK-UP OF THE EMPIRE RANKS very high on the list of forbidden topics. However, occasionally in conversation someone will admit that decentralization is the only solution. Only regional devolution of authority coupled with some form of confederal or federal system would create smaller areas of manageable size and facilitate the gradual acquisition of experience with civil liberties and civil society. But this vision of a dismembered China still seems largely irrelevant, and at any rate, is conceivable only as the end result of a slow and certainly painful process.

When he ended martial law, a symbolic action that carried more weight in the West than in China, Premier Li Peng accurately described the repressive order that has been reestablished: "Life and production are functioning in an orderly fashion, supplies are sufficient, the people are living and working in peace and contentment."<sup>2</sup>

This government-directed "people's happiness" conforms at one and the same time to the logic of dictatorship, and to a sort of self-proclaimed "enlightened" Confucian despotism. Western nations would, at any rate, be ill-advised to fall for it by continuing to over-indulge the current regime. It is necessary, on the other hand, to resist measures that would isolate China. Any such steps would inevitably end up penalizing the people of China and permit the government to carry on its brutal activities behind even thicker walls.

# LEADING THE HORSE TO WATER

*Now that the Soviets have embraced the UN and other international organizations, the only superpower left to be convinced is the USA.*

BY THOMAS G. WEISS

IN A SIGNIFICANT DEPARTURE FROM THEIR past words and actions, the Soviets have renounced previous doctrine and are now embracing multilateralism, especially United Nations mechanisms for preventing and limiting regional conflicts. In the revised Soviet lexicon for the Third World, "International peacekeeping and peacemaking" has replaced "support for national liberation struggles." While prominent in Western social sciences since the 1970s, "interdependence" has been anathema in Moscow until only recently.

The Kremlin's declared new policy is unequivocal. After decades of indifference or antagonism, the Soviets are now among the most vocal supporters of UN conflict management and resolution. Moreover, Soviet deeds are increasingly matching their rhetoric – acceptance of the UN in Afghanistan and Angola, pressure on the Vietnamese to withdraw from Cambodia, steps to repay UN hard-currency arrears, and a slow-down in arms shipments.

While Moscow was discovering the UN, however, the US was beginning to abandon the world body. This reversal of roles was striking, for the UN would hardly have existed without almost four decades of solid American financial and political support. In many ways, peacekeeping was a pragmatic American reaction when the Cold War meant that collective security had to be discarded as 1940s idealism. More particularly, the United States had traditionally paid for at least thirty percent of the peacekeeping bills, and sometimes much more. During Ronald Reagan's presidential tenure, however, official US support plummeted as Washington became the organization's leading foot-dragger and debtor. Multilateralism has not yet fully recovered from this period of American aloofness and hostility.

THE BUSH ADMINISTRATION SEEMS TO VIEW THE UN as less inimical to US interests than did its predecessor. While it is too early to tell whether a page has been turned regarding renewed US support for the United Nations, developments over the last eighteen months give rise to guarded optimism. UN-bashing ceased to be Washington entertainment in 1988, when

even Ronald Reagan set aside his "doctrine" of unilateral intervention and support for anti-communist insurgents in favour of selected UN action in the Third World. Five new peacekeeping operations have been deployed since. All were backed fully by the US, and all were helpful to American foreign policy: extracting the Red Army from Afghanistan and Cuban combat troops from Angola, stopping the carnage between Iran and Iraq, ensuring the peaceful transition to Namibian independence, and helping to depoliticize Central America. Moreover, the recently proposed UN interim administration, and large peacekeeping force for Cambodia, will permit the US to abandon a policy that was neither moral nor sensible. Until now, the US was committed, in effect, to Khmer Rouge participation in a Cambodian government.

Canada, as a strong ally and pillar of peacekeeping, must do what it can to usher the US fully back into the multilateral fold. Having relinquished its leadership role on First Avenue, the United States must come to grips with the Kremlin's volte-face there, as well as with a number of its worthwhile initiatives. Soviet proposals can no longer be dismissed simply because of their provenance.

While they are hardly household terms in the United States or anywhere else, Canada should lose no opportunity to emphasize the extent to which UNGOMAP (UN Military Observer Group India-Pakistan), ONUVEN (UN Observation Mission for the Verification of Elections in Nicaragua), UNIIMOG (UN Iran-Iraq Military Observer Group), UNTAG (UN Transition Assistance Group), and ONUCA (UN Observer Group Central America) serve and have served US interests. While the US is now responsible for over half of the approximately \$1 billion of UN debt and often resorts to financial intimidation, others are carrying large responsibilities. Some 80,000 Canadian soldiers (about the size of Canada's present armed force) have worn blue berets; of 14,000 UN troops world wide today, 1,200 of them are Canadians. Canada and other countries are putting their soldiers' lives at risk and

receiving only partial reimbursement for international service that ultimately serve US and Western interests.

CANADA SHOULD INJECT ITS OWN STRONG VIEWS about UN peacekeeping onto the bilateral US-Canada agenda and into NATO's discussions about appropriate military force structures and about the nature of burden sharing. Domestic politics in the United States – a strong pro-Israeli lobby and the right wing of the Republican party that occasionally needs to be pacified – could reverse the new-found and fledgling support for the UN in the Bush administration. In December for example, Washington once again cast into doubt UN financing and multilateralism, this time over a possible upgrading of the PLO's status at the United Nations. Vice-President Quayle immediately escalated the campaign with the politically mischievous suggestion that future American financing might well be linked to a repeal of the 1975 General Assembly resolution that defines Zionism as a "form of racism." This declaration is long forgotten as a mistake in most quarters, but the need to repeal it is viscerally appealing in Congress, which instead needs to understand how counterproductive and impossible such a reversal would be without a breakthrough in the Middle East.

This strangely-timed regression is hard to fathom for serious UN-watchers in New York or Washington, and from north of the border, US fickleness appears absolutely arcane. Not unreasonably, Canadians take seriously international treaty obligations that commit member states to paying their assessments. They ask their southern neighbour: why the double standard? Are you or are you not members of the UN? Do not peacekeepers serve US interests?

Canada should make clear that its firm support for peacekeeping and multilateralism emanates not only from middle-power instincts, but also from hard-headed calculations about Western interests and values. Canadian views on this matter count. Neither neutral nor woolly-headed, Canada is a bulwark of NATO and a crucial US ally. There is, for instance, widespread appreciation in Washington for Ot-

tawa's initiative in hosting the Open Skies Conference in February, as a follow-up to the Bush proposal to the Soviets about verification in the countries of NATO and the Warsaw Pact.

WITH DRAMATIC IMPROVEMENTS IN EAST-West relations, the regime for international security is indeed at a critical juncture. The UN has become more activist in the management of regional armed conflicts. Yet, the support of countries like Canada and the distinction for the UN attached to winning the 1988 Nobel Peace Prize are clearly not enough.

Non-superpowers might find it difficult to admit, but while it is insufficient for the United Nations to have only the backing of the superpowers, it can not realize its potential, or even function effectively, without their active collaboration. As former UN Under Secretary-General Sir Brian Urquhart has said, past UN successes have amounted to "tiptoeing around the Cold War." The waning of bipolar confrontation thus provides an unparalleled opportunity for the superpowers to join forces. Ottawa should not hesitate to stress that the UN may even be able to function more along the lines that its founders intended, a point that even some of the UN's most trenchant critics have recently realized. As Jeane Kirkpatrick has written, "One peace dividend of the Cold War's end may be a more effective UN."

Moscow's dizzying array of proposals about the UN system – over one thousand according to one tally – contains many naive ideas formulated with the zeal of a recent convert. Yet, among them are a wide variety of proposals to make the existing peacekeeping regime more financially solvent, politically active, and geared to preventive diplomacy: national earmarking of funds, equipment, and troops for rapid deployment; the stationing of UN soldiers in potential hot spots; improved training and management; a UN standing military reserve; more autonomy for the Secretary-General; war-risk reduction centres; and improved logistics and intelligence. Interestingly enough, many of these Soviet proposals had been previously floated by Western governments.

THE MOMENT IS PROPITIOUS. BEFORE THE recent backsliding over the status of the PLO, Washington had begun to react positively. Reversing previous policy, the US had joined the Soviet Union, Canada and all other members of the Security Council in authorizing military observers for Central America, the first such use of the UN in America's "back yard." While the so-called "Operation Just Cause" in Panama indicated that the US government in certain circumstances still regards unilateral armed intervention as beneficial to its interests – at least in the short run – there should be no

question about the critical significance of Washington's agreeing to the first truly international peacekeeping operation in the Western Hemisphere.

The Central American UN Observer Group's mission is initially to monitor the commitment by the region's governments to stop aiding insurgents; and subsequently there are plans to send armed UN forces to collect weapons from guerrillas. These UN soldiers (from Canada, Colombia, Spain, and Venezuela) are teaming-up with civilians from the UN and the Organization of American States (which Canada has just recently joined) to monitor Nicaragua's elections. The success of these undertakings is hardly guaranteed; it never is. Yet, the efforts to reduce violence and arms shipments and to foster national reconciliation through democratic elections are worthwhile endeavours – supposedly at the very foundation of the Western system of values.

A few days prior to the approval of the UN Observer Group in Central America, two other "firsts" took place in New York. After forty-four years of bickering, the superpowers co-sponsored a General Assembly resolution aimed at reinforcing the work of the organization, and also held a joint press conference to introduce their text. These symbolic actions were consistent with Moscow's increasing commitment to multilateralism and an encouraging sign of Washington's growing realization of the UN's contribution to international peace and security. In fact, at the conclusion of the 44th session, there was a rare meeting of minds. The Nigerian President of the General Assembly, Joseph Garba, agreed with Soviet Deputy Foreign Minister Vladimir Petrovsky and with US Ambassador to the UN Thomas Pickering, that the world organization had benefitted immensely from the warming of superpower relations.

In the past, Canada has frequently been an effective "bridge" between East and West in

many fora. As a member of the Security Council, Ottawa's role should now be to convince Washington of the historic opportunity for multilateralism. The world organization is finally earning praise across the globe as a mechanism for mitigating violence rather than being disparaged as a hot-air platform for invectives, posturing, and oneupmanship.

THE KREMLIN HAS BEGUN TO UNDERSTAND the limits of its power. It has learned the hard way about the waning utility of force to settle Third World disputes. The alleged benefits of overseas bases and attendant arms shipments have been exposed as largely illusory. Domestic restructuring requires these resources, and its success is more important for Soviet security than an over-extended Third World empire. Most significantly, the Soviets have realized that competition with the US in the Third World has had negative consequences for the bilateral Soviet-American relationship.

If this logic applies in Moscow, should it not also in Washington? As power becomes more diffuse and difficult to exercise effectively in the Third World, Washington too must understand the potential of international institutions for attacking transnational problems. Even in the face of post-Panama invasion euphoria, it is beneficial to speculate about the UN's potential in a situation like this.

Is it not plausible that the Security Council could act when a suspected drug-dealer cum head-of-state's flagrant violations of human rights, and the use of force to nullify elections, eliminate virtually all diplomatic support in his own region? By the end of the 1990s a UN with more teeth could, for instance, help combat illicit drugs and terrorism, ensure the security of small states and the delivery of humanitarian assistance, and verify arms control and elections. Moreover, consolidation of the peacekeeping regime might spill over into the economic, and environmental arenas.

This opportunity is too important for American and global interests, to be derailed by the dated prejudices of a few US domestic lobbies. The Bush administration should realize that peacekeeping is a relatively inexpensive means of protecting US interests in areas of strategic importance. The US contribution to the Namibian operation is US \$175 million, approximately four percent of the annual operating budget for the 82nd Airborne Division (on the ground, not in action), and one-third of the purchase price of one highly controversial B-2 Stealth bomber. The actual operating costs of multilateralism pale in comparison with the alternatives. Washington needs to be reminded of these facts by a trusted ally like Canada.

# PRISONERS AS PRESIDENTS

*South Africa's leaders display little vision of where their new willingness to negotiate will lead. As in Eastern Europe, the opposition may take the initiative away.*

BY HERIBERT ADAM

**D**RAMATICALLY AND UNEXPECTEDLY BY all accounts, "people's power" swept entrenched communist regimes aside in a matter of weeks in Eastern Europe. How have those events influenced the antagonists in South Africa? Why should racial minority rule be able to withstand even more widespread outrage and illegitimacy among its disenfranchised majority population? If a Vaclav Havel can move from a prison cell into a presidential palace, why can't Nelson Mandela?

Such a course of events would abolish overnight South Africa's pariah status, reverse the capital outflow and restore the country's prosperity as the most developed part of a declining African continent. Unlike Eastern Europe, South Africa would not even need special development assistance, given the abundance of human talent, natural resources and a sophisticated infrastructure. Presumably, most social forces, domestically and internationally, would welcome such a rational outcome of a seemingly intractable conflict. The South African stock market would boom as the Frankfurt bourse did in anticipation of democratic pluralism in place of authoritarian centralism. East and West, North and South would join South Africans to celebrate the abolition of the last vestige of formal colonial rule by White settlers. But since they would be urged to stay and play their part as indigenous Africans, only the minority racists among them would not be able to reconcile themselves to majority rule – neither would extremists on the left, mourning the sellout of the socialist revolution.

THE ANALOGY WITH EASTERN EUROPE MAY BE appropriate in its potential for an equally peaceful and negotiable solution, but it is far off in the timing. F.W. de Klerk's reformist agenda cannot be equated with the break in style and policies that Gorbachev symbolized for the Eastern bloc. The National Party may resemble its communist counterparts in power and influence over the life of the population, and the secret *Broederbond* may be compared with a wider politburo in shaping policies. But neither of these Afrikaner associations has experienced the erosion of morale that

Gorbachev's policies brought to the USSR's European client states.

In South Africa, ethnic rule has managed to modernize itself partially from within by jettisoning its uncompromising ideologies. Unlike in Eastern Europe, where Stalinist hardliners attempted to defend the indefensible, in South Africa the ultra-right exists in the political wilderness and reformers now try to adapt to new exigencies – de Klerk may indeed be as willing as Krenz was to open walls. The communist reformers had to contend with an enfranchised population and a disillusioned party membership, and therefore lost power to their non-communist opposition.

The South African government, on the other hand, still commands legitimacy among its ethnic constituency, and the army remains loyal to the ethnic state. Despite being half Black in composition, the Afrikaner police force itches to pounce on insurgent activists. A skeptical Black population is still deeply divided along ideological, class, ethnic and regional lines, despite a common political exclusion. The recent reformist posture of Pretoria has not deprived the rulers of other options.

THE OPPOSITION DECEIVES ITSELF WITH WISHFUL thinking that Pretoria is tacitly admitting defeat, that de Klerk is "desperate" and "panicking" in a deep crisis, due to the onslaught of a brave resistance. On the contrary, the more sophisticated strategy of negotiations instead of repression exudes confidence rather than weakness. Pretoria has learned the lessons of futile attempts at coercive pacification and now wants to reap the benefits of a political solution. Unlike the European Stalinists, the powerholders in Pretoria realize that politics cannot be made against major social forces. Instead, they try to steer them. By adopting a conciliatory stance, post-apartheid nationalists are praised as peacemakers by Western friends and African foes alike.

Whether de Klerk is "sincere" or not is therefore the wrong question. Psychologizing about changing policies overlooks the underlying interests. If staying in power and controlling opponents inside and outside the Volk can be pursued more effectively through new al-

liances and changing styles, the current rulers have shown remarkable skills of adaptation.

The more interesting question remains whether official powerholders can determine the outcome of their new approach. They themselves display little vision of where their ad hoc management should lead. Just as Gorbachev's *perestroika* developed its own dynamic of releasing ethno-nationalism in a disintegrating Soviet empire, so Pretoria's new soft co-optation may simultaneously strengthen as well as weaken the opposition. In the new interplay between previously implacably hostile sides, both antagonists change, and emerge with new strategies.

A concrete example illustrates this dialectic. Few organizations deserve more praise than F. van Zyl Slabbert's and Alex Boraine's Institute for Democratic Alternatives (IDASA).<sup>\*</sup> At the height of Botha's emergency when most dialogue had ceased and both antagonists criminalized each other, IDASA managed to pull off dozens of encounters outside and inside South Africa between opinion makers who would normally not speak to each other. The exiled African National Congress (ANC) seriously engaged for the first time with Whites who were not communists, and prominent figures of the Afrikaner establishment (though not from the government) discovered common ground with "terrorists." The mutual learning process clearly altered perceptions and subsequent policy statements.

IS THE CURRENT TREND TOWARDS NEGOTIATION rather than confrontation irreversible? Unlike the Eastern European regimes, whose fate was sealed when the Soviet Union abandoned the Brezhnev doctrine, Pretoria can fall back on coercion without needing the backup of outside allies. Although South Africa has lived with verbal condemnation from its Western friends for decades, it has nevertheless received various forms of economic, political

<sup>\*</sup> The IDASA's main activities are educational and information efforts to facilitate dialogue between the antagonists. Its leadership is made up of prominent academics and community leaders, and it receives most of its funding from West European governments, US philanthropic foundations and Canada's Department of External Affairs.

and clandestine military assistance from them. However, it is ultimately not dependent on such outside support.

The problem with South Africa is that no outside power has the leverage, short of military intervention, to force an intransigent regime into fundamental concessions. Even if comprehensive and mandatory sanctions were ever implemented – unlikely, given the global competition – Pretoria would still not collapse in the foreseeable future. Therefore, radical change in South Africa has to originate primarily from the inside.

How then does one explain the new pragmatism of the current Afrikaner oligarchy, compared with its ossified Eastern European equivalent? Above all, what accounts for the relative compliance of the South African population? Professed ideology is a poor guide to the reasons for such adaptability. According to the socialist canon of ascetic people's representation, the personal corruption of the leadership should be non-existent. Yet the revelations about exclusivist lifestyles and personal enrichment in the GDR or Romania still show a higher degree of elite remoteness and autocratic graft than the increasingly scandal-ridden Calvinist rule in Pretoria. Here an independent press and judiciary of a White democracy still hold the rulers accountable, despite emergency regulations and an insidious extension of executive power. To be sure, only a minority segment of the population in authoritarian South Africa, enjoys democratic participation. Nevertheless, even this makes an oligarchy more responsive than no democracy at all in Prague or Bucharest.

**DISENFRANCHISED SOUTH AFRICANS** HOLD NO illusions about their rulers. Racial rule clearly is for the benefit of the ruling race – a daily experience for Blacks that does not engender a feeling of betrayal. Many ordinary party members in Eastern Europe, on the other hand, felt cheated when the discrepancy between the ideology and reality was finally brought home. Hence, the temptation for revenge seems largely absent in the South African discourse. Resentment does simmer among the right, not the left. Does this force threaten the fragile attempts of reconciliation?

While the National Party is on the retreat ideologically, it firmly holds the reins of power, despite its decline to forty-eight percent of the White vote in the 1989 election. Its main challenge from the right (the Conservative Party with thirty percent) has been rebuffed. The ultra-right constitutes a grievance vote of a declining White lower stratum rather than an appealing new vision. Its Afrikaner nationalists, based on partition, promises not prosperity but further sacrifice in the name of Afrikaner purity. Ultra-right sentiments are strong in the lower echelons of the civil service and particularly in the police and security

establishment. Here nationalism and purity compensate for a low status that is further threatened by Black advancement.

The new government under de Klerk includes almost the same people as that of his predecessor. However, unlike P. W. Botha, who had a power base in the military, the new president did not belong to the so-called "securocrats." For the lawyer de Klerk, political and legal considerations so far carry more weight than repressive security arguments. In order to minimize his right-wing opposition in the police force he virtually scrapped the "National Security Management System" which had emerged as a parallel bureaucracy under police

control. He also curbed the powers of the State Security Control and restored the responsibility of cabinet in all security matters.

CONSERVATIVES EXPECT THAT THE POLITICAL earthquakes in Eastern Europe will also prove infectious elsewhere or at least moderate the socialist demands for radical transformation in South Africa. However, the situation in China, Vietnam, or Cuba, and potentially South Africa, differs from Eastern Europe insofar as communism in these places is associated with larger historical accomplishments, literacy, and improved living standards. In Eastern Europe, Stalinism was imposed by a victorious army in the wake of a devastating war.

South Africa stands at the crossroads between Western-style democracy and an authoritarian "liberation." Many knowledgeable observers do not discount the possibility of reversed repression. American sociologist Pierre van den Berghe, on a visit after a thirty-year absence, speculated wryly: "South Africa, which has already spawned the world's last

official racists, may also see its last Stalinist." Given the gross inequality, and the huge development needs in housing and education in the context of an almost complete coincidence of race and class, it is indeed hard to envisage how a more egalitarian, just, and therefore content, society can come about without massive redistribution of wealth and state regulation of the economy. No preaching about a free market and the benefits of competition can convince deprived masses that salvation will come from the five conglomerates that dominate the South African economy.

Yet most of the signs point away from the Stalinist path in South Africa towards an, as yet, undefined mixed economy and a genuine democracy. The currently dominant ANC-led opposition conceives of itself not as a socialist alternative but a broad-based, non-racial, all-class movement to abolish *apartheid*.

THE ECONOMIC FAILURES OF DECOLONIZATION elsewhere in Africa have undoubtedly left their mark on the strategic thinking of the far more sophisticated *apartheid* opposition. Because of their restraint, ultra-left critics in British and Canadian universities already accuse the ANC of putting socialism on ice for the second phase after national liberation has been achieved. However, the more the nonracial opposition enters into negotiation politics, the more it becomes vulnerable to being out-radicalized. In this predicament, stringent rhetoric is meant to counter potential outbidding. ANC literature is full of slogans such as: "We are committed to a strategy of revolutionary armed struggle to achieve our goal – the seizure of political power...."

With the widely respected Mandela as a symbol of unity and pragmatism, South Africa in 1990 has arrived at a unique historical opportunity to reconcile the seemingly irreconcilable. Normally state presidents do not meet their prisoners, unless induced by promising gains. As Chester Crocker has noted: "The meeting between Mandela and de Klerk "was significant as a symbolic portrait of a prisoner and a president who may have recognized, in that moment, that they need each other." Yet the tantalizing speculation remains whether the one will ever succeed the other in South Africa.

It is surprising that the ANC opposition, in Walter Sisulu's words, does not mind whether the president is Black or White, as long as democracy is achieved. Since the South African struggle constitutes neither a communal conflict between two mutually exclusive nationalisms nor a religiously based civil war, political enfranchisement and equal privileges for all citizens are foremost on the agenda. National Party insistence on guaranteed groups rights and the ANC commitment to individual representation can be reconciled in various constitutional compromises only if the antagonists start negotiations in earnest. □

# MARKETS AND POLITICS IN THE USSR

*Without much of a road map, the Soviet leadership is groping towards building a new economy that combines "socialist markets" with Western prosperity.*

BY MICHAEL BRYANS

**I**F YOU HAVE MONEY IN THE SOVIET UNION there is almost nothing you can buy with it; a difficulty which while hardly trivial – if some other calamity doesn't overtake it first, consumer discontent might eventually bring down Mr. Gorbachev's government – has distracted both outside observers, and previous internal efforts at reform, from the real task at hand. The point about these shortages is that they are but shadows cast by the workings of a political-economic order that is fast coming undone.

Soviet leaders now know that the old remedies of patriotic and ideological exhortation will not work. From Khrushchev onwards (including Gorbachev's early reforms in 1985 and 1986) the watchwords were: "discipline," "efficiency," and "diligence." If the Soviet people worked harder and smarter and stopped boozing and goofing-off there would be nylons and butter on the shelves. So the planners planned more carefully and managers urged workers to greater effort, and it was just like honking the car horn from the back of an enormous traffic jam – it did not make the traffic move and it only annoyed the drivers.

To see how crippling the sixty-year old command system is for the Soviet economy, we only have to listen to today's generation of Soviet economists. Among the most vocal and articulate is Nikolai Shmelev. A true product of *glasnost*, Shmelev spent years writing novels and short stories since no one who mattered was interested in his economics. These days he is both a People's Deputy, and an analyst with the Institute for the Study of Canada and the USA. Shmelev places himself "at the extreme left" of the Gorbachevian reformers – a sort of loyal opposition to the Gorbachev-Abalkin-Aganbegyan group which is attempting to re-start the economic engines.

Unlike many of his contemporaries who at least nod politely in the direction of the planning departments before disparaging them, Shmelev gives no quarter. Writing with colleague Vladimir Popov in an acerbic and all-encompassing attack on the Soviet economic structure<sup>1</sup> they show how the economic disasters that are the grist of Soviet evening television are the inevitable result of a system

working as well as it's ever going to work. "No one is to blame," they write,

... the regularity with which shortages of everything occur – from children's soap to cartridges for soda water siphons to railway cars – suggests that there is one general law underlying all these specific cases ... this law is related to the system of planning ... In its present form ... it ensures constant shortages. It makes them chronic, unavoidable, and ineradicable ... an inherent feature of the economic system.

WHAT THE SOVIET LEADERSHIP DOES NOT and cannot know, is how to plan its way out of its current deep troubles. It is confronted by a problem no society has ever tried to solve on this scale: creating whole and in short order an industrialized "market" economy from the usable leftover bits of a "command-administered" one in which all but its most fervent believers have lost heart. The fact that Western economists do not really know how their own economies work has never been a grave impediment since the experts came along well after the economies were up and running. Economists have been mostly limited to explaining economies and fiddling with the results.

The theorists still grapple unsuccessfully with questions like how individuals choose between taking a week with Club Med, paying down the mortgage and getting braces for the kids' teeth; why Taiwan is wealthier than Ghana; and how the business cycle works or whether there even is one. Two centuries later, Adam Smith's resort to metaphor for the workings of the marketplace, the "invisible hand," remains as plausible an explanation as any. Mikhail Gorbachev's problem is that he cannot be content with describing markets. He and his associates have to actually build them, and they are running out of time.

Just back from a January meeting aimed at establishing a new school of business administration at Leningrad University, Richard Ericson of Columbia University's Harriman Institute characterized the feeling he encountered on the street and in meetings as "cataclysmic" – a sense, not entirely justified in his

view, that "they are poised on the brink." From Ericson's perspective – widely shared by Soviet and foreign observers – the immediate crisis has two interlocking parts: the shortage of consumer items and the enormous stock of paper rubles in the hands of Soviet citizens who have nothing to spend them on.

This notorious "ruble overhang" amounts to somewhere between 200 billion and 350 billion rubles, no one is sure, and promises price inflation on a stupendous scale once the government releases prices to find their own level – a step now contemplated for 1993. One widely advanced financial solution lies in soaking up all the paper rubles with consumer goods; a move that would improve living standards for average Soviets and perhaps buy for Gorbachev a period of political peace to give the deeper reforms a chance to take hold. But since the domestic production system cannot make these goods, they must be obtained from abroad with what few hard currency reserves are in the Soviet treasury.

A GREAT DEAL OF SOVIET PUBLIC COMMENTARY is taken up with this dilemma and it is a central point of debate between the government, whose staged five-year programme for reform aims to "stabilize" the monetary problem before moving on to fundamental changes in 1993, and "left-wing" critics like Shmelev who want the government to move now. What everyone agrees on is that very soon Soviet citizens are going to have to be able to create their own goods and services – by most accounts an activity that is proceeding not at all well.

As it stands, the government under Gorbachev, Prime Minister Nikolai Ryzhkov and a group of economic advisers, has proposed a comprehensive programme that would by 1995 move the Soviet economy sharply in the direction of Western-style economies. The debate is over whether this is sharp enough.

The centrepiece of the programme is a set of draft foundation laws on taxation, land ownership, property rights, and local self-government, that are now before the new parliament and are meant to be in place by the spring of this year. The proposed reforms would see the state considerably reduce its

presence on the playing field of productive enterprise. What this amounts to is a revolution in citizens' political and economic relations with the state and with each other. Government and party would no longer be the main organizing vehicles for the creation and exchange of goods and services. The foundation laws, especially those on ownership of property and farm land, are to be the legal and social framework for these changes.

It is necessary to resort to some comparative economic theory to help understand why this framework is so crucial. American political-economist Charles Lindblom has described<sup>2</sup> modern industrialized economies as having three kinds of markets: the labour market where energy and talent is exchanged for money, the consumer market where individuals exchange money for goods and services, and third, and usually larger than the first two combined, the intermediate market where enterprises (corporations, firms, farms, businesses large and small, and government departments) buy and exchange parts, raw materials, business services, energy, and the like.

LINDBLOM'S INSIGHT INTO THE SOVIET ADMINISTERED system is that it disestablished this third market. Since 1929, factories and collective farms and stores and newspapers and restaurants have traded with each other only at the quantities, prices and dates set in advance by the government plan. Such is the smothering effect of the planning system, that the Soviet Union has comparatively few production organizations – numbering in the tens of thousands compared to the millions of businesses, partnerships, not-for-profit companies in the US, an economy of comparable size.

Modern post-industrial life in the West is composed of millions of commercial transactions between all manner of businesses – some of these transactions are large products for great sums between big companies, but most are not. They are instead the "trifles" as Shmelev and Popov call them – buttons and packaging and wire and paperclips and sundry services – that make up a dense and prosperous economic existence. Since there are relatively few businesses in the USSR, write Shmelev and Popov, there is a constant shortage of indispensable "trifles."

Shmelev and Popov's account of the lunacies of the planning process shows why. Even if one firm wants to trade with another, say by purchasing paper clips from the factory down the road, there is no money outside the plan with which to pay for them. And the factory down the road cannot sell them (even if they do have some to spare) since the plan says they shouldn't have them (the plan is perfect) and the extra money earned from unplanned sales further distorts the plan. So instead

of counting it as a profit, the planning ministry fines the firm four times the value of the sale.

It is these weak and underused intermediate markets – the economic space left when the government retreats – that Soviet citizens will have to occupy with various kinds of producing entities. Which is where the proposed property and land laws come in. In the West, commercial activity is nested in an array of laws, customs and institutions which allow individuals to come together in groups, outside the direction of the state, for the purposes of making things and making money. Property law, commercial lending regulations, laws to limit corporate liability, anti-trust legislation, patent rules, to name only a few, are essential in one form or another to establish and regulate production outside a Soviet-style command system.

Little of this legal framework exists in the Soviet Union. Even the most fundamental notions of "rule of law," where individual rights and property are protected from arbitrary action by the state, remain to be firmly established and are essential if Soviet citizens are to start up companies of their own or work for others who do. The character of these laws and customs, and how they work in harmony with or against a culture that is already in great ferment, will determine the nature of the economy that emerges.

IT IS NOT CLEAR WHERE THE SOVIETS WANT their economy to end up. Shmelev and Popov point to that halcyon period of relatively restrained state participation in the economy between 1921 and 1927 – Lenin's New Economic Policy. Other economists and officials have made favourable references to the diverse experiences of Sweden or Hungary or Yugoslavia. Two clear themes emerge from all the commentary: first, the government does not

want, in Ericson's words, "freewheeling Western markets;" it seeks the egalitarian outcomes embodied in socialist ideals. And second, with the exception of those whom Ericson termed "conservative engineering types" who believe that with modern computers the current administered system can be salvaged, the Soviet leadership seems to understand that it cannot order up the results it wants – it's going to have to learn to tolerate a little market chaos.

According to Ericson, there is residual fear of the "anarchy of the market" so the government wants to ensure against undesirable consequences like too much reward for individuals. "Socialist markets" envisaged by Soviet economists would remain steerable and manipulable by the government, and there continues to be a strong antipathy to "capital-based value" which is regarded as "unearned" income or exploitation. He offers this example: under the new property and enterprise laws a minimum of three people will be able to own a factory and split the profits from its operation ("labour-based value"), but they will not be able to sell at a profit the factory and its equipment to someone else – capital accumulation. In short, there will be a market for goods produced by enterprises but no market for enterprises themselves.

ERICSON REGARDS THE GOVERNMENT'S CURRENT programme as an untenable middle ground between Western-style capitalist markets and the existing system. He may be right in that once let off the leash the new markets may make their own rules. Or worse, if the legal mechanisms turn out to be at odds with traditions and cultural values, the economy might not get going at all.

It is not clear, for example, why three people should invest in an enterprise if, should they get bored or old, they cannot get back the money invested plus some reasonable amount for the capital they have had tied up. Presumably, the state could buy back enterprises at the cost of purchase plus some amount for interest, but the apparatus for administering such a system reinvents the very machinery the government claims it's trying to dismantle. A viable marketplace for goods seems to lead inexorably to a market for businesses – ideological predilections notwithstanding.

Economists everywhere will be watching the USSR (or Russia if it comes to that) with great attention. It is the largest experiment in applied economic theory ever attempted, and the well-being of 300 million people rides on the results. □

## ARMS CONTROL DIGEST

### Malta Summit

At the Malta summit on 2 December, US President Bush proposed that the two sides attempt to resolve all the outstanding issues in the strategic arms reduction talks in time to sign a START Treaty at a summit meeting in the US in late June 1990. President Gorbachev, as well as senior American officials, later indicated that a more realistic timetable would be to seek to resolve all the major issues in time for the June summit, allowing for actual signature of the Treaty later in the year.

Reversing an earlier decision on chemical weapons (CW), Mr. Bush offered to end US production of binary CW after a global Chemical Weapons Convention enters into force, provided that Moscow accept the terms of the US proposal unveiled at the UN last September. It had called for the superpowers to destroy ninety-eight percent of their stockpiles in the first eight years of a CW Convention. Toward this end, Mr. Bush in Malta proposed signing an agreement at the June 1990 summit to destroy eighty percent of the stockpiles even before a global Convention is concluded. Without endorsing the American proposal, Mr. Gorbachev described it as "interesting," raising the possibility of "rapid movement."

An array of other arms control issues was also discussed in Malta. The two sides agreed to complete their work on verification protocols for the Threshold Test Ban and Peaceful Nuclear Explosions treaties in time for signature at the June summit. The US accepted an earlier Soviet proposal to hold a European summit meeting to sign a Conventional Armed Forces in Europe (CFE) Treaty before the

end of 1990. Bush invited the Soviets to join efforts to control the proliferation of ballistic missile technology by observing the regulations of the Missile Technology Control Regime developed by the seven major Western industrialized nations. For his part, Gorbachev emphasized the need for separate negotiations on naval arms, and proposed the complete elimination of tactical nuclear weapons at sea. In response, Bush was said to have reiterated the US opposition to any such negotiations at this time.

### Open Skies

As this column was going to press, preparations were being made for the twenty-three nation Open Skies conference in Ottawa from 12 to 28 February. The Ottawa meeting is to be the first of two, aiming to produce a treaty allowing short-notice overflights of each other's territory by unarmed aircraft to ease the fear of surprise attack and aid in the verification of arms control agreements. In a speech in Berlin on 12 December, US Secretary of State Baker suggested that the NATO and Warsaw Pact foreign ministers also take advantage of their Ottawa meeting "to review the status and give a further push to the Vienna talks on conventional forces."

In mid-December NATO agreed on the "Basic Elements" of its own Open Skies proposal, to be presented in Ottawa. These included: national quotas of overflights based on the geographic size of the participants (several flights per month for larger countries, at least one per quarter for smaller countries); host-country inspection of the aircraft prior to, and on-board observation during, the flight; permission to use a wide variety of sensors, but not signals-intelligence devices; and sixteen hours' advance notice, followed by a "preflight period" of at least twenty-four hours. Although

the Warsaw Pact countries had not similarly presented their own position as of press time, the USSR had indicated that it wanted all foreign military bases of the two alliances open to the plan, as well as a common pool of aircraft, joint crews, "passive" sensors only (such as cameras, rather than "active" radars), and a complete sharing of data.

### 44th Session of UN General Assembly

Of forty resolutions on arms control and international security brought to a vote at the 44th Session of the UN General Assembly in December, Canada voted in favour of twenty, against five, and abstained on fifteen. Canada co-sponsored a total of ten resolutions: on two it was the lead sponsor (one on chemical and bacteriological weapons, with Poland; and the other on prohibiting the production of fissionable materials). The most dramatic issue of the session was the question of amending the Partial Test Ban Treaty into a comprehensive ban. Canada joined twenty-one other states in abstaining on this resolution, which called for an amendment conference to be held in New York in two sessions, one in June 1990 and the other in January 1991. It passed by a vote of 127-2-22, with only the US and UK opposed. Canadian Disarmament Ambassador Margaret Mason had told the First Committee earlier that, although Canada "did not view the initiative for an amending conference as likely to be either helpful or productive," it would nevertheless "participate constructively."

### Short Notes

During Prime Minister Mulroney's Moscow visit in late November, External Affairs Minister Clark and Soviet Foreign Minister Shevardnadze signed a bilateral "Agreement on Prevention of Incidents at Sea" governing the behaviour of the two states' warships and military air-

craft when in close proximity to each other. The USSR had signed similar agreements with the US, UK, West Germany, and France, and subsequently signed one with Italy just before the Malta summit.

Under the US-Soviet Intermediate-Range Nuclear Forces (INF) Treaty, the two superpowers by 22 December had eliminated all 1,126 of their shorter-range INF missiles, and 737 of 1,566 longer-range versions. The remainder of the latter are to be destroyed by 1 June 1991.

In his Berlin speech on 12 December, US Secretary of State Baker proposed that NATO consider establishing an arms control verification staff of its own, to assist in monitoring compliance with European arms control agreements, to coordinate the implementation of inspections, and to provide a clearinghouse for information.

NATO and the Warsaw Pact each tabled a draft Treaty text at the Conventional Armed Forces in Europe (CFE) talks in Vienna on 14 December. Of significant import for these talks and for military force levels in Europe in general were two other political events:

The governments of both Hungary and Czechoslovakia have called for the complete withdrawal of Soviet forces from their territories, and talks with Moscow on this issue have begun. In addition, in his State of the Union address on 31 January, George Bush proposed sharp reductions in the number of US and Soviet forces deployed in Europe. The US proposal would see each side reduce the numbers of army and airforce personnel in Central Europe to 195,000 – with the US permitted to keep an additional 30,000 in Turkey, Italy and the UK. Before the speech, Bush made a phone call to Gorbachev who, it was reported, responded positively to the proposal. □

## DEFENCE NOTES

### The Warsaw Pact

In late 1989 and early 1990, developments in the Warsaw Pact dominated defence developments in both East and West. In mid-January the new government of Czechoslovakia began talks with the Soviet Union aimed at an agreement on the withdrawal of all Soviet troops by the end of 1990. Soviet troops entered Czechoslovakia with those of other Warsaw Pact countries in 1968 to suppress the uprising in that year against communist rule.

At a Warsaw Pact meeting on 4 December 1989, the members, including the Soviet Union, condemned the 1968 invasion as an inadmissible interference in the internal affairs of Czechoslovakia. During 1989 some 5,000 Soviet troops, 700 tanks and 200 aircraft were withdrawn from Czechoslovakia as part of Gorbachev's decision to reduce Soviet troops in Eastern Europe by 50,000. About 75,000 troops remain in Czechoslovakia.

On 24 January, Czech foreign minister Jiri Dienstbier announced informally that his country will end its international trade in arms. Czechoslovakia ranks seventh in the world in total weapons exports.

Some days later, at the Vienna seminar on military doctrine attended by military representatives from both the Warsaw Pact and NATO alliances, Hungary called for the withdrawal of all Soviet troops from Hungarian territory by the end of 1991. Negotiations began shortly thereafter. Statements attributed to the new government in Poland also indicated that the withdrawal of Soviet troops was seen as a prerequisite to a new relationship between Poland and the Soviet Union.

At the same time, all of the members of the Warsaw Pact have

indicated that they intend to remain members. In Vienna, Soviet spokesmen suggested that there would soon be changes in the political direction of the Pact. According to these sources, the present Political Consultative Committee will be scrapped and replaced by a council which will more strongly reflect the national governments and interests of the Pact members.

The effect of Soviet troop withdrawals on Soviet military doctrine is not yet clear. In his comments to the Vienna seminar, Mikhail Moiseyev, Chief of the Soviet General Staff, stated that the Soviets were now guided by the principle of "reasonable sufficiency." In conventional forces, this means "a quantity and structure which will enable the sides to repel any aggression and yet have no capacities to launch an attack or wage large-scale offensive operations." By way of explanation, Moiseyev pointed to the Soviet unilateral force reductions of 500,000 troops, but he gave no explanation of the kind of force posture which would preclude offensive operations. Moiseyev also announced that the Soviet defence budget will be reduced by 8.2 percent in 1990, and by another fourteen percent in the following two years.

### Two NATO Reactions

As the pace of change in Eastern Europe accelerated, NATO planners, according to one unidentified spokesperson, have not so much managed the change as watched it. However, two implications have been noted. First, West German officials have expressed great doubt that an agreement will be reached to deploy a successor to the short-range Lance nuclear missile. "Do we really want to install new nuclear missiles," a senior West German official is quoted as saying, "that can only hit Lech Walesa's Poland, or Hungary?"

Second, the Warsaw Pact capability to launch a surprise attack

has been reassessed. In recent years, US intelligence sources have stated that NATO might have a fourteen day warning or less, of a full-scale Soviet attack on Western Europe. Revised national intelligence estimates claim that there would be at least one month's warning of such an attack, with other estimates suggesting at least two months. The length of reliable warning time is related to defence expenditures, particularly for the US which needs a large airlift capability to ensure rapid reinforcement of its troops in Europe.

### The US Defence Budget

After many weeks of debate in the media about the restructuring of US military forces, on 30 January, President Bush presented his fiscal year 1991 defence budget to Congress. The surprise in the budget was that there were no surprises. Bush called for defence spending of US \$303.3 billion, an increase from \$296.3 billion in FY 1990, but a reduction of about two percent after inflation is taken into account.

Despite widespread speculation that major strategic programmes would be abandoned or cut, Bush called for the continuation of the modernization programme of strategic nuclear forces. This programme includes the B-2 bomber, the advanced cruise missile, the new Seawolf attack submarine, the Trident D-5 submarine-launched ballistic missile, the multiple warhead MX missile, and the single warhead Midgetman. The budget also called for an increase in spending on Star Wars research.

As presented by Defense Secretary Richard Cheney, the administration plans to reduce the budget by two percent annually over the next four years. The cuts seem most likely to fall on conventional forces as the US prepares to reduce the size of its army in response to changes in Europe. Indeed, on 31 January, the day after releasing his budget, George Bush proposed

that the US and USSR cut deployed forces in Central Europe each to 195,000.

While the strategic direction indicated in the budget will be subject to considerable criticism in Congressional hearings now in progress, Cheney's proposal to close sixty military bases may become the focus of considerable negotiation between Congress and the White House.

### Canadian Policy

Canadian Forces personnel took part in two historic events in January. First, a Canadian Hercules C-130 transport flew a "proof of concept" mission over Hungarian territory to test procedures proposed for use in an Open Skies regime.

Second, Chief of Defence Staff John de Chastelain led the Canadian delegation to the Vienna seminar on military doctrine. Gen. De Chastelain used the opportunity to restate an old Canadian theme with the NATO allies. Ever since Canada negotiated the NORAD agreement in 1958, spokesmen have pointed out that Canadian defence policy supports NATO insofar as it helps protect the US from surprise attack. In his Vienna speech, de Chastelain first emphasized his point: "I would reiterate that Canada's military role in NATO has just as much to do with the forces we deploy in North America, as it does with those we deploy in the Eastern Atlantic and in Europe."

On the future of Canada's forces in Europe, the speech was slightly less certain. De Chastelain noted that the size of the Canadian contribution is less important than the political message given by its presence. He immediately went on to comment, however, that "militarily our forces are far from being insignificant," and that, "for both alliance reasons and for purely selfish, national reasons, Canada has much to offer and to gain by its military presence in Europe."

- DAVID COX

## REPORT FROM THE HILL

### Soviet Relations

The Prime Minister reported to the House of Commons on 27 November about his trip the week before to the Soviet Union where he met, among others, Soviet President Gorbachev and Prime Minister Ryzhkov. External Affairs Minister Joe Clark met with his counterpart, Eduard Shevardnadze. Fourteen bilateral agreements (including renewals) were completed during the visit, on subjects ranging from international affairs to Arctic cooperation to the environment. The Prime Minister proposed to Mr. Gorbachev that he would suggest to his six Economic Summit colleagues that each year's chairman discuss with the Soviet President the ideas and strategies that emerge from the meeting.

There were extended responses from Liberal Leader John Turner and NDP External Affairs critic Bill Blaikie in which they criticized the government for insufficient boldness in dealing with the Soviets, particularly with respect to Mr. Gorbachev's proposal in his October 1987 Murmansk speech for an Arctic zone of peace.

### Panama and the OAS

The Prime Minister came in for much sharper attack on 20 December in the Commons over his support, announced that morning, for US intervention in Panama. There was a heated exchange between Mr. Mulroney and the new NDP Leader Audrey McLaughlin. Ms. McLaughlin asked, "Is this the way for a civilized government to act in a civilized world? When is the Prime Minister going to communicate to the American government that Latin America is no longer the private backyard of the United States?" The Prime Minister stressed the special

circumstances of Panama and replied that the sentiments expressed by the NDP Leader were "so far removed from the mainstream fundamental values of Canadians, that she has just indicated why they [the NDP] will never, ever, be called upon to form a government in this country."

Other members were concerned about how the Canadian decision would affect relations with Latin American countries in the Organization of American States (OAS).

### Indochina Policy

On 25 January Joe Clark provided a progress report to the Commons on international efforts to resolve the conflict in Cambodia. He indicated that the government "is now in the process of re-establishing the eligibility of Cambodia, Vietnam and Laos, the three countries of Indochina, for official development assistance." Canada fully supports the Australian proposal for the establishment of a UN interim administration for Cambodia. Clark dispatched a diplomatic mission to Hanoi and Phnom Penh in October the purpose of which was to stress to those governments the importance of their accepting a major UN role in any settlement. The minister also commended the current Hun Sen regime in Cambodia for an improved record, especially in the field of human rights. He pointed out that Canada and other countries may be called upon to participate in UN-led peacekeeping and transitional arrangements and, to this end, Canada's recent experiences in Namibia and elsewhere were being reviewed.

### Open Skies

A major international conference opened in Ottawa on 12 February bringing together the foreign ministers of the sixteen member states of NATO and the seven member states of the Warsaw Pact for the first time since the political changes began in the

Soviet bloc. Under discussion was a proposal for regular exchange of unarmed surveillance flights which would throw open the air space over North America, Europe and the Soviet Union as a confidence-building measure. A second round of talks, to be held later this year in Budapest, is expected to lead to the signing of a treaty.

### Parliamentary Committees

The Commons Standing Committee on External Affairs and International Trade (SCEAIT) continued to hold hearings on Canada's relations with the Soviet Union and Eastern Europe. These included sessions on the German question on 23 November and 6 December, on Soviet policy toward the Third World on 28 November, and on disarmament and Open Skies on 12 December.

The Committee also heard, on 23 November, from representatives of the Canadian Conference of Catholic Bishops and the Jesuits following their attendance at the funeral in El Salvador for six Jesuit priests and their two employees, murdered by members of the Salvadoran armed forces. The situation in El Salvador was the focus of discussion at additional meetings of SCEAIT on 13 and 14 December. The latter meeting also heard from the Director of Peacekeeping Operations in the Department of National Defence about Canada's contribution to ONUCA, the UN Observer Group in Central America.

On 7 December the Committee heard from a variety of experts, including the president of CIDA and the executive director of CUSO, on issues of structural adjustment – the economic stabilization policies imposed by international financial institutions with a view to reviving the economies of Third World debtor nations.

The Commons Standing Committee on National Defence is in the midst of hearings on maritime sovereignty. It has heard already from the Chief of Defence Staff as

well as officials from External Affairs, Environment, Fisheries and Oceans, the Canadian Coast Guard and the Solicitor-General, plus outside experts. In an interim report of 20 December, the Committee recommended the purchase of conventional submarines and maritime patrol aircraft.

### Short Notes

Former NDP Leader Ed Broadbent took up a new appointment late in January as the first president of the government-funded crown corporation, the International Centre for Human Rights and Democratic Development, based in Montreal. Set up through legislation passed in September 1988, the Centre receives its funding from the CIDA budget and is intended to provide financial and technical resources to improve human rights and promote the development of democratic institutions and processes in Third World countries.

Doug Lindores, Senior Vice-President of CIDA, has been appointed special advisor on Ethiopia and bordering countries to the Minister of External Relations. These countries are again facing famine conditions.

During Question Period in the Commons on 23 January, Liberal MP Christine Stewart asked the government whether Canada had ignored human rights violations in the massive construction project of five Candu nuclear reactors in Romania. Joe Clark responded that Canadian diplomats were attempting to determine whether slave labour had in fact been used; which, if any, officials had been aware of it; and how long they had known. He rejected Ms. Stewart's suggestion that construction be suspended until details of the allegations could be checked, describing that as "an unfortunate way for Canada to proceed" at a critical time when Romania was struggling to build a democracy and restructure its economy. □

— GREG WIRICK

## REPORT FROM THE SECURITY COUNCIL

### Invasion of Panama

■ On 23 December 1989 the Soviet Union denounced the US invasion of Panama as "a flagrant violation of the independence, sovereignty and territorial integrity of states." In a heated debate, the USSR, its allies, and the non-aligned members of the Security Council backed a draft resolution that "strongly" deplored the intervention.

For its part, the US argued that it had been acting in self defence, protecting both the 35,000 Americans in the area as well as upholding the Panama Canal Treaty. Canada, while regretting the use of force, agreed that the US "relied on force as a last resort and only after the failure of numerous attempts to resolve the situation in Panama peacefully."

Canadian Ambassador Yves Fortier pointed to the harassment of US citizens as justification for the US action. He added that General Manuel Antonio Noriega's statement that Panama was in a "state of war" left President Bush "with few options."

Britain and France sided with the US in vetoing the draft resolution; Canada also opposed it. Finland abstained, and the other ten countries voted in favour of the document.

The US invasion raised a ticklish diplomatic issue. During the debate, the Council was unable to decide who should represent Panama. The sitting Panamanian representative, named by Noriega, demanded to speak to the Council, as did the envoy of the newly installed government of President Guillermo Endara. The matter was finally settled on 29 December in the General Assembly, which also held a debate on the invasion. A

diplomat accredited to the UN under the Noriega regime, who switched his allegiance to Endara, was allowed to occupy his country's seat in the Assembly, but he was not allowed to vote on a resolution critical of the invasion. On 8 January, the Secretary-General accepted the credentials of a new envoy appointed by the Endara government.

One element of the invasion did force Canada to break ranks with the US. On 17 January, it voted in favour of a draft resolution that censured Washington for allowing its troops to break into the Nicaraguan ambassador's home in Panama. Canada noted that the action was a violation of international law, particularly with regard to the inviolability of diplomatic missions. The US vetoed the resolution; Great Britain abstained, and the remaining thirteen members voted in favour.

### Other Central American Issues

On 7 November, the Council decided unanimously to create a new peace force to monitor the borders of El Salvador and Nicaragua. The role of the 625-person Observer Group in Central America (ONUCA) is to prevent the infiltration of insurgents and arms. One hundred and forty Canadians are involved, with the rest coming from Spain, West Germany, Ireland, Columbia and Venezuela.

On 30 November, the Council met at the request of El Salvador, following the crash on its territory of a plane carrying surface-to-air missiles. El Salvador charged that the missiles were destined for anti-government guerrillas and had been sent from Nicaragua. It accused Nicaragua of violating the Central America peace accord. Nicaragua did not deny the charges, instead responding that it was the US that had first introduced such missiles into the region when it gave them to the Nicaraguan Contras.

### The Middle East

■ On 7 November, the fifteen members debated a draft resolution that "strongly" deplored

Israeli practices "which violate the human rights of the Palestinian people in the Occupied Territory." The document singled out the "siege of towns, the ransacking of the homes of inhabitants, as has happened in Beit Sahur, and the confiscation of their property and valuables."

Canada voted in favour of the resolution which was vetoed by the US on the grounds that it was unbalanced and failed to address the violence committed by Palestinians. This marked the third American veto in one year of resolutions dealing with the Occupied Territories.

The Council also devoted time to the continuing instability in Lebanon. On 22 November, it condemned the assassination of René Moawad, the newly installed president of Lebanon. On 27 December, the Council called on the Lebanese people to support Elias Hrawi, the newly elected Lebanese president whose authority is challenged by Christian Gen. Michel Aoun.

### Cambodia

On 16 January, during a meeting in Paris, the five permanent members proposed "an enhanced UN role" in Cambodia. They called for a cease-fire, as well as for the dispatching of UN peacekeeping troops, the creation of an interim UN administration, and UN supervision of free elections.

### Friction on the Council

On 3 November, the United States and the Soviet Union held their first joint news conference to announce "an encouraging new trend" for cooperation within the UN. Proclaiming an end to their confrontation, the two superpowers announced their first joint draft (General Assembly) resolution. The document called on "all states to intensify their efforts to assure international peace and security."

The new harmony among the five permanent members, particularly between the two superpowers, has at least once led to friction with the other ten members of the Council. Last October the non-permanent members expressed their irritation when the five issued an appeal on Lebanon without consulting the entire Council.

"It wasn't just Canada, others spoke critically of that behaviour," Ambassador Fortier said during an interview. He added that communication between the five and the other members had returned to normal and he suggested that the incident was an aberration resulting from the permanent members adapting to the new climate.

However, there is a sense among some of the countries, that as the Cold War winds down the intimate relations they enjoyed with one or the other superpower are cooling. There is also wariness among some developing countries at the sight of the permanent members working so closely together. Last year, Third World countries opposed an effort by the permanent members to expand the authority of the Council to deal with issues like drug trafficking. There was concern that the move would merely put more power into the hands of the permanent members.

### Other Business

On 29 November, the Council renewed the mandate of the UN Disengagement Observer Force which monitors the cease fire between Israel and Syria. On 14 December, the mandate of the UN Peacekeeping Force in Cyprus was renewed and on 11 January, it approved a two-month extension of the presence of forty military observers with the Good Offices Mission in Afghanistan and Pakistan. ■

— TREVOR ROWE

## NEWS FROM THE INSTITUTE

Prior to the meeting of the NATO and Warsaw Pact Foreign Ministers and delegates in Ottawa in February to negotiate an Open Skies treaty and give political impetus to the conventional force reductions talks, the Institute organized a media roundtable for members of the working press. Addressing the journalists present, and those from outside Ottawa who joined the discussion via telephone hook-ups, were **David Cox** and **Jane Boulden** of Queen's University, **Fred Bild**, Secretary-General of the conference, **John Noble**, of the Department of External Affairs, **Col. Alain Pellerin** of the Department of National Defence, and **Lt. Col. Gordon Sharpe**, a Research Fellow at the Institute this year, also from the Department of National Defence. **Bernard Wood** chaired the discussion which focussed on the opportunities for confidence-building raised by the proposed treaty, as well as some of the opening national positions, and technical questions.

In late February, the Institute hosted a closing reception for delegates to the Open Skies negotiating meeting from participating countries. Budapest is the site of the next round of negotiations, at the end of which it is expected that a treaty will be ready to be signed.

"The Future of the United Nations System" is the title of a conference at the University of Ottawa in early January sponsored by the Institute and the Ford Foundation, and organized by a

group including **John Trent** of Ottawa University and **Gene Lyons** of Dartmouth College. A number of papers were prepared for the meetings: they focussed on the policies of a dozen or so different nations towards the United Nations. The papers will be edited and published in book form next year. **Roger Hill**, **Fen Hampson** and **Ron Fisher** of the Institute staff participated in the meetings. New opportunities for conflict resolution by the UN was one of the major themes, stressed especially by Northern developed states. However, representatives from developing nations pointed to the lack of progress in the area of economic development and said that in their view, solutions to those problems were still the most urgent.

**Alexander Ognev** of the Institute of World Economy and International Relations in the Soviet Union, and **Gennady Vorontsov** of the United Nations Association of the USSR, were in Canada to attend the conference at the University of Ottawa. The next week they spoke at the Institute about the concept of the Common European House, and well as about the changing policies of the Soviet Union towards the United Nations.

"Peace in our Time? A Canadian Agenda into the 1990s" is the title of the Director's Annual

Statement released by **Bernard Wood** at a press conference in early January, and available in a published version at the end of the month. An excerpt from the statement on the subject of Canadian security and defence policy can be found in the Director's report on page 21.

**Bernard Wood**, and **Peter Roberts**, a former Canadian Ambassador to the Soviet Union, were the Canadian guests at a high-level conference organized by the Union of Soviet Friendship Societies in Moscow in late January to discuss The Human Dimension of Security and Co-operation in Europe. Participants came from all European states as well as from Canada and the United States. Soviet officials in attendance included the Ministers of Culture and Justice, as well as the Prosecutor-General. Discussions focussed on the idea of the common European home, as well as on the attempt to find a new meanings for the concepts of sovereignty and independence. While in Moscow, Mr. Wood had discussions with **Georgy Arbatov** and **Sergei Plehkanov**, Director and Deputy Director respectively of the Institute of the USA and Canada, and other members of the staff.

**Tom Weiss**, formerly executive director of the International Peace Academy in New York and

a member of the United Nations secretariat was a visiting Fellow at the Institute for a week during December. He held a number of meetings with Institute staff and others on questions of peacekeeping, as well as on research needs and opportunities for the UN in the new international climate. While at the Institute, Mr. Weiss wrote an op ed article, published in the *Christian Science Monitor* on 3 January. An article by Mr. Weiss on changing super-power attitudes to the UN can be found on page 8 of this issue of *Peace & Security*.

During the winter there were several seminars at the Institute. **Robert Jordan** of the University of New Orleans spoke on recent changes in US maritime strategy. He said that budgetary restraint in the US was likely to have a major effect on the forward maritime strategy of the US Navy. A significant factor limiting this strategy would be the likely reduction of the number of carrier task forces fifteen to twelve. He reiterated the fact that the US Navy still seems uninterested in any form of naval arms control. **Phoebe Marr**, a Senior Fellow with the Strategic Concepts Development Centre at the National Defense University in Washington, D.C. led a discussion on post-Khomeini Iran. In mid-February **Peter Hakim**, staff Director of the Inter-American Dialogue in Washington, gave a seminar on the elections in Nicaragua.

**Bernard Wood** and **Marie-France Desjardins** participated in a meeting of the consultative group on disarmament and arms control, sponsored by the Department of External Affairs. The major subject for discussion was the nuclear non-proliferation

### IN MEMORIAM

Institute staff and friends were profoundly shocked and saddened by the death of Norma Salem on 22 January 1990 in Ottawa. Ms. Salem was a Research Associate at the Institute from September 1988 until the time of her death. She received a Ph.D from McGill University in Islamic Studies, and came to the Institute from the Institut québécois de recherche sur la culture in Montreal. While at CIIPS, Ms. Salem was in charge of a major study on Cyprus, the report of which will be available soon. She had recently begun work on a new project on Lebanon. We join her friends in offering our deep sympathy to her family, and particularly to her son, Omer.

regime. Later in January, Mr. Wood gave the closing remarks at a roundtable discussion on education and training skills for South Africans in a non-racial democracy. The Minister of External Affairs, the Rt. Hon. **Joe Clark**, delivered the key-note address at the day-long meeting, sponsored by the South Africa Education Trust Fund.

**Roger Hill** spoke at a workshop organized by the York University Centre for International and Strategic Studies on the implications for Canada of the Europeanization of European Defence. He also appeared before the House of Commons Standing Committee on National Defence which is reviewing Canada's Maritime Sovereignty.

In late January, **John Toogood** attended a conference entitled "Defence and Development: Insights from Southeast Asia" in Bangkok, Thailand. Earlier in the month he spoke to the Ottawa branch of Project Ploughshares on peace and security aspects of Canadian foreign and defence policy in the 1990s.

The interconnections between domestic dispute resolution and international conflict resolution were the subject of a seminar sponsored by the US Institute for Peace and Rutgers University in late January. **Ron Fisher** gave a paper entitled "Pacific, Impartial Third Party Intervention in International Conflict: The Potential for a Contingency Approach."

In early February **Ron Purver** attended an international seminar in Moscow on the naval arms race, and **Fen Hampson** participated in a meeting in Washington organized by the Brookings Institute on "Political Institutions and their Consequences." In mid-March Mr. Hampson gave a paper on "The Superpowers and Middle Powers and the Security of Third World States," at a

conference at the University of British Columbia entitled "Security Dilemma: National Security and Third World States."

**Brad Feasey** gave several workshops at a professional development day for high school teachers in February organized by the Ontario English Catholic Teachers' Association in Belleville, Ontario.

**Nancy Gordon** spoke to a class at the Canadian Forces Staff College in Toronto on arms control, peace and disarmament. Her fellow panelists were **General MacNamara** (ret.) and **Col. Alain Pellerin** of the Department of National Defence.

**Malcolm Bow**, formerly the Director of Arms Control Division in the Department of External Affairs, was a visiting Fellow at the Institute for a week in January.

Mr. Bow was working on issues in the area of the non-proliferation of weapons of mass destruction.

In late January the Institute hosted a roundtable discussion on current directions in Soviet policies in Africa and the Middle East. Leading the seminar were **G. Tarasoff**, special assistant to Mr. Shevardnadze on the Middle East, and **U. Ukalov**, director-general of the African directorate in the Ministry of Foreign Affairs in Moscow. They were visiting Ottawa for political consultations with Canadian officials, a process initiated during the Prime Minister's visit to the USSR in November. Mr. Ukalov said that Canada and the USSR shared the same general objective with regard to regional conflicts in Africa, and that the search for political solutions preoccupied both countries. He maintained that the only means of ensuring lasting solu-

tions was through the "table of negotiations": settlements which resulted from military actions or which were imposed from outside simply did not work in the long run. In Southern Africa, the withdrawal of ideological competition and superpower involvement provided opportunities for peaceful settlement. He did not underestimate these problems, but emphasized that many of them could be solved now that the superpowers were cooperating instead of competing. He said that in the Horn of Africa where famine threatened once again, war, more than drought, was responsible.

Mr. Tarasoff reviewed policy in the Middle East where the Soviets have been using their influence to moderate the policies of the PLO. He said that he hoped there would soon be more tangible expressions of support for the moderate PLO stance; if such is not forthcoming he fears a reversion to extremism. He expressed considerable concern about the production capabilities and flows of weapons to the countries in the Middle East, pointing to the fact that this unstable area is the second most highly armed in the world, after Europe. Mr. Tarasoff urged support for an international conference on the Middle East; he said that while bilateral talks might be productive as a first step, the number and complexity and interconnections among issues and parties were such that they could be addressed only in the context of an international conference. The Soviet Union hopes that the five permanent members of the Security Council will convene such a conference.

**Margaret Bourgeault**, a joint projects officer in the Public Programmes section of the Institute, resigned from her position in February. **Jill Tansley**, formerly executive assistant to Bernard Wood, took over the job in mid-February. □

### American-European Summer Academy

The Institute offers three scholarships for Canadians to attend the American European Summer Academy held every year in Austria on "The Relations Between Europe and North America." The programme covers themes such as history and institutions of trans-Atlantic relations; thematic issues and perspectives on foreign policy, trade and economic links, Third World development, and scenarios for the future. This year the summer school will take place between 1 and 21 July 1990.

The Academy brings together young people from Western Europe and North America. Candidates should have completed a first university degree. The three scholarships of up to \$2,500 each, will cover tuition, subsistence and travel costs for three Canadians to be selected by the Centre international de formation européenne.

Requests for further information and application forms should be addressed directly to:

Secretariat,  
Centre international de formation européenne,  
4 Boulevard Carabacel,  
F06000, Nice, France.

### Grants Procedures and Deadlines

*The Institute allocates grants twice a year. Contact the Institute for a copy of updated criteria and application forms. Please note the following deadlines:*

30 June for an October decision

31 December for a March decision

## The Peace and Security Bookshelf Grant

The Institute is now holding its annual "Peace and Security Bookshelf" competition, offering a number of \$500 grants to public and secondary school libraries wishing to develop their collections in the areas of peace and security from a Canadian perspective.

This initiative fits into the Institute's mandate from the Parliament of Canada to collect and disseminate information on issues of international peace and security, and to encourage public discussion.

This is the third time that the grants are being offered. This year, secondary school libraries are included because of the growing attention of students to this field.

Interested libraries are asked to apply to the Institute with a letter indicating why they could use such a grant. If the application is accepted, they will receive a cheque, a bibliography, and suggestions for the promotion of the collection.

Two bibliographies have been compiled, one of French-language items and one of English-language items. These list the most up-to-date, in-print Canadian materials on peace and security, from a variety of viewpoints. Annotations are included, and there are sections on Reference Works, Magazines, Books for Adults and Books for Children.

The bibliographies are freely available to interested groups or individuals, regardless of whether or not they are applying for the grant.

## FROM THE DIRECTOR

### CANADIAN DEFENCE POLICY – OPEN SEASON?

**D**URING 1989 IT BECAME clear that, however difficult and unpleasant the task, another comprehensive review and re-thinking of Canadian defence policy is now inescapable. One critical reason is that last year's Budget so dramatically reduced and postponed the spending commitments for re-equipping the Canadian forces, that the framework of the 1987 Defence White Paper no longer held any prospect of reconciling Canadian defence capabilities and commitments. The second, and even more important reason for a rethinking is found in the dramatic evolution of East-West relations.

So far, the global political changes underway do not appear to have reached the point of materially altering military planners' calculations of capabilities and potential threats. However, with the Conventional Forces negotiations proceeding rapidly in Vienna, with substantial reductions in tanks and other equipment expected to be agreed by summer 1990, it would be totally unrealistic for any government in the position of Canada's, to proceed with a major acquisition such as the promised new battle tanks for the Canadian Forces in Germany. Canadian participation, through our NATO contingent, has taken on heightened political importance by helping buffer European-US relations during the all-important process of East-West negotiations and the reductions that will follow. However, the outcome of those negotiations will soon have a major impact on the overall importance of a Canadian contingent. Either way, Canadian foreign and military policy must explore a range of highly unpredictable future options, in a field where decisions have long lead-times and very high price tags.

The challenge now, is to arrive at decisions that will provide Canada's defence planners, and Armed Forces personnel, with clear directions and credible assurance that they will be equipped to carry out the tasks assigned to them. For this challenge to be met, there is no alternative to an in-depth public debate of policy options.

#### Issues for Informed Debate

■ As the Defence White Paper acknowledged, the country's security comprises three inter-related components: defence policy and programmes; arms control and disarmament possibilities; and conflict resolution activities

including peacekeeping. Much more than was recognized in the White Paper, a positive environment for the latter two can ultimately reduce the need for defence and result in different sets of demands.

■ While Canadians are accustomed to thinking of our military expenditure as very modest, Canada actually ranks about twelfth in the world in its total military expenditure and sixth in NATO – enough resources for very substantial military capabilities. In the size of our armed forces, on the other hand, we rank about 48th, and it is well known that the Canadian forces consider much of their equipment to be inferior and outdated. Even allowing for the fact that many larger military forces rely on conscripts, and that the size of Canada's territory imposes additional costs, there is a clear need to examine how Canada's defence capability can achieve the highest cost-effectiveness. Should Canada try to maintain a fully balanced (and full-time professional) force capability, and a full-fledged national military infrastructure? Is it possible for a middle power to seek specialized "niches" of excellence in defence as we must in other areas?

For most potential strategic military threats Canadian territory and airspace are inseparably linked with those of the United States. This fact dictates the Canadian need to influence US policies where vital Canadian interests are different. Conversely, US vital interests will also need to be taken into account in Canadian policies – implying the continuing search for compromise in this distinctly asymmetrical relationship.

The North Atlantic Alliance is likely to remain an important umbrella framework for Western European-North American political, security and defence cooperation. While this cooperation has mainly taken the form of North American contingents and reinforcement capabilities for Europe, as well as joint naval operations, it is possible that the Western Europeans will take greater share of a reduced overall burden of European defence in future. This raises the possibility of a smaller direct North American contribution in Europe, and conceivably a strengthened European naval and air participation in NATO's North American area.

■ The Arctic represents a major frontier region in East-West relations, with Canada and the Soviet Union having the largest territorial stake. The possibilities for constructive coop-

eration and the reduction of security threats should be distinctive Canadian priorities for bilateral and circumpolar action.

■ We have been drawn into a number of demanding and expensive new tasks by the evolution of competing military technologies between East and West. The North Warning System, the emphasis on Forward Operating Locations, Forward Dispersal Bases, low-level flying exercises, and aerospace and submarine surveillance requirements are all developments with major implications for Canadian defence and for basic Canadian interests in our relations with the US. Wherever possible, Canada should seek the reductions of technological developments which could increase these demands.

For certain kinds of traditional and new international challenges to Canadian security, the appropriate response may not lie either in military defence capability or in cooperation with the US. These challenges include: the maintenance of Canadian sovereignty; enforcement of Canadian fisheries zones and regulations; environmental protection; coastal surveillance and enforcement capability against drug trafficking or illegal entry; services such as ice-breaking, and search and rescue operations. These "security" services may or may not prove possible to handle in tandem, or "multi-tasked," with more traditionally-defined naval and air operations. What is certain is that all of these requirements are intensifying while the available resources are not expanding. The public (as various opinion surveys attest) is primarily concerned with seeing these needs met.

Peacekeeping has been a substantial part of Canadian defence activity for decades and an unparalleled Canadian contribution to international security through the UN system. UN peacekeeping has suddenly undergone a huge expansion to respond to the new willingness of the major powers to see conflicts resolved under international supervision. No country's armed forces have a higher level of experience, capability and acceptability for these tasks than do Canada's. And Canada has been involved in all of these operations, to the point where it has become difficult to consider peacekeeping as a mere "auxiliary" role for our Armed Forces. How we will now rank these peacekeeping tasks among our security policy priorities will be a key question for the allocation of our defence resources. □

– BERNARD WOOD

## REVIEWS

### **Building Global Security** Douglas Roche

*Toronto: NC Press, 1989, 160 pp.,  
\$14.95 paper*

Douglas Roche's latest book marks his effort to rejoin the public policy debate and cast off the often troubling limitations imposed upon him during his tenure as Canada's Ambassador for Disarmament. As always, his views are visionary, and he re-enters the debate with positions that are difficult to disagree with.

This is an ambitious book, aiming to sketch no less than "a bold new plan – realistic and timely" to achieve "common security" in the face of the challenges facing humanity today. Roche provides a "tour d'horizon" of major challenges facing us at the close of the twentieth century, and singles out for special attention three issues: the continuing dangers of high levels of military spending, which translate into nuclear arms racing, reliance on nuclear deterrence, and the destructive (and expensive) arms trade with the Third World; the persistent economic, political and social underdevelopment in which the majority of the world's people live; and the accelerating environmental degradation at the global and local levels.

His grasp of the ground-level details and human costs of these problems is powerful. But although he is correct to highlight these issues, the link between the looming catastrophe, the change required to avoid it, and the specific action to take is weak. It would be unrealistic to expect "answers" to the challenges Roche poses, but readers are right to expect some analysis of the complex and contradictory choices facing

us from one of Canada's foremost speakers on these issues.

Perhaps the most poignant case is the conflict between developmental and environmental goals. Roche notes that "over the next two decades developing countries will need to create 700 million jobs – more jobs than currently exist in the entire industrialized world!" Yet three pages later he notes that a fifty percent reduction in carbon dioxide emissions (the main source of which is the burning of fossil fuels) is needed to stop global warming. How the jobs created for these people (or the consumption demands their employment generates) will be consistent with reduced fossil fuel consumption is not addressed. Repeating the new mantra of "sustainable development" does not tell us how to avoid the terrible dilemma of this choice.

Roche also traces the outlines of recent positive and negative developments in the foreign policy positions of major states, including the Soviet Union, the United States, China, India and Canada. He singles out for praise President Gorbachev, and criticizes the conservative caution and lack of boldness that characterizes Canadian and American responses.

What is striking is the absence of an analysis of the deep historical, social and economic causes of the current crises he earlier identifies. These causes transcend the policy choices of individual states or leaders, and are rooted in the structure of the state system and nature of international economic forces. Solutions to problems of this magnitude are not to be found in the short-term machinations of the political process.

Roche seems to acknowledge this when he argues that the shift to a shared vision of "common security" will ultimately be based upon individual action and consciousness. Thus his conclusion

provides suggestions for actions Canadians can take, including: becoming environmentally responsible; lobbying politicians; joining local peace and environment group; planting trees; knitting quilts and eating ethnic foods. The reader is tempted to ask: "is this all?"

Most important, Roche's book must pass the test of advancing intelligent debate on the solutions to pressing world problems. If the goal is to increase public awareness of these issues as a basis for action, perhaps this book reaches it. But if the goal is to sketch a bold new plan to achieve common security, the book falls short.

### **Radical Mandarin:** **The Memoirs of Escott Reid** Escott Reid

*Toronto: University of Toronto Press,  
1989, 405 pp., \$35.00 cloth*

Escott Reid, who served with distinction for a quarter of a century as one of Canada's foremost diplomats, has had a full life since the mid-1960s as an author (of five other books), advisor, and educator. Now eighty-five years of age, he recalls here not only his own past but also important parts of the history of Canada's coming of age in the tumultuous world politics of the middle third of the century. *Radical Mandarin* is part autobiography, part interpretative history, and part advice on policy. It is also an informative, enjoyable, and satisfying piece of work. He remarks at one point that,

to try in old age to discern the useful accomplishments of one's public life is a puzzling task. So many achievements which seemed important at the time look trivial or evanescent from a distance of decades. What does encourage me is that I played a part in molding six institutions: the Canadian Institute of International Affairs, the Department of External

Affairs, The International Civil Aviation Organization, the United Nations, the North Atlantic Alliance, and Glendon College.

Reid's experiences with these institutions figure prominently in his memoirs, and what he has to say – and he writes lucidly – is instructive and often evocative in capturing the political moods of his times.

Reid was frequently at or near the centres of decision-making. He met a lot of major political actors; he was concerned with formulating Canadian policy on matters of importance; he represented Canada abroad at times when major changes were underway (India in the mid-1950s, Germany in the early 1960s); and he was often at odds with government policy and dismayed by the behaviour of Washington. His life and career were wrapped up with many of the central themes of world politics between the late 1920s and the early 1960s; and while he does not claim to have been always present at their creation, he was certainly in a position to witness and sometimes influence the making of foreign policies and the unfolding of world events.

He struggled to promote humane policies; and now, in retrospect, he tries to understand more fully what he was a part of. His testimony is especially valuable for the years from the climax of World War Two to the height of the Korean War, years when his official duties were exceptionally diverse and frequently intense and demanding.

Many of Reid's reflections are pertinent to current history. In the 1950s, membership in the Commonwealth, he suggests, countered "some of the misleading simplicities of much of the cold war propaganda of the time" and

"helped us realize ... that most of the crucial problems before the world are not ... aspects of a struggle against communism. It helped us to face these crucial problems: colonialism and its aftermath, racial discrimination, cultural imperialism, the misery of half the people of the world." Escott Reid thought more deeply and more sensitively about these and other international issues than most of his contemporaries. His memoir of thought and action deserves to be read with appreciation and respect.

### The Meaning of the Nuclear Revolution: Statecraft and the Prospect of Armageddon

Robert Jervis

Ithaca: Cornell University Press, 1989, 266 pp., US\$ 21.95 cloth

One might well ask, with the democratic revolution now sweeping across Eastern Europe and the Soviet Union, whether the United States did not overspend on a threat that was not nearly as great as some imagined. The implication behind Robert Jervis' new book is that the nuclear strategy developed to address that "threat" was just as flawed in both design and logic. Jervis is the dean of American security studies and well known for his earlier writings on nuclear strategy, crisis management and the psychology of decision making. His new book is unquestionably the most comprehensive and thorough critique of US nuclear policy available.

Jervis argues that US and Soviet nuclear strategies have been masked in a bundle of contradictions: on the one hand, the political leadership of the two superpowers has long since recognized that nuclear war is both unwinnable and unthinkable; on the other hand, they have encouraged a buildup of their respective nuclear arsenals and the pursuit of nuclear strategies which are based on the premise that victory in nu-

clear war is possible. He ridicules current notions about "countervailing" or "prevailing" responses, escalation dominance and control, or deterrence by denial.

At the same time he urges a return to what he refers to as the "major old, good ideas," namely, that nuclear weapons are not ordinary weapons, that the nuclear revolution has rendered the possibility of military victory obsolete, and that crisis stability is both a necessary and desirable objective of all strategy and policy.

Jervis also suggests that scholars and students of nuclear strategy have contributed a number of important "new, good ideas" to the strategic debate. These include the insight that any attempt by one side to "improve" its own security will only make its adversary feel more vulnerable (now referred to as the "security dilemma") and lead to a costly arms race, that arms control should concentrate on the characteristics of weapons not their numbers, and that it is difficult in practice to distinguish between a first-strike and a so-called "second-strike" weapon. Jervis also suggests that a growing appreciation of the security dilemma has facilitated possibilities for security cooperation between the superpowers and led to the development of common principles, norms, and rules of conflict management.

In other chapters, Jervis addresses such issues as the relationship between morality and nuclear strategy, the different meanings and policy understandings of MAD, and the psychological aspects of crisis stability. The book also includes a brilliant chapter on the symbolic nature of nuclear politics, his analysis of which yields five important conclusions:

many strategic policies create their own difficulties; there are opportunities for avoiding such pitfalls; a good deal of strategic planning operates autonomously on the basis of self-defined problems; many of the possibilities for and against arms control must be seen in psychological, not military terms; beliefs about whether war is inevitable are especially important in determining whether peace will be maintained.

Much of Jervis' analysis is at the level of strategic theory and psychology. Yet one is forced to ask whether, if US and Soviet nuclear policies have been so flawed, the root of the problem lies at this level (the level of ideas or strategic logic), at the level of institutions, or somewhere else. Unfortunately Jervis does not address this issue. Instead, he prefers to level his critique at the mind-numbing debates of nuclear theologians.

Although the implication of Jervis' argument is that fewer is better when it comes to nuclear weapons — what some call "existential deterrence" — his book is bereft of ideas about how this is to be achieved and how nuclear forces and strategies of the two superpowers should be changed to accommodate new political realities in the East-West relationship. Let us hope that Jervis will turn his formidable powers of analysis to these questions in his next book. — Fen Osler Hampson

Mr. Hampson teaches international affairs at Carleton University and is a research associate at the Institute.

### BRIEFLY NOTED

#### The Defence Industrial Base and the West

David G. Haglund, editor

London: Routledge, 1989, 288 pp., \$69.00 cloth

With a multi-national list of contributors this volume draws on recent cases of complex weapon systems development to show, first, the kinds of opportunities and challenges presented by multi-state participation in weapon development and second, the major themes of the debate "over the degree to which the goal of maintenance of the defence industrial base conditions and sometimes conflicts with other objectives of states." Among the chapters are: "The MRCA/Tornado: The Politics and Economics of Collaborative Procurement"; "The Swedish Defence Industrial Base: Implications for the Economy"; and "Israel and the Lavi Fighter-Aircraft."

### Canadian Oceans Policy: National Strategies and the New Law of the Sea

Donald McRae and Gordon Munro, editors

Vancouver: University of British Columbia Press, 1989, 282 pp., \$39.95 cloth, \$22.95 paper

This book is concerned with the nature and adequacy of Canada's ocean management policies and practices in the light of the regime that emerged from the 1982 Convention on the Law of the Sea. The multidisciplinary perspective presented here by lawyers, political scientists, economists, fisheries scientists, and diplomats specializing in oceans matters, examines how ocean issues are managed by one of the world's most important coastal states and looks at the progressive development of an international oceans regime.

### The Arctic: Choices for Peace and Security

Thomas R. Berger, Harriet Critchley, Alexei Rodionov, Mary Simon and 20 others.

Vancouver: Gordon Soules, 1989, 282 pp., \$12.95 paper

This volume is drawn from the speeches and debates of the public inquiry by the same name held in Edmonton, 18 and 19 March 1989. The inquiry, attended by over fifteen hundred participants, examined the Arctic as a key element of international peace and security. The issues include: the environmental effects of Arctic industrial development and resource extraction; problems of pollution from the south; militarization of the Arctic and the threat of nuclear confrontation in the Arctic; the need for the superpowers and other Arctic countries to cooperate to reduce political and military tension; and the needs and aims of the native peoples of the Arctic.

(The conference on which this volume is based received financial assistance from the Institute for Peace and Security) □

Reviews of French language publications can be found in *Paix et Sécurité* "Livres" section.

## LETTER FROM PRAGUE BY VĚRA MURRAY

**On the Palace Square, gazing past the guards at the main building, I had the strangest feeling. I certainly had not been used to looking kindly on the place which houses the offices of the president.**

When I was young, and whenever I visited Czechoslovakia during the past twenty years, I would feel contempt, helplessness, even fear when I'd look at that palace. Now, for the first time there was not hatred, but admiration for the man in the president's home. I could scarcely believe it. With me on the square, dozens of people stared up at the building. Citizens of Prague, people from the countryside, foreign tourists speaking Czech, I'm sure we were all thinking the same thing: we have an awfully long way to go in this country of ours.

It's ironic, but human nature seems to have an easier time adapting to repression than learning about democracy from scratch. In the same way, nationalizing a free economy is a simple matter compared to privatizing all the industries and services of an economy that has been state run for decades. This is the kind of challenge that Czechs, like all Eastern Europeans, are beginning to encounter. The freedom which was so longed for and which has seemingly dropped from the sky, brings problems quite unimaginable to people who take it for granted that they can join any political party they choose, send their children to university, open a business, buy stocks or shares, or simply write a stiff letter of protest to the editor of their newspaper. It's hardly surprising, then, that two short weeks after the election of Vaclav Havel, and only two months after the beginning of Czechoslovakia's "quiet revolution," I was standing there in Prague feeling both satisfaction and extreme anxiety.

How to organize the first free elections, planned for next June? In a society, closed for forty years,

where any attempt to be different was nipped in the bud, the natural reaction has been to be as different and distinctive as possible – so thirty-six political parties have sprung up in the past two months. How to deal with such a range of opinion? How to encourage democracy without falling into a pattern of electing weak coalition governments that change every

---

**... the greatest fear of the revolution's leaders has been the kind of chaos which would give the State Security forces an excuse to "re-establish order."**

---

few months? All along, the greatest fear of the revolution's leaders has been the kind of chaos which would, before or after the elections, give the State Security forces an excuse to "re-establish order."

No one really knows the extent and structure of this repressive body, upon which the communist regime depended – not even the Minister of the Interior. In 1968, during the Prague Spring, Pavel, a communist reformer who headed the State Security apparatus for a few months, never was able to find out anything about the way it was run. Last November, the members of the State Security just vanished overnight – lock, stock and files. They have everything to lose and nothing to gain with the new regime.

How to deal with the communists? In a few factories and schools, "outraged citizens" have begun to get even. Calling themselves the Civic Forum – a movement gathering in all the opposition forces around Havel during the early days of the revolution – they get involved in the running of a factory on the grounds that the director is

an old Stalinist, and they decide which school teachers should stay or go. Although it's a far cry from the quick and nasty justice we saw in Romania, the people around Havel are horrified by it. On the whole this is a very pragmatic people, with little tendency to get carried away – not always an advantage, however, as the history of Czechoslovakia since World War II shows.

Those who were responsible for the bloody repression of 17 November must be brought to justice, of course, and the most corrupt members of the communist party apparatus must be punished. But the idea of a witch hunt is repul-

ing directed by the state, of all initiative being crushed by the state, people will not get back into the entrepreneurial spirit overnight, ready to take financial risks, or even prepared to work overtime.

At the moment nobody serious has the kind of money needed to purchase the country's medium-sized businesses, let alone the giant heavy industries. Nobody that is, except the sons of some communist *apparatchiks*, and maybe a few blackmarketeers and foreigners.

Will there be a lot of unemployment? And what about the standard of living? The people of Czechoslovakia are used to more comfortable lives than their Eastern Bloc neighbours, thanks to the huge subsidies paid to farmers, and retail prices kept artificially low – but it won't be possible to keep on cheating like this. As for the magnificent forests, once the pride of the country, most of them are dead or dying from acid rain, and half of the potable water is contaminated. Can this environmental catastrophe be reversed?

A sense of humour and a talent to improvise are two qualities which have survived in Czech society even after decades of communism, and despite widespread cynicism and disillusionment. However, the late-night discussions in Prague in which I took part were unusually serious. Making fun of Soviet occupiers or laughing at the stupidity of Jakes, the former communist party secretary, was not only easier, it was also a way of surviving. "We have this terrible feeling of responsibility," a close friend of Havel's told me, "for such a long time all we did was say how bad things were. Now in the middle of this economic gloom it's up to us to do better." □

*Věra Murray was born in Czechoslovakia, left the country in 1968 and is currently the Moscow correspondent for the Quebec magazine L'Actualité.*

*Translation by Eva Bild*

Je me suis retrouvée sur la Place du Château, et au-delà des sentinelles gardant l'entrée comme toujours, j'ai

regarde le premier bâtiment, envahie par un sentiment des plus absurdes.

sentiment des plus absurdes.

Dans le mois de juin prochain ?

Après la révolution, avant ou après les élections, c'est une situa-

de la révolution. Ils se méfient de la direction d'une usine, parce que le directeur est un vieux sarkhan et ils décident qui parmi les enseignants peut rester au non. On est loin de la justice sommaire exercée en Roumanie, mais les gens autour de Havel, sont tout de même horribles. Dans l'ensemble, ils sont peu portés au mélodrame; ce sont des pragmatiques jusqu'à la moëlle. Des caractéristiques qui ont leur avantages et leurs désavantages comme l'a prouvé l'histoire riche que depuis la Seconde Guerre mondiale.

Il faudrait sûrement traduire en justitice les responsables de la répression sanglante du 17 novembre, événement qui a mis en marche la révolution, et punir les membres les plus corrompus de l'appareil du parti communiste. Pour le reste, la chasse aux communistes répugne même à ceux qui ont payé leur liberté avec des années de prison, comme Václav Havel lui-même.

...Deux mois à peine après le début de la «révolution tranquille» tchécoslovaque, j'ai senti à Prague, au-delà d'une incroyable satisfaction, une anxiété presque palpable.

une anxiété presque palpable.

De plus, dans un pays où l'avaancement dépendait depuis quarante ans de l'appartenance au parti unique, beaucoup se sont joints à celui-ci pour pouvoir tout simplement faire leur travail. Deux fois, après 1948 et après 1968, le pays a été saigné de ses intellectuels, partis en exil, ou devenus préposés au chauffage ou gardiens de nuit. Il ne peut pas aujourd'hui se permettre le luxe de mettre à la porte des spécialistes dont le seul défaut est d'avoir été communiste. Dans la plupart des cas, on ne saurait leur trouver de remplaçants.

À la différence de celle de la Hongrie et même de l'Allemagne de l'Est, l'économie mûre de la Tchécoslovaquie a été nationalisée après 1948, des usines Skoda au plus petit cordonnier, des grands hôtels de la ville d'eau de Karlsbad au plus modestes bistros de village, sans oublier les activités du Nord de la Bohême. Le nouveau régime vise à rétablir l'économie de marché, et là-dessus, tout le monde est d'accord. Les communistes posséderont leur boutique, et des résistants de famille réforon-

tion chaotique dont pourrait profiter la Sécurité d'Etat (la force de répression sur laquelle reposait le régime communiste), pour «rétablir l'ordre». Personne ne connaît l'ampleur ni la structure exacte de cette organisation. Même pas le nouveau ministre de l'Intérieur. En 1968, pendant le printemps de Prague, le ministre Pavel, un communiste réformiste qui dirigea le ministère durant quelques mois, n'a jamais pu apprendre quoique ce soit sur le fonctionnement des services spéciaux. Des novembre dernier, du jour au lendemain, les membres de la Sécurité ont disparu, avec les armes et les archives. Ils n'ont rien à gagner mais tout à perdre avec le nouveau

regime.  
Comment traiter les commu-  
nités ? Dans certaines usines et dans  
certaines écoles, des « citoyens in-  
dignes » ont commencé à régler  
leurs comptes au nom du Forum  
civilique, mouvement rassemblant  
toutes les forces de l'opposition au-  
tour de Havel dès les premiers jours

« Il est donc peu surprenant que, deux semaines à peine après l'élection à la présidence de Václav Havel, deux mois à peine après le début de la « révolution tranquille » tchecoslovaque, j'aie senti à Prague, au-delà d'une incroyable satisfaction, une anxiété presque palpable. Comment organiser les premières élections législatives libres, prévues

l'homme, la nature humaine  
 semble plus facilement s'ajuster à  
 un régime dur qu'à l'apprentissage  
 de la démocratie à partir de zéro. De la  
 même façon, nationaliser une éco-  
 nomie libre paraît être une tâche  
 nettement moins compliquée que  
 celle de privatiser toutes les usines  
 et tous les services dans une écono-  
 mie gérée depuis des décennies par  
 l'Etat. Ces défis, les Tchécosto-  
 vaques, comme tous les Européens  
 de l'Est, sont en train de les décou-  
 vrir. La liberté, tant souhaitée, qui  
 soudain est presque tombée du ciel,  
 apporte avec elle des difficultés à  
 peine imaginables pour quelqu'un  
 qui vient tout d'un coup acquiescer  
 à être membre du parti politique de  
 son choix, d'envoyer son enfant à  
 l'université, d'acheter un commerce  
 ou d'acheter des actions à la bourse.

je n'étais pas habituée à regarder avec bienveillance ce lieu où se trouvent les bureaux du président de la République; dans ma jeunesse et pendant les visites que je fais en Tchécoslovaquie depuis vingt ans, j'avais plutôt fait avec du mépris, de l'impissance et de la peur. Maintenant, pour la première fois de ma vie, je n'éprouvais pas de haine mais beaucoup d'admiration pour celui qui occupe la fonction de président. Je n'arrivais pas à me rendre à l'évidence. Avec moi, des dizaines de Français en promenade, des provinciaux et une foule de touristes étrangers parlant le tchèque parlaient le babillement. J'aurais pu penser que nous pensions la même chose : en ce qui concerne notre pays natal, nous avions tous un

un racc. Mais après quarante ans de prise en charge par l'Etat, période où toute initiative a été écrasée, ce n'est pas du jour au lendemain que les gens reviennent l'esprit d'en-dehors, vont tout reprendre des risques financiers, ou même faire aux heures supplémentaires. Quant à eux compagnies de moyenne envergure, aucun particulier « sérieux » n'a pu le moment assez d'argent pour les acheter. Sans peut-être les fils d'*d'aparvichiks* communistes qui se sont enrichis au dépend de l'Etat, les individus qui font du marché noir, les étrangers... Y aura-t-il beaucoup de chômage ? Et le niveau de vie ? Les Tchecoslovaques vivaient mieux que les citoyens et citoyens des autres pays de l'Est à cause des subventions massives accordées à l'agriculture et des prix de détail tenus artificiellement bas. Il ne sera plus possible de continuer avec ce genre de tricheries. Et que dire des magnifiques forêts qui faisaient autrefois l'orgueil du pays et qui sont maintenant malades ou ont été détruites par les pluies acides, et de plus de la moitié de l'eau potable qui est contaminée ? Cette situation écologique catastrophique est-elle réversible ?

provisionnement sont deux qualités qui semblent toujours survivre dans la société tschèque, même après des décennies de communisme, et malgré le cynisme et le désagacement très généralisés. Les discussions aux-quelles j'ai assisté tard dans la nuit à Prague, étaient d'un sérieux inhabituel. Se moquer de l'occupant soviétique, ou de la bêtise de Jakes, secrétaire du Parti communiste jusqu'au début de la révolution, était non seulement plus facile, c'était aussi une façon de survivre. «Nous avons tous un terrible sentiment de responsabilité», me disait un ami très proche de Havel, «pendant si longtemps, nous ne faisons que dire combien tout était mauvais. Maintenant, au milieu du marasme économique général, c'est à nous de mieux faire.» □

iels que les Brigades rouges ou la mystérieuse Djihad islamique, mais d'y inclure l'IRA (en Irlande du Nord) et l'ETA (au Pays basque) qui recourent pourtant essentiellement à la même stratégie de lutte, à savoir le terrorisme.

La qualité de cet ouvrage ne réside toutefois pas dans ces distinctions fines et académiques, mais plutôt dans l'effort de synthèse et de classification qu'il nous propose, d'une certaine façon, correspond à une définition indirecte du phénomène. Gandolfi distingue ainsi les MLN en fonction des objectifs qu'ils poursuivent. On obtient alors des mouvements recherchant la sécession, d'autres la révolution. Les premiers correspondent à la vision traditionnelle que l'on a des MLN, c'est-à-dire des mouvements s'opposant à un colonialisme européen, ou aux «militarismes» issus du tiers-monde dont le couple Maroc-Sahara occidental est un excellent exemple.

Les MLN visant la révolution sont, quant à eux, orientés vers la destruction d'un régime en place et l'instauration d'un ordre politique nouveau. Cette catégorie inclut la plupart des mouvements révolutionnaires d'inspiration marxiste, mais aussi les «combattants de la liberté» anticomunistes si chers à la droite américaine (UNTA en Angola et Contra au Nicaragua).

Après avoir décrit les divers types d'objectifs que poursuivent les MLN, Gandolfi passe à une description des structures de ces mouvements selon le schéma suivant : dénomination, organes, membres, pluralité et regroupement au sein de l'étude est construite sur la prémisse suivante : «la structure est fonction de l'objectif de libération poursuivi. L'objectif commande la structure et non l'inverse». Cette proposition théorique originale n'est malheureusement pas justifiée au cours de l'étude. En fait, on pourrait facilement avancer l'argument inverse : la structure est avant tout fonction des caractéristiques du milieu au sein duquel il évolue. La présence de structures tribales, le gouvernement en place, la présence d'un sanctuaire sûr sont autant d'exemples à élaborer les éléments catholiques à amener l'Eglise occidentale à une prise de position des politiques de défense des pays du continent européen. La contestation probable d'un conflit armé sur le sur les dangers et les conséquences de la blâse l'opinion publique occidentale protestations antinucléaires ont montré.

Au début des années 1980, les

traditions nationales, émettaient des déclarations articulées associant la prévention de la guerre à la promotion de la paix. Les textes des Conférences épiscopales américaines, allemande et française de 1983 ont retenu l'attention de l'auteur pour plusieurs raisons. Il s'agit de pays démocratiques, dont le poids économique, politique et stratégique est la place au premier plan sur la scène internationale. Dans ces pays, l'Eglise catholique agit librement et contrairement à l'Eglise des pays de l'Est.

Dans l'introduction, l'auteur étudie les rapports de l'Eglise et de l'Etat dans la tradition catholique et expose la philosophie politique du pape Jean-Paul II. La première partie passe en revue les alternatives de la dissuasion nucléaire. La troisième expose les aspects éthiques, stratégiques, politiques et théologiques de la dissuasion nucléaire. La troisième partie passe en revue les alternatives de la loi naturelle.

Cette loi signifie, entre autres, la justice dans ses formes sociale et distributive. Le respect effectif des droits de l'homme devient alors un impératif catégorique. Saint-Augustin soulignait déjà avec insistance que sans la justice, l'entreprise des hommes peut devenir du brigandage. Les bases d'une éthique commune sont contenues dans la doctrine de l'Eglise catholique et explicitées, adaptées, suivant les époques et les circonstances historiques, par les encyclopes papales.

Dans leurs analyses des politiques de défense, les évêques français et allemands, en fonction des conflits européens du passé, insistent plutôt sur les valeurs tandis que leurs confrères américains mettent en relief les rapports de force. Les approches des évêques européens du «centre catholique» tiennent compte de

des exemples de facteurs qui échappent à la volonté des MLN et qui pourtant déterminent directement leurs forces et leurs stratégies de

La dernière partie du livre porte sur la place des MLN au sein de la communauté internationale. L'auteur apporte ici une contribution originale en mettant l'accent sur les dimensions légales, peu étudiées parce que souvent jugées, peut-être à tort, comme non pertinentes par la

considérer que la société internationale continue d'être dominée par des Etats et que les MLN échappent rarement à leurs influences et à leurs manipulations.

Au tableau des critiques portant sur la forme de l'ouvrage, il faut mentionner deux points importants. Premièrement, l'absence d'une table des matières complète, celle fournie ne rendant pas justice à l'approche détaillée adoptée par Gandolfi.

Deuxièmement, ce livre ne contient aucune référence et possède une bibliographie trop sommaire. Cette dernière, limitée à des livres écrits en français, ne contient que trois publications pour les années 1980 et n'inclut même pas l'anthologie classique «Stratégies de la guerrilla» de Gérard Chaliand. Bref, le néophyte trouvera dans ce livre bien peu de repères pour poursuivre plus à fond son étude des MLN.

## LIVRES

### L'or et le sang : les buts de guerre économiques de la Première

guerre mondiale

Georges-Henri Soutou

Éditions Fayard, Paris, 1989.

663 pages, 69,95 \$

Le livre de Georges-Henri

Soutou représente l'aboutissement

d'un itinéraire intellectuel qui a

commencé par une question simple :

pourquoi le blocus allié de l'Alle-

magne a-t-il été maintenu jusqu'en

1919, soit un an après l'armistice ?

Section l'auteur, «tous les appétits

et tous les projets économiques de

la Première Guerre mondiale, ont

marqué le conflit et que l'on re-

trouve, bien présents, dans le texte

même du Traité de Versailles».

Soutou s'oppose donc à l'historio-

graphie traditionnelle qui évacue les

buts de guerre économiques pour

se préoccuper uniquement du point

de vue politique et des ambitions

territoriales de style classique.

Après une étude approfondie des

politiques économiques nationales

des États européens et des États-

Unis, par exemple, Soutou en vient

à la conclusion que la Première

Grande Guerre a été la matrice du

XX<sup>e</sup> siècle parce que «celle-ci

marque une étape entre la longue et

lente évolution passée et l'accepta-

tion de l'évolution scientifique et

technique de notre société en lais-

sant de côté les bouleversements

moeurs». L'auteur se propose d'ana-

lyser le premier conflit mondial

sous tous les angles possibles.

Soutou démontre que l'affronte-

ment économique a dominé la

Grande Guerre mais, surtout, qu'il

s'est prolongé dans l'après-guerre,

alors qu'on assiste à la «mise au

point de véritables buts de guerre

économiques». Pour les Alliés, c'est

la victoire d'un libéralisme renou-

vel. Pour les puissances centrales,

l'objectif majeur deviendra la cons-

truction du *Mittelwopa*. Mais, au-

delà des buts de guerre strictement

économiques, L'or et le sang cons-

tinue aussi une histoire de la Grande

Guerre du côté civil. En effet, tout

comme Soutou refuse de réduire le

conflit de 1914-1918 à un exercice

militaire, il refuse une interprétation

basée sur un petit nombre de res-

ponsables principaux. Il mesure

l'influence et la responsabilité de

plusieurs autres personnalités

(ministres, dirigeants privés,

groupes de pression, intellectuels)

qui elles aussi élaboreront des pro-

grammes et essaieront de les faire

passer. C'est ainsi que la Grande

Guerre nous est effectivement

présentée sous ses multiples aspects.

Soutou rejette donc les notions de

«d'impérialisme économique»

mythique. Pour l'Allemagne, la

priorité devient le retour au marché

international et non pas, comme

le prônaient les militaires, l'aurar-

complète. L'Allemagne n'est

donc plus au centre ni à l'Est, elle

est à l'Ouest.

En plus de s'opposer à l'évacua-

tion des buts de guerre écono-

miques, Soutou rejette l'analyse

traditionnelle des avantages et des

instruments économiques fournis

aux Alliés par le Traité de Ver-

sailles. Selon lui, en s'attachant

uniquement au problème des répa-

rages économiques découlant du

traité, la majorité des historiens ont

eu tort de conclure que les Alliés

n'avaient pas atteint leurs objectifs

économiques. En effet, pour Soutou,

les Alliés ont réussi à réaliser, à Ver-

sailles, l'essentiel de leurs ambitions

économiques. La qualité et l'éten-

due de la recherche de l'auteur ren-

dent cette thèse tout à fait possible.

— Pierre Fournier

Pierre Fournier est professeur au département de science politique de l'Université du Québec à Montréal.

partie apaisée depuis Bismarck, elle est toujours présente au sein de la société allemande. En ce sens, un des thèmes majeurs de cette lutte devient le choix, pour l'après-guerre, entre «le maintien de l'ouverture sur le marché mondial libéral ou la fermeture autarcique d'une Europe centrale aristocratique et traditionaliste».

La «lisse de la Grande Guerre peut

être perçue, selon l'auteur, comme

un changement de régime politique,

qui consacre la victoire de la libre

la porte ouverte), ainsi que l'aban-

don des «méthodes allemandes

d'expansion économique», à base

étatique, au profit d'une concu-

rence commerciale ouverte. C'est

la, selon Soutou, que réside le pro-

blème, et non pas dans un processus

«d'impérialisme économique»

mythique. Pour l'Allemagne, la

priorité devient le retour au marché

international et non pas, comme

le prônaient les militaires, l'aurar-

complète. L'Allemagne n'est

donc plus au centre ni à l'Est, elle

est à l'Ouest.

En plus de s'opposer à l'évacua-

tion des buts de guerre écono-

miques, Soutou rejette l'analyse

traditionnelle des avantages et des

instruments économiques fournis

aux Alliés par le Traité de Ver-

sailles. Selon lui, en s'attachant

uniquement au problème des répa-

rages économiques découlant du

traité, la majorité des historiens ont

eu tort de conclure que les Alliés

n'avaient pas atteint leurs objectifs

économiques. En effet, pour Soutou,

les Alliés ont réussi à réaliser, à Ver-

sailles, l'essentiel de leurs ambitions

économiques. La qualité et l'éten-

due de la recherche de l'auteur ren-

dent cette thèse tout à fait possible.

Les mouvements

de libération nationale

Alain Gandolfi

Presses universitaires de France,

Collection Que sais-je ? N° 2478.

Paris, 1989

125 pages, 8,25 \$

Alain Gandolfi propose, dans

cette brève étude, un survol des

mouvements de libération nationale

(MLN) selon le signe proposé par

l'auteur tout fait adapté au lecteur

qui recherche un ouvrage d'intro-

duction concis sur le sujet. Mal-

heureusement, comme c'est trop

souvent le cas avec ce type d'ou-

vrage, le lecteur a l'impression de

rester sur sa faim après avoir tourné

la dernière page.

Qu'est-ce qu'un MLN ? C'est la

une question à laquelle Alain Gan-

dolfi, qui enseigne à l'Université

d'Aix-Marseille III, se montre au

départ réticent à répondre. Comme

il le dit si bien, il faut «ratissier large

pour rester plus près de la réalité».

Par conséquent, son propos tend de

«véresser un inventaire de ces mou-

vements en tentant de cerner pro-

gressivement la notion à partir de

ses éléments constitutifs».

Il s'oppose ainsi à la conception

restrictive répandue par le droit inter-

national qui accorde le statut de

MLN seulement aux «organisations

représentatives de peuples luttant

pour leur indépendance contre une

metropole dont ils sont ethnique-

ment ou culturellement différents

et séparés par la mer». Mais cette

définition, issue de la réalité de

l'époque de la décolonisation (qui

prend, en gros, fin avec le retrait

portugais d'Afrique en 1975) ne

correspond plus nécessairement à la

diversité actuelle des MLN. Ce qui

amène l'auteur, en conclusion, à

appeler MLN «tout mouvement or-

ganisé, prétendant représenter une

communauté territoriale au nom de

laquelle il agit par des moyens

généralement extra-légaux, pour

changer l'ordre étatique dont il con-

teste la légitimité». Cette perspec-

tive lui permet ainsi d'exclure de

son étude des groupes terroristes

si en Allemagne cette lutte s'était en

dent cette thèse tout à fait possible.

## LA POLITIQUE

**A** MESURE QUE SE DÉ-  
roulait l'année 1989,  
il est devenu clair que,

DE DEFENSE

il est devenu clair que,  
tout difficile et désagréa-

DU CANADA :

ble que ceci pût être, le Canada allait devoir iné-

## SONT PAS FAITS

fondamentalement sa politique de défense. En effet,

dernier a tellement réduit les ressources et différé les programmes de rééquipement des Forces canadiennes que le cadre défini dans le Livre blanc de 1987 sur la Défense ne permettait désormais plus de concilier les capacités de notre pays en matière de défense et ses engagements. Par ailleurs, et c'est là une raison encore plus importante de repenser la politique de défense, les relations Est-Ouest ont connu une évolution dramatique.

« L'existence d'un éventuel conflit n'est pas suffisante pour obliger les stratégies militaires à avoir lieu. L'évaluation sur les capacités des forces armées et les menaces potentielles. Cependant, avec la progression rapide des puissances conventionnelles à Vienne, avec les réductions sensibles du nombre de chars et d'autres »

matériels dont on pense qu'elles feront l'objet d'un accord d'ici l'été 1990, n'importe quel pays dans la position du Canada manqueraient totalement de réalisme s'il poursuivait la réalisation d'un projet d'envieusement tel que celui portant sur l'achat de nouveaux chars pour les Forces canadiennes déployées en Allemagne. La participation du Canada à l'OTAN a acquis une dimension politique

plus grande du fait qu'elle aidera à harmoniser les relations entre l'Europe et les États-Unis pendant et le processus capital des négociations Est-Ouest et des réductions qui suivront. Cependant, l'issue de ces négociations aura bientôt une incidence cruciale sur l'importance globale du contingent canadien d'acier en Europe. D'un autre côté, dans la politique étrangère et militaire du Canada, de

Le défi qui se pose désormais, consiste à prendre des décisions qui donneront aux stratèges de la Défense canadienne et au personnel de nos forces armées des orientations raisonnablement

...sur les options.

Comme le Livre blanc sur la Défense l'a souligné, la sécurité du Canada comporte trois volets connexes : la politique et les programmes de défense; les perspectives de désarmement et de limitation des armements; et les activités qui

visent à régler les conflits et qui comprennent les missions de maintien de la paix. Beaucoup plus

Le public canadien est habitué de penser que le budget militaire national est très modeste, mais le Canada se situe au douzième rang dans le monde.

pour ce qui est des dépenses militaires totales, et au sixième rang dans l'OTAN. Pour ce qui est de la taille de nos forces armées, nous nous classons au quatrième-huitième rang, par ailleurs, les Forces canadiennes estiment, cela est bien connu, qu'une grande partie de leur matériel est de qualité inférieure et vétuste. Même si l'on prend en compte bien des armées plus nombreuses mises sur pied

est le fait que l'origine des renseignements, il est clair que la taille du territoire canadien est telle que la collecte de renseignements de cette nature est une tâche considérable. Il est clair que la collecte de renseignements de cette nature est une tâche considérable. Il est clair que la collecte de renseignements de cette nature est une tâche considérable.

« Les infrastructures militaires d'envoyement véritablement nationale ? Est-il possible pour nous d'acquiescer à la moyenne de se chercher des « créneaux » spécialisés où elle excellerait en matière de défense, comme le Canada le fait dans d'autres domaines ? En ce qui concerne la plupart des menaces militaires stratégiques possibles, le territoire et

l'espace aérien du Canada forme un tout avec le Canada-États-Unis. Cette réalité nous oblige à rechercher à influer sur les politiques américaines lorsque les intérêts vixans du Canada sont différents. En revanche, les politiques canadiennes deviendront aussi prendre en compte les intérêts vixans des États-Unis, de sorte qu'il faudra continuer à rechercher des compromis dans cette

relation clairement asymétrique. L'Alliance de l'Atlantique Nord demeurera sans doute un cadre important de coopération entre l'Europe occidentale et l'Amérique du Nord en matière politique et dans les domaines de la sécurité et de la défense. Jusqu'ici, cette coopération s'est principalement traduite par l'envoi de contingents nord-américains en Europe, la mise

en réserve de renforts qui seraient déployés à la-  
bas en cas d'urgence, et la participation à des opéra-  
tions navales conjointes, mais il est possible que,  
à l'avenir, les Européens de l'Ouest assument  
une part plus grande du fardeau moindre que sera  
la défense de leurs pays. La contribution nord-  
atlantique directe en Europe pourrait donc dimi-  
nuer, et il ne peut pas en être des activités

L'Arctique représente un grand domaine à nord-américains et européens s'accroîtront dans la zone d'influence des relations Est-Ouest, le Canada

et l'Union soviétique y aient les enjeux territoriaux les plus considérables. À la faveur de ses rapports bilatéraux et circumpolaires, le Canada devrait distinctement mettre l'accent sur les moyens possibles de renforcer la confiance dans ce contexte, d'établir une coopération constructive et de réduire les menaces pesant sur la sécurité.

Nous avons dû assumer un certain nombre de nouvelles tâches exigeantes et coûteuses à cause de la concurrence technologique militaire entre

L'Est et l'Ouest. Le Système d'alerte du Nord et l'accent mis sur les bases d'opérations avancées, sur les bases avancées de déploiement et les vols d'exercice à basse altitude, ainsi que sur les systèmes de surveillance aérospatiale et sous-marine sont autant d'éléments revêtant beaucoup d'importance pour la défense du Canada et la protection de ses intérêts fondamentaux dans ces

rapports avec les États-Unis. Chaque fois que cela est possible, le Canada est justifié de demander la réduction ou la limitation des développements technologiques susceptibles d'alourdir encore sa tâche. Pour faire face à d'autres types de défis traditionnels et de nouveaux défis internationaux, le Canada doit également faire face à d'autres types de défis internationaux.

entre chercher la solution ailleurs qu dans les moyens militaires de défense ou dans un collabo-  
ration canado-américaine. Au nombre de ces  
défis, citons les suivants : affirmer et protéger la  
souveraineté canadienne; protéger les zones de  
pêche du Canada et faire respecter les règlements  
pertinents; protéger l'environnement; surveiller

Les opérations de maintien de la paix, considérées comme des opérations de maintien de la paix, sont considérées comme des opérations de maintien de la paix.

[illegible]

mais des mesures de voir des conflits se régler sous surveillance internationale. Aucun pays ne possède autant d'expérience, de moyens et de crédibilité pour accomplir ces tâches que le Canada. Ce dernier a participé à toutes ces opérations, au point qu'il est devenu difficile de considérer le maintien de la paix simplement comme un rôle «auxiliaire» des Forces canadiennes. Quel dé-

# NOUVELLES DE L'INSTITUT

Avant la réunion qu'on tenue à Ottawa en février les ministres des Affaires étrangères et les délégués de l'O.N.U. et du Pacte de Varsovie, en vue de négocier un traité sur l'ouverture des espaces aériens et de donner un élan politique aux pour-parlers sur la réduction des forces conventionnelles, l'Institut a organisé une table ronde à l'intention des médias. Divers orateurs se sont adressés aux journalistes présents à ceux d'en dehors d'Ottawa.

par l'entremise de liaisons téléphoniques; mentionnons **David Cox** et **Jane Boulden**, de l'Université Queen's, **Fred Bild**, secrétaire général de la conférence, **John Noble**, du ministère des Affaires extérieures, le colonel **Alain Pelletier**, du ministère de la Défense nationale, et le colonel **Gordon Sharpe**, membre associé (Recherche) à l'Institut, qui représentait lui aussi la Défense nationale.

**Bernard Wood** a présidé la séance qui a surtout porté sur les chances d'accroître la confiance grâce au traité proposé, sur certaines des positions nationales initiales, et sur des questions techniques.

À la fin de février, l'Institut a offert, à l'intention des délégués de pays participants, une réception pour marquer la fin de la conférence sur l'ouverture des espaces aériens. La prochaine ronde de négociations se tiendra à Budapest, et l'on s'attend à ce qu'un traité soit prêt à être signé à l'issue de cette réunion.

«L'avenir du système des Nations-Unies», tel est le titre d'une conférence qui a eu lieu à l'Université d'Ottawa, au début de janvier, sous le patronage de la Fondation Ford et de l'Institut; le groupe organisé comprenait notamment **John Trent**, de l'Université d'Ottawa, et **Gene Lyons**, du Collège

Dartmouth. Un certain nombre d'exposés ont été préparés pour la circonstance; ils ont concerné les politiques de l'O.N.U. et ils seront révisés et publiés sous forme de livre l'an prochain. **Roger Hill**, **Fen Hampson** et **Ron Fisher** de l'Institut ont assisté aux séances. Les nouvelles occasions qui s'offrent à l'O.N.U. de régler des conflits ont constitué un des grands thèmes des discussions, et les pays industrialisés du Nord s'y sont principalement attachés. Des représentants de pays européens, du Canada et des États-Unis étaient présents. Au nombre des représentants soviétiques figuraient les ministres de la Culture et de la Justice ainsi que le Procureur général. Les centiens ont mis l'accent sur l'idée d'un Parlement européen commun et sur les efforts visant à donner une nouvelle signification aux concepts de souveraineté et d'indépendance. Pendant son séjour à Moscou, **M. Wood** s'est entretenu avec **Georgiy Arbatov** et **Sergei Plekhanov**, respectivement directeur et directeur adjoint de l'Institut des études canado-américaines, et avec d'autres membres de cet établissement.

**Tom Weiss**, ancien directeur général de l'*International Peace Academy* à New York et membre du secrétariat des Nations-Unies, a fait une visite d'une semaine à l'Institut en décembre. Il s'est réuni à maintes reprises avec des membres de ce dernier et avec d'autres personnes pour parler du maintien de la paix ainsi que d'autres besoins et perspectives de recherche intéressant l'ONU dans le nouveau climat international.

fin du même mois. Un extrait de la conférence de presse au début de janvier et offert en format relié à la recteur général, **M. Le personnel et les amis de l'Institut ont appris dans la stupeur et la tristesse le décès de **Norma Saleem** survenu le 22 janvier 1990 à Ottawa. Mme Saleem était chargée de recherche à l'Institut, au moment de son décès, elle occupait ce poste depuis septembre 1988. Elle détenait un doctorat en études islamiques de l'Université McGill, avait d'arriver à l'IPS, elle travaillait à l'Institut québécois de recherche sur la culture, à Montréal. Pendant son séjour à l'IPS, Mme Saleem a été chargée d'une étude importante sur Chypre, et un rapport paraîtra bientôt à ce sujet. Elle venait d'entreprendre un nouveau projet sur le Liban. Nous nous joignons à ses amis pour offrir nos plus sincères condoléances à sa famille, et plus particulièrement à son fils, **Omer**.

## IN MEMORIAM

revue, qui porte sur la sécurité et la politique de défense du Canada apparaît dans la chronique «Note de la Direction», à la page 21.

**Bernard Wood** et **Peter Roberts**, ancien ambassadeur du Canada en URSS, ont assisté à une conférence de haut niveau organisée par l'Union des sociétés soviétiques d'amitié à Moscou, à la fin de janvier. Les discussions ont alors porté sur la dimension humaine de la sécurité et de la coopération en Europe. Des participants de tous les pays européens, du Canada et des États-Unis étaient présents. Au nombre des représentants soviétiques figuraient les ministres de la Culture et de la Justice ainsi que le Procureur général. Les centiens ont mis l'accent sur l'idée d'un Parlement européen commun et sur les efforts visant à donner une nouvelle signification aux concepts de souveraineté et d'indépendance. national. Pendant son séjour, **M. Weiss** a rédigé un article de fond qui a paru dans le *Christian Science Monitor* le 3 janvier. Nos lecteurs trouveront un article de **M. Weiss** à la page 8, sur l'évolution des attitudes des superpuissances face à l'ONU.

Plusieurs colloques ont eu lieu à l'Institut au cours de l'hiver. **Robert Jordan**, de l'Université de la Nouvelle-Orléans, s'est penché sur les récents changements apportés à la stratégie maritime des États-Unis. Selon lui, les restrictions budgétaires aux États-Unis influenceront sans doute beaucoup sur la stratégie maritime de déploiement avancé après la fin de la guerre froide. En effet, il est probable que le nombre de forces opérationnelles de porte-avions passera de quinze à douze, ce qui limiterait considérablement cette stratégie. **M. Jordan** a semblé toujours peu intéressée par la limitation des armements navals, laquelle qu'en soit la forme. **Phoebe Marr**, chargée de recherche principale au *Strategic Concepts Development Centre*, à l'Université de la Défense nationale, à Washington (D.C.), a dirigé un atelier sur l'après-Khoméini en Iran. À la mi-février, **Peter Hakim** de l'*Inter-American Dialogue*, à Washington, a présenté un colloque sur les élections au Nicaragua.

**Bernard Wood** et **Marie-France Desjardins** ont participé à une réunion du groupe consultatif sur le désarmement et la limitation des armements, qui était présentée par le ministère des Affaires extérieures. Les délibérations ont surtout porté sur le régime de la non-prolifération des armes nucléaires. Plus tard en janvier, **M. Wood** a prononcé l'alloucation de clôture. Plus tard en janvier, **M. Wood** a prononcé l'alloucation de clôture.

clôture à une table ronde sur l'éducation et la formation des Sud-Africains dans une démocratie *apartheid*. Le ministre des Affaires extérieures, le très honorable **Joe Clark**, a fait le discours d'ouverture.

## EN DIRECT DE LA COLLINE PARLEMENTAIRE

relations du Canada avec les pays d'Amérique latine au sein de l'Organisation des États américains (OEA).

### Politique en Indochine

Le 25 janvier, M. Joe Clark a remis à la Chambre des communes un rapport intitulé sur les efforts déployés à l'échelle internationale en vue de résoudre le conflit au Cambodge. Il a précisé que le gouvernement «était actuellement en train de redonner au Cambodge, au Vietnam et au Laos, les trois pays formant l'ancienne Indochine, le droit à l'aide publique au développement». Le Canada est entièrement favorable à la proposition austérienne de créer au Cambodge une infrastructure administrative provisoire sous l'égide des Nations-Unies. Au mois d'octobre, M. Clark a déposé à Hanoï et à Phnom Penh une mission diplomatique que il a chargée de raporter aux gouvernements vietnamiens et cambodgiens l'importance pour eux d'accepter que l'ONU joue un rôle de premier plan dans tout règlement. Le ministre a également félicité le régime d'accepter de participer à des mécanismes de maintien de paix et de transition sous la gouverne des Nations-Unies et, qu'à cette fin, l'on était en train de passer en revue les récentes expériences vécues par le Canada en Namibie et ailleurs dans le monde à ce chapitre.

### Ciels ouverts

Une importante conférence internationale s'est ouverte le 12 février à Ottawa, y participant les ministres des Affaires étrangères des seize pays membres de l'OTAN et des sept pays membres du Pacte de Varsovie. Les participants ont abordé, entre autres questions, une proposition sur des vols de surveillance que des aéronefs non armés des deux alliances effectueraient régulièrement au-dessus des terres loires l'une de l'autre; un tel régime permettrait l'ouverture des espaces aériens au-dessus de l'Amérique du Nord, de l'Europe et de l'Union so-

Le 27 novembre dernier, le premier ministre a rendu compte à la Chambre des communes de son récent voyage en Union soviétique, à l'occasion duquel il s'est notamment entretenu avec le président et le premier ministre soviétiques, MM. Gorbatchev et Ryzhkov. Le ministre canadien des Affaires étrangères, M. Joe Clark, a discuté avec son homologue soviétique, M. Eouard Chevardnadze. Au cours de cette visite, les dirigeants ont conclu au total quatorze ententes bilatérales y compris les reconductions) portant, entre autres sujets, sur des questions de relations internationales, sur l'Arctique et sur l'environnement. Le premier ministre a déclaré à M. Gorbatchev qu'il proposerait à ses six collègues du Groupe des sept que, chaque année, le président en exercice se réunisse avec le chef d'État soviétique pour discuter avec lui des idées et des stratégies formées au cours de leur réunion.

M. John Turner, chef du Parti libéral, et M. Bill Blaikie, critique néo-démocratique pour les Affaires étrangères, ont longuement réagi au rapport du premier ministre, reprochant au gouvernement son manque d'audace dans ses relations avec les Soviétiques, particulièrement en ce qui trait à la proposition faite par M. Gorbatchev en octobre 1987 dans son discours de Mourmansk sur la création d'une zone de paix dans l'Arctique.

### Le Panama et l'OEA

Le 20 décembre, le premier ministre a dû affronter à la Chambre des communes des critiques beaucoup plus acerbes, après avoir annoncé l'intervention américaine au Panama. Les députés ont assisté à une altercation entre M. Mulroney et le nouveau chef du NPD, Mme Audrey McLaughlin.

D'autres députés se sont dits inquiets de l'effet possible de la décision du premier ministre sur les

vitique et constituerait une mesure propre à accroître la confiance. Une deuxième série de pourparlers doit se tenir à Budapest plus tard au cours de l'année et déboucher sur la signature d'un traité.

### Comités parlementaires

Le Comité permanent des affaires étrangères et du commerce extérieur (CPAECB) a continué ses audiences sur les relations du Canada avec l'Union soviétique et l'Europe de l'Est; il a notamment tenu deux sessions le 23 novembre et le 6 décembre sur le problème allemand, une session le 28 novembre sur la politique soviétique dans le tiers-monde et une session le 12 décembre sur le désarmement et l'ouverture des espaces aériens.

Le Comité a également entendu le 23 novembre des représentants de la Conférence des évêques catholiques du Canada et des Jésuites qui venaient d'assister au Salvador aux funérailles de six prêtres jésuites et par des membres des forces armées salvadoriennes. La situation de ce pays a fait l'objet de deux autres séances de discussion au CPAECB les 13 et 14 décembre derniers. À l'occasion de cette dernière réunion, des opérations de maintien de la paix des Nations-Unies en Amérique centrale.

Le 7 décembre, le Comité a entendu une série d'experts, dont le président de l'ACDI et le directeur exécutif du SUCO, qui ont abordé certains problèmes d'ajustement structurel — les politiques de stabilisation économique imposées par les institutions financières internationales en vue de relancer les économies des pays endettés du tiers-monde.

Le Comité de la défense (Chambre des communes) tient en ce moment ses audiences sur la souveraineté maritime. Il a déjà entendu le Chef de l'état-major de la Défense, ainsi que des fonctionnaires des Affaires extérieures, de l'Environnement, des Pêches et de la Garde côtière canadienne et du Solliciteur général, sans compter des spécialistes venus de l'extérieur. Dans un rapport périodique daté du 20 décembre, le Comité a recom-

mandé l'achat de sous-marins à propulsion conventionnelle et d'aéronefs de reconnaissance maritime.

### En bref

L'ancien chef du NPD, M. Ed Broadbent, a accepté vers la fin du mois de janvier un nouvel emploi en tant que premier président du Centre international des droits de la personne et du développement des institutions et des procédures démocratiques.

Doug Lindores, vice-président principal de l'ACDI, a été nommé conseiller spécial de la ministre des Relations extérieures, relativement à l'Éthiopie et aux pays limitrophes. Tous ces pays sont de nouveau aux prises avec la famine.

Le 23 janvier dernier, pendant la période de questions à la Chambre des Communes, la députée libérale Christine Stewart a demandé au gouvernement si le Canada n'avait pas fermé les yeux sur certaines violations des droits de la personne survenues en Roumanie dans le cadre du vaste projet de construction de cinq réacteurs nucléaires Candu. M. Joe Clark a répondu que les diplomates canadiens cherchaient actuellement à savoir dans quelle mesure on avait vraiment eu recours à des esclaves, quels responsables, le cas échéant, avaient été informés de la situation et quand ils l'auraient été. M. Clark a rejeté l'allégation de Mme Stewart, qui demandait la suspension des travaux de construction jusqu'à ce que l'on en sache plus.

M. Clark a fait valoir qu'il serait «malheureux que le Canada agisse ainsi» au moment précisément où la Roumanie se débat pour instaurer la démocratie et le respect de son économie. □

— GREG WIRICK

## CHRONIQUE DE LA DÉFENSE

### Le Pacte de Varsovie

Vers la fin de 1989 et au début

de 1990, ce sont les événements

survenus au sein du Pacte de Varso-

vie qui ont constitué l'essentiel de

l'actualité en matière de défense,

à l'Est qu'à l'Ouest. Vers la mi-

janvier, le nouveau gouvernement

tchécoslovaque a entrepris des pour-

parlers avec l'URSS pour parvenir à

un accord sur le retrait, d'ici la fin

de 1990, de toutes les troupes sovi-

liques stationnées sur son territoire.

Les forces de l'URSS sont entrées

en Tchécoslovaquie en 1968, en

même temps que celles des autres

pays du Pacte de Varsovie, pour

réprimer l'insurrection contre le

régime communiste.

Le 4 décembre 1989, les pays du

Pacte de Varsovie, dont l'Union

soviétique, ont profité d'une de leurs

réunions pour condamner l'invasion

de 1968, la qualifiant d'ingérence

indépassable dans les affaires in-

ternes de la Tchécoslovaquie. En

1989, quelque 5 000 soldats sovi-

tiques, 700 chars et 200 avions

ont été retirés de ce pays, lorsque

M. Gorbatchev a décidé de réduire

de 50 000 hommes les effectifs

soviétiques en Europe de l'Est. Il

reste environ 75 000 soldats en

Tchécoslovaquie.

Le 24 janvier, le ministre tchèque

des Affaires étrangères, M. Jiri

Dienstbier a officiellement annoncé

que son pays cesserait de se livrer

au trafic d'armes internationales. La

Tchécoslovaquie est actuellement le

septième exportateur mondial

d'armements.

Quelques jours plus tard, lors

d'un colloque organisé à Vienne par

des représentants militaires du Pacte

de Varsovie et de l'OTAN et con-

sauf, quant à lui, déclaré que le

retrait des troupes soviétiques cons-

tituait une condition *sine qua non*

de l'instauration d'une nouvelle

relation entre la Pologne et l'URSS.

Parallèlement, tous les membres

du Pacte de Varsovie ont indiqué

leur intention de demeurer dans l'al-

liance. À Vienne, des porte-parole

soviétiques ont annoncé que l'orien-

tation politique de l'organisation

militaire changerait bientôt. D'après

ces mêmes sources, l'actuel Comité

consultatif politique va être remplacé

par un conseil militaire plus fidèle-

ment à la nature et les intérêts des

gouvernements membres du Pacte.

Il est encore trop tôt pour savoir

quel sera exactement l'effet du re-

trait des troupes soviétiques sur la

doctrine militaire de Moscou. À

l'occasion du colloque de Vienne,

Mikhail Moïseïev, Chef de l'État-

major général soviétique, a précisé

que l'URSS s'inspirait désormais du

principe de la «suffisance

raisonnable». Sur le plan des forces

conventionnelles, il faut comprendre

par là «des effectifs et des structures

qui permettent aux deux camps de

donner les moyens de lancer une

attaque ou de mener une opération

offensive de grande envergure».

M. Moïseïev a illustré son propos

en citant la décision prise par son

pays de retirer 500 000 hommes,

mais il n'a donné aucune explica-

tion quant à la structure militaire qui

permettrait d'empêcher une opéra-

tion offensive. Par ailleurs, le Chef

de l'État-major général a annoncé

une réduction de 8,2 p. 100 du bud-

get s'agissant de la défense pour

1990, et de 14 p. 100 pour les deux

années suivantes.

### Les deux réactions de l'OTAN

Si l'on en croit un porte-parole,

les planificateurs de l'OTAN, face à

l'accélération du rythme des boule-

versements en Europe de l'Est, se

sont contentés d'observer le change-

ment, sans essayer d'y faire face.

Deux conséquences possibles ont

toutefois été soulignées. Première-

ment, des représentants du gou-

vernement ouest-allemand ont dit

douter fortement que l'on parvienne

à conclure un accord sur le dé-

ploiement d'un successeur au mis-

sile nucléaire à courte portée *Lance*.

Deuxièmement, la capacité des pays

du Pacte de Varsovie de lancer une

attaque surprise a été réévaluée. Au

cours des dernières années, des ser-

vices de renseignements américains

ont avancé que, dans l'hypothèse

d'une attaque soviétique de grande

envergure contre l'Europe occiden-

tale, l'OTAN disposerait d'un plus

quatorze jours pour se préparer.

D'après certaines estimations révi-

sées, ce délai passerait à au

moins un mois, alors que d'autres

sources parlent d'au moins deux

mois. La durée du délai d'avertisse-

ment faible est liée aux dépenses

militaires, surtout pour les États-

Unis, qui ont besoin d'une impor-

tante capacité d'emport instantanée

pour venir rapidement à la rescousse

de leurs troupes stationnées en

Europe.

Le 30 janvier, le président Bush

a finalement présenté au Congrès son

budget de la défense pour l'exercice

1991. Le président Bush veut con-

sacrer 303,3 milliards de dollars US

à la défense, soit une augmentation

par rapport aux 296,3 milliards

de l'exercice 1990, mais une réduc-

tion d'environ 2 p. 100 une fois

l'inflation prise en compte.

Même s'il avait été largement

question d'abandonner ou de réduire

certains grands programmes straté-

giques, Bush a demandé que l'on

poursuive le programme de mo-

dernisation des forces nucléaires

stratégiques. Ce dernier porte no-

tairement sur le bombardier B-2, le

missile de croisière perfectionné,

le nouveau sous-marin d'attaque

*Seawolf*, le missile balistique

*Trident D-5* lancé depuis un sous-

marin, le missile *MX* à têtes multi-

ples et le *Madigan* à tête unique.

Le budget prévoit également

une augmentation du budget de

la Guerre des étoiles.

Comme l'a indiqué le Secrétaire à

la Défense, M. Richard Cheney, le

gouvernement entend réduire le bud-

get de 2 p. 100 par an au cours des

quatre prochaines années. Ces com-

pressions devraient plutôt porter sur

les forces conventionnelles, étant

donné que les événements récents

# À QUAND LES TABLETTES

Sans grande expérience en la matière, les dirigeants soviétiques s'efforcent d'édifier une nouvelle économie qui alliera à la fois les «marchés socialistes» et la prospérité occidentale.

PAR MICHAEL BRYANS

en sortie de la télévision soviétique constituent le résultat inévitable d'un système qui ne fonctionnera jamais mieux. «On ne peut blâmer personne», écrivent-ils, la réglementation avec laquelle les pénuries de toutes sortes se produisent (depuis le savon pour enfants jusqu'aux cartouches-soda, en passant par les wagons de train) montre qu'il existe une loi sous-jacente dans tous ces cas... cette loi se rapporte au système de planification. Dans sa forme actuelle, elle garantit des pénuries constantes.

L'ère Khrouchchevienne a celle des premières réformes de Gorbatchev, en 1985 et 1986, les «disciplines», «l'efficacité» et «l'efficacité» plus forte et mieux et s'ils cessaient de se saouler et de commettre gaffe sur gaffe, il y aurait des bas de nylon et du beurre sur les tablettes des magasins. Les planificateurs se sont donc attelés plus méticuleusement à leur tâche, et les gestionnaires ont exhorté les travailleurs à fournir un plus grand effort, mais ils n'ont pas eu plus de succès que le conducteur klaxonnant éperdument au beau milieu d'un embouteillage monstrueux : la circulation ne bouge pas pour autant, et il s'attire les investissements de autres conducteurs.

À fin de comprendre à quel point le système de planification hiérarchisée et vieux de soixante ans paralysait l'économie de l'URSS, il suffit d'écouter la génération actuelle d'économistes soviétiques. Mikolaï Shmelev compte parmi les plus militants et les plus réfléchis de ces derniers. Shmelev est en soi un véritable produit de la «glasnost», il a passé des années à écrire des romans, car personne d'important ne s'intéressait à multiplier les fonctions de député et d'analyste à l'Institut des études canado-américaines; il se situe à l'«extrême-gauche» des réformistes gorbatcheviens, lesquels forment une sorte d'opposition loyale au groupe des Gorbatchev, Abalkin et Aganbegyan qui essaient de faire redémarrer les moeurs économiques du pays.

Contrairement à bon nombre de ses contemporains, qui manifestent au moins certains égards à l'endroit des services de planification avant de les dénigrer, Shmelev ne fait pas de quartier. Écrivant avec son collègue Vladimir Popov une critique virulente et détaillée sur la structure économique soviétique, il s'explique comment les désastres économiques alimentaient les chroniques

en sortie de la télévision soviétique constituent le résultat inévitable d'un système qui ne fonctionnera jamais mieux. «On ne peut blâmer personne», écrivent-ils, la réglementation avec laquelle les pénuries de toutes sortes se produisent (depuis le savon pour enfants jusqu'aux cartouches-soda, en passant par les wagons de train) montre qu'il existe une loi sous-jacente dans tous ces cas... cette loi se rapporte au système de planification. Dans sa forme actuelle, elle garantit des pénuries constantes.

Le fait que les économistes occidentaux n'ont jamais vraiment su comment leurs propres économies fonctionnaient n'a jamais constitué un obstacle sérieux, étant donné que les experts se sont manifestés bien après que les régimes économiques se fussent mis à tourner. Les économistes se sont principalement contentés d'expliquer les économies et d'interpréter les résultats à leur guise. Les théoriciens se débattaient encore, sans succès, avec des questions telles que celles de savoir comment les consommateurs choisissent entre prendre une semaine de vacances au Club Méd, réduire leur hypochondrie, et faire poser une prophèse orthodoxe à leur enfant; pour tout dire, le cycle des affaires fonctionne, à supposer qu'il en existe un. Le problème de Mikhaïl Gorbatchev tient au fait qu'il ne peut se contenter de décrire les marchés; avec ses collègues, il doit les construire de toutes pièces, mais il ne leur reste plus beaucoup de temps pour accomplir ce tour de force.

Selon Richard Ericson de l'Université Columbia, la crise immédiate s'explique par deux facteurs interdépendants : la pénurie de biens de consommation, et l'énorme quantité de roubles dont les citoyens soviétiques disposent et qu'ils ne peuvent dépenser parce qu'il n'y a rien à acheter.

Les réserves monétaires se situeraient entre 200 et 350 milliards de roubles, mais personne n'en connaît précisément l'ampleur. Voilà qui annonce une inflation prodigieuse des que le gouvernement cessera de réglementer les prix, étape qui est maintenant prévue pour 1993. Une solution qui fait beaucoup d'adeptes consisterait à inonder le marché avec des biens de consommation de manière à absorber toutes ces réserves de roubles. Pareille mesure améliorerait la qualité de vie du citoyen soviétique moyen et procurerait peut-être à M. Gorbatchev une période de paix politique, ce qui permettrait aux réformes plus fondamentales de prendre racine. Mais comme le système national de production ne peut fabriquer ces biens, le pays doit les obtenir à l'étranger avec le peu de devises fortes que le gouvernement a dans ses coffres.

Le dilemme alimente énormément le débat en URSS, et c'est un thème central de discussion entre, d'une part, le gouvernement, dont le programme quinquennal de réformes grève les visages à «stabiliser» la question monétaire avant que le pays opère des changements fondamentaux en 1993, et, d'autre part, les critiques de «gauche» comme Shmelev, qui veulent que le gouvernement passe immédiatement à l'action.

Tous s'entendent pour dire que, très bientôt, les citoyens soviétiques devront pouvoir créer leurs propres biens et services; or, d'après la grande majorité des critères, on est loin de progresser avantagieusement vers un tel état de choses.

À l'heure actuelle, le gouvernement dirigé par M. Gorbatchev, le premier ministre Mikolaï Ryzhkov et un groupe de conseillers économiques, orienterait brutalement l'économie soviétique dans la direction que suivent les économies occidentales. Maintenant, il y a lieu de se demander si le coup de barre sera suffisant. Un ensemble de projets de loi cadres sur l'imposition, la propriété foncière, la propriété civile et l'autonomie locale constitue la clef de voûte du programme; ces documents sont actuellement devant le nouveau parlement et sont censés entrer en vigueur au printemps de 1990.

À l'issue des réformes proposées, la présence de l'État dans le secteur de la production diminue et sensiblement. Cela équivaut à révolutionner les relations politiques et économiques entre les citoyens et l'État et entre les citoyens eux-mêmes. Le gouvernement et le parti ne seraient désormais plus les principaux organisateurs aux fins de la création et de l'échange des biens et des

ment les missions de maintien de la paix et le multilatéralisme, mais aussi le souci réaliste des intérêts et des valeurs occidentales. L'opinion canadienne compte en la matière. Ni neutre ni docile, le Canada est un rempart de l'OTAN et un allié essentiel des États-Unis.

Avec l'amélioration sensible des relations Est-Ouest, les garants de la sécurité internationale se trouvent bel et bien à la croisée des chemins. Les Nations-Unies participent plus activement à la gestion des conflits armés régionaux. Cependant, le soutien de pays comme le Canada et l'aura apportée par le prix Nobel de la paix, en 1988, ne suffisent pas.

Les puissances autres que les États-Unis et l'URSS auront peut-être du mal à l'admettre, mais tout comme l'ONU ne peut se contenter de l'appui des seules superpuissances, elle ne peut plus agir pleinement, ni même fonctionner de manière efficace, sans leur collaboration active. Ainsi que l'a fait remarquer l'ancien Secrétaire général adjoint des Nations-Unies, M. Brian Urquhart, les succès passés de l'ONU se résument à des exercices de contournement discret de la Guerre froide. L'atténuation de la confrontation bipolaire fournit donc aux superpuissances une occasion sans précédent de unir leurs forces.

Ottawa ne devrait pas hésiter à soutenir que ses fondateurs ne l'espèrent, chose que même l'ONU pourrait même fonctionner mieux que ces ténants des détachements les plus féroces de l'Organisation ont comprise ces derniers temps. Comme l'a écrit Jeanne Kirkpatrick, autrefois ambassadrice des États-Unis à l'ONU, il se peut que, grâce à la paix apportée par la fin de la Guerre froide, les Nations-Unies deviennent plus efficaces.

Sur le nombre étouffant de propositions que Moscou a faites concernant le système onusien (plus d'un millier selon un décompte), il y a beaucoup d'idées nouvelles formulées avec le zèle évident d'un nouveau converti. Cependant, on y trouve aussi tout un ensemble de propositions visant à rendre le régime existant des opérations de maintien de la paix « viable », plus actif politiquement et plus axé sur une diplomatie de prévention. À cette fin, les textes préconisent une allocation nationale de fonds, d'équipements et de troupes destinées à un déploiement rapide, l'affectation de soldats de l'ONU aux endroits à risque, un meilleur entraînement et une meilleure gestion, des forces onusiennes de réserve permanente, plus d'autonomie pour le Secrétaire général, des centres de réduction des risques de guerre, et de meilleurs services de logistique et de renseignement. Notons au passage que beaucoup de ces propositions soviétiques ont déjà été lancées par des gouvernements occidentaux dans le passé.

Le moment est propice. Avant le récent accroissement de la 44<sup>e</sup> session, il régalait un rare consensus et la sécurité internationale. En fait, au terme d'un accord avec le vice-ministre soviétique des Affaires étrangères, M. Vladimir Petrovsky, et M. Thomas Pickering, le président nigérian de l'Assemblée générale, M. Joseph Garba, a déclaré que l'organisation mondiale avait beaucoup gagné au réchauffement des relations entre les superpuissances.

Par le passé, le Canada a souvent servi de « pont » entre l'Est et l'Ouest dans de nombreuses instances. En tant que membre du Conseil de

la sécurité, son rôle devrait être maintenant de continuer à faire progresser le multilatéralisme. En vaincre Washington de l'occasion historique qui s'offre de faire progresser le multilatéralisme. En fin, le monde entier joue l'organisation mondiale pour sa capacité d'atténuer la violence et ne la dénie plus comme étant un lieu où l'on brasse du vent, où l'on s'investit, où l'on parade et où l'on cherche à intimider.

LE KREMLIN A COMMENCÉ À COMPRENDRE les limites de son pouvoir. Il a appris à ses dépens que la force ne peut servir de panacée aux conflits du tiers-monde. Les prétendus bénéficiaires des bases implantées à l'étranger et des expéditions d'armes qui les accompagnent sont, on le sait maintenant, très illusoires. Ces ressources sont nécessaires à la reconstruction intérieure, dont la réussite est en définitive plus essentielle à la sécurité soviétique qu'un empire démesuré dans le tiers-monde. Plus important encore, Moscou s'est aperçu que la compétition avec les États-Unis dans le tiers-monde s'est révélée préjudiciable aux relations bilatérales soviéto-américaines.

Si cette logique va à Moscou, pourquoi n'en trait-il pas de même à Washington ? Puisqu'il vient plus difficile d'exercer un pouvoir effectif dans le tiers-monde, la Maison-Blanche doit-elle aussi comprendre le potentiel vital que constituent les institutions internationales pour le maintien de la paix et la résolution de problèmes transnationaux. Même dans l'euphorie qui fait suite à l'opération « Juste Cause », il est bon de songer au potentiel des Nations-Unies dans une situation comme celle du Panama.

Ne peut-on envisager que le Conseil de sécurité agisse quand un chef d'État, soupçonné de s'adonner au trafic de drogue, viole de manière flagrante les droits de la personne et emploie la force pour annuler des élections au point de perdre virtuellement tout soutien diplomatique dans sa propre région ? Voici la fin des années 1990.

des Nations-Unies plus mordantes pourraient, par exemple, aider à combattre les fléaux que sont les drogues illicites et le terrorisme, assurer la sécurité de petits États, garantir l'achèvement des accords de limitation des armements et surveiller le déroulement d'élections. En outre, la consolidation et l'essor du régime de maintien de la paix pourraient s'étendre aux domaines économiques, sociaux et environnementaux.

L'occasion qui se présente est trop importante pour les intérêts américains et mondiaux pour qu'on la laisse échapper à cause des préjugés de modes d'une poignée de jobys américains. Le gouvernement Bush devrait comprendre que les opérations de maintien de la paix sont un moyen rentable de protéger les intérêts américains dans des régions stratégiques. La contribution américaine à l'opération namibienne s'élève à 175 millions de dollars US, ce qui correspond à 4 p. 100 environ du budget d'exploitation de la 82<sup>e</sup> Division aéroportée (quand elle est inactive), ou au tiers du prix d'achat d'un des bombardiers indectables B-2 si controversés. Les coûts d'exploitation du multilatéralisme paraissent bien minimes face aux frais que les autres solutions nécessiteraient. Il faut qu'un allié aussi fiable qu'Ottawa rappelle ces faits à Washington.

Quelques jours avant que soit approuvé l'envoi du Groupe d'observateurs de l'ONU en Amérique centrale, on assiste à New York à deux autres « premières ». Après quarante-quatre ans de croissance de Moscou au multilatéralisme, constataient aussi un signe encourageant de la part de Washington qui comprend de plus en plus que l'ONU joue un rôle essentiel pour garantir la paix internationale. Il régalait un rare consensus. En fait, au terme d'un accord avec le vice-ministre soviétique des Affaires étrangères, M. Vladimir Petrovsky, et M. Thomas Pickering, le président nigérian de l'Assemblée générale, M. Joseph Garba, a déclaré que l'organisation mondiale avait beaucoup gagné au réchauffement des relations entre les superpuissances.

Par le passé, le Canada a souvent servi de « pont » entre l'Est et l'Ouest dans de nombreuses instances. En tant que membre du Conseil de la sécurité, son rôle devrait être maintenant de continuer à faire progresser le multilatéralisme. # RAMENER LES ÉTATS-UNIS AU BERCAIL

*Maintenant que les Soviétiques acceptent volontiers les Nations-Unies et les autres organisations internationales, les États-Unis restent la seule superpuissance à convoquer.*

PAR THOMAS G. WEISS

ES SOVIÉTIQUES, S'ÉCARANT NETTEMENT DE leurs discours et de leurs actions passés, renoucent à leur doctrine antérieure pour devenir des adeptes du multilatéralisme et notamment des mécanismes des Nations-Unies visant à prévenir et à limiter les conflits régionaux. Dans son lexique révisé du tiers-monde, le Kremlin ne parle plus de «soutien aux luttes de libération nationale» mais d'«opérations internationales d'établissement et de maintien de la paix». Quant à l'«interdépendance», thème dominant des sciences sociales occidentales depuis les années 1970, le Kremlin a décidé tout récemment de ne plus la vouer aux gémonies.

La nouvelle politique officielle du Kremlin est sans équivoque. Après des décennies d'indifférence ou d'opposition, l'URSS compte aujourd'hui parmi les plus francs partisans de la gestion des conflits et de leur règlement, tels que les Nations-Unies les recommandent. En outre, elle démontre de plus en plus souvent qu'il ne s'agit pas seulement de beaux discours de sa part.

Ainsi, elle a accepté la présence des Nations-Unies en Afghanistan et en Angola, a fait pression sur les Vietnamiens pour qu'ils évacuent le Cambodge et semble disposé à régler aux organisations internationales ses arrières de contributions en devises fortes et à ralentir ses expéditions d'armes.

Cependant, au moment où l'URSS découvrirait les Nations-Unies, les États-Unis commencent à les abandonner. Cette inversion des rôles fut d'autant plus frappante que, sans le ferme soutien politique et financier des Américains, l'organisation mondiale aurait difficilement tenu le coup pendant près de quatre décennies. De bien des façons, l'idée de monter des opérations de maintien de la paix fut une réaction pragmatique de la Maison-Blanche à une époque où la Guerre froide imposait de rejeter l'idée de sécurité collective comme l'expression d'un idéalisme typique des années 1940. Plus particulièrement, les États-Unis payaient habituellement 30 p. 100, au moins, des factures afférentes au maintien de la paix, et parfois beaucoup plus. Sous la présidence de Ronald Reagan, néanmoins, le soutien officiel américain s'est réduit comme une peau de chagrin et, pour finir, Washington est devenu le plus mauvais payeur de l'Organisation. Le multilatéralisme ne s'est pas encore tout à fait remis de cette période de réserve et d'hostilité de la part des États-Unis.

Apparemment, le gouvernement Bush n'estime pas les Nations-Unies aussi défavorables aux intérêts américains que son prédécesseur. Même s'il est trop tôt pour affirmer que le soutien renouveau des États-Unis à l'ONU est entièrement

acquis, les événements des dix-huit derniers mois permettent un optimisme prudent. Washington a cessé de dénigrer à tout va les Nations-Unies en 1988, quand Ronald Reagan lui-même a rangé sa doctrine «d'intervention unilatérale et de soutien aux insurgés anticomunistes pour lui préférer un monde. Depuis lors, l'ONU a monté cinq nouvelles opérations de maintien de la paix (pour le départ d'Afghanistan de l'Armée rouge, le retrait des troupes cubaines d'Angola, l'arrêt du carnage entre l'Irak et l'Iraq, la transition pacifique de la Namibie à l'indépendance, et la contribution à une dépolitisation de l'Amérique centrale), toutes pleinement soutenues par les États-Unis et toutes bénéfiques à leur politique étrangère. De plus, la mise en place, sous l'égide des Nations-Unies, d'une administration intermédiaire au Cambodge et l'envoi sur place d'une force de maintien de la paix nombreuse, comme cela a été proposé récemment, permettraient à Washington d'abandonner une politique qui n'était ni morale ni sensée. En effet, jusqu'à présent, les États-Unis insistent pour que les Khmers rouges fassent partie du gouvernement cambodgien.

Le Canada, fervent partisan et pilier des missions de maintien de la paix, doit faire son possible pour que les États-Unis réintègrent pleinement les institutions multilatérales. Étant donné qu'ils ont renoncé au rôle dominant qu'ils jouaient au siège des Nations-Unies, les États-Unis sont forcés de réagir au vu et face de l'URSS en faveur de l'ONU et à certaines de ses initiatives intéressantes. Il n'est plus question, en effet, de rejeter les propositions soviétiques sous le seul prétexte qu'elles sont soviétiques.

Même si l'on ne connaît pas beaucoup ces organisations ni aux États-Unis ni ailleurs, le Canada ne devrait pas manquer une occasion de soutenir des élections au Nicaragua (ONUVEN), la Mission d'observation de l'ONU pour la vérification des Nations-Unies pour la période de transition (GANUPT) et le Groupe d'observateurs des Nations-Unies pour la période de transition (GANUPT), le Groupe d'as-

sisance des Nations-Unies pour la période de transition (GANUPT) et le Groupe d'observateurs des Nations-Unies en Amérique centrale (ONUCA) servent et ont servi les intérêts américains. Bien que plus de la moitié de la dette des Nations-Unies (un milliard de dollars) soit imputable aux États-Unis et que Washington bran-

disse souvent la menace financière, d'autres pays

assument aussi de grandes responsabilités. Environ 80 000 soldats canadiens (ce qui équivaut aux effectifs actuels des Forces armées canadiennes) ont porté le béret ou le casque bleus sur les 14 000 soldats des Nations-Unies aujourd'hui répartis dans le monde. 1 200 sont canadiens. Avec d'autres pays, le Canada expose la vie de ses soldats et n'est remboursé qu'en partie pour les opérations de maintien de la paix dans le programme bilatéral américain-canadien et dans les discussions de l'OTAN sur les structures militaires appropriées et sur la nature de la répartition des charges. À cause de l'échiquier politique interieur américain (vu, notamment le puissant lobby pro-israélien et l'aile droite du parti républicain qu'il faut régulièrement calmer), le gouvernement Bush devra peut-être mettre un frein au soutien qu'il commence d'accorder aux Nations-Unies. Au mois de décembre, par exemple, Washington a de nouveau émis des doutes sur le financement de l'ONU et sur le multilatéralisme, cette fois à propos d'une éventuelle promotion de l'Organisation de libération de la Palestine (OLP) au sein des Nations-Unies. Le vice-président Quayle a immédiatement donné le ton à la campagne en laissant entendre, avec une certaine malice, que le futur financement américain dépendrait probablement d'une annulation de la résolution de l'Assemblée générale qui, en 1975, avait assimilé le sionisme à une «forme de racisme». Il y a longtemps que tout le monde a oublié cette résolution considérée comme une erreur, mais le Congrès, et impossible si aucune percée diplomatique n'intervient au Moyen-Orient.

À New York et à Washington, les observateurs avertis ont du mal à comprendre cette marche arrière inopportune et, vue du Canada, l'inconsistance américaine semble totalement insoucieuse. Les Canadiens et Canadiennes prennent au sérieux, mais sans exagération, les obligations découlant des traités internationaux en vertu desquelles les États membres doivent payer leurs contributions. Ils posent donc trois questions à leur voisin méridional, à savoir : pourquoi y aurait-il deux poids, deux mesures ? Est-il bien nombreux de l'ONU ou pas ? Les opérations de maintien de la paix ne servent-elles pas ses intérêts ?

Le Canada devrait faire clairement comprendre que ce n'est pas uniquement un instinct de moyenne puissance qui le pousse à appuyer fer-

2. *Le Devoir*, 11 janvier 1990, p.1

En levant symboiquement la loi martiale, dont le sens véritable a plus de portée en Occident qu'en Chine, le Premier ministre Li Peng a bien décrit l'ordre répressif rétabli : «La vie et la production fonctionnent en bon ordre, l'approvisionnement est suffisant, le peuple vit et travaille dans la paix et le contentement».

L'Empire figure très haut dans la liste des sujets de conversation les plus interdits. Partout ce pendant, quelques interlocuteurs finissent par admettre qu'il n'y aurait pas d'autre solution que celle de la décentralisation des pouvoirs. Seule une régionalisation, couplée à des hypothèses constitutionnelles aux dimensions plus réduites et facilitant l'apprentissage progressif des libertés publiques. Cette vision d'une Chine écartelée paraît encore peu pertinente et se justifie surtout comme l'aboutissement d'un processus lent et certainement douloureux.

Chine a poussé à la centralisation; concevoir un mouvement inverse provoque des haut-le-cœur. L'obstacle incontournable dans la conception d'options politiques. Sociologues et analystes politiques chinois cherchent en vain des réponses à l'existence de leurs frontières, et ils doivent admettre très vite qu'aucun régime n'a dans l'histoire du monde, à assurer la direction politique et démocratique d'un État de plus d'un milliard d'habitants. Toute l'histoire de la Chine a poussé à la centralisation; concevoir un mouvement inverse provoque des haut-le-cœur.

Une forme de société plus «libérale» celui de recourir encore à la force pour imposer qu'un nouveau régime n'aurait d'autre choix que nombreux sont les interlocuteurs convaincus étrange les structures profondément féodales, et tique. Quarante ans de communisme ont à peine en place d'un système véritablement démocratique occidentale, personne ne conçoit la mise

# LES MALAISES DE L'INCERTITUDE

Les Chinois et les Chinoises se posent de sérieuses questions à propos de leur avenir. Est-il possible de mettre en place un système central vraiment démocratique dans un Etat de plus d'un milliard d'habitants ?

PAR HEPING \*

À DÉFAUT D'ÊTRE EN MESURE DE L'OCCUPER tout à fait, les autorités chinoises cherchent à rendre flou et anecdotique le mouvement étudiant du printemps 1989.

Comme toujours, la façon avec laquelle on s'emploie à minimiser l'ampleur des turbulences sociales est révélatrice de ce que l'on veut vraiment dissimuler.

Réduite aux dimensions d'un cas de légitime défense, la chronologie des événements devient caricaturale et la version officielle perd toute crédibilité. Selon *Beijing Information*, seuls «des émeutiers sanguinaires» ont été tués... «il n'y a eu aucun mort parmi les étudiants, y compris ceux qui ont été forcés de se retirer».

Cette justification appartient au langage classique de la propagande; elle traduit, en plus, une bienveillante toute confiance destinée à récupérer les intellectuels, c'est-à-dire ceux qui dominent la vague populaire et qui n'ont pas compris qu'ils étaient manœuvrés par «la poignée des contre-révolutionnaires» eux-mêmes manipulés de l'extérieur.

On pourrait à l'infini débattre des versions controversées décrivant le déclenchement de la répression au soir du 3 juin. Cela n'ajouterait toutefois qu'un peu plus de confusion dans une tragédie déjà trop pénible. Il reste qu'une reconnaissance exacte de la séquence des événements aidera un jour les historiens à répondre aux questions que de nombreux Chinois se posent. Tout d'abord, dans quelle mesure le mouvement pro-démocratique fut-il planifié ? Qui a incité, dès le mois d'avril, les étudiants de l'Université Beida à prendre comme prétexte la mort de l'ancien Secrétaire général Hu Yaobang pour exprimer bruyamment sur la place Tian'anmen leurs aspirations démocratiques ? Pourquoi le gouvernement chinois a-t-il systématiquement provoqué les étudiants en les accusant d'être des contre-révolutionnaires ?

Chen Yizhi, proche collaborateur de Zhao Ziyang (ancien Secrétaire général du Parti communiste chinois), déclarait au journal *Le Monde* : «Au début, les étudiants étaient calmes... mais chaque fois qu'ils voulaient évacuer la place Tian'anmen, Li Peng (l'actuel Premier ministre) les a provoqués. Ainsi, après le discours de Zhao, Li Peng (l'actuel Premier ministre) a confirmé le désarroi du gouvernement, les hésitations de ses membres et l'existence de sourdes luttes politiques qui finissent par venir à bout des plus modérés, avec la démission du Secrétaire général du Parti, Zhao Ziyang.

La ligne de pensée qui a triomphé est bien celle qui s'accroche à la certitude que tout peut être réformé sans être trop transformé. Depuis

le 4 mai, presque tous avaient repris les cours. Li Peng convoqua alors les responsables des universités pour dénoncer les atteintes à l'ordre public et le caractère illégal des manifestations. Peu après, les étudiants redescendaient dans la rue et entamaient leur grève de la faim...»

En Chine, personne ne croit à la spontanéité des mouvements politiques, et les scénarios les plus machiavéliques alimentent parfois les conversations. Phénomène normal bien sûr dans une société close où toutes les personnes «bien informées» tirent leurs renseignements de rumeurs rarement vérifiables. Il est difficile toutefois de ne pas considérer comme plausible l'intention «planifiée» du gouvernement chinois d'aboutir à une punition exemplaire. Bien qu'habitée au châtiment suprême, la société chinoise (et surtout la population de Beijing) ne s'attendait pas à une répression aussi brutale. Jusqu'aux dernières heures, personne n'y a cru vraiment. Alors que les premiers coups de feu avaient été tirés, certains étudiants dans les permanences de l'Université Beida refusaient de croire les informations qui venaient de leur parvenir, tellement, avaient certains, «on avait foi en la droiture de notre armée».

«On tue le poulet pour effrayer le singe» est aujourd'hui la formule chinoise la plus répandue pour expliquer comment une intervention militaire débridée avait pour but de servir d'exemple. Bien sûr, cette peur fut exacerbée par la conjoncture internationale et par les bouleversements dans les pays socialistes, mais ses motifs profonds furent et demeurent essentiellement chinois.

Le régime a cru qu'il était en péril, car il n'avait pas anticipé l'ampleur du mouvement. Depuis 1949, les intellectuels font partie des marginaux. Ils sont aisément persécutés, et il est aussi assez facile de les «recupérer». Une fois encore on avait minimisé, au mois d'avril, l'influence que pouvait avoir certains milliers d'étudiants rassemblés sur la place Tian'anmen. Puis, le mouvement a basculé; en dénonçant surtout les difficultés économiques, il s'est rallié la population de Beijing. Le multiples témoignages ont confirmé le désarroi du gouvernement, les hésitations de ses membres et l'existence de sourdes luttes politiques qui finissent par venir à bout des plus modérés, avec la démission du Secrétaire général du Parti, Zhao Ziyang.

La ligne de pensée qui a triomphé est bien celle qui s'accroche à la certitude que tout peut être réformé sans être trop transformé. Depuis

\* Pseudonyme utilisé par un observateur attentif de la scène politique chinoise.

1979, le gouvernement chinois cultive avec soin de multiples paradoxes en affirmant, par exemple, qu'il est possible d'ouvrir le pays tout en le fermant, ou encore en favorisant le développement d'une économie de marché dans une structure politique marxiste-léniniste. La formule «Un pays, deux systèmes» permet de rassurer les étrangers et légitime en Chine toutes les contraventions les plus visibles. Ainsi, l'écoute de *Voice of America* maintenant encore n'est permise que pour apprendre l'anglais.

LA COMPARAISON DES CONTRAIRES APPARTIENT À une logique traditionnallement chinoise; dans la conjoncture actuelle, cette logique se perpétue à Beijing dans la pensée des dirigeants trop confiants d'être les héritiers d'une révolution réussie et d'un nationalisme profondément interiorisé. Le constatation que la Chine est un grand pays qui est parvenu à assurer à sa population de plus d'un milliard d'habitants un niveau de vie plus enviable que celui des autres pays du tiers-monde. Et il est vrai qu'en Chine, on ne fait pas la queue pour obtenir un morceau de savon ou une paire de chausures. La Chine est certainement le pays le plus prospère de tous les pays en développement; elle a praité pendant longtemps un «communisme primitif» dont plusieurs Etats du tiers-monde voulaient s'inspirer. À l'époque de Mao, le refrain le plus répandu était en effet : «Ce qu'il y a à manger, tout le monde le mange, les habits qu'il y a, tout le monde les met, le travail à faire, tout le monde le fait.»

Et puis le nationalisme, ou plutôt le chauvinisme de la population chinoise — celui surtout de la majorité Han bien sûr — est un facteur fondamental sur lequel le Parti et le gouvernement comptent pour se faire pardonner leurs erreurs. Si bien qu'il n'est jamais très difficile de recourir à la xénophobie traditionnelle chinoise et de rendre l'extérieur coupable de maux internes. À maintes reprises, nous avons pu constater que même certains opposants les plus durs au régime actuel demeuraient très perméables à l'argument de l'ennemi extérieur.

Toutes ces certitudes sur lesquelles s'appuie le gouvernement chinois ont cependant été ébranlées par le changement radical d'une grande partie de la jeunesse chinoise. Environ 37 p. 100 de la population a moins de vingt ans. Et, dans les villes surtout, cette génération d'enfants uniques

démographique à l'échelle de la planète et la dette du tiers-monde, passent avant la crainte d'une agression soviétique. D'ailleurs, le recul de la menace soviétique dans leur classement s'est confirmé quelques mois plus tard à l'occasion d'une étude approfondie de l'opinion de la population canadienne sur la paix et la sécurité, réalisée par l'Institut canadien pour la

et la sécurité internationale.

Il ressort de ces sondages que les questions qui préoccupent le plus la

population canadienne aujourd'hui sont des problèmes à long terme sur lesquels aucun pays n'a de prise réelle, des problèmes qui ne peuvent être réglés en cinq ans (voire moins) passés au pouvoir et que les gouvernements tendent à égliser quand ils répartissent leurs deniers. La dégradation de l'environnement, des changements climatiques de-sastreux pour la planète, la pauvreté grandissante au milieu d'une opulence croissante, les déséquilibres inacceptables de l'économie internationale, la croissance démographique accélérée, voilà les véritables menaces pesant sur l'avenir! De plus en plus de gens en ont d'ailleurs pris conscience. Ces pro-

blèmes peuvent menacer non seulement la sécurité immédiate de nombreux pays, mais aussi la viabilité et la continuité de la société humaine dans les prochaines décennies. De fait, ils ont déjà plongé certains pays dans des crises alors que pour d'autres, la crise surviendra sans doute dans dix ou vingt ans. Mais dans tous les pays, les signes avant-coureurs de très graves difficultés à venir, plus pénibles à résoudre qu'aucune par le passé, sont déjà bien visibles.

Les nouveaux défis qui se présentent à nous, citoyens de ce monde, offrent au Canada de grandes occasions d'agir de manière constructive et de donner l'exemple. Il serait idiot de laisser croire que nous pouvons sauver le monde, mais nous sommes certes à même de mettre de l'ordre chez nous pour être prêts à relever ces défis de demain, et chercher des alliances avec qui nous pourrions faire avancer le monde utilement dans un sens qui donnera espoir dans l'avenir du genre humain.

Le présent livre a pour objectif de stimuler l'intérêt du public pour ces questions importantes et de l'inciter à en débattre, ce qui conduira, nous

et de l'inciter à en débattre, ce qui conduira, nous

examinons sont fondamentalement liées à l'évolution des rapports du Canada avec le reste du monde. Nous nous sommes laissés dépasser par beaucoup des changements survenus et nous ne sommes guère préparés aux

répercussions qu'ils auront probablement pour nous. Premièrement, l'économie : Bien que le Canada soit l'un des pays les plus riches et les plus fortunés de la planète, et qu'il appartienne au club des sept pays industriels les plus puissants, sa dépendance traditionnelle vis-à-vis de l'exportation de matières premières ne l'a pas particulièrement bien préparé aux changements radicaux qui surviennent aujourd'hui dans le monde. Il ne fait aucun doute que tout ce que le Canada pourrait souhaiter faire pour offrir à tous ses habitants (et à ceux d'autres pays) une vie convenable et productive, mais il sait que la route qu'il attend sera semée de beaucoup plus d'embûches qu'elle ne l'a été ces quarante dernières années.

Malgré ces problèmes, si nous voulons donner l'exemple en contribuant à mettre un terme aux changements climatiques causés par l'être humain, il nous faudra renforcer l'idée désormais acceptée selon laquelle l'économie nationale doit devenir indéfiniment durable pour ce qui a trait à l'environnement et aux ressources. Cela signifie tout d'abord qu'il y aura des décisions très difficiles, voire révolutionnaires, à prendre quant à l'utilisation des énergies.

Deuxièmement, notre propre société : Nous ne pouvons rester indifférents à l'évolution de la situation démographique. D'immenses groupes de population, exclus du partage des biens terrestres, sont prêts à agir, et nous ne pouvons refuser de le voir. Nous allons continuer de recevoir des immigrants du tiers-monde en nombres croissants, et nous nous interrogeons trop

peu sur les conséquences probables de la nouvelle composition de notre population pour nos rapports sociaux. Mais s'il est possible (comme certains Canadiens et Canadiennes le croient) que ce pays benî puisse donner un exemple de tolérance et de vie convenable au reste du monde, nous ne pouvons certes nous attendre que cet exemple prenne corps sans un effort immense et de l'ingéniosité et sans que les différents peuples se tendent

volontairement la main. Troisièmement, l'environnement : Plus personne ne peut prétendre ne pas voir les signaux d'alarme que donne l'environnement. Nous appartenons à cette partie de la population mondiale qui abuse des ressources planétaires; il nous échoit donc au premier chef de trouver un moyen de résoudre les problèmes causés par la pollution atmosphérique, la pollution de l'eau, la dégradation des sols, le pillage des océans et les changements atmosphériques qui provoqueront presque à coup sûr des modifications climatiques mondiales. Nous devons commencer à réfléchir à ces questions. En tant que nation, nous devons devenir plus économes et moins gaspilleurs dans notre mode de vie et, bientôt, il nous faudra investir dans des mesures qui apporteront un début de solution à ces problèmes.

Mais ce n'est pas tout : nous devons aider plus que nous ne le faisons aujourd'hui la majorité défavorisée de la planète à mieux vivre et voir à ce qu'elle cesse de détruire l'environnement dont elle dépend. Puisque nous sommes responsables de cet état de choses dans une certaine mesure, à cause de nos politiques économiques et commerciales, il nous incombe de prendre des mesures correctrices qui concrétiseront ce que les membres de la Commission Brundtland ont appelé «une politique étrangère pour l'environnement».

Par exemple, on a admis maintenant que la population mondiale ne peut se permettre de laisser détruire les forêts tropicales humides. Néanmoins, il ne suffit pas d'exhorter les pays tropicaux à ne pas défricher leurs forêts. Il faudra transférer des ressources énormes vers ces pays pauvres pour qu'ils réussissent à sauver leurs forêts. Mais nos gouvernements ne semblent pas disposés à prendre les engagements nécessaires.

Nous devons nous résoudre à considérer le monde en étant conscients de notre interdépendance écologique, et à penser à une survie à long terme

plutôt qu'à une prospérité à court terme. Quatrièmement, la sphère internationale : Le Canada qui, géographiquement, fait le pont entre les États-Unis et l'Union soviétique, a particulièrement intérêt à aider à maintenir la paix mondiale, à réduire la menace d'une guerre nucléaire et à assujettir les nouvelles technologies militaires à la surveillance internationale. Beaucoup pensent que le Canada parviendrait plus sûrement à ses fins s'il dépensait ses quelques milliards de réserve à renforcer cer des organisations mondiales, à consolider la coopération internationale et à favoriser le maintien de la paix aux quatre coins de la planète, au lieu de se laisser oublier par la tâche manifestement impossible qui consiste à protéger ses côtes intérieures contre des adversaires imaginaires. La paix, l'ordre et un bon gouvernement ont toujours été des idéaux canadiens, et nous devrions faire en sorte qu'ils deviennent aussi ceux du monde. □

1. La présente liste a été compilée par Eric Sölem, du Centre d'analyse et de recherche opérationnelle, à la Direction de l'analyse stratégique, au ministère de la Défense nationale, dans son intéressant monographie intitulée Futures of the International Systems, Rapport du projet n° 143, mai 1980, p.49.

2. Theodore Gordon, cité par Eric M. Kohn, à la page deux de sa monographie intitulée Planning in the Modern State, n° 139 dans la série de rapports de projet publiés par le Centre d'analyse et de recherche opérationnelle du ministère de la Défense nationale.

3. Ce sont les conclusions auxquelles sont arrivés 450 experts internationaux réunis à Ottawa en 1986 pour examiner les progrès réalisés en faveur d'un développement durable au cours des cinq années qui ont suivi la publication du rapport sur la Stratégie mondiale de la conservation en 1981. À leur avis, il ne s'était produit pratiquement aucun changement perceptible dans les attitudes des gouvernements.

Par conséquent, et bien que le principe sur lequel repose le présent ouvrage soit plus largement accepté qu'il ne l'était, nous pensons que le besoin de clarifier les faits et les choix est au moins aussi grand.

Nos dirigeants ont commencé à changer d'attitude parce qu'à la fin des années 1980, un consensus s'est dessiné entre les scientifiques, les prévisionnistes et l'ensemble de la population quant à la gravité de la menace grandissante qui pèse sur l'environnement. Depuis que le Club de Rome a publié sa fameuse étude intitulée *Quelles limites?* dans les années 1960, beaucoup d'analystes se sont mis au travail et, aujourd'hui, tous les principaux prévisionnistes et futurologues sont d'accord sur une demi-douzaine de points, à savoir :

1. La population et les biens matériels ne peuvent continuer de croître à l'infini sur une planète limitée.
2. Il n'existe pas, à l'heure actuelle, d'informations complètes et fiables sur la capacité de la planète d'absorber tous les déchets résultant des exigences humaines.

3. À moins de changer, les politiques actuelles contribueront à creuser le fossé entre riches et pauvres, entre nations et entre individus. Même une aide étrangère considérablement accrue ne peut réparer ces injustices d'envergure planétaire.
4. La technologie, si elle peut aider, n'apporte pas la réponse à elle seule.
5. L'interdépendance entre les peuples et les pays est bien plus grande qu'on ne le pense généralement. Autrement dit, des actions engagées dans une partie du monde de risques courent de s'avérer lourdes de conséquences ailleurs.
6. C'est pourquoi il vaut mieux modifier les politiques le plus tôt possible.

D'APRÈS CETTE LISTE, NOUS DEVRONS APPORTER DE profonds changements dans l'ordre actuel des choses, si nous voulons survivre. Cela ne signifie pas que les gouvernements les feront effectivement, puisque jusqu'à présent, les personnes qui se sont préoccupées de telles questions n'ont exercé aucune influence réelle sur la plupart des gouvernements. Si le Canada est typique, il s'agit surtout de fonctionnaires et de chercheurs enthousiastes qui travaillent d'arrache-pied à leurs études dans des bureaux isolés, se réunissent en colloques pour discuter de leurs idées et produisent une nuée de documents clartoyants qui pénètrent rarement la carapace dont se bardent les ministres.

Ces grandes idées qui font l'unanimité des futurologues ne sont guère rassurantes quand on les applique aux principaux problèmes du monde contemporain. Elles évoquent un avenir rempli de dangers et de pénuries, et une qualité de vie allant de mal en pis. Ainsi, voici cinq thèmes dont un futurologue dit qu'ils définiront le monde en 1994, soit d'ici cinq ans à peine : la capacité de mener une guerre nucléaire, de graves pénuries alimentaires, la détérioration de la biosphère, la répartition déséquilibrée des richesses, des pénuries matérielles et énergétiques.

L'implicite dans ces thèmes, c'est que le développement économique et l'environnement sont les deux revers d'une même médaille, qu'ils sont tous deux d'une importance cruciale pour notre avenir, et que nous devons trouver un moyen de rendre tout développement futur viable tant du point de vue environnemental que de celui des ressources.

Ce concept de développement durable est apparu sur le marché mondial des idées en 1981 avec la publication d'un rapport novateur sous le titre *quelque peu bureaucratique de Stratégie mondiale de la conservation* (S.M.C.). Ce document, élaboré par le Programme des Nations-Unies pour l'environnement (P.N.U.E.), l'Union internationale pour la conservation de la nature et de ses ressources et le *World Wildlife Fund*, tentait de répondre aux objections que la Conférence de Stockholm sur l'environnement humain (1972) avait suscitées de la part des habitants de pays du tiers-monde, en sommant l'alarme à propos de l'état de la planète.

À l'époque, on pensait surtout que le développement économique était en train de détruire une bonne partie du monde naturel, ce qui sous-entendait notamment que le développement était nuisible. Assez naturellement, les populations des pays qui désespéraient de se développer ont rejeté la thèse tout entière et y ont même vu une sorte de complot des Blancs pour empêcher les peuples indigènes de la Terre de se faire un place au soleil. La S.M.C fut la première étude à s'attaquer à ce problème. On y déclarait que la capacité de la planète de nourrir sa population est réduite à cause d'une mauvaise gestion des terres, d'une dilapidation des ressources, et de la pauvreté qui, dans beaucoup d'endroits, contraint les populations à détruire les ressources dont elles ont besoin si elles veulent survivre. Pour les auteurs de la Stratégie, d'accord avec les environnementalistes, il est essentiel de maintenir les cycles écologiques et les milieux vivants de la Terre ainsi que de préserver sa diversité génétique.

Mais ils allaient encore plus loin : ils recommandaient que les activités humaines continuèrent de dépendre de l'utilisation d'autres espèces et écosystèmes tout entiers. Ils ajoutaient, toutefois, qu'il allait falloir exploiter la nature d'une façon durable à très long terme.

Le PROGRAMME DES NATIONS-UNIES POUR l'environnement (P.N.U.E.) a donc pris le développement durable pour devise, ce que beaucoup ont accepté depuis lors, en théorie du moins. En affirmant que développement et environnement sont tous deux essentiels à la perpétuation de la vie humaine sur terre, le document a exorcisé l'analyse environnementale de la situation humaine dans les pays en développement. Mis au défi, nombre de gouvernements se sont officiellement engagés à repenser leur politique dans le sens de la durabilité et ils ont promis de définir et d'appliquer des stratégies nationales de préservation qui guideraient l'ensemble de leur développement futur.

Malheureusement, ces promesses n'ont pas donné grand-chose de concret. Un après l'autre, les ministres des Finances des divers pays et leurs conseillers économiques ont oublié l'environnement. Ils ont fait fi des avertissements formulés par les conseillers scientifiques et les penseurs veillant sur la planète. Les ministres de l'Environnement, relégués au second plan, ont un peu de poids dans les conseils d'État.

Pourtant, tous les pronostics ne sont pas mauvais. Si les dirigeants se sont mis à parler d'environnement dans leurs discours, c'est pour une bonne raison : le changement d'attitude chez les populations du monde occidental a été spectaculaire. De nombreux sondages d'opinion donnent à penser que, dans différents pays, l'électorat considère que les vrais dangers menaçant la sécurité ne sont plus les mêmes qu'avant. À en juger par ces sondages, les Canadiens et Canadiennes semblent prêts à agir pour écarter les menaces à long terme qui se dessinent aujourd'hui (même s'ils ne sont peut-être pas encore disposés à payer plus d'impôts afin de financer des actions en ce sens). Aux jours de la Guerre froide, l'Union soviétique faisait figure d'ennemi d'après un sondage réalisé en 1987 par l'Institut Nord-Sud d'Ottawa, une dent. Cette perception s'est grandement estompée, à telle enseigne que, d'après un sondage réalisé en 1987 par l'Institut Nord-Sud d'Ottawa, une même que les caprices de la politique étrangère américaine, la croissance

années, cependant, presque partout des gens ont commencé à s'apercevoir qu'en modifiant à long terme les éléments essentiels à la vie, l'être humain risquait de compromettre tout autant, sinon plus, sa sécurité qu'avec les guerres nucléaires et les agressions militaires contre lesquelles il s'est tellement appliqué à se défendre.

La vitesse à laquelle cette nouvelle perception s'est répandue illustre remarquablement le pouvoir de nos nouveaux systèmes de communications de masse. La publication, en 1987, du rapport de la Commission mondiale sur l'environnement et le développement, présentée à l'Assemblée générale des Nations-Unies et connu sous le nom de Rapport Brundtland, a conféré un caractère pressant à des craintes et à des préoccupations qui s'amplifiaient depuis plusieurs décennies. En deux ans, ce rapport s'est vendu à des dizaines de millions d'exemplaires dans des dizaines de pays et en plus grand nombre au Canada que nulle part ailleurs. Rapidement, donc, les dirigeants politiques ont dû prêter attention au phénomène.

Depuis que l'environnement est devenu un sujet d'inquiétude général à la fin des années soixante, la plupart des responsables politiques ont agi comme si les questions environnementales (propres de l'eau et de l'air, fertilité des sols, forêts vigoureuses) venaient au second plan derrière la véritable gestion des affaires de leur pays.

En fait, c'est à cause de ce manque d'empressement politique que l'idée du débat public tout autour de la planète :

la présidence Bush a reconnu l'existence des précipitations acides et s'est décidé à faire c'est à l'initiative de Margaret Thatcher qu'une conférence internationale sur les changements climatiques a eu lieu;

la Communauté économique européenne a adopté une politique agricole orientée vers la production de l'environnement, afin d'encourager l'emploi d'engrais organiques et de décourager l'agriculture industrielle;

le gouvernement hollandais aura été le premier au monde à être renversé sur une question environnementale. En effet, la coalition gouvernementale s'est désagrégée à cause d'un nouveau plan d'une portée considérable qui visait à résoudre la crise environnementale du pays en une

génération en doublant le budget affecté à l'environnement pendant les quatre prochaines années; les partis écologistes comptent plus de députés au Parlement européen et, en Angleterre, ils ont remporté 15 p. 100 des suffrages aux dernières

élections; au Canada, le gouvernement a abandonné son programme de réarmement, ce qui lui permet de se consacrer davantage à des problèmes à plus long terme; un groupe de gens d'affaires américains a même décerné un prix à Brian Mulroney pour les discours vibrants qu'il a prononcés au cours de conférences

internationales. Que tant de nos dirigeants se soient ralliés à la cause après des décennies d'indifférence montre toute l'importance que les questions environnementales ont désormais acquise. Pour ne pas se laisser dépasser par les événements, ces dirigeants ont dû, ne serait-ce que pour la forme, déclarer que l'espèce humaine ne pourra connaître un avenir sans inquiéter que si nous parvenons à bâtir une économie planétaire viable du point de vue

environnemental. Les paroles ne suffisent évidemment pas. Ainsi, un groupe de militants canadiens a suivi le premier ministre, M. Brian Mulroney, à une conférence en Europe et l'a fortement critiqué devant la presse mondiale, car ses discours vigoureux en faveur de politiques viables n'ont pas empêché son gouvernement de réduire les fonds alloués à des projets sur les énergies de remplacement tout en investissant sans compter dans des mégaprojets énergétiques lourds de conséquences d'ordre climatique. Les écologistes ont

accusé le premier ministre de parler plus qu'il n'agit. Nous avons ainsi découvert qu'en tant que dirigeants politiques à souscrire au concept de viabilité, et les forcer à prendre les mesures qui s'imposent, il y a un fossé énorme. Il ne fait aucun doute qu'il faudra des années de débat politique féroce et de lutte acharnée avant d'obtenir la

création d'un nouvel ordre international.

cours d'eau; la Tchécoslovaquie, la Chine ou la Pologne, avec leur pollution atmosphérique effroyable; le Brésil, avec sa destruction insensée de la forêt tropicale humide; les États-Unis ou le Canada qui, au nom du progrès industriel, deviennent des poisons mortels dans les campagnes et les océans. Voilà ce que nous ont servi quotidiennement nos médias qui, ayant découvert le fion, semblaient se complaire à nous faire tous mourir de peur.

À PEINE CE DÉLUGE D'INFORMATIONS EFFRAYANTES AVAIT-IL COMMENCÉ À

se présenter que les gouvernements canadiens se sentaient que le Rapport Brundtland et celle du

gouvernement canadien, telle qu'elle se révélait dans le Livre blanc sur la Défense (1987), était tout simplement trop flagrant pour qu'on en

restât là. Le Rapport Brundtland laissait entendre qu'il fallait envisager l'avenir différemment et

redistribuer sans tarder les ressources pour élever les défis inédits que nous pose notre sécurité à long terme, en tant que Canadiens

et citoyens du monde. En revanche, le Livre blanc sur la Défense passait cette nouvelle dimension sous le silence le plus complet pour ne présenter aux Canadiens et Canadiennes qu'un programme de réarmement reposant sur ce qui s'est avéré (et toujours plus de jour en jour) être des clichés dépassés datant de la

Croquer froide.

l'important, selon nous, de stimuler le débat public sur ces problèmes vi-

taux. C'est alors que quelque chose d'intéressant s'est produit. En effet, le hasard a voulu qu'entre la conception du présent

ouvrage et sa parution dix-huit mois plus tard, un profond changement s'opéra dans la façon dont la population percevait les choses. Peut-être

exceptionnellement chaud de 1988 y fut-il pour quelque chose? Tandis que les climatologues du monde entier se réunissaient à Toronto pour examiner la perspective de changements climatiques à long terme provoqués par l'être humain, changements à cause de siècles de grandes villes risquant d'être submergées, des forêts décimées et la superficie des terres agricoles réduite (premier, la vie humaine de se trouver révolutionnée), la ville souffrait sous les plus hautes températures enregistrées depuis des années, et beaucoup de gens éprouvaient des difficultés à respirer dans l'air lourd et

chargé de smog. Un a appris que les cinq années les plus chaudes qu'aient connues le Canada depuis un siècle qu'on relève les températures se trouvaient dans les années 1980. Il apparaissait donc que les changements climatiques n'étaient plus une perspective lointaine, mais qu'ils étaient déjà bien présents dans nos vies.

À ce moment-là, nous avons eu un aperçu de la destruction épouvantable de l'environnement à l'Amérique du Sud et de l'Afrique. Pendant un temps, ce fut apparemment à qui trouverait le pays le plus irresponsable : l'Éthiopie, avec son érosion massive des sols; l'Union soviétique, avec ses détournements désastreux de

# LE CANADA DANS UN MONDE EN CRISE PASSONS À L'ACTION

L'Institut pour la paix et la sécurité a produit un ouvrage fondamental sur les façons dont le Canada pourrait affronter les principales menaces qui pèseront sur la sécurité internationale dans l'avenir.

PAR BOYCE RICHARDSON

**V**ERS LA FIN DES ANNÉES 1980, partout, les gens ont commencé à prendre conscience de l'ampleur des changements qui attendent la société humaine. Bien entendu, le monde change constamment, mais souvent, cela s'est fait graduellement, si discrètement que la plupart des gens ne s'en sont même pas aperçus. L'être des communications par satellite a mis fin à cette époque. Des pays qui, il y a dix ans seulement, étaient à l'abri des grandes influences intellectuelles et technologiques qui balayaient la majeure partie de la planète reconnaissent aujourd'hui qu'ils ne peuvent plus se calfeutrer derrière leurs frontières. Pendant ce temps, dans des parties mieux loties du monde, l'idée bien ancrée et reconfortante d'une supériorité économique et technologique s'effrite inexorablement.

Vers la fin des années 1980, cela s'est traduit dans certains pays par des soulèvements cataclysmiques, comme les manifestations de Beijing, en 1989, au cours desquelles des millions de personnes ont réclamé des changements. En Europe de l'Est, de vieux liens se sont défaits avec une rapidité qui laisse encore incrédules les gens habitués aux rigidités de la Guerre froide. Et dans les pays qui goûtaient depuis longtemps les fruits de l'industrie et de la technologie, essentiellement ceux d'Amérique du Nord et d'Europe, de vieilles certitudes quant au caractère inéluctable et permanent du progrès se sont érodées.

Les raisons en sont nombreuses. Les populations sont plus promptes que jamais à exploser. Notre monde est de plus en plus bipolarisé, avec d'un côté les riches et de l'autre, les pauvres. Il est de plus en plus évident que notre planète ne peut supporter l'insouciance des méthodes actuelles de développement économique. Même les gens qui semblent tout avoir, parmi lesquels les Canadiens, se sont mis à douter fortement de l'avenir.

Ce qui est nouveau dans les années 1980, c'est que ces perceptions du besoin de grands changements dans l'évolution du monde sont aussi devenues celles de la masse des gens; du moins, elles sont maintenant monnaie courante dans le dialogue politique de pays dont les idéologies et les régimes varient considérablement.

Presque partout, les dirigeants reconnaissent aujourd'hui la nécessité d'un changement, et ceux qui ne l'admettent pas (la vieille garde qui a rêssé si brutalement son autorité en Chine en est le parfait symbole) font figure de dinosaures sociaux en voie d'extinction.

On doit cette évolution des perceptions à deux grandes influences : d'abord, à l'apaisement rapide des tensions Est-Ouest qui dominent les relations internationales depuis la fin de la Seconde Guerre mondiale, et ensuite, à la prise de conscience grandissante du fait que les ressources de notre Terre sont limitées et que les êtres humains les pillent à un rythme et d'une manière qui ne peuvent continuer sans causer des dommages irréparables aux cycles dont toute forme de vie dépend.

Ensemble, ces deux influences ont amené les populations du globe à revoir leur définition de la sécurité. La sécurité a toujours été une préoccupation essentielle des groupes humains; depuis la fin de la Seconde Guerre mondiale, nous avons dépensé tant et plus pour défendre contre ce que nous percevions comme des menaces militaires pesant sur notre sécurité. Ces toutes dernières

## NOTE FROM THE EDITOR

"I would see a return to fairly classical forms of interstate politics." So goes one speculation about the future of Europe from **Denis Stairs**, one of five participants in a roundtable featured as this issue's cover story. We should all devoutly hope Dr. Stairs is wrong about Europe, for if not, we are in for a very unhappy and tragic time.

The key word here is "classical." The classical way in which the states and peoples of Europe have interacted in the last few centuries is through the almost constant preparation for, frequent threats of, and – often enough to kill upwards of seventy million people in

the last three hundred years – calculated use of war to achieve some goal or other. War, and all the social, political, and technological apparatus that went with it, has been an indispensable part of the daily conduct of business between the "civilized" nations of Europe.

The question we need to ask ourselves now, as we run to keep up with the rush of events there, is not "will the new Germany return to its former nasty ways?" or even "can Gorbachev steer his country around the various disasters that loom ahead?" Rather, it is how will states react to the inevitable ethnic rivalries, nationalist resurgences, and economic disasters.

Joining in common celebration of the demise of the Berlin Wall is one thing, but the real test will arrive in something like the year 2002, when whatever security system has evolved must deal all at the same time with – to cite only one of the possible combinations – a resurgent Germany, a nervous France, a civil-war torn Yugoslavia and a sullen, bankrupt post-Gorbachev Russia. The problems and provocations are classical, but the collective and individual responses of nations and their governments (including our own) must not be.

The three authors of our other feature stories this time are warily optimistic about the parts of the world they examine. **Christoph Bertram** contends that a security system less "tidy" and formalized than the one Europeans have become used to, is entirely appropriate, now that threats to security are more diffuse; **Peter Hakim** regards the new American ambivalence towards involvement in Central America as, on the whole, a positive development; and **Heribert Adam** sees the surprising lack of bitterness and desire for revenge among South Africa's *apartheid* victims as the precondition for a peaceful resolution there.

Beginning with this issue, *Peace&Security* will be printed on acid-free, non-chemically bleached paper. We are assured by our suppliers that this paper-making process is more benign environmentally than conventional methods, and results in a paper with superior archival qualities. Following comments from some of our readers, we have also ceased the practice of mailing the magazine in plastic protective envelopes.

**The Geneva Talks: A New Nuclear Relationship Between the Superpowers?** by David Cox, Background Paper 32, May 1990, 8 pages.

*Other Publications From the Institute include:*  
*Occasional Papers • Background Papers • Working Papers • Factsheets • Annual Guide to Canadian Policies • Director's Annual Review • Institute's Annual Report.*

**Economic Sanctions and South Africa**, by Steven Godfrey, Background Paper 33, June 1990, 8 pages.

**Climate Change, Global Security and International Governance: A Summary of Conference Proceedings** by Kenneth Bush, June 1990.

*Use the tear-out card in this issue to obtain more information about these and other Institute publications.*

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

ENVIRONMENTAL ISSUES HAVE grabbed the spotlight of public attention. Paradoxically, compared with all the doom and gloom scenarios, there has been little discussion, in *practical policy terms*, of what can or should be done to address environmental problems within the context of global security and international governance. In response to this lacuna, the Institute for Peace and Security assembled a wide range of decision makers and experts, on 11 and 12 April, to discuss the nature of climate change, its ecological, social, political and economic consequences, and possible policy responses at regional, national and international levels.

There was surprisingly little disagreement over the basic processes of climate change. It will have a range of geophysical impacts, including fluctuations in temperature, amount and distribution of precipitation, storm frequency and intensity, and sea level. But the focus of the conference was not on the geophysical effects of climate change, rather, it was on the political, social and economic impact.

An underlying theme was that the world's economy and ecology are now totally interlocked – as Jim MacNeill of the Institute for Research on Public Policy put it, “until death do them part.” This raises fundamental questions about how policy decisions are taken and their implications for ecological sustainability. While the scope for possible action may grow with technological opportunity, it is very clear that the obstacles to sustainability are not technical or even economic; they are social, institutional and political.

The 1988 Toronto Conference on the Changing Atmosphere sponsored by the Canadian Government, the United Nations Environment Programme and the World Meteorological Organization, called for a twenty percent reduction in global carbon dioxide emissions by the year 2005. Since then, worldwide emissions have *increased* by approximately six percent and it is unlikely that the target will be met. As Christopher Flavin of the Worldwatch Institute pointed out in Ottawa, the twenty percent goal was formulated on the basis of what the climate needs, not what politicians are ready to accept or what economists are willing to put into their econometric models.

Because energy use is the principal source of atmospheric contaminants, energy is the crux of the problem. An effective response to climate change, Flavin argued, must recognize two things: energy politics is “hardball politics” dominated by a handful of powerful in-

# FACING UP TO CLIMATE CHANGE

*An international conference  
in Ottawa considers fundamental questions  
of policy and action.*

dustries and interests; and economic soundness and market forces must determine appropriate technologies and strategies. There was a strong call at the conference for a political and economic “levelling of the playing field,” with subsidies attracting particular attention. According to Jim MacNeill, “When you compare \$40 to 50 billion a year [for subsidies] in North America to promote fossil fuels, and hence to promote acid rain and global warming, with the decreasing amounts spent on efficiency and alternatives to fossil fuels, it is simply no contest. Acid rain and global warming win hands down.”

THE ARGUMENT THAT ECONOMIC SOUNDNESS and market forces should guide environmental policy raised the contentious question of whether subsidies should be a policy instrument at all and, if so, what activities should be subsidized. MacNeill reflected a view shared by a number of delegates when he argued that subsidies which encourage ecologically damaging production processes, such as the Organization for Economic Cooperation and Development (OECD) agricultural subsidies which reinforce the overuse of soils, wood, and other ecological capital, should be either scrapped or made ecologically sensitive. Others believed that levelling required they all be stopped. The debate, though animated, was inconclusive.

Peter Gleick of the Pacific Institute focussed the concern of the conference on the relationship between climate change and international conflict. He pointed out that while the impact of climate change will be fairly evenly distributed among nations, the ability to *respond and adapt* will not. This disparity is already causing some tension between rich and poor nations and may become a principal source of conflict in the years to come. Where international tensions already exist, the impact of climate change on resource availability and quality may trigger conflicts – the 1967 war in the Middle East was caused partly by the question of access to the Jordan River.

The further deterioration of North-South relations was another prominent theme of the conference. As the Cold War wanes, a new

type of power logic may be emerging. Some developing countries have clearly come to the conclusion that the second wave of environmental concern now sweeping Europe, North America and Japan, provides them with political leverage, however negative, that they can use in bargaining for action on those things that concern them most. The fact of rapid population growth and increasing energy use by developing countries means that the industrial-

ized world cannot deal with global warming on its own. Rich nations will, therefore, have to begin to address issues of crucial importance to developing countries such as resource and financial burden sharing, debt reduction, trade access, and preferential access to intellectual property and technology, if meaningful international agreements on the environment are to be implemented.

THE POLICY CHOICES AND ACTION WE TAKE NOW, will be played out in future climate trends. There is an inescapable lag between societal action and global ecological reaction due to the sheer momentum of climate change. Concentrations of greenhouse gases will continue to build up in the atmosphere and the longer it takes to deal with them, the more the climate will change.

The broad scope of the ideas for action and policy options discussed in Ottawa is suggested by the following short-list: creation of new indices of climate change and sustainable development to measure progress in tackling environmental problems; the use of remote sensing as an early warning mechanism; an expanded role for international institutions; the creation of a world atmospheric trust fund; a tax on carbon emissions; use of regulatory and economic incentives; and reforestation. It was clear to most participants that the costs of action are far less than the costs of inaction.

The final statement of the 1988 Toronto conference warned: “Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate consequences may be second only to a global nuclear war.” The response to the “unintended experiment” of climate change, if it is to be effective, must be rooted in the social, economic, and political as well as the scientific. □

# LYING LOW IN CENTRAL AMERICA

*Washington's new ambivalence towards Central America may offer the best hope yet for ending the region's devastating wars.*

BY PETER HAKIM

GEORGE BUSH AND HIS ADVISORS HAVE EVERY REASON TO BE pleased by developments in Central America. Since they took office, the two main objectives of US policy in the region have been accomplished: Sandinista rule has ended in Nicaragua and the Noriega regime has been deposed in Panama.

The situation has also brightened for the United States in El Salvador. Washington had seemed trapped in a no-win position, supporting a government and military that could not defeat a Marxist guerrilla insurgency, was unwilling to negotiate seriously, and was unable to control gross abuses of human rights. Now, for the first time, meaningful negotiations are underway to resolve that country's ten-year-old civil war.

What is remarkable is that these developments occurred during a period when US policy in Central America was marked by ambiguity and uncertainty. The Bush administration's approach to the region lacked both the direction and fervour of its predecessor. The Reagan White House was driven by ideological zeal and strong purpose. In Central America, Reagan charted a course with a clear set of goals and pursued them doggedly; he refused to be sidetracked either by the divisions his policies provoked in Congress or among the American people, or by the conflicts they produced with Latin American nations.

BUSH DID NOT COME TO POWER WITH STRONG IDEOLOGICAL MOORINGS. From the outset, his administration was motivated mainly by domestic political calculations and by a risk-avoiding pragmatism. The Bush White House saw itself engaged in a delicate balancing act of placating a distrustful Republican right while averting conflict with the Democrat-controlled Congress. The resulting policies were far more responsive not only to the political dynamics of Washington, but also to events in Central America. Latin Americans were, by and large, more comfortable with the Bush approach, a change that opened opportunities for US-Latin American cooperation in dealing with Central America's problems.

Ironically, the only opportunity that the US government grasped was in Panama. In May 1989, after General Noriega had annulled the country's presidential elections and sent his thugs into the streets to reassert his authority, the US turned to the Organization of American States (OAS) to deal with the Panama crisis. That effort at regional diplomacy, however, was half-hearted at best.

The OAS mission was given an impossibly short deadline of three months, and Washington's interpretation of its mandate was at odds with that of the Latin Americans. The White House wanted the OAS to pursue the same objective that its own policies had failed to accomplish — Noriega's departure from power. For their part, Latin American governments felt the task of the OAS was to negotiate a settlement among the different political groups in Panama. Since Washington was unwilling to accept any arrangement that involved a continuing role for Noriega, the OAS mission was effectively deprived of any real authority to conduct negotiations; Noriega quickly understood the situation and simply declined to deal with the OAS at all.

By September, the failure of the OAS initiative left Washington with

few options, it could either accept Noriega's continued rule or use force to oust him. The first option became increasingly difficult to sustain in the face of a rising clamour from Congress for tougher action. Criticism from both Republicans and Democrats intensified dramatically in October following Bush's decision not to support dissident Panamanian officers in their abortive coup attempt.

On 19 December, the US launched its invasion, and in defiance of Murphy's law, virtually everything that could have gone wrong went right. Troops rapidly subdued the Panamanian Defense Forces without an unacceptable loss of lives; the Panamanian population overwhelmingly supported the US action; the Panamanian opposition leaders, widely credited with having won last May's elections, agreed to take charge of a new government; and there was no serious guerrilla resistance. None of this was a sure bet; luck played a crucial role in the "success" of the invasion.

Absent from the administration's calculations, however, was any concern about the impact of the invasion in Latin America or regard for established international norms against armed intervention. Virtually every country of the region resented and condemned the US action. Moreover, it soon became clear that Washington had not prepared very effectively for the post-invasion period, and committed a series of blunders, starting with the inauguration of President Endara on a US military base, thereby compromising his claim to legitimate authority. It took the administration two months to lift its economic sanctions against Panama, and even now the economy remains in a shambles; promised US aid was delayed for many months; and US troops are still required to keep order.

None of this diminished enthusiasm back in the US, where the intervention provided an enormous boost to the Bush administration. The sniping in Washington about Bush's excessive caution and his ineffectiveness as a world leader was silenced. He and his administration gained stature and authority, and greater flexibility to deal with other international problems. However, Bush never sought to test his newly-acquired credibility elsewhere in the region. Ambiguity continued to characterize his policies elsewhere in the region.

NOWHERE WAS THAT AMBIGUITY BETTER ILLUSTRATED THAN IN NICARAGUA. For eight years, the Reagan White House had relentlessly supported the Contras in their war against the Sandinista government. More than any other initiative the Contra war came to symbolize what the Reagan presidency was about: the US had to reassert its power and influence, to stop further communist gains in this Hemisphere or elsewhere, and to challenge those gains wherever possible. While Congressional opposition brought a halt to military aid to the Contras a year before Reagan left office, he sustained to the end his campaign to revive that aid.

Bush chose not to engage in further battle with Congress over the Contras, but neither did he give up on the Contras as an instrument of US policy. Instead, the Bush administration, two months after it took office, hammered out a bipartisan agreement with congressional leaders. The Contras would be kept intact with another year of so-called humanitarian aid, but would continue to be denied military supplies.

Following the signing of the bipartisan accord, Secretary of State James Baker declared that the military approach in Nicaragua had failed and announced that the US would pursue a political settlement through a policy of carrots and sticks. The promised carrots and sticks never appeared. The administration infuriated avid Contra supporters when it failed to prevent or even denounce an August 1989 agreement among the five Central American presidents that called for the dismantling of the Contras by early December. The administration subsequently declined to veto a UN Security Council decision to establish a mission to oversee the Contra demobilization.

At the same time, however, Washington passed over several opportunities to disentangle itself from the Contra policy. The Sandinistas, for example, committed themselves in December 1989 to provide conditions for the Contras to return home. The US never sought to test that commitment by encouraging the Contra forces to attempt to repatriate. Instead, US aid flowed unabated to the Contras in Honduras giving them every incentive to remain where they were.

Washington was holding its breath, waiting to see whether the Sandinistas would keep their pledge to hold fair presidential elections. The hope was that the opposition, headed by Violeta Barrios de Chamorro, would come out on top – providing an instant solution to the United States' Nicaraguan problem. The opposition did win. But, at the time, it was not the only, or even the most probable, scenario. Prior to the elections, the US was silent on whether it would respect a fair electoral victory by the Sandinistas and whether it would lift economic sanctions and help demobilize the Contras following such an outcome. Now those questions are all moot.

Only after the Sandinistas were clearly moving to turn over power did the US administration turn significant attention to Central America's most brutal conflict – the civil war in El Salvador. In late March, Secretary Baker began efforts to develop a bipartisan accord with Congress on future US policy in El Salvador. The timing was propitious – a few weeks before UN Secretary-General Pérez de Cuellar announced that the warring parties – the government of El Salvador and the Farabundo Martí National Liberation Front (FMLN) guerrillas – had agreed to UN-mediated peace negotiations.

THE BUSH ADMINISTRATION HAD INHERITED A POLICY IN EL SALVADOR that was more nuanced than that for Nicaragua. The Reagan White House, after some prodding from Congress, also addressed the political dimensions of the struggle. The US sought to build a political centre in El Salvador; to encourage economic and social reforms; and to bring an end to widespread political killings and other abuses of human rights.

By the end of Reagan's term these aims were largely frustrated – and the situation further deteriorated through 1989. The US-backed centrist government of José Napoleon Duarte was swept out of office by the right-wing Arena party in presidential elections; human rights violations escalated; and the war with the guerrillas became even more violent.

The extent of the deterioration was starkly revealed by the massive offensive launched by the guerrillas in October. With simultaneous attacks in all of El Salvador's major cities the FMLN demonstrated a military capacity that exceeded even the best-informed estimates. Salvador's armed forces could no longer credibly claim that the guerrilla army was close to defeat. Whatever illusions the Salvadoran government had that it could control the military were shattered, first, by the army's brutal response to the FMLN offensive – which was carried out without real consultation with the elected authorities – and then by the cold-blooded murder of six Jesuit priests by members of a US-trained battalion.

What became clear was that US policy had been based on a patently false assumption – that steady, albeit slow, progress was being made. The war was stalemated; Salvadoran politics were not becoming more democratic or more decent. After ten years of deep involvement and an investment of more than \$4 billion, US policy had been stymied.

FROM THE START, THE BUSH ADMINISTRATION SEEMED LESS INTENT THAN its predecessor on defeating the FMLN guerrillas militarily and more open to the alternative of a negotiated settlement. But the administration never really decided which of these objectives it was pursuing, nor defined a strategy which could have achieved either one. The White House never tried to use its leverage – \$400 million a year in aid – to induce the Salvadoran government and army to work toward a settlement.

Since the guerrilla offensive and the slaying of the Jesuits, the administration and Congress have squabbled over aid to El Salvador. James Baker's efforts to seek an accord with Congress may have coincided

with de Cuellar's initiative to get the parties to the negotiating table, but it was mainly a response to growing Congressional resistance to sustaining past Salvadoran aid levels. It may finally have become clear that the US cannot indefinitely provide large-scale assistance to a Salvadoran government and army that can neither defeat the guerrillas nor control systematic human rights abuses by its partners.

The evolution of US policy since Bush took office has, in part, reflected the declining significance of Central America in Washington's calculations. With the warming of East-West relations and the crumbling of communist regimes, the

struggle against revolutionary Marxism and Soviet bloc influence in the Americas has lost most of its relevance.

Not wishing to confront the political risks of an activist policy in a region of secondary importance, the Bush administration sought to lower the profile of Central America in US politics, and, in the process, also lowered the US profile in Central America. As Washington diminished its engagement in the region, aside from Panama, the space widened for other actors: the Central American presidents, other Latin American leaders, the UN, and the OAS. All have played critical roles in Nicaragua and they are now weighing in in El Salvador. The crucial lesson may be that US foreign policy interests can, at least in some circumstances, be best advanced by reducing the intensity of the United States' direct involvement and by relying more on multilateral approaches.

Central America's problems are, of course, still a long way from resolution. The current negotiations in El Salvador may prove as fruitless as previous rounds of talks. The new US-backed governments of Nicaragua and Panama face immense problems: neither country has any tradition of democratic rule; their governing institutions are weak; and authority in the two countries is wielded by fragile coalitions bound together mainly by their opposition to the regimes they replaced. Moreover, both their economies are moribund and desperately poor. Two other countries in the region, Guatemala and Honduras, are in comparably difficult straits.

It is early – and unseemly – for the Bush administration to celebrate success in Central America. The countries and people of the region, after all, are still suffering the devastating effects of more than a decade of warfare in which the US was heavily involved. Even if, and when, the wars are halted, Central America's tragedy will not be over. Only if the US and the rest of the international community are willing to invest as much in economic reconstruction as they have in armed conflict does the region have a chance for a better future. □

Michael McPherson

# EUROPE'S MESSY REBIRTH

*Any new security system for Europe won't be nearly as tidy as the old one – maybe it doesn't need to be.*

BY CHRISTOPH BERTRAM

**I**T NEVER RAINS BUT IT POURS. FOR FORTY years, history seemed frozen in the Soviet empire and in East-West relations, and gradually West Europeans, including West Germans, came to arrange themselves in a reality which seemed enduring. Now that reality is past. As a result, old certainties have been replaced by new uncertainties.

The very base on which Europe's security system has rested for so long is crumbling: Eastern Europe, no longer a security bulwark for the Soviet Union, is becoming a large buffer zone between Russia and Western Europe. Soviet forces, against whom NATO was set up, are leaving their garrisons in Hungary and Czechoslovakia and are being thinned out in Poland and East Germany. The threat which NATO deterred so effectively for so long, is shrinking, if not disappearing.

What will this mean for the future? In March, East Germans voted for a new government whose only mandate is to negotiate the quick unification of Germany. By this summer, economic and monetary union will be established between the two German states, and West Germany's Deutschmark the currency for the whole area. In three to four years – some think even earlier – there will not be two, but only one, united German state.

The Soviet Union has ceased to be the dominant power in the centre of Europe. That seems irreversible. Of course, nobody can predict the future of President Gorbachev and the fate of the reform for which he stands. The task of turning the Soviet Union into a modern state capable of integration into the international political and economic system is gigantic – the present reform leadership may well stumble and possibly fail in the effort. But even if it is replaced by a more traditional regime, the changes that occurred in Eastern Europe cannot be reversed.

Poland, Czechoslovakia and Hungary will not accept a return of Soviet troops and of Soviet tutelage, nor will East Germans forgo unity with the West. Any Soviet attempt to reconquer the lost terrain by military force would risk what East and West have so care-

fully avoided ever since the beginning of the nuclear age – direct, and possibly escalatory, military confrontation.

So much is clear. But now the uncertainties – and the chances – are coming to the fore. How should the unification of Germany be accommodated in the existing European security structure? How should the structure itself evolve, given the virtual disintegration of the Warsaw Pact and the need, for the Atlantic Alliance and its NATO-organization, to adjust to the fundamental changes in Europe? What threats, if any, are left to justify military alliances at all?

To date, nobody knows the answers to these questions. For some time the need to develop new structures of security in Europe has been widely recognized. But when the East European revolution occurred, none of them had been brought to conclusion. So there is no firm framework in which to integrate the united Germany, the newly democratic states of Eastern Europe or the two alliance systems.

THE FIRST QUESTION IS WHETHER SUCH A framework is at all necessary. Have the military threats not disappeared, is détente not finally accomplished? Unfortunately, the prospects for a Europe of peace and harmony remain clouded. Europe – despite the cuts in military forces that have been made and those that are currently, with good chances of success, being negotiated between NATO and Warsaw Pact countries in Vienna – remains, in military personnel and fire-power, the most militarized region in the world, and nuclear weapons are in the arsenals of the major powers.

It is true that the old concept of threat which the West has so long feared and which Soviet sources now confirm was part of Soviet military planning – namely a massive, rapidly moving attack by Warsaw Pact forces against the West – appears today like a faded cartoon in an old journal. But the potential for conflict remains: ethnic strife in the Soviet Union, Eastern Europe and the Balkans; crises in the nearby Third World – the Middle East and Northern Africa – spreading to Europe. And there is, of course, one traditional problem of

European security which the unification of Germany has revived in the minds of many of her neighbours: whether a strong Germany might once again challenge European stability.

Europe's ability to address these problems would depend not least on the organization that can be found to deal with the new threats as effectively as the Atlantic Alliance has dealt with the old ones. Today, a number of candidates are available, but none of them fully qualify.

The Conference on Security and Cooperation in Europe (CSCE) seems best placed to provide a framework which spans East and West Europe. It includes practically all European states, plus the Soviet Union, the United States and Canada. However, it is a traditional international conference: every state has one vote, and no agreement or common action is possible unless there is total consensus among them. The CSCE is thus like the United Nations without a Security Council, a Secretary General, or even a Secretariat.

While it is increasingly accepted that the CSCE's organizational structure should be strengthened – for example, by regular meetings of foreign ministers, the establishment of a crisis centre, or an organization for arms control verification – it is essentially a framework for negotiation, communication and dialogue, not for decisive common action in case of crisis. The idea that one day the two existing alliance systems could merge under its roof, therefore, still belongs more to the realm of wishful thinking than to reality.

CAN THE TWO ALLIANCE SYSTEMS DO THE JOB, by serving on the one hand the security needs of their respective members and, on the other, by building a joint network of arms control and crisis cooperation? Again, the answer is negative, for the simple reason that the Warsaw Pact has ceased, for all practical purposes, to operate as a cohesive body. Instead, the Atlantic Pact with NATO is today the only functioning security structure left in Europe.

Nor does the demise of the Warsaw Pact imply that of NATO. In contrast to the Eastern bloc which was essentially a transmission belt

for Soviet military control and coordination, NATO has always been an alliance of sovereign states, addressing not only military but policy issues as well, including the coordination of arms control matters. There never was symmetry between these two European defence organizations.

Of course, NATO cannot now conduct business as usual. It has to devise new ways of military integration with much reduced forces; rethink and reformulate its nuclear strategy; and give greater emphasis than it has so far to the management of arms control. And it will also have to address the question whether in a world in which military forces are much less central to international politics, other forms and fora for transatlantic cooperation need to be found.

Yet NATO will remain essentially a Western club. The idea, advanced by some, that Eastern states, too, should join, overlooks three fundamental realities: that Eastern European countries, having just regained their independence, have no desire to submit themselves to any new supranational organization; that Western countries continue to want to discuss security and defence issues among themselves; and that the Soviet Union would regard any eastward territorial extension of NATO as thoroughly unacceptable.

THEN THERE IS THE EUROPEAN COMMUNITY of twelve Western European nations. This Common Market, which will become significantly more integrated with the internal market planned for 1992, is already exerting a major attraction on all other European countries, those of Eastern Europe included. Because of its wealth and its large market, the European Community has recently been pushed into a new kind of security role. For Eastern European economies, access to this market would offer the hope of economic recovery and hence could be highly useful in strengthening political stability in these countries. Perhaps some day, Poland, Hungary or Czechoslovakia might qualify for full membership. In the meantime, association agreements between the Community and East European states have to be arranged.

So the European Community indeed has a stabilizing role and hence a responsibility for security, but that does not qualify it to become a European system of security. Perhaps, as part of the reform in Western defence cooperation, the Community might increasingly offer a framework for a genuinely Western European defence integration, and there are many in Europe who feel that this would be desirable. But it is difficult to imagine that it could evolve into a wider European security forum.

Finally, there is the ongoing process of East-West arms control negotiations in Europe. The

talks in Vienna which started in March 1989 are moving ahead at a speed unheard of for such negotiations: a first agreement, setting equal ceilings of military forces for NATO and the Warsaw Pact in Europe, is probable by the autumn; a follow-up on deeper reductions is already being prepared. Of course, these talks do not amount to a formal organization. But some organizational structure is nevertheless likely to emerge in the proposed regime for verification and confidence-building measures.

SO THERE IS NO ALL-EUROPEAN SECURITY system yet – or is there? Perhaps the apparent tidiness of the European security structure during the past forty years has misled us into thinking that a security system must, in order to function, be equally tidy and thoroughly organized. But remember, in the past this was the consequence of extraordinary circumstances – a threat assumed to be precise in a world assumed to be bipolar. Now that the threats have become more amorphous and the world pluralistic, a looser, less formalized and less comprehensive security system would seem to be quite appropriate. Indeed, Europe's new security system consists of the four elements outlined above, each imperfect in itself, but complementing the others.

All-European security matters can, therefore, be addressed in their political aspects in a

strengthened CSCE, in their military aspects in quasi-permanent arms control negotiations to which crisis centres and a verification regime would be added. All-European economic prosperity – and with it political stability – will be served by the European Community through its internal integration and a series of association agreements with other European states, possibly one day even including the Soviet Union. And Western political and military coordination would continue in a revamped NATO, with the European Community increasingly becoming the framework for close West European defence integration.

THE FIRST TEST OF WHETHER THIS MULTI-LAYER system can actually work will lie in the way German unification is embedded in an international consensus. Significantly, the diplomatic timetable already envisages stages which correspond to the various elements of the new European security system listed above. There will be a series of meetings between the two German states and the World War II allies (the US, the USSR, France and Britain) to seek agreement on the future alliance status of a united Germany and the expiration of still existing Four-Power rights in Germany.\*

The Vienna negotiations on arms control will have to define the size and equipment of military forces from the Atlantic to the Urals, including a ceiling for future German forces (the large majority of Europeans, East and West, and of Germans want the united Germany to be a member of NATO). In late 1990, a CSCE Conference will bring together all thirty-five member states of the organization to review and settle the matter. In the meantime, the European Community will have to provide some prospect of closer association to other European states.

Of course, timetables can get tangled; things can go wrong. There are many actors who could throw spanners into the diplomatic works. Imagine for a moment that the Soviet Union might try to respond to Baltic aspirations to independence with military repression. Hence the task of getting from here to there is by no means an easy one. But if there is reason, nevertheless, for confidence that the unification of Germany can be achieved in a cooperative atmosphere, it is due to the existence today of the different elements of East-West, European and Atlantic cooperation. The layers are in place; now they have to be fitted together. □

\*In accordance with treaties signed in 1945, the four victorious powers of the Second World War – France, the UK, the US and the USSR – retain rights and responsibilities with respect to Germany. Any changes of the status quo of the three political organisms – the Federal Republic of Germany, the German Democratic Republic and Berlin – formed on the territory of Germany delineated by the Potsdam resolutions (1945) require the agreement of all four powers.

# ON RACISTS, TERRORISTS AND PEACEMAKERS

*The apparently amiable beginning to negotiations over South Africa's future presents yet more dangerous and intricate new puzzles to solve.*

BY HERIBERT ADAM

**T**HE EXTRAORDINARY SPECTACLE OF THE SOUTH AFRICAN GOVERNMENT and the African National Congress (ANC) amicably socializing and bantering with each other for the first time, needs to be decoded for its psychological implications. Politics is about the manipulation of symbols as a precondition for the exercise of real power. Not only was the ground laid for irreversible negotiations and compromises between two deadly enemies during the three days of talks at the foot of Table Mountain, they discovered, in the words of ANC foreign affairs spokesman, Thabo Mbeki, that to their mutual amazement they "had no horns." Members of the dreaded Security Police who guarded the ANC delegation became buddies with their enemies and were soon on first-name terms. While white and black South Africa wondered about respectable "terrorists" being invited into the official residence of South Africa prime ministers, a correspondent observed, flabbergasted: "But when he [Mbeki] began to crack jokes, accompanied by some boyish elbow-tugging with General Basie Smit, the chief of the Security Police, the unusual appeared to become elevated to the sublime."

The National Party-ANC instant love affair replicates an experience many South African exiles from different political backgrounds have encountered when they meet abroad. Free of the *apartheid* framework, and as a minority in a foreign society, they discover their common South Africanness. A psychological explanation of the cordial relations between former arch enemies would point to the rediscovery of bonds of origin, of a repressed kinship – children of the same soil.

The welcome back of estranged exiles by family in control of the estate, extends beyond the mere rational calculation that the outside world's acceptance is contingent on ANC endorsement. ANC forgiveness means renewed legitimacy for the beleaguered regime. The state president now can travel through the front door of the world. South African bankers can again collect long-term loans. Celebrated as peacemakers with strategic foresight, the same former *apartheid* engineers occupy a new moral high ground.

This constellation also explains the remarkable cohesion which the National Party displayed during the process of change. Most seasoned observers expected defections to the right, if the leadership were "to go so far." Yet the party caucus endorsed the cabinet's moves unanimously and issued encouragement and congratulations. Such support was particularly surprising because the caucus was left in the dark about the precise contents of the president's 2 February speech. The crucial last-minute input and consultation was not with his own constituency but with the opponent in prison. The potential coalition and government of national unity was born at this moment. As a result, a sense of relief, even euphoria, swept the land. One of the most frequent utterances quoted on both sides stressed the foolishness of not having undergone the exercise of reconciliation years ago.

The more remarkable feature of the process lies in the forgiveness by the victims. Without bitterness about decades of suffering, or expressions of revenge for horrendous crimes, Mandela publicly declares "let bygones be bygones." With this attitude, Mandela in fact manufactures a new myth, that the past no longer matters. However, the past may be

forgiven but cannot be forgotten. By legitimating the perpetrators of past apartheid crimes in the interest of future peace, conversion without repentance is condoned. Not without reason does the religious practice of cleansing from past sins insist on confession and restitution as a symbolic demonstration of the sincerity of conversion. However, neither an apology nor an offer of compensation has so far been heard from the official powerholders. The National Party has yet to apologize for the misery inflicted: so far there is only the cynical admission that *apartheid* has failed. To declare *apartheid* unworkable is not the same as denouncing it as criminal.

BY FORGIVING WITHOUT INSISTING ON SOME KIND OF MORAL REHABILITATION, Mandela may indeed compromise his credibility among his radical constituency. It is not enough to demand compensation in the form of nationalization. But even on this issue, the ANC has compromised after a howl of protest by the market and monopolies. Now nationalization will be considered only if the experts who are to study it find it feasible. This feasible socialism may make economic sense but will not be understood by a deprived constituency that demands tangible benefits now. Instead, it is fed with the imagery of a dual presidency.

De Klerk and Mandela assure each other of their mutual respect at a joint press conference. Stephen Gray, a Johannesburg writer, accurately describes De Klerk and Mandela on TV as "two propped-up grandfathers, both smiling awkwardly at the camera." The country's largest paper, on the other hand, editorializes glowingly: "The youngish, imperiously calm and sure-footed State President, and the tall, dignified and articulate black leader sitting side by side, making history together." The chairman of the South African Communist (SACP) Marxist-Leninist vanguard party joins the celebrations of harmony at the back of the polished Mercedes and at the bar of the luxury Lord Charles hotel. The papers dwell in infinite detail on the refined menu, not failing to notice the visitors' preference for the carvery.

In the meantime, fifteen miles down the road from Somerset West in Khayelitsha and the infamous Crossroads, thousands of shack dwellers freeze in the cold winter rain in cardboard shelters. The occupants of the vehicles in the ANC convoy, with police in front and behind, and a helicopter overhead, drive quickly past the misery behind the sand dunes on the N2 highway. Their air-conditioned comfort spares them the stench of overcrowding and poor sanitation. Thabo Mbeki addresses the well-heeled members of the press club over lunch at the Cape Sun Hotel and a packed hall with an enthusiastic audience at the elite, white-washed Stellenbosch University in the midst of charming vineyards. The occupants of the Cape Flats hear about the ANC being in town, but, apart from a poorly attended rally at Mitchells Plain, don't see their liberators. Langa, the oldest African township, is rumoured to have already become a stronghold of the rival Pan Africanist Congress (PAC), a hard-line movement which rejects negotiation as appeasement. Adventurous journalists in search of evidence report graffiti: "one settler, one bullet!"

For security reasons, the ANC delegation cannot live in the dilapidated townships or even visit the winding lanes that they pass with expressions of horror. But the greying gerontocracy of the ANC in impeccable business suits and Gucci watches, with two token women included, must find themselves as alien in the cesspool of Khayelitsha as the white designers of this alternative to influx control. The ANC image is modelled on white expectations, not on the aspirations of the Lumpenproletariat. "Statesman-like," they must impress the oppressors that they are no longer the "terrorists" they were made out to be. As one commentator wryly noted: "The oppressors and terrorists have overnight begun to represent the centre of South African politics."

THE FAST PACE OF THIS POLITICAL METAMORPHOSIS HAS NOT YET ALLOWED its implications to be realized by those likely to be left out of the new alliance. Even the downtrodden borrow from the glory of their leaders being accepted in the halls of power. But the sensible trend of reconciliation means disaster looming under the surface: the closer the ex-prisoners get to their jailers, the further they move from their own powerbase. Gaining political power under South African circumstances means losing support at the same time. By restricting political education and suppressing organization for liberation for decades, the *apartheid* regime has laid the seeds for destroying even its liberators. "The Nats and the ANC are rapidly deligitimating each other by rubbing elbows," exaggerates American sociologist Pierre van den Berghe, who nonetheless senses the potential danger of the enlarged middle ground shrinking again under the *toenadering* – the Afrikaans word for rapprochement.

The random violence in Natal and elsewhere gives a foretaste of the potential anarchy ready to emerge if the rational chartist project of non-racialism fails. How often can Mandela afford to be ignored when he calls for arms to be thrown into the sea? This is the inevitable revenge of the bitter South African history, regardless of the noble intents to repress it. Are the actors for the oppressed aware of this dialectic? Or have they also become blinded by the taste of power in the shadow of the magic Table Mountain?

IF A PROFESSIONAL PUBLIC RELATIONS AGENCY HAD BEEN ASKED BY THE South African government to design a campaign to discredit the ANC, it could not have conceived a better script. Yet the government and the ANC now need each other. Neither can afford to weaken a moderate partner for fear of extremist rivals taking over and South Africa falling apart in a murderous civil war. The indefatigable Pik Botha is reported to have pressed the emerging partnership ideology on his ANC dinner partner with the analogy: "We are all in one boat, and the sharks to the left and sharks to the right are not going to distinguish between us when we fall over." Mandela ominously speaks of the NP and the ANC as the "major actors" and "senior partners," relegating the junior rivals to the other side of the table – opposed to ANC hegemony.

The leader of a past Stalinist party, as Mandela's right-hand man, obsesses white South Africa. In fact, dedicated, bright SACP members occupy most of the influential positions in the ANC and the unions as a separate vanguard underground. To reveal its secret membership, as would be normal under democratic conditions, could embarrass the SACP. It would show its dominance in the ANC and vindicate government propaganda.

What white South Africa has not yet understood, is the recent development that turned rhetorical Stalinist ideologues into the more prag-

matic and moderate force in the ANC. With a disintegrating Soviet bloc seeking peace and investments instead of world revolution, South African communists have nowhere else to go than home. This makes them unexpected allies of Pretoria's negotiation project. The SACP's professed socialism in the second stage, after democracy has been achieved, depends, in SACP leader Joe Slovo's words, on the "class forces in play" at that time. In practical terms, this puts socialism on ice: once non-racial capitalism delivers the goods, relatively colour-blind, Marxist socialist parties shrink or turn into social democrats, as has been demonstrated the world over.

Because of its past radical image, the SACP leadership can entice a sceptical youth into the negotiation process. From this perspective the government should welcome the red flags rather than fear them. If anyone can prevent a latent counter-racism and make a rational colour-blind attitude prevail, it is the internationalist universalism of traditional Marxists. That is the historical merit of South African communists, their undemocratic Stalinism notwithstanding.

Jerry Kola

Meanwhile, new stories about past clandestine police atrocities daily strain the imagination of thriller readers. They have difficulties in distinguishing between reality in the *Cape Times* and fiction in the library. It would seem important that an amnesty not preempt the period of revelations. Determining the truth is essential for the nature of the new society whose moral foundations rest on an appropriate historical consciousness. The phase of revelations does not aim at estab-

lishing criminal liability of individual perpetrators, but political and administrative liability that allowed and encouraged the crimes in the first place. If the new order is to be qualitatively different from the old one, it would have to alter those institutional frameworks rather than appropriate them under new management. That was the error Zimbabwe made – simply continuing with the emergency legislation of its predecessor.

WE STILL LACK AN ADEQUATE EXPLANATION OF WHY THE LEADERS OF THE victims of apartheid humiliation can so easily forget that the future is always a prisoner of the past. Perhaps the key to the puzzle why they do not show bitterness and preach revenge lies in their secure identity. The ANC's Barbara Masekela, who has spent most of her exile in the US, has highlighted a crucial difference: "The apartheid regime has not been able to deprive us of our culture, our language and our heritage, which is quite different from the position of black Americans, who have actually been deprived of their African culture." For this reason, she concludes, "the average black South African is not alienated" and South Africa lacks the US racial polarization.

In other words, South African blacks have been subjugated but not conquered spiritually. They can relate to their oppressors as equals. With his demeanour and discourse, Mandela displays a pride and self-confidence that equals his oppressors. He even learned their despised language – but not to gain entry as a colonized subject. Black Consciousness, as a sense of identity that has rid itself of the inferiority complex of an internalized slave mentality, has only reaffirmed a genuine non-racialism among black activists of all political strategies. There is no counter-racism among blacks. It is this universalism which transcends narrow group thinking, that the South African government has experienced for the first time. It was a precondition for the remarkable moderation. □

BETWEEN 20 AUGUST AND 14 September, 1990, the parties to the Treaty on the non-proliferation of nuclear weapons (NPT) are to meet in Geneva to examine the functioning of the Treaty. It is an important event, because it will be the last meeting of its kind before the parties meet again in 1995 to decide whether the Treaty will remain in effect for an indefinite period, or be extended for one or more additional limited terms.

After many years of negotiations at the UN, the NPT (as it is commonly called) was opened for signature in 1968. It is expressly intended to prevent the spread of nuclear weapons. According to the provisions of the Treaty, which came into effect in 1970, states with nuclear weapons commit themselves not to transfer such weapons to any other party. Non-nuclear-weapon states, for their part, agree not to acquire nuclear weapons. To verify compliance with this obligation, states without nuclear weapons also agree to submit activities they undertake in the area of peaceful uses of nuclear technology to the safeguards enforced by the International Atomic Energy Agency (IAEA).

#### The fourth review conference

The 1990 Conference (like those in 1975, 1980 and 1985) is one of the meetings which, according to the Treaty, is to take place every five years, and aims at ensuring that the provisions of the Treaty are being implemented. The first three conferences, however, did not always arrive at a consensus in this respect.

As far as the non-nuclear-weapon signatories are concerned, the NPT is not only intended to prevent the dissemination of those weapons, it is also supposed to achieve nuclear disarmament. Under Article VI, all parties to the Treaty "undertake to pursue negotiations in good faith on effective measures relating to cessation of the nuclear arms race at an early date, and to nuclear disarmament." Moreover, in the Preamble to the Treaty, the signatories call for "the determination of the Parties to the Treaty banning nuclear weapon tests in the atmosphere, in outer space and under water (PTBT) ... to seek to achieve the discontinuance of all test explosions of nuclear weapons."

Because of the increasing quality and quantity of nuclear weapons held by nuclear-weapon powers that are party to the Treaty (the US, UK, and USSR), these countries have, in the past, been criticized by several non-

#### ARMS CONTROL DIGEST BACKGROUND

## THE FOURTH REVIEW CONFERENCE OF THE TREATY ON THE NON-PROLIFERATION OF NUCLEAR WEAPONS

nuclear-weapon states for not trying hard enough to achieve the NPT's goals. According to the critics, it is incumbent upon the powers which are allowed under the Treaty provisions to own nuclear weapons and continue testing, to meet the requirements of the Treaty related to disarmament. The issue was so contentious that at the Second Review Conference of the Treaty in 1980, the parties could not agree on a final Declaration.

Although significant progress has been made on nuclear disarmament – namely the Intermediate-range Nuclear Forces treaty (INF) which bans a whole category of missiles and, more recently, advancement of the START talks on the possible reduction of strategic nuclear arsenals by fifty percent – it is expected that the issue of a complete nuclear test ban will be of central concern at the 1990 discussions. Two of the three depository governments of the Partial Test Ban Treaty (the US and UK) have openly stated that they would oppose any initiative seeking to convert that treaty into a complete nuclear weapon test ban agreement at an amending conference scheduled for January 1991. Their efforts will probably not go unnoticed at this next NPT Review Conference.

Peaceful development of atomic energy is another important goal of the NPT. However, since nuclear technologies are less in demand (mainly because of economic factors, and disasters such as Chernobyl), the issue should attract less attention than at previous meetings. On the other hand, the problem of the nuclear capabilities of states that have not signed the Treaty could, once more, generate considerable controversy. On this point, many countries find the NPT flawed because it does not ban co-operation between signatory and non-signatory states, and the latter do not accept the IAEA's complete verification measures.

#### What is at stake?

In its twenty-year existence, the IAEA has not detected a single violation of the Treaty's provisions, and none of the parties has invoked its right to withdraw – a right a country can exercise under the Treaty if, in its view, its supreme interests are threatened. Although it is now recognized as the cornerstone of the international regime for preventing the spread of

nuclear weapons, the NPT remains a fragile instrument. Since China and France have not yet signed (although there have been some recent hints that France is reconsidering its policy) only three of the five nuclear-weapon powers are officially bound by the Treaty provisions. Moreover, Israel, South Africa, India, Pakistan, Brazil and Argentina have not signed it either and they are all suspected of owning, or wishing to procure, nuclear weapons – a fact which presents a serious challenge to the very existence of the Treaty.

Despite the significant disagreements that could arise on some issues, no-one thinks the 1990 Conference will fail. The meeting may, however, signal the beginning of talks on the future of the Treaty after 1995. The idea of extending the NPT for only a very short term in exchange, for example, for a firm commitment to conclude a complete nuclear test ban treaty at a definite date, could monopolize informal talks at the conference. For the advocates of the NPT, adopting such a strategy would be extremely dangerous, and could jeopardize the treaty. If the Treaty is abrogated, the IAEA will no longer have the right to inspect several nuclear programmes which, until now, have always been recognized (thanks to the Agency's verification measures) as being conducted for peaceful purposes only. Since one cannot distinguish between civilian atoms and military atoms, the disappearance of the NPT-IAEA system would shroud many nuclear programmes in uncertainty – an uncertainty that would be even greater since at least thirty countries will have the capability to build nuclear weapons before the end of the decade.

Some twenty-five years passed between the time atomic energy was discovered, and when the NPT came into effect. During that period, many attempts at preventing a greater proliferation of nuclear weapons were made, with varying degrees of success. Even though the Treaty is not without flaws, its advocates recognize that the implementation of a new international non-proliferation agreement would confront insurmountable difficulties. It is why the success of the 1990 Review Conference is so important to them. □

## ARMS CONTROL DIGEST

### Strategic Arms Reduction Talks (START)

"Major" progress towards a START Treaty was reported from the Baker-Shevardnadze "ministerial" meeting in Moscow, from 7 to 9 February. The two sides settled two of the three outstanding issues they had hoped to resolve: telemetry encryption, and non-deployed missiles. On the third issue, air-launched cruise missiles (ALCMs), the Soviets accepted the US proposal that bombers be counted as carrying an arbitrary number of missiles much lower than that which they are theoretically capable of carrying. Thus, US bombers would be counted as carrying ten ALCMs, and current Soviet bombers as eight, even though they are equipped for up to twenty and twelve, respectively. They would not be permitted to carry more than the latter numbers, however. Disagreement continued over the range at which ALCMs would be subject to START limits, with the Soviets continuing to argue for the 600 km definition from SALT II, while the US wanted it raised to 900–1,000 km (a drop from its previous proposal of 1,500 km).

The most promising advances toward an agreement in Moscow concerned strategic defences and sea-launched cruise missiles (SLCMs). Regarding the first, the Soviets dropped their insistence on an agreed statement permitting withdrawal from the START Treaty in the event of abrogation or withdrawal from the Anti-ballistic Missile Treaty, although they indicated that they would continue their own policy of linking the two. On SLCMs, the Soviets finally accepted the US preference for a simple declaration of planned deployments, while the US agreed

to consider such a declaration as "politically binding." The two sides continued to disagree, however, on both the range above which missiles would be included (the US proposing 300 km, the Soviets 600), and the type of missiles (the US wanting it limited to nuclear missiles, the Soviets, to both nuclear and conventional types).

Finally, without committing itself to immediate follow-on negotiations, the US agreed to hear Soviet proposals for "START II" talks focussing on deeper cuts and stabilizing measures.

Hopes for a quick conclusion of the START Treaty were dimmed at the Baker-Shevardnadze ministerial in Washington, in early April. Although progress was made on some minor points, none of the major issues outstanding from Moscow were settled. Furthermore, according to American press reports, the Soviets "backtracked" on the issue of a purely declaratory approach to SLCM limits. An added complication was a new US proposal said to have been presented to Shevardnadze in Namibia, in March. This called for a ban on mobile land-based missiles with multiple warheads (MIRVs) as part of START I, and a ban on all MIRVed land-based missiles in START II. President Gorbachev reportedly ignored the former and objected to the latter on the grounds that it did not include submarine-launched ballistic missiles, in which the US has an advantage.

After the April meeting, with just one more ministerial planned before the Presidential summit, some US officials were reported as doubting that even an agreement in principle on START would be ready in time.

### Conventional Forces in Europe (CFE)

In early February, President Gorbachev rejected President Bush's 31 January proposal for unequal levels of US and Soviet personnel on allied territory in Eu-

rope. Just a few days later, however, at the Open Skies meeting in Ottawa, the Soviets reversed themselves by accepting the original Bush proposal, and hence the principle of a larger number of US than Soviet troops on foreign soil in Europe. The proposal requires the Soviets to reduce their forces by 370,000 to 380,000 men, compared to just 80,000 for the US.

The West's assumption that the issue of personnel reductions had thereby been solved was belied, however, when Soviet chief negotiator Oleg Grinevsky on 22 February suggested additional alliance-wide ceilings of 700,000 to 750,000 in Central Europe. Western negotiators, who want personnel limitations restricted to US and Soviet forces, immediately rejected the idea and warned that it could wreck the agreement if it was put forward as a formal proposal by the East.

On another issue, NATO's revised proposal in early February lowered the ceiling on combat-capable aircraft to 4,700, as desired by the Warsaw Pact. NATO also agreed to exempt approximately 2,700 "primary" trainer aircraft, again in line with Pact wishes, and to set a separate ceiling of 500 on air-defence interceptors. However, the East continues to insist on exempting some 1,500 interceptors and 1,500 combat-capable trainers, as well as medium bombers and land-based naval aircraft. Western negotiators complain that the resulting "ceiling" would be over 2,000 higher than the number of aircraft now possessed by NATO.

At the Washington ministerial meeting in early April, Soviet Foreign Minister Shevardnadze reportedly proposed equal ceilings of 500 US and Soviet combat aircraft based on allied territory, while postponing other aircraft-related issues to the next stage of the talks; this was rejected by the US. Other outstanding issues include ceilings for artillery and armoured combat vehicles, restrictions on helicopters, and definitions of

armoured vehicles. Nevertheless, despite a widespread perception that the negotiations have stalled, both Eastern and Western delegates continue to believe that they can conclude an agreement before the end of the year.

### Open Skies

The negotiations on an Open Skies Treaty began with high hopes in Ottawa in mid-February, as the foreign ministers of the twenty-three participating states (NATO and the Warsaw Pact) endorsed the concept of mutual aerial surveillance with "maximum possible openness and minimum restrictions." However, the talks soon bogged down in the details, as the USSR – isolated among its allies – insisted on a number of provisions which would restrict the "openness" of the regime. The Western states resisted Soviet proposals for a pooling of aircraft and sharing of the data, as well as the extension of overflights to overseas bases.

When the Ottawa meeting broke up on 27 February, little progress had been made on the detailed points of contention. While dropping their initial demand for a common fleet of aircraft, the Soviets had raised a new one that would allow only Soviet aircraft to overfly their territory. Other disagreements arose over the idea of restricted zones over various types of installations and populated areas, as proposed by Moscow; the type of sensors to be permitted aboard the aircraft, with the Soviets arguing for greater restrictiveness than the West; and the number of overflights to be permitted, with the Soviets proposing a lower figure.

Shortly after the talks resumed in Budapest on 23 April, both the Soviet and American chief delegates expressed pessimism about the prospects of reaching an agreement by the target date of 12 May. □

## DEFENCE NOTES

### The Future of NATO

In recent months the rapid political developments leading towards German reunification have raised core questions about the future of NATO and European security. Official comments have revealed sharply different views on the place of a unified Germany in NATO.

At the end of January, Mikhail Gorbachev announced that the Soviet Union accepted in principle the unification of Germany. The initial position of the Soviet Union was that gradual German unification should be accompanied by disengagement from the two alliances and the establishment by treaty of a neutral state. This view has been strongly rejected not only by NATO, but also within the Warsaw Treaty Organization. In particular, Poland continues to express deep concern about a unified Germany, and is clearly skeptical that neutrality would be a practicable solution. Faced with somewhat ambiguous comments by Chancellor Kohl on future guarantees for the western frontier of Poland at the Ottawa meeting of the two alliances in mid-February, the Polish foreign minister called for a unified Germany to remain within NATO lest it become a "superpower on the European stage."

President Bush stated the official position of the United States and West Germany at a press conference on 25 February, where he commented: "We share a common belief that a unified Germany should remain a full member of the North Atlantic Treaty Organization, including participation in its military structure." To this, Chancellor Kohl added: "One thing is clear: a united Germany cannot belong to two different pact systems." Although not all members of NATO appear to be enthu-

siastic about German reunification, all take the position that a reunified Germany should be in NATO. The Soviet Union thus appears to be diplomatically isolated.

In early April, the Soviets offered a different solution. A unified Germany could remain in both alliances for a transitional period of five to seven years, so that, according to Gorbachev, reunification could be synchronised with "new structures of security for all of Europe from the Atlantic to the Urals." These comments, echoing the earlier Soviet concept of a "European house," were received negatively in Washington, but served to underline continuing Soviet unwillingness to accept the NATO solution.

### Arsenals in the Middle East

In late March and early April, two incidents refocused attention on the emerging potential for widespread deployment of weapons of mass destruction in the Middle East. In late March arrests were made in England following an alleged attempt to smuggle key components of nuclear weapon triggers to Iraq. One week later British customs officials prevented the export to Iraq of lengths of metal tubing which, according to some experts, could be used to assemble a massive artillery piece capable of firing chemical or nuclear warheads over a distance of hundreds of kilometres. Iraq has denied seeking a nuclear capability (which is in any case conservatively estimated to require four or five more years of development), but has acknowledged possession of sophisticated chemical weapons.

During April also, a fire at a controversial chemical plant in Libya, the cause of which is unknown, may have seriously damaged production capabilities. While Libya denies that the plant at Rabta, outside Tripoli, is intended for chemical weapons production, in March, US officials provided information from intelligence analyses which concluded that Libya

had resumed the production of chemical weapons in late 1989.

Libya and Iraq are two of a number of states which have been seeking to acquire a ballistic missile delivery capability. Libya is believed to be developing a missile with a range in excess of 500 kilometres, while Iraq may have successfully extended the range of its Soviet-built Scud-B missile with the aid of an extra fuel tank designed by North Korea. US intelligence sources have also identified facilities close to the Rabta plant that could serve for the storage of poison gas canisters, but it is not yet clear that Libya has been able to design a chemical warhead for its ballistic missiles.

### Elusive Peace Dividend

In what promises to be a continuing debate, Washington is divided on defence policy. In early March, CIA chief William Webster and Defense Secretary Cheney openly disagreed on the nature of the Soviet threat. Testifying before a Senate committee, Webster claimed that the US intelligence community saw little likelihood that the Soviets would pose a conventional military threat in the foreseeable future, even if Gorbachev were deposed by Communist Party conservatives. Cheney, on the other hand, argued that recent Soviet changes were reversible, and described Webster's testimony as "not helpful" in securing Congressional support for the President's budget submission.

The following week the Chairman of the Senate Budget Committee proposed to cut defence by four percent per year as opposed to the two percent cut called for by President Bush. With any such cut in the defence budget, possibly including the two percent proposed by the president, attention focusses anew on which of the major new weapons systems, including the B-2 Stealth bomber, the Trident nuclear missile submarine, the mobile MX missile and the Midgetman ICBM, will come under the axe. Meanwhile, Congress has begun to discuss how to

reallocate the \$140 billion over five years, which would be saved if the two-percent cut is accepted.

On 19 and 20 April, the influential chairman of the Senate Armed Services Committee, Sam Nunn entered the debate with two speeches in the US Senate amounting to what the *New York Times* called "a benchmark" statement on how US military policy and spending plans should change. Nunn said the US should reduce troop strength in Europe to between 75,000 and 100,000 – the Bush administration has proposed 225,000. He also said that the US Navy should reduce the number of aircraft carrier battlegroups to 10 or 12, not the Navy's proposed 14. On the budget side, Nunn suggested cutting the proposed 1991 defence budget by \$18 billion, to \$289 billion.

On 26 April the Defense Secretary re-entered the fray with a proposal to reduce the development and production of new military aircraft. Instead of buying 132 B-2 Stealth bombers, the Air Force would purchase 75; the planned purchase of 210 C-17A transports would be reduced to 120; and the Navy's planned purchase of a new tactical attack plane would be cut by about one-quarter. Two other military aircraft development programmes, for the Navy and the Air Force, are being deferred. Cheney cited changes in Eastern Europe and the USSR as reasons for the reductions and is reported also to have indicated that the Navy would be asked to reduce the number of aircraft carriers it employs, to twelve.

In Canada, the peace dividend is scarcely visible. Under the budget tabled by Michael Wilson on 20 February, defence spending will be limited to five percent growth in 1990–1992, or about the level of inflation. A Department of National Defence task force is expected to produce a revised defence posture in the summer or early fall. □

— DAVID COX

## REPORT FROM THE HILL

### The Budget

Minister of Finance Michael Wilson tabled the federal budget on 20 February. The major cuts that had been anticipated for defence and foreign assistance did not materialize, although both areas were limited to five percent annual growth over the next two years, approximately the rate of inflation. Total spending by External Affairs was virtually frozen for 1990-91 at \$1.1 billion, while National Defence was increased by \$665 million to \$12 billion, and overseas aid funds were pegged at \$2.5 billion.

The latter funds had been severely cut in the 1989 budget, lowering from 0.49 to 0.43 percent the ratio of aid to the Gross National Product. Earlier in the year, External Affairs Minister Clark had waged a quite public battle to defend the aid budget from further cuts and, although he clearly succeeded, his prediction that the ratio would rise to 0.45 percent this year appeared unlikely given the constraints imposed on spending increases.

The only major defence item to be cut was the \$680-million Polar 8 icebreaker. The government said the cutback was in part a response to the 1988 bilateral agreement whereby the United States promised to give advance notice when it sent its icebreakers into the Northwest Passage. These waters are claimed by Canada, while the US continues to maintain that they are an international waterway. In the Commons on 13 March, External Affairs Minister Joe Clark said that the agreement required the US to seek

the prior consent of Canada, but opposition members disputed this interpretation.

### African Issues

Joe Clark addressed the Commons on 7 March about his visit on 26 to 28 February to Lusaka, Zambia – the headquarters of the African National Congress (ANC) in exile – to meet with Nelson Mandela and leaders of the Front Line states which have led the fight against apartheid in South Africa. Clark indicated that Mandela was “unambiguous” on the issue of sanctions; that “the greatest assistance which could be offered by the outside world to the ANC is to maintain sanctions. Indeed, he spoke of intensifying sanctions, and I have asked him to indicate where and how this should occur.”

External Relations Minister Monique Landry reported to the House on 28 March about her recent visit to Ethiopia and the humanitarian and diplomatic initiatives which Canada has taken in that country. The House unanimously supported a resolution condemning all parties to the conflict “who would use food as a weapon to attain strategic, military and political objectives and who would not assist the international donor community to provide ... delivery of food to the starving millions in the area.”

### Changes in Europe

During a brief visit to Ottawa, West German Foreign Minister Hans-Dietrich Genscher appeared before the House External Affairs Committee on 5 April and called for Canada, the United States and the European Community (EC) to consider a new definition of their relationship in light of the rapid changes in the European political order. Beyond German reunifica-

tion, Genscher pointed to the increasing integration of the twelve members of the EC: “We are on the way to the political union of Europe, meaning the Europe of the Community...” He saw NATO retaining an important role in European security, with both American and Canadian troops, but predicted that its task would become more political, with greater emphasis on verification, arms control, confidence-building and the establishment of cooperative security structures in Europe.

In another corner of Europe, Lithuania’s declaration of independence on 11 March won unanimous approval from the Commons the following day. Government officials were careful to stress that Canada had never legally recognized the Soviet occupation of the three Baltic republics.

Despite the formal declarations Canada, like its Western allies, adopted a judicious course. This was reflected in an interview with MP Patrick Boyer, parliamentary secretary to Joe Clark, following a pro-independence rally in Toronto at the beginning of April. He is quoted as saying, “The hangup is that Canada and other countries find it hard to say we recognize Lithuania as a totally independent country when, in fact, it isn’t.”

### Parliamentary Committees

The House of Commons External Affairs Committee continued its study of Canada’s relations with Eastern Europe and the Soviet Union, with a trip to Moscow, Leningrad, Kiev, Berlin and Bonn from 20 April to 5 May. It is unclear how soon the Committee plans to report to the House on its findings, although a report on the trip is expected before the House rises late in June.

The House Defence Committee is engaged in drafting its report on Canada’s maritime sovereignty. The final report will be tabled in the House before the end of June.

The Committee held hearings at the beginning of May on the safety of the CF-18, following a series of five crashes which have killed four pilots. Since the 138 jet fighters were acquired in 1982, thirteen have crashed and eight pilots have died. DND maintains that “human factors,” not mechanical failures, are responsible for an accident rate significantly higher than that for versions of the same aircraft used by airforces of other countries.

### Short Notes

Canada hosted a meeting in Yellowknife of high-level officials from all eight circumpolar nations (the four Scandinavian nations, Iceland, the United States, the Soviet Union and Canada) on 18 to 23 April to discuss Arctic environmental problems. The Yellowknife meeting was only the second occasion in history when the circumpolar nations have met as a group, the first being in Finland in 1989. The new interest being shown in multilateral cooperation on Arctic issues is largely a reflection of the profound change in Soviet attitudes.

The federal government is proceeding with plans announced in 1988 for an International Institute for Sustainable Development, a research and public education institute focussing on environment and development, particularly in the Third World. To be located in Winnipeg, the centre’s core operating budget will be \$5 million per year over five years for a total of \$25 million. Funding will come from the Canadian International Development Agency (CIDA), Environment Canada, and the Manitoba government. Lloyd McGinnis, the President and CEO of Wardrop Engineering, was named Chairman of the new institute’s board of directors. □

— GREGORY WIRICK

## REPORT FROM THE SECURITY COUNCIL

### Namibia Joins the UN

On 17 April, the Security Council unanimously endorsed Namibia's application to become the 160th member of the United Nations. The event marked the culmination of fourteen years of international diplomacy in which Canada played a prominent role. In the words of Secretary-General Javier Pérez de Cuellar, it was a demonstration of "how, with unity in aim and coherence of effort, multilateralism can be both fruitful and dynamic."

### Central America

Reflective of the renewed dynamism of the world body are the efforts now underway in Central America. On 27 March, the Security Council unanimously voted to expand the size and role of the United Nations Observer Group in Central America (ONUCA). The force, which numbered 260 troops, including a contingent of Canadians, was increased to about 1,060. Venezuela contributed the largest number of the new troops.

ONUCA's original duties had been limited to verifying the cut-off of aid to the Contra rebels, and patrolling borders to prevent guerrilla attacks. ONUCA's new mandate called for collecting weapons, ammunition, military equipment and uniforms from the Contras. Under the terms of the new mandate, rebels in Honduras were to be demobilized at already existing camps there. Rebels in Nicaragua, would go to temporary assembly points ("security zones") protected by ONUCA forces.

"There should be no doubt in anyone's mind about the position of the United States on the ques-

tion of the Contras," James Wilkinson, the US envoy, told the Council at the time. "We want and encourage them to demobilize freely and return to their land to contribute to its development."

Despite the US support for the Council's action, as of 1 May, Contra leaders in Nicaragua continued to insist they wouldn't lay down their arms until the Sandinistas relinquished power over the Nicaraguan military. Contras in Honduras cooperated with ONUCA and voluntarily demobilized, but the bulk of the Contra force remained in Nicaragua. On 20 April, the Council once again expanded ONUCA's mandate to include monitoring a ceasefire that had gone into effect the day before. It followed an agreement between representatives of the newly-elected government of Nicaragua, the Contras, and the Archbishop of Managua.

One other Latin American issue briefly held the attention of the Council. On 9 February, it met to hear a complaint from Cuba that a US Coast Guard vessel had fired on a Cuban-chartered freighter in the Gulf of Mexico while attempting to search the ship for drugs. Cuba portrayed the US as a "modern-day buccaneer." The US responded that the attack was legal because Washington had been granted the permission to board the freighter by Panama, the ship's flag state.

The Council adjourned without considering a resolution. Several Council members suggested it was unlikely that further action would be taken because the US action was not viewed as a serious violation of international law.

### Middle East

On 15 March, the Council met to consider allegations that Israel intends to settle Soviet Jewish emigres in the Occupied Territories. It's estimated that 50,000 to

100,000 Soviet Jews will immigrate this year to Israel. The meeting had been called at the request of the Soviet Union whose delegate urged Israel to make a "sober assessment of the situation." He said the settlement of immigrants in the Occupied Territories was a new and serious obstacle to peace. The issue, he said, was not whether the Soviet Union should cut-off emigration. Rather, the responsibility lay with Israel.

The Palestine Liberation Organization's representative accused Israel of usurping Palestinian land, adding that Jews were arriving from "all parts of the world to replace Palestinians in the homeland." Israel replied that the accusation was "preposterous" and an attempt by Arab states to create a "diplomatic storm" in order to halt Jewish immigration to Israel.

At a subsequent meeting on 29 March, Canadian Ambassador Yves Fortier urged Israel to settle new immigrants exclusively within its pre-1967 borders, adding that Canada did not recognize "the permanence" of Israeli control over the Occupied Territories. "Canada will oppose, and will continue to oppose, any actions taken by the Israeli Government to alter the demographic structure of the occupied territories, particularly in the coming months," Fortier said.

The meeting was adjourned by the president of the Council who said the debate would be resumed at a future, unspecified date.

### Iran and Iraq

On 27 February, in an effort to nudge along peace talks between Iran and Iraq, the Council called on the two countries to "co-operate fully" with the Secretary-General in his efforts to hold direct talks between the two countries.

In a statement, the Council expressed its support for proposals by the Secretary-General for a new round of talks under his auspices for a two-month period and with a specific agenda. The

agenda hasn't been made public but is said to contain eight points that are aimed at ensuring the implementation of Resolution 598 that forms the basis of the UN ordered peace settlement.

On 29 March, the Council extended the mandate of the United Nations Iran-Iraq Military Observer Group (UNIMOG) for six months. During this meeting, the Secretary-General told Council members he "expects" that both governments are "determined to take advantage of the opportunity and the momentum created by the Security Council's statement of 27 February." But he also called on the two sides to notify him of their acceptance of the proposed agenda "and to give added political impetus to the talks by indicating to each other their sincerity and their determination to implement Resolution 598."

### Cyprus

In other UN sponsored negotiations, the Council on 12 March, called on the two Cypriot communities to pursue efforts towards the creation of an independent, sovereign and non-aligned federal republic. The call came after a week-long round of negotiations in New York failed to elicit agreement between Mr. Rauf Denktaş — the leader of the Turkish Cypriots, and Mr. George Vassiliou — the president of the Republic of Cyprus.

Assessing the talks, the Secretary-General reported to the Council that "in the circumstances, I came to the conclusion, regrettably, that we faced an impasse of a substantive kind, which raised questions regarding the essence of the mandate of good offices given to me by the Security Council and, therefore, regarding the basis of the talks." □

— TREVOR ROWE

## FROM THE DIRECTOR

### PEACE AND SECURITY IN THE MIDST OF INTERNATIONAL TURMOIL

Cold War which has so darkened the international scene since the Second World War. We are embarrassed, or should be, because none of us predicted what would happen, when or how.

Peace and security are, of course, the indispensable foundations of any viable international order. What are peace and security likely to mean for us, and what we will need to do to secure them, over the coming decades?

For perhaps the first time, our entire species now shares security threats, and ones that come from sources other than human hostility. Global warming, for example, could conceivably do more damage to humanity over the next century than all the wars of history.

The threat to our planet's environment and life-support systems is only the most obvious symptom of our global interdependence. If we are unable to manage better issues such as trade, investment and protectionism, debt, exchange rates and technology flows, we will surely be bumping into each other harder and with more damage and danger. It is significant that even two years ago most Americans ranked their fear of Japanese economic competition as more threatening than the Soviet military challenge.

**E**AST-WEST MILITARY CONFRONTATION WILL remain a vital issue for our security. Even with successful negotiations in Vienna on conventional arms reductions, and strategic arms reductions between the superpowers, the USSR, the US and some other countries will remain heavily-armed states without enough mutual confidence and common values to rule out major armed conflict. As long as weapons modernization proceeds on both sides, with some seeking decisive military superiority, the level of danger will remain high.

Canadian objectives should be for the deepest possible military cuts, on a balanced basis, to leave the new Europe with much lower levels of arms and potential military threats. Simultaneously, we have a stake in building a new European security structure that will lock

**A**S PEOPLE WITH A special interest in international affairs, we are all exhilarated and embarrassed these days. We are exhilarated because of the rapid and generally peaceful lifting of the sombre pall of the

in these lower levels of threat and provide for better ways of resolving the conflicts which will inevitably arise.

The idea for using the thirty-five nation framework of the Conference on Security and Cooperation in Europe (CSCE) as the new umbrella under which all the European countries (except Albania) and the two North American partners could manage their new security relationships, has steadily gained the support of many governments – including our own. But so far Washington has been less enthusiastic. We now have an important task in convincing our American neighbours that an institutionalized CSCE is not a threat to NATO. NATO will retain its key role in providing a North Atlantic security guarantee.

This security guarantee will continue to call for a credible deterrent or counter to any potentially threatening military capability. It will continue to require significant, if much reduced, American forces stationed in Europe – to give credibility to the American strategic guarantee – and as long as there are American forces in Europe, I can see very strong arguments for significant Canadian forces there as well. It is time to stop the simplistic debate in Canada about leaving our NATO contingent in Europe or pulling it out, and start thinking about what kinds of things we might best be doing there.

**W**ITH NATO STILL PROVIDING THE OVERALL guarantee, the most immediate security preoccupations within the new Europe may well be in managing disputes and small-scale conflicts derived from inter-ethnic or other frictions. We have already seen how some of the poisonous viruses of pre-War Europe have emerged as dangerous as ever from the ice of the Cold War. There is already serious talk of new machinery (possibly under the CSCE or the UN) for crisis management and peacekeeping.

If this role is to emerge and help to preserve the new security gains in Europe, there is no country better equipped and more trusted to help organize it than Canada. With limited troops but extensive experience, Canada may be able to make an especially useful contribution with a modest NATO contingent in Europe.

I do not see the East-West relationship as the most likely arena for serious military conflicts in the coming decades. In my Annual Statement this past January, I underlined the possibility of a "decade of proliferation" of weapons of mass destruction to many new countries.

These trends are not inescapable, but they will become so unless we now muster, as an inter-

national community, an extraordinary effort to both control the diffusion of advanced weaponry, and start seriously promoting conflict resolution and regional security arrangements in all parts of the world.

**O**NCE AGAIN, THERE IS A SPECIAL OPPORTUNITY for Canada – a trusted middle power, experienced mediator and peacekeeper, the fourth-ranking contributor to the UN system, with one of the largest and most respected aid programmes. We have earned a good measure of credibility and political goodwill, and these assets could be turned to good purpose in efforts to help with regional peace-building. But we must contend with a strange mid-life apathy and cynicism toward international institutions which could stifle these new efforts. Our closest friends and neighbours in the United States – who led in post-war order-building – are now the most alienated from the UN.

Surely it is the time for a group of like-minded governments, from all regions of the world, to advance the cause of these institutions for handling challenges like regional conflict, the arms trade, drug trafficking and terrorism, and environmental protection, as well as the continuing desperate need for economic improvement in the Third World.

Sometimes it is important to remind ourselves how the world sees us. In an admittedly imperfect world, Canada is seen by others as a model of peace and prosperity, a successful experiment in tolerance and practical compromise between two great language groups, diverse and far-flung regions and, now, practically all the world's cultures. It is these traits, and this political culture, which equip Canada for even greater roles in the new world order which seems to be emerging.

Happily, most foreigners do not yet know how we Canadians have faltered in recent months in our trusteeship at home of these scarce and precious commodities of tolerance and practical compromise. Those of us who work in the foreign policy field hope that they can be fully restored before the world finds out that they were ever in jeopardy. □

– BERNARD WOOD

*This column is based on an address given in mid-April by Bernard Wood to a meeting of Le Conseil des relations internationales de Montréal.*

## NEWS FROM THE INSTITUTE

In mid-April **Bernard Wood** gave a major address to Le Conseil des Relations Internationales in Montreal on Canadian security policy. Excerpts from the text, entitled *International Turmoil: The Challenges Facing Canadians* can be found in the Director's report on page 19. The following evening, Mr. Wood was the guest speaker at a meeting of the Montreal branch of the CIIA. Later that week, Mr. Wood, and **Sam Lewis**, president of the US Institute for Peace, spoke at a conference at Wayne State University in Detroit.

"Climate Change, Global Security and International Governance" was the title of a CIIPS conference in mid-April in Ottawa. Focussing on the security implications of climate change, the conference brought together parliamentarians, officials, academics, and members of non-governmental organizations. A brief summary of some of the conference highlights can be found on page 7.

In mid-March the Institute and Summerhill Press launched *Time to Change* by **Boyce Richardson**; an excerpt from the book appeared in the spring issue of *Peace & Security*.

**Deirdre Collings** recently joined the Institute staff as a researcher with primary responsibility as coordinator for a project on Lebanon. Ms. Collings did her graduate work at Carleton University specializing in the study of the Middle East. Her book on the Palestinians will soon be published in England and France. Some time ago, **Estelle Laferrière**

was appointed executive secretary when **Nicole Campbell-Morel** left the Institute.

In mid-April the Institute was a co-sponsor of Expo-Science, a pan-québécoise science fair for the school system in Quebec, the finals for which took place this year in Hull. "A project for my planet" was the theme this year. Over 80 finalists displayed their work; ten winners were chosen to participate in an international science fair in Prague.

A number of seminars were held during the quarter: we organized a one-day briefing on economic cooperation in Europe prior to the Bonn CSCE; Ambassador **David Peel** and some of his staff from Vienna led a discussion on the conventional arms control negotiations taking place there; **Sam Lewis**, president of the US Insti-

tute for Peace and formerly US Ambassador to Israel, gave a seminar on US policy in the Middle East; **Kevin Clements**, of the University of Canterbury in Christchurch, New Zealand, spoke on New Zealand's defence and security policies.

**Ron Purver** gave a paper on Arctic arms control at a seminar sponsored by the Calgary branch of the Naval Officers of Association of Canada. He also spoke about Canada and arms control in the Pacific at the University of Victoria, and made a presentation at the University of California at Berkeley on security relations in the Arctic. **Fen Hampson** spoke at a conference at the University of Wisconsin at Madison on environmental security in the 1990s.

In March **Bernard Wood** gave an address on the evolving inter-

national security environment to a meeting cosponsored by the Canadian Institute for Strategic Studies and the Center for Strategic and International Studies in Washington. At the end of the month he spoke again in Washington to the 65th meeting of the Canadian American Committee: his subject was an alternative spending programme for Canadian defence. During March he led a session at the Collège militaire royal de St. Jean on Canada and the world in the 1990s.

During his official visit to Canada, at the end of April, **President Vassiliou**, of Cyprus, addressed a meeting at the Institute. On 24 April **Vitaliy Korotich**, editor of *Ogonyok* and member of the Congress of People's Deputies in the Soviet Union, led a seminar on developments in the USSR.

**Brad Feasey** gave a presentation to the spring conference of the Independent Schools History Teachers Association in Ontario at Upper Canada College. **Paul Gray**, a history teacher in Parry Sound, brought pupils from this Canadian and American history class to the Institute for a roundtable discussion.

**Nancy Gordon** represented the Institute at the Annual General Meeting of the Canadian National Commission for UNESCO which took place in Hull in early April. **Federico Mayor**, UNESCO's Director-General, addressed the meeting which focussed on culture, science and development.

**Rychard Brûlé** attended a conference in Algiers in March organized by the United Nations Institute for Disarmament Research (UNIDIR). The meetings, which brought together African Institutes involved with security and disarmament studies, focussed on areas of common and cooperative study, as well as on new avenues for research. □

### Peace and Security Competitions Fund

The Board of Directors of the Institute has recently implemented changes in the administration and adjudication of its responsive competitions to fund research and the encouragement of public discussion and information on issues of international peace and security. The goal is to ensure maximum fairness, rigour and efficiency in these competitions and to contribute to the very best resulting projects. These responsive programmes, like the Institute's Barton Awards Programme, will now be managed quite separately from the Institute's in-house and directed programmes.

Resources for these responsive contributions will now be allocated annually by the Institute to a PEACE AND SECURITY COMPETITIONS FUND which will continue to contribute to the most promising projects selected through a semi-annual, independent and competitive process.

The Fund's activities will be overseen by a Council of Trustees composed of four members of the Institute's Board plus up to three outside members. Daily operations will be the responsibility of a Fund Director who is also, at least at the outset, the Secretary-Treasurer of the Institute.

The semi-annual nature of the process remains as before as does the division of available money into two programmes: research; and public discussion and information. Applications will continue to be reviewed by Fund staff for their completeness and relevance to the specified fields of interest and criteria. They will then be considered (as in the past) by Advisory Committees composed of three external assessors, chaired by the Fund Director. Recommendations from these committees will be passed to the Council of Trustees for decisions.

The amount of money allocated to the Fund for the fiscal year 1990-91 is the same as that allocated the previous year. Criteria and application forms have been modified to reflect the above changes. Please note in particular that the winter deadline for applications has been changed to November 30. Thus the deadlines are June 30 and November 30, with notifications of the competition results expected in October and March respectively. Prospective applicants are encouraged to contact the Fund Director or Fund Administrators for copies of the new criteria and application forms.

### New Reference Publications

The Institute has recently published a new bibliography, edited by Ron Purver, Senior Research Fellow, *Surviving the Nuclear Age: A Bibliography on Nuclear Weapons, Arms Control and Disarmament, 1987 Update*. The print version of this comprehensive English-language bibliography is available for the 1987 update only, although the core bibliography and updates cover materials from 1945 to the present. Access to these is available directly from the library.

Coming in June are two further publications, *Canada and International Peace and Security: A Bibliography, 1985-1989*, and the *Peace and Security Thesaurus*. The former compiles material from the library's database covering the serial literature, ephemeral literature, and some government documents containing the Canadian perspective on issues of international peace and security. It will be published annually.

The thesaurus is a listing of subject terminology in the field of peace and security. We hope it will prove useful as a basis for libraries and other information centres looking for a standardized vocabulary to use in providing subject access to their collections.

### PRICES:

*Surviving the Nuclear Age* - no charge  
*Canada and International Peace and Security* - \$15.00  
(\$10.00 each for 10 copies or more)  
*Peace and Security Thesaurus* - \$10.00

## REVIEWS

**Shadow of Heaven:**  
**The Life of Lester Pearson,**  
**Volume One: 1897–1948**  
John English

Toronto: Lester & Orpen Dennys, 1989,  
414 pp., \$28.95 cloth

For most readers of this journal, Lester Pearson is a familiar figure. Almost everyone knows something, and many know a lot, about his life and accomplishments, especially during his years of public prominence, the quarter century after World War Two. *Shadow of Heaven* is concerned to reconstruct and interpret his less public first fifty years. It is very much a study of a man and his times. John English not only explains Pearson's unfolding character and attitudes, from youth to middle age; he also writes, sensitively and evocatively, of Pearson's various milieus (his turn-of-the-century Methodist home, the University of Toronto in the 1920s, wartime London and Washington). And he suggests as well some of the circumstances and experiences that especially influenced Pearson's conduct, outlook, and career.

This is a readable and engaging biography. It is sympathetic and admiring but not uncritical or effusive. It gives a good sense of Pearson's concrete, lived experience, including the fortuitous elements, and a few rough passages (actually, very few). The phases of his life are well-distinguished, including his coming of age in World War One and his transition in the late 1920s from a teacher of history to a shaper of foreign policy. Pearson was almost constantly on the go, seeing the world, playing sports, meeting people, moving from here to

there. Between 1915 and 1946 he was almost as often abroad as at home. As English makes clear, Pearson's wife, Maryon, was not always a beneficiary of her husband's public successes.

*Shadow of Heaven* sheds light on the logic of Pearson's move from diplomacy to party politics. He possessed many of the qualities of a good politician and had refined these qualities over thirty years, some of them spent at or near the centre stage of world affairs (notably in the 1940s). English, in comparing Pearson and Mackenzie King, writes that "Both men scanned the surface with political antennae of exquisite sensitivity, and their feelings largely shaped their deeds." A feel for the surface – this was a precondition for political success. English likens Pearson to "a prospector of extraordinary skill and intuition." He was observant, resourceful, quick-witted, and wide-ranging. And he was persistently, and usually cheerfully, in search of usable political deposits, grounds for accommodation, practical opportunities, and better maps to the future.

This is an admirable book – a book that is likely to be enjoyed by a wide readership.

History at Queen's University in  
Kingston.

**The Defence of Canada: In the  
Arms of the Empire, 1760–1939**  
Gwynne Dyer and Tina Viljoen

Toronto: McClelland and Stewart, 1990,  
375 pp., \$34.95 cloth

This is the first of a two-book work, based on the controversial NFB/CBC TV series of the same name, broadcast in 1986. A lot of potential readers are no doubt

already prepared to love or hate this volume, depending upon how they feel about Canadian neutrality, a cause with which, especially thanks to the television series, the Dyer name is now closely associated.

Yet let us not get all worked up just yet, one way or the other. NATO supporters and Dyer's other ideological adversaries should save their real ire for the second volume, which will pick up with events in the summer of 1939 and eventually deal with NATO issues. Just about everyone interested in Canadian history, regardless of opinion on contemporary Canadian defence commitments, can welcome this first volume as a popular, well-written, often intriguing and sometimes moving survey of the roles military force and the threat of military force have played in the development of Canada from the fall of New France until the eve of the Second World War.

To be sure, this first volume is intended to set up the second. Dyer and Viljoen seem never to have encountered an alliance they have liked. And this certainly includes the British Empire. They underline that by the end of the 19th century the British could not be counted on, if necessary, to defend Canada against the US, although the British government took pains to conceal this from Ottawa. Yet, "London was able to inveigle Canada into a series of imperial wars that were none of Canada's concern, but in which millions of Canadians endured great hardship and a hundred thousand were killed, by playing on the gullibility of English Canadians who were blinded by their sentimental attachment to Britain."

Understandably then, Dyer and Viljoen are sympathetic to French Canada's historic resistance to overseas imperial commitments.

One of the book's greatest strengths is this openness to French Canada. The country's military history is not described as an English Canadian affair into which French Canadians periodically attempted to throw monkey-wrenches. Dyer and Viljoen are particularly effective in quoting both English Canadian and French Canadian historical sources.

The chief conclusions Dyer and Viljoen draw are twofold. Canada was created and has been shaped by European military struggles. Second – and to the authors' regret – participation in the British Empire conditioned Canadians to see their security frontier as lying overseas: "The old strategic and psychological equation of dependence on Britain to protect us from American invasion ... lasted just long enough to deliver us smoothly into our new obsession with playing a role in the European balance of power." This "new obsession" is to be the main subject of the second volume.

**Canada's Department of  
External Affairs, Volume I,  
The Early Years, 1909–1946**  
John Hilliker

Montreal and Kingston: The Institute of  
Public Administration of Canada,  
McGill-Queen's University Press, 1990,  
406 pp., \$45 cloth, \$19.95 paper

(French translation:  
*Le ministère des Affaires extérieures  
du Canada, 1909–1946*, Les presses de  
l'Université Laval.)

This book is one of the Canadian Public Administration Series sponsored by the Institute of Public Administration of Canada. Although the emphasis throughout the book is on the evolution of the

Department of External Affairs as an institution, the work is also, inevitably, a short history of the development of Canadian foreign policy and the conduct of Canada's external relations up to 1946.

The book begins with a chapter on the very haphazard handling of external affairs from 1867 to 1909, when the Department of External Affairs was established. Except for the first three years, the responsible minister was always the Prime Minister. This arrangement had obvious advantages for the Department; but the author points out that it also had disadvantages. Successive Prime Ministers, lacking a proper secretariat of their own, relied on External Affairs for administrative support, and assigned to it tasks that had nothing to do with external relations.

John Hilliker, Head of the Historical Section of the Academic Relations Division, External Affairs and International Trade Canada (the current designation of what was so long known as the Department of External Affairs), sets down the facts about such mundane matters as the recruitment of personnel, salaries, assignment of responsibilities, the opening of diplomatic missions, accommodation in Ottawa and abroad. This is all very interesting; but even more interesting are his descriptions of people, their interaction, and their influence on policy.

The first notable personality was Sir Joseph Pope, who successfully promoted the idea of having a Department of External Affairs which would provide for the orderly handling of papers on international matters. As the first Under Secretary, content with Canada's colonial status, he had no interest in developing a foreign service or an independent foreign policy. When he retired in 1925 there were in the Department only three officers, including himself, dealing with external affairs.

Much of the book is concerned with the regime of Dr. O.D. Skelton, Under Secretary from 1925 until his death in 1941, the period of transition from Empire to Commonwealth. Hilliker describes Skelton's efforts to recruit "the best brains" to staff a proper foreign ministry and an independent foreign service – efforts that were frequently frustrated, but were ultimately successful in bringing together a small group of talented generalists who formed the core of what became a first class service.

Others who figure prominently in the book were Loring Christie, adviser to Sir Robert Borden, close collaborator of Skelton, and first career Minister to the United States; Norman Robertson, the very wise successor to Skelton as Under Secretary; Lester Pearson, honing his diplomatic skills; Hume Wrong, a man of great intellect who played an important role in the Department and in Washington, where he was a highly effective number two serving with non-career heads of mission; Hugh Keenleyside, who strove manfully to introduce administrative reforms; and, towards the end, Escott Reid. Of special interest are the references to Mackenzie King, whose interaction with Skelton, and later with Robertson, is a recurring theme.

Throughout the book, especially while covering the Skelton and Robertson periods, Hilliker writes of the efforts of External Affairs to influence government policy. King had great regard for Skelton, but frequently rejected his advice for reasons of domestic politics. Skelton succeeded, however, in persuading King to approve a modest expansion of the department with a view to enabling Canada to play a greater role in international affairs. In the last chapter of the book the author shows how a rapidly maturing foreign service, Skelton's legacy, was able to help the government deal effectively with the complex issues that arose during and immediately following the war.

In so far as the book is an administrative history, it paints a

rather sorry picture. In Skelton's time capable junior officers with two or three university degrees worked at odd jobs assigned to them by the Under Secretary himself, and spent long hours deciphering telegrams, but were not assigned to work with, and be trained by, overworked seniors. It was only during World War II that, under the pressure of events, some administrative order was brought out of chaos. Women were not appointed as foreign service officers until after the war.

John Hilliker has produced a well organized, well written, and highly readable book. His second volume, to cover the period from 1946 to 1968, is awaited with great interest. – *Benjamin Rogers*

*Mr. Rogers held various positions in the Department of External Affairs from 1938 to 1975. He currently lives in Ottawa.*

#### BRIEFLY NOTED

##### **Peace, Development and Security in the Caribbean**

Anthony T. Bryan, J. Edward Greene, Timothy M. Shaw, editors  
*London: MacMillan, 1990, 332 pp., \$134.95 cloth*

The essays here were, for the most part, originally presented at a workshop of the same name in Kingston, Jamaica in 1987. Influenced by the debate over the US invasion of Grenada in 1983, the writers focus on five specific questions: Is the region prepared for another Grenada? How can defects in the present security arrangement be corrected? What kind of organization or institution is appropriate for these new arrangements? What can be done to improve the economic environment in which these security arrangements are rooted? How can the access of Caribbean small states to multilateral financial institutions be increased in ways that are not counterproductive?

The research project from which this volume stems was developed jointly by the Institute for Peace and Security, the International Peace Academy, the University of the West Indies and Dalhousie University.

##### **Middle Power Internationalism: The North-South Dimension** Cranford Pratt, editor

*Kingston and Montreal: McGill-Queen's University Press, 1990, 167 pp., \$32.95 cloth*

In this volume, four analysts – Cranford Pratt, Asbjørn Løbræk, Bernard Wood and Raphael Kaplinsky – discuss the values, political constraints, economic interests, and international policies central to the development of a more conciliatory attitude by Western nations to the concerns and aspirations of poorer countries of the South. In particular, the five essays examine the special role of middle powers like Canada, the Netherlands and the Scandinavian countries in promoting this change. The volume is an outgrowth of the OECD's Development Centre "Western Middle Powers and Global Poverty Project."

##### **Voices From Tiananmen Square** Mok Chiu Yu and J. Frank Harrison, editors

*Montreal: Black Rose Books, 1990, 203 pp., \$38.95 cloth, \$19.95 paper*

This book consists of original documents, translated for the first time into English, of speeches, handbills, posters, manifestos and interviews from leading activists, capturing the personal and political struggles of China's Democracy Movement. It situates the events of May and June 1989 in their historical context and covers the development of the Movement inside and outside China to the present day. □

Reviews of French language publications can be found in *Paix et Sécurité* "Livres" section.

## LETTER FROM KUBINKA BY JOCELYN COULON

**After bouncing for an hour over what seem like endless potholed roads, our delegation of journalists and military officers arrive at the air force base at Kubinka, a hundred kilometres from Moscow.**

Members of the base command, there to meet us, are impeccably turned out. On a warm, sunny day in April, the Canadian flag snaps in the wind.

This military base is one of the Soviet Union's most modern; it was the first to receive the formidable MiG-29 jet-fighter, now the star of every air show in the world. In fact, Kubinka is the pride and joy of the Soviet military-industrial complex – the Red Army shows it off to all foreign visitors, and it's here that our group starts a week at the heart of the Soviet army.

The officers are especially friendly, they really like Canadians. Our two countries have so much in common they remind us: the climate, the landscape, the great expanses of territory, and hockey – the sport which has really brought us closer together. There's one thing that really separates us, however, and that's raw military power. The Soviets have a hard time believing that the Canadian armed forces are so hard up, especially when they see the smart, well-cut uniform of one of our colonels.

After the ritual tour of the military museum with its displays of feats of arms and gifts from abroad, we settle down in the beautiful dining room. The Soviet officers open the conversation about disarmament, but they are cautious when discussing Mikhail Gorbachev's reforms. In Kantemirovka, also in the Moscow region, the officers of an armoured division were more direct with us and said that they didn't believe the economic reforms would succeed. Here in Kubinka they're more

restrained; it's all in the nuances, and we have to read between the lines.

"The population of this base has recently been reduced by a quarter," says the assistant base commander, Colonel Vladimir Basov – a young officer, fortyish, with fine features and elegant manners. "We're really at the limit now and only just able to get our

---

**... The Soviets have a hard time believing that the Canadian armed forces are so hard up, especially when they see the smart, well-cut uniform of one of our colonels.**

---

work done," he adds in the manner of all military people who must come to terms with budget cuts. When we ask for figures, so that we can make comparisons, he says there are no statistics available. The political commissar, who goes everywhere with us, is silently pleased.

The Soviet officers ask us how the Canadian forces operate. Just what is our country doing for disarmament at a time when the USSR is withdrawing from Europe and keeps making ever more attractive offers to the West? Kindly, a Canadian officer outlines the structure and the role of the armed forces in Canada and points out that even though we have only 88,000 people under arms, our government is thinking of making further cuts to the defence budget. At first the Soviets are taken aback, but then they burst out laughing; their sympathy for our officers is obvious.

After lunch we set out to visit the installations and see the equipment. In a large hangar, a MiG-29

and two combat helicopters are lined up, with an officer standing at attention in front of each one, ready to give a technical description of his aircraft. These three men are veterans of the war in Afghanistan. They invite us to climb aboard, and are very forthcoming with their explanations. Returning to the reception centre we drive along one of the runways where we see dozens of fighters and transport planes with pilots and technicians swarming over them. The aircraft are polished to within an inch of their lives.

The Soviet army is the most powerful in the world, and in a Soviet Union where the commu-

Army is well aware, furthermore, that its power to influence events has increased during these past few months as the Kremlin has asked it first, to crush the Azeri revolt in Bakou, then, to restore order in Georgia and finally, to impose a blockade on Lithuania.

The Army rejects the notion that it might become a volunteer force, because the present system of conscription assures cheap and obedient manpower. Our hosts proudly tell us that the integration of many ethnic groups is possible – even though ethnic violence was responsible for hundreds of deaths in the past year. Not a word is said about the number of deserters, nor about the draft resisters, nor about the growing gulf separating the officers of European origin from the draftees – forty percent of whom are from the Muslim and Asian republics. The Soviet military would be happy to transform their institution, but they want to do it their way and in their own good time. All evidence indicates that the Kremlin is listening carefully.

Leaving Kubinka I carry away a strange feeling of isolation. It wasn't easy at that base, or at others elsewhere for that matter, to break down the wall which separates journalists from soldiers. In fact, the Soviet officers were more at ease with the Canadian officers than with the representatives of the press. There was even one general who, near the end of our stay, lectured us for a whole hour about the role of journalists, recalling the good old days when journalists had to toe the party line. If *perestroika* still has a long way to go in the Red Army, at least *glasnost* allowed us to probe a little into the hearts and minds of those who make it work. □

## Notre délégation de journalistes et de militaires canadiens arrive à la base aérienne de Kubinka, à une centaine de kilomètres de Moscou.

Le petit cortège de voitures, après avoir brinquebalé pendant une heure sur ces étonnantes routes défoncées, est accueilli par les membres de l'état-major de la base, impeccables dans leur uniforme. Le drapeau canadien claque au vent en ce début d'avril chaud et ensoleillé.

Cette base militaire est l'une des plus modernes en Union soviétique. Elle fut la première à recevoir, en 1983, le redoutable chasseur MIG 29, qu'on peut voir maintenant dans tous les spectacles aériens du monde. En fait, Kubinka est un joyau du complexe militaro-industriel soviétique, que l'Armée rouge exhibe à tous les étrangers de passage. C'est par cette base que notre groupe a commencé un voyage d'une semaine au cœur de l'Armée soviétique.

L'Armée soviétique, ment affables, car ils aiment bien les Canadiens. Nos deux pays ont beaucoup en commun, rappellent-ils : le climat, le paysage, l'étendue du territoire et, bien sûr, le hockey ce sport qui a tant favorisé le rapprochement entre les deux nations.

Mais une réalité bien concrète nous sépare : la puissance militaire. Les Soviétiques ont de la difficulté à croire que les Forces canadiennes soient si pauvres, devant l'uniforme ruilant et bien coupé d'un colonel qui nous accompagne.

Après la traditionnelle visite du musée militaire qui étale les faits d'armes et les cadeaux reçus de l'étranger, nous nous installons dans une belle salle à dîner où les officiers soviétiques ouvrent la conversation sur le désarmement mais se montrent prudents sur les formes instaurées par Mikhail Gorbatchev. À Kantermirovka, aussi en banquette de Moscou, les officiers d'une division blindée ont été plus directs et ont déclaré qu'ils ne croyaient pas à la réussite de ces formes économiques. Mais si le ton

est plus retenu à Kubinka, tout est en subtilité, et il faut lire entre les lignes.

«Les effectifs de cette base ont été réduits de 25 p. 100 depuis peu», déclare le commandant adjoint, le colonel Vladimir Basov, un jeune officier de quarante ans, aux traits fins et aux manières élégantes. «Nous sommes cependant à la limite et tout juste en état d'effectuer le travail», dit-il comme tous les militaires du monde qui doivent composer, à contrecoeur, avec des réductions budgétaires. Si on lui demande de nous donner des chiffres aux fins de comparaison, il répond qu'il n'existe pas de statistiques. Le commissaire politique, notre groupe a commencé un

éclatent finalement de rire et sem-  
blent visiblement sympathiser avec  
nos militaires.

Le déjeuner terminé, nous com-  
mençons la visite des installations et  
du matériel. Dans un grand hangar  
sont alignés un MiG 29 et deux héli-  
copères de combat avec, devant  
chaque appareil, un officier au  
garde-à-vous qui nous décrit les  
performances techniques de son  
aéronef. Les trois militaires sont des  
anciens combattants de l'Afgha-  
nistan. Ils nous invitent à monter à  
bord des appareils et n'hésitent pas  
à nous donner toutes les explica-  
tions voulues. En revenant au bâti-  
ment de réception, nous roulons  
sur une des pistes de la base. Des  
dizaines de chasseurs et d'avions de  
transport sont alignés et reçoivent  
une attention méticuleuse de la part  
d'une nuée de pilotes et de techni-  
ciens qui astiquent toute cette quin-  
caillerie. Le soleil se charge de la  
faire briller.

## L'Armée soviétique est la plus puissante du monde et demeurera, pour un certain temps encore, l'institution la plus stable du pays alors que le Parti communiste est en voie de désintégration et que certaines républiques prennent le large....

qui nous accompagne partout, approuve silencieusement.

Les officiers soviétiques nous de-  
mandent comment les Forces cana-  
diennes fonctionnent et ce que notre  
pays fait pour le désarmement au  
moment où l'Union soviétique se  
retire d'Europe de l'Est et ne cesse  
d'offrir à l'Occident des proposi-  
tions alléchantes. Gentiment, un  
militaire canadien décrit les struc-  
tures et les rôles des Forces cana-  
diennes et souligne qu'avec 88 000  
personnes sous les drapeaux, le gou-  
vernement s'apprête quand même à  
sabler les effectifs. Un moment in-  
terloqués, les officiers soviétiques

L'Armée soviétique est la plus  
puissante du monde et demeurera, pour un certain temps encore, l'in-  
stitution la plus stable du pays alors  
que le Parti communiste est en voie  
de désintégration et que certaines  
républiques prennent le large. À nos  
questions politiques et même à cer-  
taines questions sur les problèmes  
de l'Armée, nous n'avons jamais  
reçu de réponses complètes. C'est à  
roverka, aux académies Frunze de  
Moscou et Grechko de Leningrad,  
avec les équipes de rédaction du  
*Soldat soviétique* et de l'*Etoile  
Rouge*, que nous avons pu tirer un  
portrait assez juste de cette énorme  
machine qu'est l'Armée rouge.

Cette dernière demeure un bloc  
très conservateur qui exige du gou-  
vernement que les économies réa-  
lisées par le désarmement soient  
réinvesties dans l'Armée pour

Les militaires soviétiques veulent  
bien transformer leur Armée, mais  
ils veulent la faire à leur rythme  
et à leurs conditions. Tout indique  
qu'au Kremlin, on les écouterait  
d'une oreille attentive.

En quittant Kubinka, je ressens  
un étrange sentiment de solitude. Il  
n'a pas été facile, ni dans cette base,  
ni ailleurs, de briser le mur qui sé-  
pare militaires et journalistes. En  
fait, les officiers soviétiques se  
sentent plus à l'aise avec les mili-  
taires canadiens qu'avec les repré-  
sentants de la presse. Il y a même eu  
un général qui, à la fin de notre  
séjour, nous a sermonnés pendant  
une heure sur le rôle des journalistes  
en évoquant le temps béni où ceux-  
ci étaient sous le contrôle du Parti.  
Si la *persistika* a encore du chemin  
à faire dans l'Armée rouge, la *glas-  
nost* nous a permis de sonder les  
cœurs et les esprits de ceux qui en  
constituent les rouages. □

*Jocelyn Coulon était membre d'une  
délégation de journalistes et de  
militaires canadiens invités par  
l'Armée soviétique en avril 1990.*

droit de la région des conceptions

romantiques. Car pour l'auteur, l'histoire de la médecine n'est point de tâche plus urgente que celle de démolir les idées reçues.

Le chapitre qu'il consacre à « la récolte sandiniste » frappe particulièrement juste même après la défaite électorale des Sandinistes en février dernier. « Au Nicaragua, c'est l'élite qui est dramatiquement di-

visée, l'élite qui a embrassé avec  
flueur les idéologies modernes et se  
livre une lutte sans merci pour le  
pouvoir, au nom du peuple qui four-  
nit la chair à canon. » Peu represen-  
tative des classes ouvrières et

l'unité révolutionnaire a dénigré d'emblée le modèle démocratique bourgeois au profit de Cuba, alors que tout était possible une fois la garde somoziste démembrée. Résolument partisan de la

démocratique pluraliste et réformiste, l'auteur ne peut que constater en bout de ligne le triomphe (momentané ?) du pluralisme armé, triomphé attribuable, au premier chef, aux stratégies et aux idéologies des

parties en lutte. Car si ce livre pose un seul mérite, c'est celui de rendre leur part de responsabilités aux pays de l'isthme. Les investisseurs américains y sont infimes, et quoiqu'à maints égards la politique

milien des Etats-Unis n'aide  
rien à désamorcer la crise, leurs  
intérêts demeurent guidés par des  
impératifs de stabilité. Entre recon-  
naître le rôle incontournable des  
Etats-Unis et leur imputer la respon-

du Salvador tandis que le dictateur Anastasio Somoza fut le Nicaragua sous le feu des révolutionnaires sandinistes. À Washington, l'Amérique centrale se retrouve inopinément «promue au rôle peu convoité d'en-jeu vital pour la sécurité des États-

Unis». Dix ans et 200 000 morts plus tard, Alain Destexhe situe, à cette date, l'An 1 de la crise centre-américaine et son ouvrage, pour une bonne part, cherche à en retracer les origines et le déroulement.

Faut-il parler d'une ou de plusieurs crises en Amérique centrale ? À travers un précieux rappel historique qui va de l'indépendance du début du XIX<sup>e</sup> siècle jusqu'à 1980, l'auteur explique comment les

crises nationales qui affectèrent à divers degrés les pays de l'isthme en sont venues à se combiner, sous

ment sur les problèmes de vérité-

La diplomatie interalliée (rôle de médiateur entre les États-Unis et l'Europe).  
Les auteurs terminent par un sur-

vol général de l'apport du Canada aux différentes séries de négociations sur le désarmement, ainsi que par une évaluation de la gestion des politiques canadiennes dans ce domaine, tant au sein de l'appareil

Cet ouvrage permet de mesurer l'ampleur des difficultés qui ont marqué la recherche des différents accords sur la réduction des armements et de façon plus implicite, de faire ressortir les points de vue divergents.

peu de moyens dont dispose le Canada pour véritablement faire progresser le cours des négociations. Même si l'on admet avec les auteurs que « l'influence canadienne en matière de désarmement » de con-

trôle des armements est allée bien au-delà de ce que l'on était en droit d'attendre d'un petit ou d'un grand pays comme le Canada», il n'en demeure pas moins que cette influence ne s'est exercée que dans un

nombre limité de dossiers. Plus en-  
core, l'histoire tend à démontrer que  
l'activité canadienne ne fut que  
rarement déterminante. Mais ce bi-  
lan reste fortement lié à celui que  
l'on peut tirer de l'ensemble des

pourparlers qui se sont engagés de 1945 à 1988. Ainsi, en dépit de quelques succès au niveau du contrôle des armements (CTB, TNP, mesures de confiance), le processus de désarmement multilatéral s'est,

Dans cette perspective, la plus grande contribution canadienne fut sans doute d'avoir encouragé et soutenu la poursuite du dialogue. La principale critique qui pourrait être adressée à cet ouvrage est liée

La forme même que les auteurs ont choisie de lui donner. Certains pour-  
ront en effet déplorer le caractère  
essentiellement descriptif de cette  
histoire de la participation cana-  
dienne aux négociations sur le

désarmement puisque, à l'exception de quelques passages, les auteurs ne cherchent pas à interpréter les éléments qu'ils présentent, soit en tenant des hypothèses ou encore en

## LIVRES

### Tous azimuts

Régis Debray

Éditions Odile Jacob/IFEDN

Paris, 1989  
218 pages, 29,95 \$

«Penser l'Europe de la défense,

n'est-ce pas repenser l'Europe

d'aujourd'hui à la lumière de ce que

pourtait être un jour sa défense ou

encore dessiner ce que devrait être

l'Europe de demain pour qu'elle

puisse se défendre après-demain ?»

Voilà l'objet du tout nouveau livre

de Régis Debray.

L'analyse à laquelle se livre Régis

Debray n'est pas sans intérêt. L'au-

teur aborde plusieurs questions

situer au-delà des problèmes sou-

levés. En effet, le lecteur non spé-

cialisé sur les questions de défense

pourra facilement se retrouver dans

cet ouvrage. Réflexion tant philo-

sophique que politique, «Tous azi-

mut» ouvre de nouvelles pistes et

l'avenir du monde occidental.

A l'Europe est en pleine mutation,

un peu après les autres, l'Europe

issue de l'Union commence à être re-

ne se sert pas des conséquences

pour l'Europe et le système inter-

national, tant du point de vue poli-

tique que militaire. De ce fait, pour

sera plus dangereuse que celle de la

«Guerre froide car plus destructi-

menaces : la disparition de la me-

nace». De ce fait, en concentrant

son attention sur un ennemi préfé-

rentiel, c'est-à-dire l'URSS et le

certaine façon, un affaiblissement

du flanc sud de l'Alliance, d'où

pourrait venir la future menace.

Donc, nous sommes passés d'un axe

«Est-Ouest» improbable à un axe

«Nord-Sud» probable.

L'auteur démontre qu'il est

utopique, voire irréalisable, de penser

l'Europe en termes «d'Etats-Unis

d'Europe». Chaque Etat ayant ses

particularités propres, c'est-à-dire

son histoire, sa culture, etc., il sem-

ble difficile de penser que chacun

voudra les remettre en cause. En

fait, comme l'indique si bien De-

bray, l'Amérique a fait du neuf avec

du neuf, l'Europe doit faire du neuf

avec du vieux. Elle doit créer un

système qui lui est propre. «L'Eu-

rope du possible est à présent celle

du consensus».

Une Europe voulant jouer un rôle

sur la scène internationale, amène

à se poser la question : Washing-

ton, Londres, Bonn ou Paris ? Au

niveau des institutions, Régis De-

bray souligne l'incompatibilité des

formules qui prévalent actuellement.

En ce qui concerne l'Organisation

du Traité de l'Atlantique Nord

(OTAN), la prépondérance améri-

caine entraîne une certaine dépen-

dance; la communauté économique

européenne (CEE) n'est pas compé-

rente pour formuler des propositions

en matière de défense et l'Union de

l'Europe occidentale (UEO), bien

qu'étant habilitée à traiter des ques-

tions de défense, «n'a ni troupe ni

commandement propre». Il faudrait

plutôt augmenter la coopération au

lieu de créer un nouvel organisme

voué sans doute, comme les trois

autres, à un échec institutionnel.

Voulait créer une stratégie unique,

une armée unique et un commande-

ment unique ne serait qu'un leurre;

mieux vaut unir les forces et les

faiblesses au lieu de vouloir niveler

les postures et les doctrines.

Abordant le cas de la France,

l'auteur fait ressortir certaines

ambiguïtés résultant de la politique

allemande est-il possible ? Ces deux

pays peuvent-ils avoir une stratégie

commune ? Bien que ce sujet ait fait

l'objet de beaucoup d'analyses et de

discussions, il semble utopique de

stratégie commune est difficile à

obtenir et ce, pour plusieurs rai-

sons : les priorités, les marges de

manoeuvres et les affirmations des deux

pays ne sont pas les mêmes. De par

sa position sur le continent euro-

péen, l'auteur démontre un illo-

gisme de la politique militaire

française, qui est de penser terrestre

en oubliant le côté maritime. Quoi-

que cette option ne soit pas rejetée

(tout pousse à la France à la main-

tenir), il faut remarquer que «notre

défense nationale elle-même ne se

joue plus aux frontières terrestres,

mais très loin de nos côtes, par

100 mètres de fond au moins

(SMLB) et dans l'espace, sur orbite

géostationnaire».

La solution de Régis Debray est

simple. Il prône un retour au con-

cept gaullien tous azimuts. L'Eu-

rope, et donc la France, ne devrait

plus penser leur stratégie en fonc-

tion d'un ennemi préférentiel,

concept qui ne semble plus corres-

pondre à la réalité d'aujourd'hui,

mais bien instaurer un nouveau sys-

tème de défense qui ne soit dirigé

contre personne, donc tous azimuts,

utilisant toutes les ressources des

pays européens et lui permettant

d'assurer son indépendance et de

prendre en main son destin.

## NOUVELLES DE L'INSTITUT

Elle a écrit un livre sur les Pales-tiniens qui paraîtra bientôt en Anglais. Estelle Laferrière a été secrétaire de direction, quand Nicole Campbell-Morel a quitté l'Institut.

À la mi-avril, l'Institut a co-parrainé l'Expo-Science, forte scientifique pan-québécoise; les finales ont eu lieu à Hull, cette année. Le thème en était « Un projet pour ma planète ». Dix gagnant(e)s ont été choisie(s), et il(elles) participeront à une foire scientifique internationale à Prague.

Un certain nombre de colloques ont eu lieu pendant le trimestre : d'une journée sur la coopération économique en Europe, avant que se tienne la réunion de la SCSA à Bonn; l'ambassadeur David Peel et les membres de son personnel de Vienne ont mené une discussion sur les négociations concernant la limitation des armes conventionnelles.

À la fin d'avril, le président Vassilou de la République de Chypre a pris la parole pendant une réunion qui se tenait à l'Institut. Le 24 avril, Vitaliy Korotich, rédacteur en chef de la revue *Ogonyok* et membre du Congrès soviétique des députés du peuple, a mené un colloque sur l'évolution de la conjoncture en URSS.

Brad Feezey a fait un exposé à la conférence du printemps de l'Independent Schools History Teachers Association in Ontario, au Collège du Haut-Canada (*Upper Canada College*). Paul Gray, professeur de l'histoire à Parry Sound, a amené des élèves de sa classe d'histoire du Canada et des États-Unis à l'Institut pour les faire participer à une table ronde.

Nancy Gordon a représenté l'Institut à l'Assemblée générale annuelle de la Commission canadienne pour l'UNESCO, qui a eu lieu à Hull, en avril. Federico Mayor, Directeur général de l'UNESCO, a pris la parole pendant la réunion. À l'Institut, l'Assemblée générale an-

ciennes de la Commission canadienne pour l'UNESCO, qui a eu lieu à Hull, en avril. Federico Mayor, Directeur général de l'UNESCO, a pris la parole pendant la réunion. À l'Institut, l'Assemblée générale an-

ciennes de la Commission canadienne pour l'UNESCO, qui a eu lieu à Hull, en avril. Federico Mayor, Directeur général de l'UNESCO, a pris la parole pendant la réunion. À l'Institut, l'Assemblée générale an-

ciennes de la Commission canadienne pour l'UNESCO, qui a eu lieu à Hull, en avril. Federico Mayor, Directeur général de l'UNESCO, a pris la parole pendant la réunion. À l'Institut, l'Assemblée générale an-

« Les changements climatiques, la sécurité internationale et le concept de gouvernement mondial », était le titre d'une conférence organisée par l'Institut à la mi-avril à Ottawa. Mettant l'accent sur l'incidence des changements climatiques sur la sécurité, la conférence a rassemblé des parlementaires, des dignitaires, des universitaires et des membres d'organismes non gouvernementaux. Le lecteur peut trouver un résumé des faits saillants de la conférence à la page 7.

À la mi-mars, l'Institut et la maison *Sumnerhill Press* ont lancé l'ouvrage de Boyce Richardson intitulé *Time to Change*; un extrait de ce livre a paru dans le numéro du printemps de *Paix et Sécurité*.

Deirdre Collings vient de se joindre au personnel de l'Institut en tant que chercheuse; elle s'occupera principalement de coordonner la réalisation d'un projet sur le Liban. Elle est diplômée de l'Université Carleton, où elle a mené des études spécialisées sur le Moyen-Orient.

Les activités du Fonds seront gérées par un Conseil de gestion qui comprendra quatre membres du Conseil d'administration de l'Institut et une à trois personnes de l'extérieur. Il incombera au directeur du Fonds d'en surveiller le fonctionnement quotidien; tout ou moins au début, le Secrétaire-trésorier de l'Institut assurera cette fonction.

Pour la gestion du processus, le Fonds conservera le calendrier semestriel ainsi que le mode de répartition des fonds entre deux programmes : la recherche, et les débats publics et l'information. Le personnel offrira continuera à évoluer les demandes quant à la pertinence du sujet et au respect des critères, et pour s'assurer que tous les délais exigés ont été fournis. Ensuite, comme par le passé, les demandes seront analysées par un comité consultatif composé de trois évaluateurs de transmission au Conseil de gestion pour qu'il statue sur chaque cas.

Pour l'année financière 1990-1991, le budget du Fonds sera le même que celui de l'exercice précédent. Les critères de demande ont été modifiés de manière à rendre compte des changements décrits ci-dessus. **Prêt de noter, en particulier, que la date limite pour la présentation des demandes en hiver a été fixée au 30 novembre.** Par conséquent, les dates de tombée seront désormais le 30 juin et le 30 novembre, et l'annonce des résultats est prévue pour octobre et mars respectivement. Nous invitons les candidat(e)s potentielle(s) à communiquer avec le directeur ou les administrateurs du Fonds pour obtenir des formulaires de demande et un exemplaire de l'énoncé des nouveaux critères.

## NOTE DE LA DIRECTION

### PAIX, SÉCURITÉ ET NOUVEL ÉQUILIBRE MONDIAL

**P**OUR NOUS TOUS QUI nous intéressons particulièrement aux affaires internationales, la situation que nous vivons aujourd'hui est à la fois exaltante et troublante. Exaltante parce que nous assistons au lever extraordinaire, rapide et le plus souvent pacifique du triste rideau de la Guerre froide qui a tant assombri la scène internationale depuis la fin de la Seconde Guerre mondiale. Troublante (du moins, elle devrait l'être) parce qu'aucun d'entre nous n'avait prévu la nature, la date ni les modalités des événements qui se sont déroulés. Pour la première fois peut-être, la sécurité de l'espèce humaine tout entière est compromise par des dangers qui ne sont pas attribuables à l'hostilité entre les humains. Le réchauffement de la planète, par exemple, pourrait causer plus de tort à l'humanité au cours du siècle prochain que toutes les guerres de l'histoire.

La menace qui plane sur l'environnement terrestre et sur les systèmes vitaux, ne constitue que le symptôme le plus évident de l'interdépendance mondiale. Si nous ne parvenons pas à mieux gérer les dossiers tels que ceux du commerce, des investissements et du protectionnisme, de la dette, des taux de change et des transferts de technologie, les chocs entre les différents pays seront certainement de plus en plus violents, dommageables et dangereux.

**A**FFRONTEMENT MILITAIRE ENTRE L'EST ET L'OUEST demeure un élément clef dans l'équation de notre sécurité. Même si les négociations de Vienne sur la réduction des armes conventionnelles et les pourparlers américano-soviétiques sur la réduction des armes stratégiques sont couronnés de succès, l'URSS et les États-Unis ainsi que certains autres pays seront encore des nations très armées ne se faisant pas encore suffisamment confiance et ne partageant pas assez de valeurs communes pour écarter toute possibilité de conflit armé d'envieure. Tant que la modernisation de certaines armes se poursuivra de part et d'autre et que grandes réductions équilibrées possibles des forces armées, de manière à abaisser considérablement le niveau des arsenaux ainsi que l'ampleur des menaces militaires en Europe. Parallèlement, nous avons tout intérêt à favoriser l'édification d'une nouvelle structure européenne de sécurité qui «gèlera» pour de bon l'ampleur de la menace à ces niveaux inférieurs et offrirait de meilleures façons de résoudre les conflits qui surgissent inévitablement.

L'idée de mettre à profit la Conférence sur la sécurité et la coopération en Europe (CSCE), trinitaire, nous a maintenu une importance relative. Nous avons maintenant une importante tâche à remplir : convaincre les États-Unis qu'une CSCE institutionnalisée ne représente pas un danger pour l'Organisation du Traité de l'Atlantique Nord (OTAN). Pour garantir la sécurité de l'Atlantique Nord, l'Alliance devra continuer d'offrir une force de dissuasion ou une opposition crédible, face à toute menace militaire possible. Pareille conjonction exigera en Europe la présence de forces américaines importantes, quoique considérablement réduites; et tant qu'il y aura des forces américaines sur le Vieux Continent, le Canada sera pleinement justifié, à mon avis, d'y déployer également des forces armées. Le moment est venu de mettre un terme chez nous au débat simpliste sur la question de savoir s'il faut laisser notre contingent de l'OTAN en Europe ou le retirer; commençons plutôt à nous demander quels rôles nous pourrions le mieux assumer là-bas. Nous avons déjà vu comment certains des virus empoisonnés de l'Europe de l'avant-guerre ont émergé, aussi dangereux que jamais, des glaces de la Guerre froide (affrontements ethniques, etc.). On parle déjà sérieusement de nouveaux mécanismes de gestion des crises et de maintien de la paix, qui relèveraient sans doute de la CSCE ou des Nations-Unies.

Pour que cette perspective se concrétise et qu'elle contribue à préserver les progrès accomplis en Europe sur le plan de la sécurité, il faudra organiser les nouvelles structures, et je ne vois aucun pays soit mieux équipé et plus écouteux, le Canada est sans doute à même de fournir un apport particulièrement utile en déployant un modeste contingent auprès de l'OTAN en Europe.

**A** MON AVIS, CE N'EST PAS DANS LE CADRE DES relations Est-Ouest que l'on risque le plus de voir éclater des conflits militaires importants au cours des décennies à venir. Dans ma revue annuelle de janvier dernier j'ai souligné que nous risquions d'entamer une «décennie de profitez-vous» des armes de destruction massive dans les nombreux pays qui n'en étaient pas dotés jusqu'ici. Ces tendances ne sont pas entièrement inévitables, mais elles vont le devenir si la communauté internationale dans son ensemble ne mobilise pas toutes ses énergies dès aujourd'hui, à la fois pour limiter la diffusion d'armements perfectionnés et pour préconiser dans le monde entier le règlement des conflits et la signature d'accords régionaux de sécurité.

Une fois de plus, je crois qu'il y a pour le Canada des occasions spéciales à saisir, plus nombreuses qu'habituellement en sa qualité de puissance moyenne qui inspire confiance, qui a l'expérience de la médiation et du maintien de la paix et qui a un des programmes d'aide les plus importants et les plus respectés qui soient dans la plupart des régions du tiers-monde. Nous avons gagné par nos actions une bonne mesure de crédibilité et de bonne volonté politique, autant d'atouts que nous pourrions utilement mettre à profit en unissant nos efforts à ceux de nombreux autres pays pour contribuer aux processus régionaux d'instauration de la paix. Mais, nous sommes aux prises avec une étrange apathie «cyclique», une sorte de crise de la quarantaine, et avec une attitude de cynisme à l'endroit des institutions internationales. Les États-Unis sont maintenant le pays le plus éloigné de l'ONU.

**L** EST TEMPS, POUR UN GROUPE DE GOUVERNEMENTS qui représentent toutes les régions du monde et qui sont «sur la même longueur d'ondes» de promouvoir la cause des institutions internationales pour leur permettre de mieux relever les défis tels que les conflits régionaux, le commerce des armes, le trafic de drogues, le terrorisme et la protection de l'environnement, et pour leur donner également les moyens de répondre aux besoins toujours aussi criants de progrès économiques et sociaux dans le tiers-monde. Dans un monde dont il faut admettre qu'il est imparfait, le Canada est considéré comme un modèle de paix et de prospérité, comme un pays qui refuse de tolérance et comme l'expression du nouvel ordre mondial qui semble vouloir se façonner.

Heureusement, la plupart des étrangers ne savent pas encore comment, au cours des dernières mois, Canadiens et Canadiennes, n'avons pas réussi, dans notre propre pays, à sauvegarder ces atouts précieux et rares que sont la tolérance et la capacité de faire des compromis pratiques. Ceux et celles d'entre nous qui oeuvrent dans le domaine de la politique étrangère espèrent que le Canada retrouvera ces deux qualités avant même que le monde s'aperçoive que nous les avons momentanément mises en danger. □

— BERNARD WOOD

*Cet article est tiré d'une allocution prononcée à la mi-avril par M. Bernard Wood devant le Conseil des relations internationales de Montréal.*

# À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

## La Namibie dans les rangs de l'ONU

Le 17 avril, le Conseil de sécurité a accepté à l'unanimité la candidature de la Namibie, qui devient le 160<sup>e</sup> membre des Nations-Unies. L'événement marquant des quatre années de diplomatie internationale, au cours duquel le Canada a joué un rôle important. Selon les propres termes du Secrétaire général, M. Javier Pérez de Cuéllar, il pouvait «com- bien le multilatéralisme, synonyme d'union vers un objectif et de co- hèrece dans l'effort, peut se révéler à la fois fructueux et dynamique».

## L'Amérique centrale

Les efforts déployés en ce moment en Amérique centrale proviennent bien le regain de dynamisme que connaît l'organisation mondiale. Le 27 mars, le Conseil de sécurité a voté à l'unanimité l'élargissement du rôle du Groupe d'observateurs des Nations-Unies en Amérique centrale (GONUAC) et l'accroissement de ses effectifs. La force, qui comptait 260 soldats, dont un contingent de Canadiens, passe à quelque 1060 personnes. Le gros des nouveaux venus est fourni par la Venezuela.

À l'origine, le GONUAC avait pour seules tâches de vérifier que les rebelles de la *Contra* ne reçoivent plus d'aide et de patronner le long des frontières pour prévenir des attaques de la guérilla. D'ores et déjà, il lui incombera aussi de récupérer les armes, les munitions, l'équipement militaire et les unités des *Contras*. Aux termes du nouveau mandat, les rebelles se devaient être démobiliés dans des camps existant. Ceux basés au Nicaragua devaient se rendre de des points de rassemblement temporaires (des «zones de sécurité») protégées par les forces du GONUAC.

«La position des États-Unis sur la question des *Contras* est on ne peut plus claire», a déclaré alors

M. James Wilkinson, envoyé américain, au Conseil de sécurité. «Nous voulons qu'ils se démobilisent librement et qu'ils retournent dans leur pays pour contribuer à son développement, et nous les y encourageons.»

Malgré le soutien que les États-Unis apportent à l'action du Conseil de sécurité, le 1<sup>er</sup> mai, les chefs de la *Contra* se trouvant au Nicaragua continuaient d'affirmer qu'ils ne déposeront pas les armes tant que les Sandinistes n'auront pas abandonné le pouvoir à l'armée nicaraguayenne. Les *Contras* basés au Honduras ont coopéré avec le GONUAC et se sont volontairement démobilisés, mais le gros des forces accusées est resté au Nicaragua. Le 20 avril, le Conseil de sécurité a de nouveau étendu le mandat du GONUAC pour lui attribuer un rôle de surveillance du cessez-le-feu entré en vigueur la veille. Ce cessez-le-feu faisait suite à un accord conclu entre des représentants du gouvernement nicaraguayen et le gouvernement élu, les *Contras* et l'archevêque de Managua.

Une autre question latino-américaine a brièvement retenu l'attention du Conseil. En effet, il s'est réuni le 9 février pour entendre une plainte de Cuba, qui accusait un navire de la garde-côte américaine d'avoir ouvert le feu, dans le Golfe du Mexique, sur un cargo affrété par Cuba que les Américains voulaient fouiller, certains d'y trouver de la drogue. Cuba a traité les Américains de «pirates des temps modernes».

Les États-Unis ont répondu que les garde-côtes avaient agi en toute légalité, puis que Washington avait reçu du Panama l'autorisation de monter à bord du cargo battant pavillon panaméen.

Le Conseil a levé la séance sans envisager d'adopter une résolution. Plusieurs membres du Conseil ont laissé entendre qu'il était improbable que l'affaire ait des prolongements parce que l'acte des États-Unis ne constituait pas une grave violation du droit international.

## Le Moyen-Orient

Le 15 mars, le Conseil de sécurité s'est réuni pour examiner des allégations selon lesquelles Israël aurait l'intention d'installer des

Juifs soviétiques immigrants dans les territoires occupés. On estime que de 50 000 à 100 000 Juifs soviétiques émigreront cette année en Israël. La réunion a eu lieu à la demande de l'URSS, dont le délégué a exhorté Israël à «évaluer sérieusement la situation». Ce même délégué a déclaré que l'installation d'immigrants dans les territoires occupés constituait un nouvel obstacle à la paix. La question, a-t-il déclaré, n'était pas de savoir si l'Union soviétique devait arrêter l'émigration, mais qu'Israël prenne ses responsabilités.

Le représentant de l'Organisation des États arabes, qui s'est tenue le 19 mars, a appelé que le Canada n'a pas ré- que les Israéliens exercent sur les territoires occupés. «Le Canada s'opposera, et continuera de s'opposer, à toutes les actions entreprises par le gouvernement israélien pour modifier la structure démographique des territoires occupés, notamment dans les mois à venir», a déclaré M. Fortier. Le président du Conseil a levé la séance en précisant que le débat reprendrait à une date ultérieure non déterminée.

## L'Irak et l'Irak

Le 27 février, pour donner un coup de pouce aux négociations de paix entre l'Irak et l'Irak, le Conseil a demandé aux deux pays de «co- opérer pleinement» aux efforts que le Secrétaire général déploie pour entre eux.

Dans une déclaration, le Conseil a exprimé son soutien aux propositions du Secrétaire général appelant à une nouvelle série de pourparlers

qui, placée sous ses auspices, dure- rait deux mois et se déroulerait dans un programme précis. Ce programme n'a pas été rendu public, mais on pense qu'il comportera huit points visant à assurer l'application de la Résolution 598, sur laquelle repose l'accord de paix imposé par l'ONU.

Le 29 mars, le Conseil a prolongé de six mois le mandat du Groupe d'observateurs militaires des Nations-Unies en Iran-Irak (GOMNUII). Pendant cette réunion, le Secrétaire général a informé les membres du Conseil qu'il «essaierait» que les deux gouvernements étaient «décidés à saisir l'occasion de l'impulsion créée par la déclaration faite le 27 février par le Conseil de sécurité». Mais il a également demandé aux deux parties de lui faire savoir si elles acceptaient le programme proposé et de «relancer les négociations en proclamant mutuellement leur sincérité et leur détermination à appliquer la Résolution 598».

## Chypre

Le 12 mars, à propos d'autres négociations se déroulant sous l'égide des Nations-Unies, le Conseil a demandé aux deux communautés chypriotes de poursuivre leurs efforts en vue de créer une république fédérale indépendante, souveraine et non alignée. Cet appel est intervenu après que M. Rauf Denktash (dirigeant des Chypriotes turcs) et M. George Vassiliou (président de la République de Chypre) n'ont pu parvenir à un accord au terme d'une semaine de négociations, à New York. Faisant le bilan des pourparlers, le Secrétaire général a déclaré au Conseil, «étant donné les circonstances, j'en suis arrivé à la conclusion, regrettable, que nous nous trouvons dans une impasse difficile et que l'essence même du mandat de bons offices que le Conseil m'a donné est remise en question, ainsi que les bases des négociations, par contrecoup». □

# EN DIRECT DE LA COLLINE PARLEMENTAIRE

## Le budget

■ Le ministre des Finances, M. Michael Wilson, a déposé le budget fédéral le 20 février. Les grandes coupes attendues dans les secteurs de la défense et de l'aide extérieure ne se sont pas matérialisées, bien qu'on ait limité le taux de croissance annuel des deux cas, au cours des deux prochaines années, à 5 p. 100, ce qui correspond à peu près au taux d'inflation. Le budget total des Affaires étrangères a, à toutes fins utiles, été plafonné à 1,1 milliard de dollars pour 1990-1991, tandis que celui de la Défense nationale a augmenté de 655 millions pour passer à 12 milliards; 2,5 milliards de dollars seront affectés à l'aide extérieure.

Dans le budget de 1989, les fonds réservés à l'aide extérieure avaient subi des coupes profondes, et leur valeur était passée de 0,49 à 0,43 p. 100 du Produit national brut. Plus tôt cette année, le ministre des Affaires étrangères, M. Joe Clark, avait mené une campagne publique pour empêcher toute autre réduction du budget de l'aide extérieure et, bien que ses efforts aient de toute évidence été couronnés de succès, il est peu probable, vu le plafonnement des dépenses, que se réalise sa prédiction, à savoir que le rapport susmentionné passerait à 0,45 p. 100 cette année.

Le seul grand programme à être rayé du budget de la Défense est celui du bris-glaces *Polar 8*. Le gouvernement a prétendu que cette coupe de 660 millions de dollars se justifiait par l'accord bilatéral conclu en 1988 avec les États-Unis, en vertu duquel ceux-ci promettaient de noifier le Canada avant d'envoyer leurs bris-glaces dans le Pas-du-Nord-Ouest. Notre pays revendique des droits souverains sur ces eaux, tandis que Washington continue de soutenir qu'il s'agit là d'une voie maritime internationale. À la Chambre des communes le 13 mars, le ministre des Affaires étrangères, M. Joe Clark, a fait valoir

## en Europe

### L'évolution de la conjoncture

■ Au cours d'une brève visite à Ottawa, le ministre ouest-allemand des Affaires étrangères, M. Hans-Dietrich Genscher, a témoigné devant le Comité des affaires étrangères (Communes), le 5 avril; il a alors exhorté le Canada, les États-Unis et la Communauté européenne à envisager de redéfinir leurs relations à la lumière des changements s'opérant rapidement dans l'ordre politique européen. Regardant au-delà de la réunification allemande, M. Genscher a évoqué l'intégration grandissante des douze membres de la Communauté : « Nous marchons vers l'union politique de l'Europe, l'Europe de la Communauté... » Selon lui, l'OTAN, y compris les troupes américaines et canadiennes, conservera un rôle important aux fins de la sécurité européenne; il a cependant prédit que la mission de l'Alliance deviendrait plus politique et que l'on mettrait désormais davantage l'accent sur la vérification, la limitation des armements, le renforcement de la confiance et l'établissement de structures coopératives de sécurité en Europe.

Le 11 mars, la Lituanie a proclamé son indépendance, et le lendemain, la Chambre des communes lui a accordé unanimement son approbation. Les représentants du gouvernement ont pris soin de souligner que le Canada n'avait jamais reconnu juridiquement l'occupation des trois républiques baltes par l'URSS.

En dépit des déclarations officielles, le Canada, tout comme ses alliés occidentaux, a opéré pour une attitude empreinte de jugement. C'est ce qui a transpiré d'une entrevue accordée par le député Patrick Boyer, secrétaire parlementaire de Joe Clark, après un ralliement pro-indépendance à Toronto, au début d'avril. Il aurait déclaré que le problème tenait au fait que le Canada et d'autres pays trouvaient difficile de

## En Afrique

■ Joe Clark a informé les Communes le 7 mars sur la visite qu'il avait effectuée du 26 au 28 février à Lusaka, en Zambie, ville où l'*African National Congress* (ANC) en exil a son quartier général. M. Clark s'est alors réuni avec M. Nelson Mandela et des dirigeants des États de la ligne de front qui ont mené la lutte contre l'apartheid en Afrique du Sud. Il a précisé que M. Mandela était on ne peut plus clair sur la question des sanctions et, de dire M. Clark, « je lui ai pris d'indiquer comment et dans quel domaine il y aurait lieu de ce faire ».

La ministre des Relations extérieures, Monique Landry, a rendu visite aux Communes, le 28 mars, sur sa récente visite en Éthiopie et sur les efforts diplomatiques et humanitaires que le Canada déploie dans ce pays. La Chambre a sanctionné à l'unanimité une résolution condamnant toutes les parties au conflit qui se servent de la nourriture comme d'une arme pour atteindre des objectifs stratégiques, militaires et politiques, et qui refusent d'aider les organismes donateurs internationaux à faire parvenir la nourriture aux faibles dans la région.

### Les comités parlementaires

Le Comité des affaires étrangères (Communes) a poursuivi son étude sur les relations de notre pays avec l'Europe de l'Est et l'Union soviétique, et il s'est rendu à Moscou, Leningrad, Kiev, Berlin et Bonn entre le 20 avril et le 5 mai. On ne sait pas au juste quand le Comité envisage de rendre compte de ses conclusions à la Chambre, mais un rapport sur le voyage est attendu en chambre avant l'ajournement des débats à la fin de juin.

Le Comité de la défense nationale (Communes) s'affaire à rédiger l'ébauche de son rapport sur la souveraineté maritime du Canada. Le rapport définitif sera déposé devant

la Chambre avant la fin de juin. Le Comité a tenu des audiences au début de mai sur la sûreté du CF-18, après que cinq écrasements survenus cette année eurent entraîné la mort de quatre pilotes. Depuis l'acquisition des 138 chasseurs à réaction en 1982, treize se sont écrasés et huit pilotes ont été tués. Le ministre de la Défense nationale soutient que des facteurs humains, et non des défaillances mécaniques, expliquent plus élevé que dans les forces aériennes d'autres pays employant d'autres versions du même appareil.

### En bref

■ Du 18 au 23 avril, le Canada a accueilli à Yellowknife des hauts dignitaires des huit pays circumpolaires (les quatre pays scandinaves, l'Islande, les États-Unis, l'URSS et le Canada) pour discuter des problèmes environnementaux propres à l'Arctique. C'était seulement la deuxième fois dans l'histoire que ces pays se réunissaient en tant que groupe; le premier « sommet » de ce genre avait eu lieu en Finlande en 1989. Le nouvel intérêt que l'on manifeste pour la coopération multilatérale à l'égard de l'Arctique atteste pour une large part des changements profonds s'étant opérés dans les attitudes soviétiques.

Le gouvernement fédéral a entériné la mise en oeuvre des plans annoncés en 1988 relativement à la création d'un institut international pour le développement durable; il s'agit d'un institut de recherche et d'éducation publique s'intéressant surtout à l'environnement et au développement, notamment dans le tiers-monde. Cet organisme s'installera à Winnipeg et recevra 5 millions de dollars par année pour une période de cinq ans. Les fonds proviendront de l'Agence canadienne de développement international (ACDI), d'environnement Canada et du gouvernement manitobain.

Lloyd McChinnis, président-directeur général de la maison *Wardrop Engineering*, a été nommé président du conseil d'administration. □

# CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

## Pourparlers sur la réduction des armements stratégiques (START)

Des progrès « importants » vers la conclusion d'un traité START ont, dit-on, été accomplis au sommet à Moscou du 7 au 9 février. Les deux parties sont parvenues à un accord sur deux des trois questions en litige : la réduction du nombre de missiles de croisière et des missiles de moyenne portée. Quant à la troisième, celle des missiles de croisière, les deux parties ont convenu de continuer à négocier. Les deux parties ont également convenu de continuer à négocier la réduction du nombre de missiles de croisière et des missiles de moyenne portée.

Enfin, les deux parties ont convenu de continuer à négocier la réduction du nombre de missiles de croisière et des missiles de moyenne portée. Les deux parties ont également convenu de continuer à négocier la réduction du nombre de missiles de croisière et des missiles de moyenne portée.

10 AOUT AU 14 SEPTEMBRE

prochains, les Etats signataires du Traité sur la non-prolifération des armes nucléaires (TNP) doivent se réunir à Genève pour examiner le fonctionnement du Traité. L'événement est important, car ce sera la dernière rencontre de ce genre avant que les parties se réunissent de nouveau en 1995 pour décider si le Traité demeure en vigueur pour une période indéfinie, ou s'il sera prorogé pour une ou plusieurs périodes supplémentaires d'une durée déterminée.

Le TNP (comme on l'appelle communément) a été ouvert à la signature en 1968, après de nombreuses années de négociations aux Nations-Unies; il vise expressément à prévenir la dissémination de l'arme nucléaire. Selon les dispositions du Traité qui est entré en vigueur en 1970, chaque Etat doit d'ores et déjà s'engager à ne pas transférer ses armes à qui que ce soit. Les Etats non dotés d'armes nucléaires, pour leur part, acceptent de ne pas en faire l'acquisition. Pour que le respect de cette obligation soit confirmé, ces derniers s'engagent également à soumettre toutes leurs activités nucléaires pacifiques aux mesures de garanties prévues par l'Agence internationale de l'énergie atomique (AIEA).

La Conférence de 1990 (tout comme celles de 1975, 1980 et 1985) s'inscrit dans le cadre des conférences quinquennales prévues par le Traité et elle a pour but de s'assurer que les objectifs et les dispositions du Traité sont en voie de réalisation. Au cours des trois conférences précédentes, toutefois, l'unanimité à ce sujet n'a pas toujours été acquise.

Pour les Etats signataires non dotés d'armes nucléaires, le TNP n'a pas seulement pour but de prévenir la dissémination de l'arme; il vise également à assurer le désarmement nucléaire. Aux termes de l'Article VI, par exemple, «toutes les parties s'engagent à poursuivre de bonne foi et à une date rapprochée des négociations sur des mesures efficaces relatives à la cessation de la course aux armements nucléaires et au désarmement nucléaire». De plus, le Préambule du Traité rappelle que «les parties au Traité interdisant les essais d'armes nucléaires dans l'atmosphère, dans l'espace extra-atmosphérique et sous l'eau (PTBT), sont résolues à en arriver à un arrêt complet de toutes les explosions d'armes atomiques...»

Etant donné la multiplication quantitative et qualitative des armements nucléaires chez les puissances signataires dotées de ces engins (c'est-à-dire les Etats-Unis, la Grande-Bretagne et l'Union soviétique), plusieurs Etats non «nucléaires» ont reproché à ces pays, dans le passé, de ne pas œuvrer pleinement à la réalisation des objectifs du TNP. En fait, selon eux, les obligations du Traité en matière de désarmement incomberaient avant tout aux seules puissances qui, en vertu des dispositions du Traité, peuvent posséder ces armes et continuer à procéder à des essais nucléaires. Le contenu de ce sujet fut tel

## COMPLÉMENT DU CONDENSE

# LA QUATRIÈME CONFÉRENCE D'EXAMEN DU TRAITÉ SUR LA NON-PROLIFÉRATION DES ARMES NUCLÉAIRES

Bien que des progrès importants aient été accomplis en ce qui concerne les questions de désarmement nucléaire (notamment depuis la conclusion du Traité de 1987 sur les FNL, qui élimine toute une catégorie de missiles et, plus récemment, avec l'avancement des négociations START sur une réduction possible de près de 50 p. 100 des armements nucléaires stratégiques), on s'attend tout de même à ce que la question d'une interdiction complète des essais nucléaires marque profondément les discussions de la Conférence de 1990. À cet égard, deux des trois gouvernements dépositaires du PTBT (les Etats-Unis et la Grande-Bretagne) ont déclaré ouvertement qu'ils s'opposeraient à l'initiation de signataires voulant convertir cet accord en un Traité d'interdiction complète des essais nucléaires, lors d'une conférence d'amendement prévue pour janvier 1991. Leurs efforts ne devraient pas passer inaperçus à la Conférence du TNP.

Laide au développement de l'énergie atomique à des fins pacifiques est considérée par plusieurs comme un autre objectif important du TNP. Toutefois, comme les technologies nucléaires sont moins en demande (à cause principalement de facteurs économiques et environnementaux comme l'accident de Tchernobyl), la question devait soulever moins de discussions qu'aux conférences précédentes. Par ailleurs, le problème de la capacité nucléaire des Etats non signataires pourrait, encore une fois, créer une vive controverse. Sur ce point, nombreux sont les pays qui reprochent au TNP de ne pas interdire la coopération entre les Etats signataires et les Etats non signataires, car ces derniers n'acceptent pas les vérifications complètes de l'AIEA, alors qu'il n'existe presque aucune différenciation possible entre les technologies nucléaires à buts pacifiques et celles servant à des fins militaires.

## Les enjeux

Quand le Traité est entré en vigueur en 1970, quarante parties y adhéraient. Il y en a maintenant quelque 140, soit plus que pour n'importe quel autre accord de limitation des armements jamais négocié. En vingt ans d'existence, l'Agence internationale de l'énergie atomique n'a décelé aucune dérogation aux obligations du Traité, et

aucune des parties n'a fait appel à son droit de retrait, dont un pays peut se prévaloir aux termes de l'entente s'il estime que ses intérêts suprêmes sont menacés. Bien qu'il soit maintenant reconnu comme la pierre angulaire du régime international pour prévenir la dissémination de l'arme atomique, le TNP demeure tout de même un instrument fragile. La Chine et la France n'y ont pas encore adhéré (quoique des rumeurs circulent voulant que Paris ait l'intention d'adhérer au Traité), ce qui fait que seules trois des cinq puissances dotées d'armes nucléaires sont officiellement liées par les obligations du Traité. De plus, l'absence de l'Israël, de l'Afrique du Sud, de l'Inde, du Pakistan, du Brésil et de l'Argentine, nous soupçonne d'avoir ou de vouloir acquiescer à un armement nucléaire, continue d'être une menace grave pour l'accord.

En dépit des débats importants que certaines questions risquent de soulever, personne ne pense que la Conférence de 1990 échouera. On prévoit, toutefois, que cette réunion des parties pourrait marquer l'annonce des discussions sur l'avenir du Traité après 1995. À ce sujet, et comme cela se discute déjà dans certains milieux, l'idée de prolonger le TNP pour un seul terme de très courte durée en contrepartie, par exemple, d'un traité ferme en faveur de la conclusion d'un traité d'interdiction complète des essais nucléaires à une date précise pourrait monopoliser les discussions officielles de la Conférence. Pour les partisans du TNP, cependant, l'adoption d'une telle stratégie serait très dangereuse et pourrait entraîner la perte du Traité.

Si l'on met fin au Traité, l'AIEA perdra le droit d'inspecter plusieurs programmes nucléaires (notamment grâce à l'application des mesures de vérification de l'Agence) comme servant à des fins pacifiques seulement. L'énergie nucléaire ne pouvant être fractionnée entre atomes civils et atomes militaires, la perte du système TNP-AIEA aurait pour conséquence de jeter un voile d'incertitude sur de nombreux programmes nucléaires. Cette incertitude serait d'autant plus grande que, selon les données actuelles, pas moins de trente pays possèderaient désormais les moyens de fabriquer une arme nucléaire d'ici la fin de la décennie.

Entre la découverte de l'énergie atomique et la mise en œuvre du TNP, quelque vingt-cinq ans se sont écoulés. Pendant cette période, de nombreuses tentatives pour empêcher une plus grande prolifération des armes nucléaires se sont succédées avec plus ou moins de succès. Même si le Traité n'est pas sans faiblesses, ses partisans reconnaissent les difficultés insurmontables que présenterait la mise en œuvre d'un nouvel accord international de non-prolifération, et c'est pourquoi le succès de la Conférence d'examen de 1990 est très important pour eux. □

— MARIE-FRANCE DESJARDINS

Martie-France Desjardins est chercheuse à l'Institut.

Ce que les Blancs d'Afrique du Sud n'ont pas encore compris, c'est que les récents événements ont transformé les idéologues de la rhétorique stalinienne en la France la plus progressiste et la plus modérée du Congrès national africain. Avec un bloc soviétique qui recherche la paix et des investissements au lieu d'une révolution mondiale, les communistes sud-africains n'ont nulle part où aller sinon chez eux. Cette situation fait d'eux des alliés inattendus du projet de négociations de Pretoria. Le socialisme que professe le PCAS pour la deuxième étape, après que la démocratie aura été établie, dépend, selon les propres paroles de son dirigeant, Joe Slovo, des «forces sociales en présence» à ce moment-là. Autrement dit, cela met le socialisme en réserve : une fois que le capitalisme non raciste aura livré ses marchandises, les partis socialistes marxistants plujit «daltoniens» rétro-croient ou deviendront sociaux-démocrates, comme ailleurs dans le monde entier.

Grâce à son ancienne image radicale, la direction du PCAS peut entraîner une jeunesse sceptique dans le processus de négociation. De ce point de vue, le gouvernement devrait accueillir les drapeaux rouges au lieu d'en avoir peur. Si quelque un peut empêcher un racisme à rebours latent de se concrétiser et faire qu'une attitude non raciste prévaille, ce sont les marxistes classiques avec leur universalisme internationaliste. La police secrète défilait quotidiennement la chronique des journaux et les lecteurs, électrisés, ont du mal à faire la différence entre la réalité rapportée dans le *Capetown Times* et la fiction littéraire. Il serait impardonnable qu'une amitié ne coupe pas court à la période des révélations. Il est essentiel, pour la nature de la nouvelle société dont les fondements moraux reposent sur une conscience his-torique juste, de déterminer la vérité. La phase des révélations n'a pas pour objectif d'établir la responsabilité pénale des différents auteurs des crimes, mais la responsabilité de la classe politique et de l'administration qui, en premier lieu, ont permis et encouragé les crimes. Si le nouvel ordre doit être différent de l'ancien qualitativement, il devra modifier ces cadres institutionnels et non les maintenir sous une nouvelle direction. Le Zimbabwe a commis cette erreur de conserver la législation d'urgence adoptée par son prédécesseur.

Jerry K. L.

LA RAPIDITÉ DE CETTE MÉTAMORPHOSE POLITIQUE N'A PAS ENCORE PERMIS À ceux qui seront probablement tenus à l'écart de la nouvelle alliance d'en saisir les conséquences. Même les optimistes profitent un peu de la gloire de leurs dirigeants quand ceux-ci sont admis dans les allées du pouvoir. Mais la tendance à la reconquête signifie que le désastre pointe sous la surface :

pour au lendemain, oppresseurs et terroristes font figure de centristes dans la politique sud-africaine.»

Comme l'a fait observer un commentateur avec une ironie désabusée : «Du seuil du CNA répond aux attentes des Blancs, pas aux aspirations des blancs de cette solution qui visait à endiguer l'afflux des Noirs au Cap. doit se trouver aussi étranger au cloaque de Khyabitha que les concep-tions blanches de cette solution qui visait à endiguer l'afflux des Noirs au Cap. Gucsi, dans les rangs desquels on compte deux femmes, pour le principe, nante du Congrès national africain, en costumes impeccables et mantes

«d'approchement», le centre qui s'était élargi risque de se rétrécir. La violence aveugle au Natal et ailleurs donne un avant-goût de l'anarchie qui est prête à émerger si le projet de charte équitable pour une société non raciste échoue. Combien de fois Mandela peut-il se permettre d'être ignoré quand il demande que l'on jette les armes à la mer ? Qu'importe les nobles tentatives déployées pour l'empêcher, le recours aux armes est la revanche inévitable de l'amère histoire sud-africaine. Ceux qui représentent les opprimés ont-ils conscience de cette dialectique ? Ou bien le goût du pouvoir les a-t-il aussi rendu aveugles à l'ombre magique de la montagne de la Table ?

SI LE GOUVERNEMENT SUD-AFRICAIN AVAIT DEMANDÉ À UNE AGENCE DE RELATIONS publiques de concevoir une campagne pour discréditer le CNA, elle n'aurait pu rédiger meilleur scénario. Toutefois, le gouvernement et le CNA luxent d'affaiblir un partenaire modéré de crainte que des rivaux extrémistes prennent le pouvoir et que l'Afrique du Sud sombre dans une guerre civile meurtrière. On rapporte qu'au cours d'un dîner, l'infiniment petit P. W. Botha essaya de convaincre son invité du CNA de la nécessité de l'idéologie de participation naissante en recourant à l'analogie suivante : «Nous sommes tous dans le même bateau et les requins qui rodent à gauche comme à droite ne feront pas de différence entre nous quand nous tomberons par dessus bord.» Mandela parle sincèrement du Parti national et du CNA comme des «principaux acteurs» et des «associés majoritaires», reléguant ainsi les rivaux minoritaires, opposés à l'hégémonie de son mouvement, de l'autre côté de la table.

Le dirigeant d'un ancien parti stalinien, qu'est le bras droit de Mandela, est devenu l'idée fixe des Blancs d'Afrique du Sud. De fait, des membres dévoués et intelligents du PCAS occupent la plupart des postes influents au sein du CNA et des syndicats, en tant que résistants séparés d'avant-garde. Révéler son appartenance secrète, comme ce serait normal dans un pays démocratique, pourrait embarrasser le PCAS. Cela reviendrait, en montrant son rôle prédominant dans le CNA, à donner raison à la propagande gouvernementale.

NOUS NOUS EXPLIQUONS ENCORE MAL COMMENT LES DIRIGEANTS DES VICTIMES de l'humiliation qu'est l'*apartheid* peuvent si facilement oublier que l'ave-nir est toujours prisonnier du passé. Peut-être ne montrent-ils pas d'amertume et ne crèvent-ils pas vengeance parce qu'ils n'ont pas à affirmer leur identité. Barbara Massekala, membre du CNA qui a passé l'essentiel de son exil aux États-Unis, a mis en évidence une différence cruciale en disant : «Le régime de l'*apartheid* n'a pas pu nous priver de notre culture, de notre langue et de notre patrimoine, ce qui n'est pas le cas des Noirs américains, que l'on a dépossédés de leur culture africaine.» Pour cette raison, conclut-elle, «le Noir sud-africain moyen n'est pas aliéné» et il n'y a pas, en Afrique du Sud, de polarisation raciale à l'américaine.

En d'autres termes, les Noirs d'Afrique du Sud ont été soumis mais pas vaincus spirituellement. Par son attitude et son discours, Nelson Mandela fait preuve d'une fierté et d'une assurance qui égalent celles de ses oppresseurs. Il a même appris leur langue méprisée, mais pas pour gagner un droit d'entrée en tant que sujet colonisé. La conscience noire et un sentiment d'identité débarrassés du complexe d'infériorité propre à une mentalité d'es-clave intériorisée n'ont fait que réaffirmer un authentique antiracisme chez les activistes noirs de toutes tendances politiques. Il n'y a pas de racisme à rebours chez les Noirs. C'est cet universalisme, qui transcende l'étréité raciale, que le gouvernement sud-africain connaît pour la première fois. C'était une condition sine qua non de la remarquable modération. □

# DES RACISTES, DES TERRORISTES ET DES CONCILIATEURS

*Le début, apparemment aimable, des négociations sur l'avenir de l'Afrique du Sud présente de nouvelles inconnues encore plus dangereuses et complexes à résoudre.*

PAR HERIBERT ADAM

se terminant par des procès-verbaux. Sans exprimer d'amertume au terme de décennies de souffrance, sans crier vengeance pour des crimes abominables, Nelson Mandela déclare publiquement qu'il faut oublier le passé. Par cette attitude, il rabrique en fait un nouveau mythe, à savoir que le passé n'importe plus. Cependant, si l'on peut pardonner le passé, on ne peut l'oublier. Légitimement les auteurs des crimes passés de l'*'apartheid'* dans l'intérêt de la paix future devraient accepter une conversion sans repentir. Ce n'est pas sans raison que, dans l'acte qui consiste à se laver des péchés commis, la religion insiste sur la confession et sur la réparation comme preuves symboliques de la sincérité du converti. Cependant, les tenants du pouvoir officiel n'ont encore ni présenté d'excuses ni offert de réparation. Le Parti national ne s'est pas encore excusé des souffrances infligées. Jusqu'ici, il n'a fait que reconnaître l'existence de l'*'apartheid'*, ce qui ne manque pas de cynisme. Proclamer que l'*'apartheid'* est impraticable et le dénoncer comme étant criminel ne revient pas au même.

EN PARDONNANT SANS INSISTER SUR UNE FORME QUELCONQUE DE RÉHABILITATION morale, Nelson Mandela risque bien de compromettre sa crédibilité auprès des membres radicaux de son parti. Il ne suffit pas d'exiger réparation sous la forme de nationalisation. Même sur ce point, pourtant, le CNA a lâché du lest devant les cris poussés dans le monde des affaires et dans les momopies. On ne répartira de nationalisation que si les experts ont dû étudier la jauge réalisable. Ce socialisme est peut-être sensé du point de vue économique, mais les Sud-Africains d'en haut qui exigent des améliorations tangibles maintenant ne comprendront pas qu'on veuille l'instaurer.

En fait, il est aimablement par l'image d'une double présidence. La télévision montre un Frederik De Klerk et un Nelson Mandela qui s'assurent de leur respect mutuel au cours d'une conférence de presse commune. Stephen Gray, un écrivain de Johannesburg, décrit très justement les deux hommes comme «deux grands-pères revigorés qui soulevaient gauche-mment la caméra». Par contre, dans son édition, le plus grand journal du pays les présentait chaleureusement de la façon suivante : «Le toujours jeune, imperturbable et alerte président et le dirigeant noir grand, digne et éloquent assis côte à côte, écrivant l'Histoire ensemble.» A l'arrière d'une Mercedes noire rutilante puis au bar du luxueux Lord Charles Hotel, le président du parti communiste sud-africain (PSCA), parti marxiste-léniniste d'avant-garde, se joint aux cérémonies célébrant l'harmonie.

Pendant ce temps, à une vingtaine de kilomètres de Somerses West, à Khayelisheta et dans l'infâme Crossroads, des milliers de Noirs logés dans des cabanes géant de froid sous la pluie hivernale glaciale qui s'abats sur leurs abris en carton. Les véhicules du convoi du CNA, encadrés par la police et surveillés par un hélicoptère, passent à toute vitesse devant les dunes de sable qui masquent la misère, le long de la Nationale 2. Grâce à la climatisation, leurs occupants n'ont pas à supporter la puanteur ambiante de ces

«un colon, une balle !»,  
lures dans Langa rapportent avoir vu sur les murs des graffiti proclamant-  
la taxant de simple mesure d'apaisement. Des journalistes qui se sont aven-  
le Congrès panafricain (CPA), mouvement dur qui rejette la négociation en  
des *townships* noirs, est déjà devenu une place forte du parti rival du CNA,  
d'un déjeuner au *Cape Sun Hotel*. Le bruit court que Langa, le plus vieux  
prononce une allocution devant les nantis du club de la presse, à l'occasion  
nouveaux spectacles ou les installations sanitaires sont certains. I rabbo Mbeki

Pour des raisons de sécurité, la délégation du CNA ne peut loger dans les *townships* délabrés ni même emprunter les allées sinueuses dont la vue provoque chez eux des expressions horribles. Mais la gérontocratie gris-

E SPECTACLE EXTRAORDINAIRE DU GOUVERNEMENT SUD-AFRICAIN ET DU  
CONGRÈS NATIONAL AFRICAIN (CNA) devenant ensemble et plaisantant  
aimablement pour la première fois nécessaire un certain décadage si  
l'on veut en saisir la portée psychologique. La politique, c'est la ma-

Selon les propres termes du porte-parole du CNA pour les Affaires étrangères, M<sup>r</sup>. Thabo Mbeki, ils ont découvert, à leur grande surprise, qu'ils n'avaient rien de diabolique. Des membres de la redoutable police de sécurité qui surveillaient la délégation du CNA ont sympathisé avec leurs camarades et les autres s'en sont allés à l'appeler par leurs prénoms. Alors que Blancs et Noirs d'Afrique du Sud se demandaient pourquoi des

« Les responsables étaient invités à la résidence officielle des premiers ministres sud-africains, un correspondant s'était fait remarquer, à propos de Thabo Mbeki : « Mais quand il s'est mis à blâquer comme un pygmée en donnant des coups de coude au général Basile Smit, le chef de la police de sécurité, l'inhabitué a tourné au fantasmatique. »

Le coup de foudre entre le Parti national et le CNA est une répétition de l'expérience que beaucoup d'exilés sud-africains de divers horizons politiques vivent quand ils se rencontrent à l'étranger. Libérés du cadre de l'*apartheid* et devenus minorité dans une société étrangère, ils se découvrent une essence sud-africaine commune. Psychologiquement, les relations cordiales établies entre les anciens ennemis mortels s'expliquent par la redécouverte de liens d'origine, d'une parenté refoulée, car ils sont nés de la

Le fait que la famille qui dirige le domaine souhaite la bienvenue à des exilés avec qui elle était rouillée dépasse le simple calcul rationnel en vertu duquel l'approbation du monde extérieur dépend de la reconnaissance du CNA. Le pardon du CNA équivaut à redonner une légitimité au régime as- symétrique. Aujourd'hui, le président sud-africain est accueilli à l'étranger par la grande porte. Les banquiers sud-africains peuvent de nouveau obtenir des prêts à long terme. Petits comme des artisans de la paix kidnoués de prévoyance stratégique, ceux-là mêmes qui furent les ingénieurs de l'*apartheid* tiennent, moralement, le haut du pavé.

CETTE CONSTITUTION EXPLIQUE AUSSI LA REMARQUABLE COHESION AFFICHÉE par le Parti national (PN) durant le processus de changement. La plupart des observateurs avertis s'attendaient à des défections au profit de la droite, si jamais la direction du parti «allait aussi loin». Pourtant, le comité du PN a approuvé les décisions du gouvernement à l'unanimité et lui a présenté ses encouragements et ses félicitations. Ce soutien était d'autant plus surprenant que le président ne lui avait pas dévoilé la teneur exacte de son discours du 2 février. De plus, ce ne sont pas les membres de son propre parti que F. W. De Klerk a consultés pour un avis crucial de dernière minute, mais

La faculté de pardonner dont les victimes font preuve n'est d'ailleurs pas la seule à avoir été mise à l'épreuve. Les victimes ont également été confrontées à la difficulté de faire valoir leurs droits, de faire reconnaître leurs souffrances, de faire reconnaître leurs douleurs. Elles ont dû faire face à la difficulté de faire reconnaître leurs souffrances, de faire reconnaître leurs douleurs. Elles ont dû faire face à la difficulté de faire reconnaître leurs souffrances, de faire reconnaître leurs douleurs.

L'OTAN. Contrairement au bloc des pays de l'Est, qui jouait en fait le rôle d'une courroie de transmission pour le commandement et la coordination militaires soviétiques, l'OTAN a toujours été une alliance d'États souverains, s'intéressant non seulement à des questions militaires, mais aussi à des questions de politique, dont la coordination des différents aspects de la limitation des armements. Il n'y a jamais eu de symétrie entre les activités de ces deux organisations européennes de défense.

Il reste, bien évidemment, que l'OTAN ne peut plus continuer en faisant comme si de rien n'était. Il lui faut trouver de nouvelles méthodes d'intégration militaire avec des forces considérablement réduites, revoir et reformuler sa stratégie nucléaire et, enfin, accorder beaucoup plus d'importance qu'elle ne l'a fait jusqu'à présent à la gestion des accords de limitation des armements. Elle devra également voir dans quelle mesure, dans un monde où les forces militaires sont beaucoup moins cruciales pour les relations politiques internationales, il ne faudrait pas trouver d'autres formes et instances de coopération «transatlantique».

Mais l'OTAN va rester pour l'essentiel un club occidental. Ceux qui ont prétendu que l'Organisation devrait accueillir également les États d'Europe de l'Est omettent trois réalités fondamentales : les pays d'Europe de l'Est, qui viennent tout juste de recouvrer leur indépendance, n'ont aucun désir de se soumettre à une organisation supranationale quelle qu'elle soit ; les pays occidentaux veulent continuer à discuter en vase clos des questions de sécurité et de défense ; et l'Union soviétique rejeterait carrément toute expansion territoriale de l'OTAN à l'Est.

IL Y A AUSSI LA COMMUNAUTÉ EUROPÉENNE DES douze nations d'Europe occidentale. Ce Marché commun, dont l'intégration va être considérablement renforcée par la réalisation du marché intérieur prévue pour 1992, attire déjà beaucoup les autres pays européens, dont ceux de l'Est. Les richesses et le vaste marché de la Communauté européenne lui ont récemment conféré un nouveau rôle en matière de sécurité : pour les pays d'Europe de l'Est, ce grand marché représente, en effet, l'espoir d'une reprise économique et, partant, d'un renforcement de la stabilité politique. Peut-être qu'un jour, la Pologne, la Hongrie ou la Tchécoslovaquie rempliront les conditions requises pour devenir membres à part entière de la CE ; en attendant, il faut conclure des accords d'association entre la Communauté et les États d'Europe de l'Est.

La Communauté européenne joue donc, on le voit, un rôle stabilisateur et elle est investie, à ce titre, d'une certaine responsabilité en matière de sécurité. Mais elle ne peut pas constituer pour autant un système de sécurité européen. Peut-être que, dans le cadre de la réforme des mécanismes de la coopération occidentale au chapitre de la défense, la Communauté pourrait correspondre de plus en plus au cadre d'une défense européenne véritablement intégrée, et nombreux sont ceux qui en Europe appellent ce projet de leurs vœux. Mais il est difficile d'imaginer que ce cadre se transforme par la suite en une tribune élargie où

Don Weinman

l'on discuterait des questions intéressant la

sécurité européenne en général.

Enfin, il y a le processus permanent des négocia-

tions sur la limitation des armements en Europe entre l'Est et l'Ouest. Les pourparlers de

Vienna, amorcés en mars 1989, avancent à une

vitesse jamais vue : il est probable que nous au-

rons d'ici l'automne un premier accord qui fixera

des plafonds égaux pour les forces militaires de

l'OTAN et du Pacte de Varsovie en Europe ; pour

faire suite à ces premiers efforts, on prépare déjà

des réductions plus importantes. Bien entendu,

ces négociations ne sauront remplacer une or-

ganisation en bonne et due forme. Mais il est

probable cependant que, du régime proposé pour

les mesures de vérification et de confiance, il se

dégagera une certaine structure organisationnelle.

IL N'EXISTE DONC PAS ENCORE DE SYSTÈME DE

sécurité pan-européen. L'apparente netteté de la

structure de sécurité en Europe au cours des qua-

rantie dernières années nous a peut-être amenés à

penser, à tort, que pour fonctionner, un régime de

sécurité doit être bien défini et complètement or-

ganisé. Mais il ne faut pas oublier que la structure

de sécurité est en fait un monde réparti bipo-

laire. À présent que les menaces sont devenues

plus difficiles à cerner et que nous vivons dans un

monde pluraliste, un régime de sécurité plus sou-

verain en Europe comprend les quatre éléments

énumérés plus haut, chacun d'entre eux étant

impartiel en soi, mais complétant l'autre.

Les questions de sécurité pan-européenne

pourraient donc être abordées sous leurs aspects

politiques dans le cadre d'une CSCE renforcée, et

sous leurs aspects militaires, dans le contexte de négociations quasi permanentes sur la limitation des armements, auxquelles on ajouterait des centres de gestion des crises et un régime de vérification. Pour assurer la prospérité économique de l'Europe dans son ensemble (et, par la même occasion, sa stabilité politique), on pourrait faire appel à la Communauté européenne par le biais de son intégration interne et à une série d'accords d'association avec d'autres États d'Europe, dont peut-être un jour l'Union soviétique. Et la coordination politique et militaire continuerait de se faire au sein d'une OTAN reformée, la Communauté européenne devenant de plus en plus le cadre d'une étroite intégration de la défense de l'Europe occidentale.

Pour savoir si ce système à «couches multiples» est vraiment praticable, il faudra voir dans quelle mesure l'unification de l'Allemagne fera ou non l'objet d'un consensus international. Il est révélateur de voir déjà sur le calendrier diplomatique, des étapes qui correspondent aux différents éléments du nouveau régime de sécurité européen décrit plus haut. On a prévu une série de réunions entre les deux États allemands et les alliés de la Seconde Guerre mondiale (les E.-U., l'URSS, la France et la Grande-Bretagne) pour trouver un accord sur le futur statut au sein de l'Alliance d'Europe des Quatre Grands en Allemagne.\*

Il faudra définir, dans le cadre des négociations d'Europe des Quatre Grands, la question de l'examen et réguler la question. Entre temps, la communauté européenne devra faire des offres d'associations plus étroites avec les autres États européens. Bien sûr, les calendriers peuvent s'embrouter ; les choses peuvent aller de travers. Nombreux sont les acteurs qui pourraient mettre des bâtons dans les roues de la machine diplomatique. Imaginez un instant que l'Union soviétique essaie de répondre aux aspirations indépendantistes des pays baltes par la répression militaire. La tâche à accomplir est loin d'être facile. Mais le fait qu'il existe aujourd'hui différents éléments de coopération entre l'Est et l'Ouest, entre l'Europe et l'Atlantique, nous donne des raisons d'espérer que l'unification de l'Allemagne se fera dans un climat de coopération. Les morceaux sont en place : à nous maintenant de refaire le puzzle. □

\* Conformément aux traités signés en 1945, les quatre puissances victorieuses de la Seconde Guerre mondiale (la France, le Royaume-Uni, les États-Unis et l'URSS) conservent leurs droits et responsabilités relativement à l'Allemagne. Aucun changement ne peut être apporté au statu quo des trois entités politiques (la République fédérale d'Allemagne, la République démocratique allemande, et Berlin) formées sur le territoire allemand après la fin de la guerre. Les résolutions de Potsdam (1945) sans l'assentiment de ces quatre puissances.

# LA RENAISSANCE COMPLIQUÉE DE L'EUROPE

*Quel que soit le nouveau système de sécurité mis en place en Europe, il sera loin d'être aussi ordonné que l'ancien. Mais est-ce bien nécessaire qu'il le soit ?*

PAR CHRISTOPH BERTRAM

précautions à éviter depuis le début de l'ère nucléaire risquent de se produire : un affrontement militaire direct, voire une escalade.

VOilà qui est clair. Mais ce sont à présent les incertitudes (et les risques) qui se manifestent. Comment intégrer l'Allemagne unifiée dans l'actuelle structure de sécurité en Europe ? Comment cette structure doit-elle évoluer, compte tenu de la quasi-désintégration du Pacte de Varsovie et de la nécessité, pour l'Alliance atlantique de s'adapter aux bouleversements en Europe ?

Quelles menaces (si menaces il y a) reste-t-il qui justifient même le maintien d'alliances multilatérales ?

Nul n'a encore trouvé réponse à ces questions. Depuis un certain temps déjà, on reconnaît la nécessité de mettre en place de nouvelles structures de sécurité en Europe. Mais au moment où la révolution en Europe de l'Est a éclaté, aucune de ces structures n'avait encore été menée à terme.

Il n'existe donc aucun véritable cadre à l'intérieur duquel on puisse intégrer l'Allemagne unifiée, les nouveaux États démocratiques d'Europe de l'Est ou les deux alliances.

La première question consiste, bien évidemment, à savoir si un tel cadre est même nécessaire. Les menaces multilatérales n'ont-elles pas disparu ? L'heure de la décadence n'est-elle pas enfin venue ? Malheureusement, la perspective d'une Europe en paix et en harmonie n'est pas encore pour demain. Malgré les réductions des forces militaires déjà mises en oeuvre et celles que l'OTAN et le Pacte de Varsovie négocient actuellement à Vienne, avec de bonnes chances de réussite, l'Europe reste la région la plus militarisée du monde quant aux effectifs militaires et à la puissance de feu, et toutes les grandes puissances possèdent des armes nucléaires.

Il est vrai que la vieille menace telle que l'Ouest l'a longtemps crainte et qui, d'après ce que confirment des sources soviétiques, aurait bel et bien fait partie de la planification soviétique (à savoir, une attaque massive et rapide des forces du Pacte de Varsovie contre l'Occident) nous fait aujourd'hui l'impression d'une bande dessinée décolorée dans un vieux journal. Mais les risques de conflit subsistent, que ce soit les querelles ethniques en Union soviétique, en Europe de l'Est et dans les Balkans, ou les crises pas si loin de nous dans le tiers-monde (au Moyen-Orient et en Afrique du Nord) qui risquent de s'étendre à l'Europe. Sans parler, bien sûr, du sempiternel

**L'**OUT ARRIVE TOUJOURS EN MÊME TEMPS ! Semblait s'être arrêté dans l'empire soviétique et dans les relations Est-Ouest, et peu à peu, les Européens de l'Ouest, dont les Allemands, en étaient venus à s'accommoder d'une réalité qui paraissait vouloir durer. Maintenant les choses ont changé. C'est ainsi que de nouveaux points d'interrogation se sont substitués à de vieilles incertitudes.

Ce qui a été, pendant si longtemps, la base même du système de sécurité européen est en train de s'effriter : l'Europe de l'Est, qui n'est plus un glacis de sécurité pour l'Union soviétique, devient une vaste zone tampon entre la Russie et l'Europe occidentale. Les forces soviétiques, contre lesquelles l'OTAN a été créée, quittent leurs garnisons de Hongrie et de Tchécoslovaquie, et sont réduites en Pologne et en Allemagne de l'Est. La menace que l'OTAN a si bien refusé à repousser pendant tant d'années est en train de s'estomper, sinon de disparaître.

Que faut-il en conclure pour l'avenir ? En mars, les Allemands de l'Est ont voté pour un nouveau gouvernement dont le seul mandat est de négocier la réunification rapide des deux moitiés de leur pays. D'ici l'été, l'union économique et monétaire interallemande sera réalisée, et le deuschmark deviendra la seule monnaie du pays. Dans trois ou quatre ans (certains disent même avant), il n'y aura plus qu'un seul État allemand unifié, et non plus deux entités nationales distinctes.

L'Union soviétique n'est plus désormais la puissance dominante dans le centre de l'Europe. Et il semble qu'elle ne le redeviendra jamais plus. Bien entendu, personne ne peut prédire l'avenir du président Gorbatchev ni le sort de la réforme qu'il préconise. La tâche qu'il a entreprise, soit faire de l'Union soviétique un État moderne, capable de s'intégrer au système économique et politique international, est gigantesque, et les menaces actuelles de la réforme pourraient bien faire un faux pas, voire échouer dans leur effort. Mais même si le régime actuel devait être remplacé par un système plus traditionnel, les changements survenus en Europe de l'Est sont irréversibles.

La Pologne, la Tchécoslovaquie et la Hongrie n'accepteront pas un retour des troupes et de la tutelle soviétiques, pas plus que les Allemands de l'Est vont renoncer à leur unification avec l'Ouest. Si l'Union soviétique faisait la moindre tentative pour reconquérir par la force le terrain perdu, ce que l'Est et l'Ouest ont pris tant de

Pourrait-on ne compter que sur les deux al- liances qui, d'une part, répondraient aux besoins de sécurité de leurs membres respectifs et, d'autre part, uniraient leurs efforts en matière de limitation des armements et de coopération en cas de crise ? Ici encore, la réponse est négative, pour la simple raison que le Pacte de Varsovie a cessé, à toutes fins pratiques, de fonctionner harmonieusement. En fait, l'OTAN est aujourd'hui la dernière structure de sécurité encore opérationnelle en Europe.

Il ne faut pas croire non plus que la disparition du Pacte de Varsovie suppose également celle de

la réalité.

Pour les deux alliances actuelles réunies sous son égide relève encore davantage de l'utopie que de la réalité.

Il est évident que la vieille menace telle que l'Ouest l'a longtemps crainte et qui, d'après ce que confirment des sources soviétiques, aurait bel et bien fait partie de la planification soviétique (à savoir, une attaque massive et rapide des forces du Pacte de Varsovie contre l'Occident) nous fait aujourd'hui l'impression d'une bande dessinée décolorée dans un vieux journal. Mais les risques de conflit subsistent, que ce soit les querelles ethniques en Union soviétique, en Europe de l'Est et dans les Balkans, ou les crises pas si loin de nous dans le tiers-monde (au Moyen-Orient et en Afrique du Nord) qui risquent de s'étendre à l'Europe. plus en continuant de bénéficier d'une aide prétendument humanitaire, mais ils ne recevraient aucune fourniture militaire.

Après la signature de l'accord bipartite, le Secrétaire d'Etat, M. James Baker, a déclaré que la méthode militaire ayant échoué au Nicaragua, les Etats-Unis recherchaient un règlement politique en usant de la carotte et du bâton. Puis, en août 1989, la Maison Blanche déclencha la fureur des fervents partisans des *Contras* en n'empêchant ni ne dénonçant l'accord signé par les cinq présidents centra américains qui demandaient le démantèlement des *Contras* au début du mois de décembre au plus tard. Par la suite, Washington a refusé d'utiliser son veto contre une décision du Conseil de sécurité de l'ONU relative à la mise sur pied d'une mission qui superviserait la démobilisation des *Contras*.

Dans le même temps, cependant, la Maison Blanche a laissé passer plusieurs occasions de prendre du recul par rapport aux *Contras*. Ainsi, les Sandinistes se sont engagés, en décembre 1989, à réunir les conditions voulues pour que les *Contras* rentrent au pays. Les Etats-Unis n'ont jamais cherché à vérifier si cela était vrai en encourageant les forces *contras* à essayer de regagner le Nicaragua. Au lieu de cela, l'aide américaine n'a cessé d'affluer au Honduras, au Nicaragua, au Guatemala, et dans d'autres pays d'Amérique centrale. Les forces armées du Salvador ne pouvaient plus proclamer que la guérilla était à deux doigts d'être vaincue. Si le gouvernement salvadorien gardait l'illusion de maîtriser son armée, il l'a perdue, d'abord en voyant la réaction brutale des militaires face à l'offensive du FMLN (l'armée n'avait pas vraiment consulté les autorités élues), ensuite, en apprenant le meurtre de

Des le départ, le gouvernement Bush a semblé moins déterminé que son prédécesseur à vaincre les guérilleros du FMLN par les armes et plus ouvert à la solution d'un règlement négocié. Mais le gouvernement n'a jamais vraiment décidé lequel de ces objectifs il poursuivait ni défini de stratégie pour l'atteindre. La Maison Blanche n'a jamais essayé d'user de son influence (400 millions de dollars d'aide par an) pour amener le gouvernement et l'armée du Salvador à s'efforcer de négocier un règlement. Depuis l'offensive de la guérilla et le massacre des jésuites, le gouvernement et le Congrès se sont querellés au sujet de l'aide au Salvador. Les efforts de James Baker pour trouver un accord avec le Congrès ont peut-être coïncidé avec l'initiative de M. Pérez de Cuellar pour amener les belligérants à la table des négociations, mais il s'agissait surtout d'une réponse aux réticences croissantes des élus du Congrès à maintenir cette aide telle qu'elle était. Il a sans doute fini par devenir évident que les Etats-Unis ne peuvent aider indéfiniment et massivement une armée et un gouvernement salvadoriens incapables de vaincre la guérilla et de mettre un terme aux violations des droits de la personne commises par leurs propres partisans.

L'évolution de la politique américaine depuis que George Bush a pris ses fonctions traduit, en partie, l'importance décroissante de l'Amérique centrale dans les calculs de Washington. Avec le réchauffement des rapports Est-Ouest et l'effondrement des régimes communistes, la lutte contre le marxisme révolutionnaire et contre l'influence du bloc soviétique sur les continents américains n'a plus vraiment lieu d'être. Peu désireux d'affronter les risques d'une politique activiste dans une région d'importance secondarise, le gouvernement Bush s'est efforcé de réintégrer l'Amérique centrale au second rang de la politique étrangère américaine et de s'y faire plus discret. En diminuant son engagement dans la région, excepté au Panama, Washington a laissé plus d'espace à d'autres acteurs : les présidents centra américains, d'autres dirigeants latino-américains, les Nations-Unies et l'OEA. Tous ont joué des rôles considérables au Nicaragua et ils s'intéressent activement au Salvador. La leçon la plus importante est sans doute que les intérêts de la politique étrangère américaine, du moins dans certaines circonstances, sont mieux servis quand les Etats-Unis interviennent moins directement et quand ils s'en remettent davantage à des approches multilatérales.

Les problèmes de l'Amérique centrale sont, évidemment, encore loin d'être résolus. Les négociations actuelles au Salvador peuvent se révéler infructueuses, comme lors des séries de pourparlers passées. Les nouveaux gouvernements nicaraguayen et panaméen, soutenus par les Etats-Unis, sont confrontés à d'immenses problèmes : ni le Nicaragua ni le Panama n'ont de tradition démocratique ; leurs institutions gouvernementales sont fragiles ; et aux régimes qu'elles remplacent qui exercent le pouvoir. De plus, leurs économies des deux pays, ce sont des coalitions surtout unies par leur opposition aux régimes démocratiques ; leurs institutions gouvernementales sont fragiles ; et les Nations-Unies et l'OEA. Tous ont joué des rôles considérables au Nicaragua et ils s'intéressent activement au Salvador. La leçon la plus importante est sans doute que les intérêts de la politique étrangère américaine, du moins dans certaines circonstances, sont mieux servis quand les Etats-Unis interviennent moins directement et quand ils s'en remettent davantage à des approches multilatérales.

# SE TÊNIR COI EN AMÉRIQUE CENTRALE

La nouvelle ambivalence de Washington à l'égard de l'Amérique centrale offre peut-être encore le meilleur espoir de mettre un terme aux guerres qui ravagent la région.

PAR PETER HAKIM

E PRÉSIDENT AMÉRICAIN, M. GEORGE BUSH, ET SES CONSEILLERS ONT perdu le pouvoir au Nicaragua et Manuel Noriega a été déposé au Panama. Les cieux s'éclaircissent aussi au Salvador, où Washington semblait dans une impasse. La Maison Blanche soutenait un gouvernement et une armée qui ne pouvaient vaincre une insurrection marxiste de type guérilla, qui ne voulaient pas négocier sérieusement et qui étaient incapables de lutter contre des violations flagrantes des droits de la personne. À présent, pour la première fois, des véritables négociations sont en cours pour mettre fin à la guerre civile qui mine le pays depuis dix ans.

Ce qui est remarquable, c'est que ces événements se sont produits à un moment où la politique des États-Unis en Amérique centrale se caractérisait par son ambiguïté et son indécision. L'attitude du gouvernement Bush vis-à-vis de la région manquait à la fois de la volonté et de la fermeté qui avaient marqué celle de son prédécesseur. La Maison Blanche de Reagan était animée d'un zèle idéologique et d'un ferme dessein. En qui concernait l'Amérique centrale, Ronald Reagan avait tracé une voie et des objectifs bien définis dont rien ne réussit à l'écarter ne fut-ce que d'un iota, ni les divi-

ni les conflits qu'ils suscitaient avec les pays latino-américains.

GEORGE BUSH N'EST PAS ARRIVÉ AU POUVOIR EN MANIFESTANT DE FORTS ancrages politiques. Dès le départ, son gouvernement s'est montré motivé par des calculs de politique intérieure et a fait preuve d'un pragmatisme prudent. La Maison Blanche devait accomplir un délicat numéro de funambule qui consistait à apaiser une droite républicaine très troublée tout en évitant des conflits avec le Congrès à majorité démocratique. Il en a résulté des politiques beaucoup plus sensibles non seulement à la dynamique politique de Washington, mais aussi aux événements d'Amérique centrale. Dans l'ensemble, les Latino-Américains se sont sentis assez rassurés par l'attitude de George Bush, grâce à laquelle, les États-Unis et l'Amérique latine ont pu créer des occasions de coopérer au règlement des problèmes centra-américains. Paradoxalement, la seule occasion que les États-Unis ont saisi a été le Panama. En mai 1989, après que le général Noriega a annulé les élections présidentielles et envoyé ses hommes de main rétablir son autorité dans les rues, les États-Unis se sont adressés à l'Organisation des États américains (OEA) pour trouver une solution à la crise panaméenne. Toutefois, ce recours à la diplomatie manquait pour le moins d'enthousiasme.

La mission de l'OEA avait trois mois pour agir, délai ridiculement court, et Washington n'était pas d'accord avec les Latino-Américains quant à l'interprétation de son mandat. Les Américains voulaient que l'OEA poursuivise l'objectif même qu'ils n'avaient pu atteindre par leurs propres politiques : retirer le pouvoir à Noriega. Les gouvernements latino-américains estimaient, pour leur part, que la tâche de l'OEA était de négocier un accord entre les différents groupes politiques panaméens en présence. Comme Noriega de continuer à jouer un rôle politique, la mission de l'OEA était simplement refusé de traiter avec l'Organisation. Au mois de septembre, l'échec de l'initiative de l'OEA laissait peu d'options aux États-Unis, qui pouvaient soit accepter que Noriega reste au pou-

caractériser sa politique.

À l'épreuve ailleurs dans la région. En fait, l'ambiguïté a continué d'y jouer un rôle. George Bush n'a jamais cherché à mettre sa crédibilité toute entière en ce qui concerne le règlement d'autres problèmes internationaux. Néanmoins, son gouvernement ont acquis stature et autorité, et davantage de latitude excessive et de n'avoir pas la dimension d'un dirigeant mondial. L'omnipotence de Washington n'accusait le président de se montrer d'une prudence où l'intervention à grande échelle redore l'image du gouvernement Bush. Plus pour maintenir l'ordre.

Rien de tout cela n'a entamé l'enthousiasme qui régnait aux États-Unis, de nombreux mois et le pays compte toujours sur les soldats américains en place. L'aide que les États-Unis avaient promise s'est fait attendre en ce qui concerne le Panama et, aujourd'hui encore, l'économie de ce dernier est en plein déclin. La Maison Blanche pour lever ses sanctions économiques, compromettant par là même la légitimité proclamée de son autorité. Il a fallu deux mois au gouvernement Bush pour lever ses sanctions économiques, compromettant par là même la légitimité proclamée de son autorité. Il a fallu deux mois au gouvernement Bush pour lever ses sanctions économiques, compromettant par là même la légitimité proclamée de son autorité. Il a fallu deux mois au gouvernement Bush pour lever ses sanctions économiques, compromettant par là même la légitimité proclamée de son autorité.

Cependant, le gouvernement Bush n'avait nullement pensé aux réactions que l'opération *Just Cause* provoquerait en Amérique latine, ni tenu compte des normes internationales en vigueur qui condamnent les interventions armées. Presque tous les pays de la région se sont indignés de l'action américaine et l'ont condamnée. De plus, il n'a pas tardé à devenir évident que les États-Unis n'avaient pas réellement préparé les lendemains de l'invasion, ce qui leur fit commettre une série d'impair, comme d'organiser la cérémonie de prestation de serment du président Endara sur une base militaire américaine et l'ont condamnée. De plus, il n'a pas tardé à devenir évident que les États-Unis n'avaient pas réellement préparé les lendemains de l'invasion, ce qui leur fit commettre une série d'impair, comme d'organiser la cérémonie de prestation de serment du président Endara sur une base militaire américaine.

Rien de tout cela n'était gagné d'avance. La chance a joué un rôle crucial dans la «réussite» de l'invasion. Les troupes américaines sont rapidement venues à bout des résistances des hommes de Noriega, s'est résommée à quelques escarmouches. Résistance des hommes de Noriega, s'est résommée à quelques escarmouches. Résistance des hommes de Noriega, s'est résommée à quelques escarmouches. Résistance des hommes de Noriega, s'est résommée à quelques escarmouches.

Le 19 décembre, les États-Unis ont déclenché leur invasion et, sorte de pied de nez au mauvais sort, presque tout ce qui aurait pu mal tourner s'est bien déroulé. Les troupes américaines sont rapidement venues à bout des forces de défense panaméenne, sans avoir à déployer trop de pertes en vies humaines; la population locale a soutenu l'action américaine au-delà de toute espérance; les dirigeants de l'opposition locale, véritables vainqueurs

de la guerre civile, ont accepté de former un nouveau gouvernement; et la résistance des hommes de Noriega, s'est résommée à quelques escarmouches. Thérault : Je n'ai jamais compris pourquoi les Canadiens en sont arrivés à la conclusion que pour contribuer valablement à la sécurité collective, il fallait nécessairement en passer par la présence de troupes canadiennes en Europe. Mais je n'en est pas ainsi. Quand George Kennan a défini le concept de l'endiguement, il l'a présenté comme un ensemble de mesures de précaution, de prévention visant à protéger l'Europe et à empêcher les Soviétiques de déborder d'Europe de l'Est en Europe occidentale le temps que les Européens de l'Ouest se remettent des ravages de la guerre et assurent leur propre protection. Nous l'avons oublié et cet arrangement entier s'est institutionnalisé. D'un point de vue purement stratégique, ce paternalisme est totalement injustifié. Pourquoi ne resterions-nous pas dans l'Otan, aussi longtemps que nous bénéficions d'un article 5, en attendant notre propre retour de la guerre et contribution de façon valable à la sécurité collective dans le contexte de l'Otan, et nous ne devrions pas hésiter sur ce point.

Hill : Soyons plus terre à terre, quels devraient être, selon vous, les effets de la force et quelle en serait la fonction principale ?

Thérault : Par fierté canadienne, je recommanderais qu'au moins, nous nous chargions de la surveillance et de la défense de notre propre territoire et que nous n'ayons plus l'air de mendier l'aide militaire américaine. Ce que nous faisons, dans un sens. Donc, le principal objectif de nos futures dépenses de défense devrait être de nous donner, au minimum, les moyens physiques d'occuper le territoire canadien ou de nous y déployer, de veiller au respect des lois canadiennes et de pouvoir assurer une présence suffisante dans le pays entier. La menace terrestre en soi est difficilement concevable.

Lox : Je pense que nous devrions coopérer pleinement avec les États-Unis en ce qui concerne la surveillance des espaces aériens et maritimes et les patrouilles s'y rattachant. Mais pour ce qui est de définir cette surveillance, je dirais qu'il faut d'abord de la défense en temps de paix, sans aller jusqu'à choisir des moyens comme les États-Unis en voulaient et en veulent toujours peut-être, à savoir des forces qui pourraient participer à une guerre nucléaire intercontinentale; et je répondrais qu'il ne faut pas aller jusque-là, parce que je doute fortement que l'on puisse le faire. Il faut trouver un juste milieu extrêmement difficile à maintenir.

Stein : Je suis d'accord avec les arguments avancés par David et Denis, à savoir qu'en avançant une brigade en Europe, nous avons payé le droit de nous asseoir à la table. J'ai l'impression que l'image que nous avons de nous-mêmes ne correspond pas avec celle que se font les États-Unis et les Européens. Cette équation di-

recte entre les ressources militaires et l'efficacité politique est beaucoup trop schématique.

Il nous arrive souvent de ne pas saisir les occasions qui se présentent à cause de la loi de la réaction anticipée. Nous appréhendons la réaction de Washington. Mais je crois que notre préoccupation est exagérée. Je voudrais vraiment que le Canada s'efforce d'envisager, d'un oeil neuf et indépendant, l'aspect «sécurité» des rapports ainsi que leur aspect «défense». Et qu'il joue de ses atouts. Car il a une réputation de bâtisseur d'institutions à l'étranger qui ne tient pas qu'à sa brigade européenne. Cette réputation repose sur les opérations de maintien de la paix, pour lesquelles la demande va considérablement augmenter. Il faudrait que nous puissions ne pas

### ses problèmes.

penser à nos limites mais à nos ressources politiques en matière de sécurité, que nous sous-estimons systématiquement.

**Morton** : Nous en revenons à une vieille réalité historique de la défense canadienne, qui remonte aux années 1860, à savoir que soit il n'y a pas de menace, soit la menace est si grande que nous n'y pouvons rien. Qui va nous attaquer ? Pour le moment, la réponse est personne. À dire vrai, personnellement, je ne suis pas sûr que nous n'ayons pas de quoi nous défendre.

1 million de dollars; aujourd'hui, il en atteint 17 milliards, mais il devrait baisser après le prochain budget fédéral. Nous disons à l'armée libérienne qu'elle bénéficie d'apuis solides. Parce que nos dépenses ont toujours eu un côté politique, parce qu'il n'existe pas de raisonnablement militaire qui soit si manifeste et évident qu'il faille procéder d'une certaine façon. Avec cet argent, nous devrions nous doter de moyens pour parler aux imprévus; car, à mon sens, c'est l'imprévisible qui justifie divers moyens et non les forces pour les mettre en oeuvre. C'est pourquoi je laisserais la brigade en Europe, parce que c'est le seul endroit où l'armée peut voir la guerre conventionnelle de premier ordre que ses voisins pratiquent. C'est pourquoi j'éprouve une préférence hétéroclite et méchante pour des sous-marins nucléaires, parce qu'il me semble qu'ils sont les seuls navires de guerre qu'il vaille la peine de posséder au vingt-et-unième siècle.

Les opérations de maintien de la paix sont très morales. Aux yeux du public, elles constituent le seul rôle positif que l'armée puisse jouer. Elles la débarrassent de ses attributions habituelles, mais il s'agit malheureusement la du seul rôle que la population veut lui voir jouer en priorité, et il faut respecter cette réalité politique. Je me dis toujours que ces opérations calment le désarmement impérialiste dont souffrent les Canadiens. C'est grâce à nos braves bêtes bleues que l'ordre règne dans les populations sous-développées. C'est sous le couvert du maintien de la paix que les Britanniques ont étendu leur empire, morceau après morceau. Les indigènes sont agités et ils ont tué un missionnaire : allons rétablir l'ordre. Les Américains ont agi de même sur ce continent. Donc je dis que je n'ai pas autant de respect pour les opérations de maintien de la paix que la plupart des gens.

Stoits : Quand on n'a pas de pouvoir, et nous n'en avons guère, il faut avoir des idées. Cela permet parfois de l'emporter sur les gros bataillons. Il est fort possible que le personnel diplomatique qui rédige des câbles tous les jours et gîane les démarches des ambassades soit bourré d'idées, mais je n'en vois guère de preuves. En tout cas, ce que le gouvernement canadien essaie de faire dans ce domaine ne me donne pas à penser que notre personnel diplomatique soit doué de grandes qualités de réflexion. Et quelque chose au fond de moi me dit que cela tient peut-être à la formation que nous leur donnons, au fait que nos universités ne le préparent pas très bien.

Je crains, pour ma part, qu'une fois le calme revenu, nous aurons bel et bien une sorte de système de concert sur le théâtre européen et que les moyennes puissances n'y seront pas admises; nous nous retrouverons avec le même genre de problème qui préoccupait tant les Affaires extérieures vers la fin de la Seconde Guerre mondiale, à savoir comment éviter que cela arrive. La réponse avait été de créer l'ONU. >

de moins en moins présent : est-ce une mauvaise

recette pour un accord de sécurité ? Pourquoi !

devons-nous tant nous inquiéter du développe-

ment économique de l'Union soviétique ? Les

Soviétiques savent le retard qu'ils ont pris. Ils

savent qu'ils n'ont aucune chance de le rattraper

à court ou à moyen terme. Ils sont en bien plus

mauvaise position que les Britanniques, à qui il

n'est arrivé que quelques fois de perdre la tête.

Eux se sont adaptés au fait que leur pays ressem-

ble plus aujourd'hui au tiers-monde qu'à l'Eu-

rope continentale. Les Soviétiques pourraient-ils

en faire de même ? Sommes-nous en présence

d'un mélange détonnant pour la stabilité

européenne ?

Hill : Denis, vous partiez du colosse européen

qui pourrait être en train d'émigrer. Quel rapport

pourrait-il avoir avec le Canada ?

Stairs : Nous spéculons tous comme des forcés.

Or, si l'on spécule, on revient à ce que l'on a

appris en premier, parce que c'est ce que l'on lit à

vingt et un ou vingt-deux ans qui compte. Si l'on

considère ce problème des rapports entre l'Alle-

mage naissante et l'Union soviétique, la logique

veut évidemment que ces deux pays n'entrent ja-

mais en guerre l'un contre l'autre. La logique

rassemble à un concert. De plus, le modèle his-

torique est le Pacte germano-soviétique et non le

modèle des impasses nucléaires. Je verrais plutôt

un retour à des formes assez classiques de

politiques interétatiques.

Voilà qui reflète notre dilemme, parce qu'à

mon avis, tout cela n'a changé en rien la position

du Canada. Comme nous le savons tous, la poli-

tique de défense canadienne a surtout consisté à

épauler la diplomatie canadienne dans la période

de l'après-guerre. Si nous sommes vraiment hon-

nêtes, et en laissant de côté les problèmes parti-

culiers que pose, par exemple, la surveillance

de l'espace aérien septentrional, la vérité, c'est

que notre contribution n'est nullement décisive

pour la protection de la sécurité occidentale.

Donc, les dépenses de défense du Canada ont

servi à acheter un billet d'entrée dans les organi-

mes multilatéraux où nous aimons nous exprimer.

Nous espérons empêcher d'autres pays de se

ridiculiser en partant du principe, bien entendu,

que nous ne nous ridiculisons jamais.

Il suffit de découvrir quel organisme sort de

l'ombre et de le promouvoir du mieux que l'on

peut. Ensuite, on fait le tour de l'organisme pour

demander à tous ses membres ce qu'ils aime-

raient que le Canada fasse, ensuite, on marchand

pour devenir soi-même membre au meilleur

compte. Je sais que je peux sembler irrévéren-

cieux, mais c'est à cela que se résume encore le

problème de la sécurité canadienne.

Thériault : Voilà qui est très intéressant, mais je

suis d'accord. C'est certainement ce qui a déter-

miné notre politique extérieure et notre politique

de défense ces vingt dernières années. Mais je

pense également qu'il y a eu une très grande part

d'aveuglement dans ces politiques. Je n'ai jamais

été un fervent partisan de la théorie mise de

l'avant par les occupant(e)s de l'édifice Pearson

pour laquelle les relations internationales re-

posent sur un jeu d'influences. Pour moi, l'in-

fluence est quelque chose qui part de la capacité

d'influer sur les événements et de faire bouger les

choses. En définitive, au bout de l'équation, il y a

le pouvoir. Or, nous n'avons aucun pouvoir.

Bien sûr, grâce à cet arrangement structurel, on

nous a plus ou moins accueillis au sein de divers

conseils. Si j'en crois ma propre expérience, et

j'ai travaillé dans plusieurs de ces organismes, il

y a longtemps que nous n'avons plus de crédibi-

lité et que nous n'exercions plus aucune influence.

Si quelque'un garde des illusions à ce sujet, ce

sont les Canadiens et personne d'autre.

Morton : J'ai beau chercher, je ne vois pas le

monde signifier que nous sommes plus indépen-

dants aujourd'hui que nous l'étions il y a dix ou

quinze ans, sauf catastrophes trop déplorables

pour que l'on y songe. Ce n'est pas dit par souci de

paratire modeste ou pour l'être, c'est ainsi que

nos priorités sont ordonnées. Après l'avoir laissé

pérorer un moment, les Canadiens et Canadien-

nes rappelleront à leur gouvernement que ce

sont les réalités économiques qui passent avant

tout. Or, nous nous sommes liés aux États-Unis

de vue diplomatique et politique. À mon avis, les

Américains (vu leur gouvernement actuel et ceux

qui suivront probablement) préféreront la solu-

tion de l'OTAN et s'attendraient à ce que le

Canada les imite docilement. Quelle raison

auraient-ils de penser autrement ?

Hill : Si nous rédigeons tous des Livres blancs,

quelles directions aimerions-nous imprimer aux

politiques canadiennes pour les dix ou quinze ans

à venir ?

Lox : Je crois, en fait, qu'il faudrait essayer de

définir le contexte politique dans lequel cela se

passera. À mon avis, peu importe que l'on pense

que nous avons trop ou peu dépensé pour la

défense, puisque nous allons moins dépenser ces

prochaines années. Je ne suis pas pour quitter

l'OTAN, en tout cas pas pour les raisons invoquées

à payer pour rester pour les raisons invoquées

par Janice pourrait baisser considérablement.

Stairs : Je m'inquiète vraiment de ce qui va arri-

ver aux ressources océaniques tant côté Atlan-

tique que Pacifique et je crois qu'il nous faut des

moyens de surveillance sur les deux côtes, or, ils

sont insuffisants à l'heure actuelle. Je vous par-

le en connaissance de cause, je vis à Halifax. Voilà

les vraies questions de sécurité qu'un Etat doit ré-

soudre pour assurer sa protection au sens tradi-

tionnel. Au-delà, on entre dans les échanges de

bons procédés et c'est alors qu'il faut décider si

l'on veut s'y prêter ou pas.

Dans le cas de l'Europe, le Canada pourrait se

révéler tellement impuissant que ce n'est même

pas la peine qu'il l'essaie, parce qu'on va tout sim-

plement l'ignorer. On ne demandera pas l'avis du

Canada, de la Belgique et ainsi de suite, qui de-

viennent se contenter de rôles de spectateurs. Or, si

tel est le cas, à quoi bon dépenser un seul dollar ?

Je ne sais pas où cela nous amène, mais certaine-

ment pas à des sous-marins à propulsion

nucléaire, pas à des jouets coûteux !

... nous ne faisons rien

des choses élémentaires

et indispensables dans

une société si l'on entend

soutenir sérieusement une

stratégie fondée sur le

multilatéralisme.

n'éprouve pas la moindre nostalgie pour le sens de la prévision que ces règles imposaient. J'ai évoqué les dangers qu'il y aurait dans des régions autres que l'Europe, des dangers réelles. Celle-ci se poursuit malgré le Moyen-Orient. Survenu dans les rapports entre les États-Unis et l'URSS. En Irak, en Libye, en Israël, elle est antérieure à ce changement. La question est de savoir si de meilleurs rapports entre les Américains et les Soviétiques nous aideront à mieux la gérer.

Thérault : Il me semble tout à fait concevable que, dans quinze à vingt ans, l'expression même de «rapports Est-Ouest» ne correspondra plus à la situation. L'hostilité qui caractérisait ces rapports s'atténue très rapidement. Mikhaïl Gorbatchev manifeste très clairement son intention de se rapprocher de l'Occident, qui l'aideront dans la tâche immense qu'il doit entreprendre, à savoir restructurer l'économie de son pays.

Cependant, c'est franchir un pas très important que de proposer, à partir de cette situation certes très prometteuse, que l'Union soviétique de l'époque, pour les pays occidentaux, le rôle de pivot, pour les pays occidentaux, à savoir des investissements à l'étranger. Les Soviétiques ont une très lourde responsabilité à assumer : il leur incombe d'aller bien loin vers le désarmement. Les Américains vont vouloir voir quelques changements de taille de la part de l'URSS, en ce qui concerne les rapports entre les puissances et la réduction des forces armées, des changements qui montreront très clairement l'absence de volonté de se rapprocher de l'Occident, qui l'aideront dans la tâche immense qu'il doit entreprendre, à savoir restructurer l'économie de son pays.

du moins pour les Canadiens et Canadiennes. La terreur que nous connaissons était, en fait, une terreur stable dont nous comprenions tous les règles. Et les règles étaient, à dire vrai, suffisamment stables pour que, moi le premier, je n'aie jamais vraiment craint qu'elles s'effondrent à un moment ou à un autre. Ce qui se passe actuellement, c'est que nous les changeons toutes sans connaître celles qui viendront à la place. Par ailleurs, nous tournons autour d'un problème évident : le problème allemand.

Stoier : C'est le problème allemand classique : l'Allemagne est une énorme agglomération de

*Il y a longtemps que nous n'exerçons plus aucune influence... Si quelquel'un garde des illusions à ce sujet, ce sont les Canadiens et personne d'autre.*

foli longes

puissance qui, quoique l'on en dise, va être, ou pourrait être, alimentée par un regain de nationalisme. Maintenant, la question est de savoir si cette renaissance du nationalisme prendra des formes dangereuses. J'éprouve quelque appréhension à ce sujet et, si j'étais polonais, je me sentirais très nerveux.

Stein : Avant de passer au problème allemand, j'aimerais revenir sur ce qu'a dit Denis. Une grande part de la recherche faite ces derniers temps à partir des nouvelles informations transmises par les Soviétiques contredit son propos et donne à penser que les règles du jeu étaient mal définies pour plusieurs sujets explosifs. Nous avons froie plusieurs fois le conflit dans la période de l'après-guerre. Je ne crois guère en la justesse des jugements de gens qui ont été confrontés de travailler avec ces règles du jeu. Je

Varsovie a cessé d'exister à des fins pratiques. Nous assistons, en URSS, à des événements qui amènent à se demander si la fédération y survivra.

Je pense que les États-Unis sont fatigués de leur rôle de garant de la sécurité occidentale et en ont assez de dépenser les sommes astronomiques que cela suppose. On se demande donc si la position bien ancrée de repli unis s'accroîtra davantage dans les années à venir. On se demande aussi ce que cela signifierait pour le Canada du point de vue des alliances et des conséquences. Je partage pleinement votre pessimisme.

David Cox : Depuis dix ans maintenant, je m'intéresse principalement à la limitation des armements et à la sécurité. Le débat sur la limitation des armements avait essentiellement pour objectif de trouver des solutions non catastrophiques à la situation dans laquelle nous nous trouvons, qui résulte en grande partie du développement et de la prolifération des armes nucléaires. Du point de vue de la limitation des armements, la situation est donc meilleure, pas pire, mais je pense que, maintenant, la limitation des armements pose un problème psychologique. Au lieu d'être confronté à un dilemme et à une question politiques assez claires (comment abandonner les armes nucléaires), nous découvrons qu'il nous faut régler un ensemble de questions qui ont été soulevées autour de la table.

Alors que faire ? Je serais tenté de répondre qu'il faut réessayer ce que l'on a déjà essayé avant. C'est-à-dire de reprendre les procédures de limitation institutionnelles et de recommencer. Comme l'ont fait la Ligue puis les Nations-Unies pour maîtriser des conflits qui n'étaient pas catastrophiques, mais qui risquaient de s'envenimer. D'un point de vue canadien, cette solution offre des possibilités, mais aussi une vaste zone d'incertitude dans laquelle notre influence serait très limitée.

Stein : Dans tout ce que nous avons dit, il y a un thème commun, à savoir que les changements actuels provoquent une instabilité qui, à son tour, est l'élément d'incertitude. Pourquoi y penser en termes négatifs ? Moi, je ne vois pas ainsi. Si nous regardons ce qui existait auparavant, nous apercevons que les structures de ces quarante dernières années étaient dangereuses. Nous avons évité ces dangers en usant de toute une série de processus formels. Les changements actuels nous exposent à de nouveaux dangers, à de nouvelles formes de dangers, à de nouvelles formes de dangers. Je ne crois guère en la justesse des jugements de gens qui ont été confrontés de travailler avec ces règles du jeu. Je

Canada en Europe dans quinze ans ?

Hill : Y aura-t-il encore dans quinze ans quelque chose que l'on puisse toujours qualifier de menace, de ces choses que contenait le Livre blanc de la défense ? Y aura-t-il une place pour le rôle de la défense ?

Cox : Imaginons une Europe au sein de laquelle nous aurions une Union soviétique quelque peu en retrait, et cette Allemagne réunifiée en pleine éclosion, mais dans le contexte de la communauté européenne, avec les États-Unis et le Canada, surtout les États-Unis, comme garant étranger

# QUE FAUT-IL FAIRE ?

## La sécurité militaire du Canada dans les années 1990

### LES MEMBRES DU GROUPE

DAVID COX

professeur associé d'études politiques à l'université Queen's de Kingston, est l'auteur de La défense continentale : analyse des tendances et perspective canadienne, paru dans «Les Cahiers de l'Institut».

DESMOND MORTON

professeur d'histoire et doyen de l'École Collège (Université de Toronto) est l'auteur et le co-auteur de dix-neuf ouvrages consacrés à l'histoire militaire et politique du Canada.

DENIS STAIRS

professeur de sciences politiques et vice-président de l'Université Dalhousie d'Halifax, est l'auteur de The Diplomacy of Construct: Canada, the Korean War and the United States.

JANICE STEIN

professeur de sciences politiques à l'Université de Toronto, vient d'écrire pour l'Institut pour la paix et la sécurité, en collaboration avec Richard Ned Lebow, une monographie intitulée Les paramètres de réussite de la dissuasion.

GÉRARD THÉRIAULT

a été Chef de l'état-major des forces armées canadiennes de 1983 jusqu'à son départ à la retraite, en 1986. Il est maintenant vice-président pour le Canada de AEG Aktiengesellschaft.

Le présent compte rendu rapporte une discussion qui a eu lieu le 30 mars, à Ottawa. Roger Hill, Directeur de la recherche à l'Institut, dirigeait les débats.

Roger Hill : Comment voyez-vous l'évolution du monde et qu'est-ce qui est, selon vous, le plus important aujourd'hui en matière de politique de défense et de sécurité ?

Denis Stairs : Le changement le plus profond concerne l'évolution des rapports entre l'Est et l'Ouest qui, très manifestement, est en train de modifier, de manière assez fondamentale, le cadre très stable dans lequel la politique de sécurité canadienne fonctionne depuis ces quarante dernières années. De toute évidence, nous savons ce qui est en train de disparaître, mais nous ne savons pas réellement ce qui surgira à la place. À mon sens, les changements fondamentaux tiennent à une sorte de discordance qui se développe entre, d'une part, une interdépendance mondiale croissante sur tout un ensemble de fronts de nature fonctionnelle, technique, économique et dans le domaine des communications et, d'autre part, une résurrection de formes très traditionnelles de nationalisme, une soit d'identification ethnique et un besoin d'expansion politique de l'appartenance culturelle. Ce phénomène, qui provoque une espèce de désintégration politique en Union soviétique, existe aussi en Europe de l'Est. On peut même dire qu'on en trouve des signes bien vivants dans notre propre pays.

Janice Stein : D'après moi, ce ne sont pas les changements que vous avez nommés, ceux relatifs aux rapports entre les États-Unis et l'Union soviétique, qui importent le plus, mais la durabilité de ces changements. Or, ce sujet suscite des polémiques passionnées selon le point de vue que l'on adopte et les indices dont on se sert pour évaluer cette durabilité. Je suis d'accord avec Denis quant au fait que nous assistons au développement simultané de deux tendances opposées.

J'imagine que l'on assistera au Moyen-Orient au développement de tendances extrêmement déséquilibrées, qui résulteront du changement très positif dans le rapport entre les deux grands. Ainsi, du fait de la désescalade entre le Kremlin et la Maison Blanche, la région pourra se procurer beaucoup plus d'armes. On assistera aussi à la disparition des contraintes que Moscou et Washington exerçaient, autrefois, sous prétexte de leur engagement dans les conflits du tiers-monde. Du point de vue de leurs rapports, il s'agit d'une évolution positive, de celui du tiers-monde, il se peut fort bien qu'elle soit négative.

Desmond Morton : Les historiens ont la mauvaise habitude, qu'ils essaient de maîtriser, de faire des analogies, pour la plupart fausses, mais je pense à un scénario d'avant 1914, année où dans une certaine mesure, la guerre a éclaté à cause de l'énorme instabilité qui régnait en Europe centrale et dans les Balkans. Je pense également à l'789. Je me suis, en fait, replongé dans cette époque pour retrouver des citations traduisant la joie ressentie quand la France monarchiste est devenue républicaine, pacifique, aimante et idéaliste, et j'ai pensé au reportage sur l'Europe centrale et l'Union soviétique. Je me suis mis à penser également aux conséquences de 1789, pas seulement pour les Français, mais pour le monde. Je ne vois donc pas l'avent d'un œil optimiste, mais c'est rarement le cas avec les historiens. L'instabilité de l'Europe centrale m'inquiète réellement, tout comme le risque d'un morcellement de l'Union soviétique, où l'expérience politique pèche par absence de sens du compromis. J'ai bien peur de ne pas voir à un monde consistant de façon moins dangereuse, sauf à très court terme.

Gérard Thériault : Je crois que, depuis un certain temps, nous nous rendions tous compte du recul de l'idéologie en Union soviétique, mais cela n'a pas empêché même les experts d'être surpris par le rythme effréné pris par la débâcle une fois qu'elle a été amorcée. Par parenthèse, le Pacte de

## NOTE FROM THE EDITOR

By the time this issue of *Peace & Security* finds its way into readers' hands, warships of the Canadian navy will have arrived in the waters of the Persian Gulf. As I write on 20 August, one of the few certainties about this crisis is that with the sending of battle-ready ships, and with some eight hundred Canadian citizens living in Iraq and Kuwait – all apparently subject to the whims of a government, which, putting aside all other complexities, is the only existing government, we must remember, known to have used nerve gas on its own unarmed citizens – Canada is directly involved. Another, is that the Gulf

confrontation threatens military action with levels of lethality and destruction not seen by Western countries since the Korean war.

Our cover story bears on the post-war period's singular international event – Eastern Europe and the demise of the Cold War. It is immediately evident from Jacques Lévesque's report that something else died in 1990, the very idea of a place called "Eastern Europe" – an eventuality bound to complicate the lives of journalists, academics, policy makers and citizens, because it will now be necessary to take into account seven places not one. The "Eastern Bloc" stands revealed not as a block at all, but rather as separate countries with different histories and aspirations, and as Lévesque underscores, very different futures.

We also present an address given at the Institute by **Shridath Ramphal**, the out-going Secretary-General of the Commonwealth. Sir Shridath reminds us of the sobering fact that even while East-West cooperation has increased, the North-South dialogue on the structure of the international economy, begun in the seventies, has stalled completely.

The reactivation of "meaningful, structured" talks between North and South on the world economy is exactly what is envisaged by **David Runnalls** in "Saving Earth's Atmosphere." The Third World now has considerable bargaining power with the West when it comes to deciding how to minimize and adapt to imminent global climate change. Runnalls sketches for us the agendas of and strategies behind these negotiations.

While the world watches the Persian Gulf and waits, another local conflict with terrifying implications plays itself out in the mountain valleys of Kashmir. **Selig Harrison** sorts through the complex of conflicting national, religious and tribal interests at the heart of this centuries-old dispute.

And from a new book on the foreign policies of Pierre Trudeau by **J.L. Granatstein** and **Robert Bothwell**, we present an excerpt on the 1983 "peace initiative." Regardless of one's judgement of this period, it is of considerable interest to this Institute since in a very important way, the legislation to create the Canadian Institute for International Peace and Security grew directly from those diplomatic efforts.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

22 REVIEWS

**T**HE YEAR 1989 WAS A TIME OF REVOLUTIONARY EUPHORIA IN EASTERN EUROPE, BUT THE DAYS FOLLOWING a revolution are rarely easy. This has been especially true for most of the East bloc countries. Democracy, the prize most cherished by the social movements in each of these nations, remains fragile, its future far from everywhere assured.

In a 1989 Canadian interview, Professor Bronislaw Geremek, a Polish politician and leader of the parliamentary group that came out of the Solidarity labour movement, rightly pointed out that even if several countries had made the transition from dictatorship to democracy, none had yet made it while moving from a centrally planned economy to a market-oriented one. The problems and risks and challenges are of a completely new order.

Almost everywhere in Eastern Europe, the backlash created by the wave of revolutions has seen foundering Communist parties pulling down with them not only the political and economic model of Stalinist socialism, but indeed the whole idea of democratic socialism, or even social democracy. Maximum privatization and the supremacy of the law of supply and demand have become the order of the day. Among the great majority of Eastern European intellectuals, most of whom are ex-Communists, one senses the emergence of a new

orthodoxy (replacing the old one) which advocates an extreme economic liberalism and is regarded as a universal panacea.

Those who support this radical liberalism are well aware that the complete adoption of the rule of market forces, and a rapid integration of Eastern European economies into the world market, can only worsen their situation in the short term by creating runaway inflation and causing hundreds of factories to shut down. These enterprises are unaccustomed to competition and unable to adapt, and the result will be widespread unemployment and considerable social injustice. Yet the defenders of this policy consider it the inevitable price that must be paid, maintaining that there is no other way and that things will soon change for the better.

HERE, BRIEFLY, IS HOW THE SITUATION APPEARED IN FOUR EASTERN EUROPEAN nations I visited in April and May of this year. It seems reasonable to begin with Poland, since it is home to the oldest non-Communist government, dating from September 1989. Poland has also been the quickest to implement a completely free-market system, so clear-cut results are already evident and several possible political consequences are beginning to emerge.

According to official Polish government statistics, the standard of living for the average Polish family dropped forty percent in a five-month period – from September 1989 to March 1990.<sup>1</sup> The figure is striking, especially since the standard of living in Poland had already declined significantly since the beginning of the decade. The recent

dramatic deterioration has been particularly noticeable since January 1990. The easing of almost all price controls brought the rate of inflation in that month to an annual rate of more than one thousand percent.

At the beginning of the summer, there were some 350,000 unemployed, a relatively small number for a country with a population of thirty-seven million. However, if the figure seems low, it is because a large share of the unemployment has been absorbed "collectively," if you will. Here is how it worked. The shock therapy administered to the Polish economy from January onwards led to a severe recession that saw many companies reduce their total production by twenty-five to fifty percent. Instead of extensive layoffs, workers agreed together to reduced working hours for everyone. It is clear that this situation cannot continue for any length of time and that a genuine restructuring of industries must take place. Most Polish economists expect a sizeable wave of unemployment in the second half of 1990.

IT IS ABSOLUTELY REMARKABLE THAT IN SPITE OF EVERYTHING THE MAZOWIECKI GOVERNMENT HAS BEEN ABLE UP to now to retain an impressive popular standing, a legitimacy so great that the Communist party's successor has not dared to break openly with it. Popular discontent is mounting, however. At the beginning of January, the government promised an economic improvement over the following six months. The deadline is past, and rather than an improvement, there is good reason to expect a decline.

For several months now, Lech Walesa has been finding it increasingly difficult to contain the dissatisfaction among his followers and to suppress the numerous strikes that have cropped up on the local level. This shaky situation, along with his own personal ambitions, explains the still embryonic war that he has begun to wage against the government, a government that was formed by his own advisors and, for all intents and purposes, appointed by him.

Because of the tarnished reputation of the former Communist party, there is no real left-wing option in Poland. The party has tried to get back into favour by calling itself the Social Democracy Party of the

# EASTERN EUROPE AFTER THE REVOLUTION

euphoria has given way to harsh economic and  
political reality.*

BY  
JACQUES  
LÉVESQUE

Polish Republic, a move bound to contribute further to the ill-repute into which the whole idea of social democracy has fallen. This limits the choice even more, leaving the door open for an extreme right-wing regime that could replace the present government.

Walesa is currently attempting to outbid his opponents by taking a populist, nationalist, and authoritarian stance. On the eve of the Solidarity congress where he was easily reelected president, he had begun to criticize "his" government, accusing it of "dragging its feet" and calling for "speedier reforms." He was basically referring to the elimination of Communists – or rather, former Communists, since there has been a mass exodus from the party as well as from its successor – who still hold a large number of important posts at various levels of the administration and in state-owned companies. Under the present conditions, a Communist witch-hunt could be a political ploy to divert attention from Poland's economic and social woes. The consequences could be far-reaching, since almost all of the Polish intelligentsia, including most of Solidarity's advisors, have been Communists at one time or another.

The president of Solidarity is now accusing intellectuals of having betrayed him, his tone becoming increasingly hostile. Last May he declared: "I allowed myself to be taken in by the intellectuals. I believed too much in the Polish intellectuals and followed their advice. They misled me."<sup>2</sup> Contrary to what the Polish government hoped for, Walesa asked for the complete withdrawal of Soviet troops from Poland. In March he affirmed his intention of running for the presidency of the country and has since called for an early election.

It is clear from all this that he sees himself as a new Pilsudski.<sup>3</sup> In any case, he remains a national hero in Poland, and if he decided to encourage a general strike, which in the present state of affairs would assume considerable magnitude, he could quite easily bring down the government.

IT IS IN ROMANIA, WHERE ECONOMIC CONDITIONS are catastrophic compared with those of Poland, that the future appears most dismal. I was shocked when I returned there. Romanians' standard of living has fallen to the level experienced by Soviets in the early 1960s. One can say without fear of exaggeration that Ceausescu's ruthless dictatorship and megalomania have reduced the country to an economic, political, and cultural wasteland.

It is exactly these conditions that account for the great paradox of Romania compared to other Eastern European countries. The fact is that the successor to the Romanian Communist party, the National Salvation Front, has been able not only to stay in power, but also to win the May 1990 presidential elections with an unprecedented eighty-nine percent majority, when much more reformist parties in Poland and Hungary were routed.

Over the last few years, repression in Romania has been so severe that in contrast with that in other Eastern bloc countries, no opposition group with any real structure has been able to operate or even make an appearance. There were no political options at hand. It was for this reason that a small group of several former Ceausescu supporters, as well as a few others co-opted at the last minute, was able to seize power in circumstances that remain mysterious.

The events of December 1989 have the character of both a genuine people's revolt and a coup d'état. It was the spontaneous uprising in Timisoara between 15 and 20 December, and in Bucharest a few days later, that initiated Ceausescu's downfall. But it was precisely because they were spontaneous reactions, without organized political direction of

any kind, that Ion Iliescu's group was able to seize power by striking a political compromise with the army, the terms of which are still unknown.

Contrary to initial accounts, it was quickly established that it was not the *Securitate* – the political police – but the army that opened fire on the crowds in Timisoara and Bucharest, the day before Ceausescu's flight. Only at the very end, with the intensification of the popular uprising, did the army turn against the dictator. The main purpose of the grotesque and hastily organized trial, at the end of which Ceausescu was promptly executed for "genocide," was to blame him for everything, to prevent him from speaking, and to play down the army's role in the repression. General Stanculescu, one of the trial's organizers, was allegedly responsible for the crackdown at Timisoara. The most complete recorded version of the trial was cut at the very moment when Ceausescu, having denied giving the order to open fire at Timisoara, was getting ready to point the finger.

Ion Iliescu and several of those in his circle, such as Silviu Brucan and Petre Roman, are surely well intentioned and truly want to see a democratic Romania. They are in danger, however, of being considerably hampered not only by the army and the state machinery, but also by the political apparatus of the former regime. Just as Ceausescu's execution permitted his government to escape trial, banning the Communist party served a similar purpose. The party disappeared in name only, and since it had no real political organization of its own, the new National Salvation Front took over the apparatus the outlawed party maintained throughout the country.

EVEN BEFORE CEAEUSCU'S FALL, HIDDEN CONFLICTS EXISTED AMONG various factions in his regime, especially between the *Securitate* and the army. There were clear indications of this during the events of December and several disturbing incidents have still not been cleared up. We now know that the mass grave "discovered" near Timisoara was a complete fabrication, with "stitched together" bodies transported there from hospital dissecting rooms and morgues. We still do not know who masterminded the operation nor whom it was supposed to discredit. In the days following Ceausescu's overthrow sixty thousand were reported dead throughout Romania. In fact the number was closer to six hundred.

Just an error in counting? The most farfetched rumours continue to circulate in Bucharest. There are those who maintain that someone (who?) tried deliberately to create panic and disorder while the difficult negotiations of setting up the new government were carried out. Nevertheless, it seems that Iliescu must come to terms with forces he barely controls. As a result of the army's refusal to suppress the rioters, in June, he was forced to call on the miners, who, flanked by political organizers from the old Communist party, exceeded their "mandate" – most obviously by arresting leaders of the new political groupings.

Given the underdeveloped political culture in Romania, making Ceausescu take the blame for all the country's ills seems to have largely succeeded as far as the National Salvation Front is concerned. Yet this is not the only reason for its overwhelming election victory. After Ceausescu was eliminated, opposition parties were put together very hastily. The major established parties, such as the re-formed National Peasants Party and National Liberal Party, have for the most part remained empty shells. Their respective leaders, Ratiu and Campeanu, candidates who ran against Iliescu for the presidency, had not lived in the country for many years (thirty-five in Ratiu's case and fifteen in Campeanu's). They had little credibility, and their parties, active mainly in Bucharest, had not penetrated much beyond the capital into the more remote parts of a country still controlled by former party cadres now siding with the Front.

What's more, during the time it was acting as an interim government, the Front adopted "vote-getting" methods of a cynical Western kind. While continuing price controls, it appreciably increased workers' salaries and made Saturday a paid holiday, even though the state obviously had no means of paying for such initiatives. In addition, the Front

government imported great quantities of consumer goods, even though the effect on the standard of living would have been marginal. Ceausescu had virtually eliminated the country's foreign debt, while these measures increased it by \$2 billion between January and May alone.

Clearly, things cannot continue in this fashion for much longer. The Front has promised a cautious transition towards a market economy: according to its spokesmen, it aims at privatizing seventy percent of industry. But room to manoeuvre is not just tight, it is practically non-existent. The Romanian economy is teetering on the brink of disaster. Given the already appalling standard of living of the population as well as its newly raised expectations, spontaneous strikes and uprisings could easily become commonplace. One cannot rule out the country's sinking into chaos or adopting a military dictatorship.

HUNGARY'S SITUATION IS BETTER IN ALL RESPECTS than Romania's, and from several points of view, better than Poland's. Arising from the spring's elections is a genuine political pluralism. The coalition government installed in May is dominated by the Hungarian Democratic Forum, which won almost twenty-five percent of the vote with nearly twenty-

two percent going to its nearest rival, the Alliance of Free Democrats – still part of the opposition.

The Alliance of Free Democrats was the creation of the first dissident intellectuals. It is a party of an extremely hard-line and uncompromising political and economic liberalism – typically Jacobin in character. It sees itself as resolutely modern, anti-nationalist, and internationalist. For example, it considers the issue of Hungarians in Transylvania to be a problem of human rights and the proper subject of international discussion rather than the concern of the Hungarian government. The Hungarian Democratic Forum, on the other hand, is both pro-nationalist and closer to Hungarian political traditions. Tinged with populism, it has been wrongly accused by its chief opponent of anti-semitism. On socio-economic questions it claimed in the beginning to represent a "third way." But under election pressure from the Free Democrats and, according to them, in order to win the confidence of international financial institutions, the Democratic Forum has gradually adopted an economic programme that is hardly distinguishable from that of its rival.

Among all the Eastern European countries, Hungary is undoubtedly the best position to make an easy transition to a market economy. Having been better prepared, the ground is much more receptive. Since the end of the 1960s, Prime Minister Kadar's government, by far the most "liberal" in the region, has put numerous market mechanisms into place. The formation of industrial and state economic structures has long been a product of this school and they are both used to operating under a regime where real competition – admittedly often of a limited sort – existed between various economic units.

In Poland as well as in Hungary, economists close to the government maintain that it is not loans from foreign governments they need so much as direct foreign investments, whether for new projects or for purchasing state-owned industries. Poles consider the progress so far to be very unsatisfactory. Over the last year, foreign investments in Poland came to an estimated \$300 million. During the same period, while it still had a Communist government, Hungary received \$700 million. Even if one sees this latter figure as completely inadequate as well, it does nevertheless show that the state of the economic foundations and infrastructure is still better in Hungary than in Poland.

DESPITE THESE ADVANTAGES, HUNGARY'S PER CAPITA FOREIGN DEBT IS THE highest in the region and the change to a market economy will require considerable sacrifices on the part of the population. In fact, as one of the leaders of the Democratic Forum observed, the new Hungarian gov-

ernment does not have even half the popularity of the Polish administration – a legitimacy enabling it to impose such sacrifices. In conditions like these, the Hungarian government might have been tempted to strengthen unity and solidarity by putting more weight on the nationalist option. But this would carry with it some serious problems on the international level.

During the election campaign, the Democratic Forum spoke of a Hungarian nation of fourteen million people and proclaimed itself defender and champion. In reality, there are 10.6 million Hungarians in Hungary itself. So in fact, the Forum was referring to the 2.5 million Hungarians in Transylvania (a figure still open to dispute), to 500,000 others in Slovakia, and to a few hundred thousand who live in Yugoslavia.

It's with Romania that the problem could become most acute. In January, after the fall of Ceausescu and with the opening of the Romanian borders, whole busloads of militants from the Democratic Forum were sent into Transylvania to support and mobilize Hungarians, an action that heightened tensions between the two countries. For the past few months, some two hundred Hungarian refugees have been leaving Romania for Hungary every day – a figure higher, proportionally, than the number of East German refugees last summer. The Hungarian government suspects its Romanian counterpart of favouring this exodus in order to rid itself of a problem. One intellectual, an advisor to the Hungarian government and otherwise fairly moderate, told us in Budapest: "If this is really a deliberate Romanian policy, we will accept the refugees, but we will insist that they bring their land with them." Obviously, it has not yet come to that.

IN CONCLUDING WITH CZECHOSLOVAKIA, WE can end on a much more optimistic note. The economic and political conditions there are the best in Eastern Europe, the standard of living is higher than anywhere else, and foreign debt negligible. As a result, the government has more room to manoeuvre in making a gradual transition to a market economy. Perhaps precisely for that reason, views on economic liberalism are less doctrinaire than in Poland or even Hungary. President Havel's economic advisors envisage a mixed economy emphasizing the private sector.

The relative absence of sectarianism and dogmatism is also fundamental to the country's political culture, which is marked by a high level of tolerance. There is no evidence of the anti-semitism that is resurfacing to varying degrees in Poland, Hungary, and Romania. Resentment against the Communists exists, of course, but there is less of an urge for revenge and the settling of scores. Czechoslovakia was, between the wars, the only Eastern bloc country to live under a genuine democracy, an experience that has left a deep impression.

Czechoslovakia, like its neighbours, will have difficult problems to solve. The environment has been seriously damaged. Modernizing its industrial equipment, as well as bringing its economy up to Western European levels – where it was before the Second World War – will be expensive. The latent issue of Slovak nationalism is coming to the fore once again, and could in the end compromise the future of the federation. But Czechoslovakia appears to have all the assets it needs to meet these challenges. □

## FROM THE DIRECTOR

### "MYTHS" AND REALITIES OF A POST-MEECH CANADA IN THE WORLD

**W**HETHER OR NOT they originally favoured the Meech Lake prescription, all thoughtful Canadians are now bracing themselves for some basic changes in the Canadian *status quo*. Internationally, too, the "peaceable king-

dom" has attracted unusual attention and concern, beginning with mystification on the part of foreigners that such a blessed and benign people as Canadians could get themselves into such a rancorous mess in the first place.

Few Canadians realize that in an imperfect world this country has long been admired as one of the world's most successful models for managing plural societies and mixed economies. For this reason, the perceived danger of a failure of the Canadian experiment causes deep international concern. This is especially so at a time when the management of such complex societies is coming to the fore as a priority challenge around the world.

As we think and talk through our future directions, all Canadians need to see themselves in this international mirror. For all the differences and frictions we are so intimately aware of, in global perspective the reservoir and habits of tolerance in this country are still very deep, and our advantages for the tasks of management are immense. This broader perspective is a vital antidote to the climate of feckless introspection and self-indulgent gloom fostered by the bitterness of the Meech process.

**T**HIS NEGATIVISM HAS BEEN FED BY SOME WHO have long been hostile to Canada anyway, and by others who have been shaken to the point of asking whether we have, or have ever had, the necessary unifying myths to forge a common identity and pursue common purposes. Some of this debate was spurred by William Thorsell's essay in the April *Report on Business*, where he claimed to strip bare our myths about the monarchy, the two founding peoples, the mixed economy, the "kinder gentler nation," and the role as "helpful fixer in international affairs."

Like some other debates in Canada in recent months, the discussion on myths has got somewhat out of hand, with a failure to recognize that no people's myths are ever entirely true — they are evolving combinations of past lega-

cies, present ideals and future aspirations. In all of this, too little attention has been paid to the issue of Canada's international identity. Thorsell, for his part, produced no evidence for the alleged hollowness of Canada's activist international tradition; he seemed simply to assume that since the world has changed, our role must have diminished — he got it absolutely wrong.

Only the most myopic of Canadians can fail to appreciate the dramatic changes taking place in the world and the impact they will have on all our lives in what Barbara Ward recognized, as long ago as 1967, as "the first international nation." For Canada to help shape these changes is crucial. Our foreign policy serves to protect our interests and project our values, and even though we have diversity in both, it is often in the wider world that we find a true perspective on just how much Canadians have in common.

**A**T THE PURELY PERSONAL LEVEL, MOST Canadians travelling anywhere in the world have had the agreeable surprise of finding an especially warm welcome afforded their passport and nationality. None of us should think this welcome is a mere quirk, or the hold-over of some popular nostalgia abroad. In a classic survey of foreign policy elites in other countries some years ago, Professors Peyton Lyon and Brian Tomlin found Canada classed with countries which are (in order of frequency mentioned): "generous"; "peace-promoters"; "modest"; "principled or moral"; and "internationalist." Canada was *contrasted* most with countries which are: "selfish or unresponsive"; "irrational"; "ideological"; "expansionist or violent"; and "isolationist."

Is this favourable Canadian image derived merely from Canada's distance and irrelevance to major world events? Once again, such a boundlessly self-sceptical question could probably leap only to a Canadian mind — and that, too, is one of our positive traits in a world not marked by modesty. In fact, Canada has the seventh largest economy in the world and the seventh largest share of trade — no one does business on that scale without being tested.

For those abroad who follow world affairs, it is less surprising than it is to most Canadians that we are the world's fourth largest voluntary contributor to the United Nations system, the seventh largest donor of foreign aid, and, inci-

dentally, we rank twelfth in the world in total military expenditure. These investments give Canada real credibility and significant influence among a widening community of nations, in which issues are becoming more diverse and influence more diffuse.

For a decade at least, it has often been Canada (the smallest of the G-7 powers at the Western Summit table) which worked to bridge the differences among those powers, and between them and many other outside countries. Canadian leaders have done so on issues of North-South relations, Southern Africa, Third World debt, and the environment. And in doing so only Canada can claim the insights which come from active membership in the Commonwealth, Francophone and inter-American communities.

**C**ANADA PLAYED ITS FULL PART IN THE Helsinki process which helped bring an end to the Cold War. In fact, European and international security will now call much more for involvement in verification activities to ensure security at much lower levels of armaments and in conflict management, conflict resolution and peacekeeping. Canada has long been Number One in the world in this type of work. As illustrated most recently by our pivotal role in resolving conflict in Namibia and Central America, Canadians probably have a greater share than any other people in the 1988 Nobel Prize awarded to the "blue berets" of UN Peacekeeping.

In the 1982 Presidential address to the Canadian Political Science Association on the subject of "The Political Culture of Canadian Foreign Policy," Professor Denis Stairs showed brilliantly how the special Canadian contribution to the world draws upon an understanding at home of the constancy of "conflicts rooted in diversity," and thus the need for flexibility, moderation, and give and take. The qualities to be avoided in international life also mirror those to be avoided at home: dogmatism; and the valuing of emotion over reason, the symbolic over the real. "To be governed thus," he stated "is to be denied the ability to perceive conflict as a matter of competing interests rather than irreconcilable absolutes, and hence to be deprived of both the will and the capacity to bargain, to trade, to find satisfaction in middle ground."

We do indeed have our myths, and some of them are vital, compelling and the envy of the world. □

— BERNARD WOOD

# NEIGHBOURHOOD VALUES FOR A COMMON FUTURE

*Even as East and West join hands, North and South, rich and poor, remain in the depths of their own Cold War.*

BY SHRIDATH S. RAMPHAL

IT IS INTRIGUING THAT ONE OF THE MOST APT DESCRIPTIONS OF OUR world, as we prepare for the third millennium, is that of the medieval poet Langland who described his world as he knew it as "a field full of folk." We know it now to be a much larger field and there are many billion more folk in it than Langland ever dreamt of. Yet, the description holds; indeed, it is closer to our present perceptions than it has been for many an era.

That field of folk is our human neighbourhood: our global village. We continue, it is true, to act more in response to the lure of materialism than the claims of humanity. We live most of our lives with yesterday's images of far away places with strange sounding names only to be reminded with increasing frequency that our genius has made our planet small and that our own survival requires that we care and share it better than we have done. Today both ethical and practical considerations compel us to put otherness behind us and acknowledge that our humanity is inseparable. And all this presses upon us as we hurtle towards the 21st century with mixed emotions of confusion and excitement, of great hope and some panic.

But the auguries are auspicious; certainly compared to say five years ago. 1985 was a dire time. The Soviet Union was entrenched in Afghanistan. The Gulf War ground on. Namibia was occupied, and its border lands were still killing fields. There was relentless repression, not talk of reform, in *apartheid* South Africa. A dead hand lay across Eastern Europe; Vaclav Havel was a dissident, not a president. And there were grave doubts over the whole future for international cooperation. There was no valid basis for assuming the existence of an ethic of multilateralism; the spirit guiding superpower decision-making was certainly not an ethos of internationalism.

But, fortunately, that ethos lingered among people, and especially among young people who understood instinctively the global community they shared. Everywhere, people were making manifest, wherever the right of dissent existed – but also, whenever they could, in places where that right was denied – their sense that they were being led to disaster. We were moved out of complacency by both mass demonstrations and the heroism of lone voices, like those of Andrei Sakharov and Nelson Mandela. The question asked by the tapestry hanging in St. James's Church in London – woven by one of the Sisters of Soweto – "How Long?" has been answered with respect to Mandela's captivity; and with regard to an end to *apartheid* itself, the answer is surely: "Not long now."

THE CLIMATE FOR MULTILATERALISM AND FOR INTERNATIONALISM HAS improved with the improvement of relations between the superpowers; this could be the true end of the post-war era – the beginning of a new age of enlightenment. But human values are about people and how they live day-to-day. Our global neighbourhood – like any other neighbourhood – is about life at the street level, not the penthouse. We would be guilty of Panglossian optimism if we ignored these large realities.

When we set out to consider the state of the world, we must be clear of what world we speak. Is it, for example, the one-quarter world that is developed and materially prosperous, or is it the other three-quarters that exists on the margins of prosperity and progress? But even if we answer in rejection of a world of separate worlds, a question remains: the world as seen through whose eyes? The eyes of strategic planners of West or East? The eyes of stockbrokers in New York or Tokyo; the eyes of farmers in the paddy fields of Bangladesh; the eyes of many who will not see or others who look as through a glass darkly? The viewpoint profoundly colours judgements on values, particularly neighbourhood values, and to a substantial extent determines whether living by them will remain an illusion or is capable of fulfilment.

MY ASSERTION IS THAT THIS IS INDEED ONE WORLD, UNEVEN AND DISPARATE but integral nonetheless. Our closely knit, interlinked human society is a contemporary reality, however much the instincts of yesterday recall us to old nationalisms and summon up the adversary habits of crude sovereignty. What interdependence means in the global context is that we all need each other. Neither rich nor poor, West nor East, has the option to go it alone. Our shrinking world really holds no human sanctuaries. There are no shelters that insulate anyone, anywhere, from disease, from poverty, from nuclear holocaust, from environmental collapse. The concept of jurisdiction, increasingly, has meaning mainly for lawyers.

In Commonwealth countries like Canada whose precious inheritance is the common law – it is recognized in law that we all owe a duty of care to our neighbour, a duty to act in a reasonable way to avoid injury to him or her. Today, that duty of care is imposing new imperatives – the duty of care we owe is to all the world's people who are our neighbours now. The nature of that duty, the notion of what is reasonable conduct in relation to others, is known intuitively by ordinary people the world over. We must, in a new, more enlightened internationalism, provide conceptual space for these realities; we need to develop new precepts of rights and duties as relevant to our time as any formulated in an earlier era. We need the rule of enforceable law between nations if human society is to live by global neighbourhood values.

But to assert what we need is to acknowledge what we lack. For all of humankind's rich catalogue of achievements, this world remains a dangerous enigma: advanced in some ways, yet primitive in others; a combination of genius and perversity that may yet cause it to self-destruct – less now with a bang than a whimper. Contrasting elements of variety and oneness have been age-old features of human society. But today they contend with a special fierceness; and this contention seems destined to constitute a great struggle of ideas which will replace the clash of idealogies that has dominated so much of the 20th century. Let me try to illustrate these preoccupations of the years ahead by looking awhile at "democracy" and "freedom."

Many will assert that the most dramatic and exciting aspect of our changing times is the compulsion towards democracy, the demand for freedom; and so it is. In China, in 1989, through the miracle of the communications revolution which has helped to make the world an intimate

human neighbourhood, the young people of Tiananmen Square who called for freedom were calling to us all, in words that could have been those of our own sons and daughters, refusing to accept for their generation denials of freedom deriving from an era which has ended. They were asserting democracy as a universal right and appealing to worldwide human solidarity.

In a number of countries, part of the dramatic change is a new enthusiasm for the market economy – for the Western way of doing things – because it represents, in contrast to the experience of the collectivist model, a way of getting things done. That does not surprise those of us who come from the Third World; for before Eastern Europe and the Soviet Union, many Third World countries had already come to terms with the marketplace. But it has been a lesson of bitter experience that the marketplace is anything but magical and can, indeed, be a heartless environment. It is to be hoped that the new leaders in Central and Eastern Europe will recognise that capitalism, like socialism, needs a human face.

IT IS AN INDICTMENT OF OUR COMMON HUMANITY that today, despite massive achievements, our primal reach for freedom is still not everywhere satisfied. All too often this is because of an almost unbelievable capacity to withhold from fellow human beings the freedoms we most cherish for ourselves, and to inflict on them the most horrendous injustices when they demand them as being theirs of right. And mixed up with some movements for freedom, implicit in some of them, is the instinct for separateness; an emphasis on ethnicity, on narrow nationalisms, on tribalisms of one kind or another, a fashion even for fundamentalism. The cry of freedom could herald the breakup of societies in ways we have not yet begun to contemplate.

Last night – respecting the constraint on outsiders not to meddle, but fulfilling, I hope, the duty of friends and family not to stay silent when danger threatens – I ventured to give expression to some thoughts on current problems here in Canada. I reminded the Royal Commonwealth Society how much the Commonwealth cares for Canada which has made the Commonwealth strong and respected; how much the world cares for Canada which has made the world a better place by being Canada. I said that the wholeness of Canada, its multi-cultural ethic, its national integrity (territorial and otherwise) are not just national assets but international ones as well; that one Canada is itself a “distinct society” whose preservation is important to the world; that both the Commonwealth and the wider world will be diminished if your affairs go awry; that what is at stake has implications for us all.

Today, I want to add this: whatever the arguments, or even the agreements to disagree – they must surely all be within the parameters of one Canada. There is no principle of self-determination that leads inexorably to national dismemberment; decolonisation was another matter altogether. Self-determination there meant freedom from external domination. That concept has no application within established nations. Autonomy, devolution, federalism, pluralism of all kinds; forms of economic, social, cultural and political self-expression that we are yet to devise; are the pathways of self-determination within nations. They do not violate borders; they do not diminish the nation’s territorial integrity. The right of self-determination of all Canadians – like all Guyanese, all Indians, all Russians, all Papua New Guineans, all Yugoslavs, all South Africans – is not a right to cease to be Canadian or to make Canada cease to be. This is not new doctrine. You have for years lived by it and

become stronger and nobler for it. Long may you continue to do so – for Canada, and for all plural societies.

BUT THERE IS A FURTHER POINT: WE ARE SURELY TAKING TOO LONG TO acknowledge that we simply have to trim the edges of sovereignty and move to the rule of enforceable law worldwide if we are to save ourselves. There is urgent need for bold spirits to articulate an ethic of human survival and for us to develop global responses to the challenges of today that fill out the internationalist vision glimpsed by the victors back in 1945 when the UN was established.

Peace and security were at the centre of that vision. For peace between the superpowers, for avoidance of an apocalyptic war between them, the prospects are the best for many years. But that is not the end of the matter. We agree readily that peace is more than the absence of war; but are we really ready as a human society to turn our swords into ploughshares? At the level of every human being, but even at a national level, security cannot in any real sense be said to exist in a condition of chronic deprivation.

Poverty itself is insecurity. It is insecurity for the individual because of the fear of hunger, disease, and early death that afflicts the hundreds of millions who live on the margins of existence in subsistence agriculture and in urban slums. It is insecurity for the nation because of the lack of control over unstable and adverse external elements in commodity and capital markets; the inability to afford basic public expenditures, the dependence on external financial assistance with its attendant conditionalities; and the inequality of bargaining power which affects external economic relationships. In North-South relations we are still in the midst of the equivalent of the “Cold War.” There was no meaningful, structured dialogue between North and South on the world economy throughout the 1980s.

WE RECOGNIZE THAT A NATIONAL SOCIETY CANNOT be at peace if power, privilege and prosperity are the prerogatives of only a few. Why do we think our world society can be at peace when

such disparities prevail within it? Far more people today suffer from economic rather than military insecurity: those who die prematurely and others whose lives are blighted by the same deprivations and deformities that go hand in hand with military conflict. Even if we use the crude reckoning of war, the conclusions are staggering. Over a period of five years, the ravages of poverty and under-development account for a minimum of thirty-five million lives and countless shortened and unfulfilled lives. For the poor, it is always war-time.

The relaxation of East-West tensions has surely created a window of opportunity for us to respond to interdependencies through change in many fields, and advance towards a world that respects our inseparable humanity: one in which there must be a better opportunity for development and for a resumption of the dialogue on cooperation – a better opportunity for global solidarity. There is a path opening before us – an ethical path to human survival, an alternative way forward, through strengthening collective processes and discovering new ways of dealing with problems in cooperative not adversarial terms; a more democratic world with more enlightened global governance.

*On his last visit to the capital city of a Commonwealth nation as Secretary-General of the Commonwealth, Shridath Ramphal delivered a speech at the Institute for Peace and Security in Ottawa on 5 June. This article is an excerpt from that address.*

# SHOWDOWN IN KASHMIR

*A fourth Indo-Pakistan war would probably start over the long-disputed territory of Kashmir, and be fought with nuclear weapons.*

BY SELIG S. HARRISON

ON 15 MAY 1990, AMID MOUNTING CONCERN OVER A SOUTH Asian nuclear war, President Bush suddenly dispatched a high-level mission to India and Pakistan. It was headed by Deputy National Security Adviser Robert Gates, his principal Soviet affairs specialist, then in Moscow, who was instructed to abandon his preparations for the impending Bush-Gorbachev summit meeting in order to proceed immediately to Islamabad and New Delhi.

What precipitated the Gates mission at a time so inconvenient for the White House were satellite photos from the National Security Agency suggesting that Pakistan, alarmed by Indian troop movements it regarded as threatening, might be preparing for a preemptive attack. Some of the photos showed unusual traffic from Islamabad's nuclear development facility at Kahuta to airfields where American-built, nuclear-capable F-16 aircraft are based. Four months after the Gates mission, there is still a serious danger of a fourth Indo-Pakistan war. But the possibility of an imminent explosion appears to have receded, partly as a result of timely intervention by Gates in Islamabad and subsequently by Soviet diplomats in New Delhi.

American leverage is much greater in Pakistan than in India because the US has long been Islamabad's major military supplier. Washington gave the Ayub Khan regime \$1.2 billion in military hardware during the Fifties in the name of deterring Soviet and Chinese aggression. When this weaponry was used against India in the 1965 war, it was cut off. But another \$1.5 billion in military assistance was agreed upon in 1981 as the price for Pakistani cooperation in the Afghan war, over and above \$2 billion in aid channeled through Islamabad for the Afghan resistance between 1980 and 1989. Then in 1986, Washington added \$1.4 billion more, which has continued to flow since the Soviet withdrawal from Afghanistan.

According to American and Pakistani officials, Gates served notice that the US would cut off aid, spare parts, and ammunition in the event of a war, as it did in 1965. More important, he warned that the administration might even suspend or terminate aid, short of a conflict, unless Islamabad's Interservices Intelligence Directorate stopped its support for Muslim insurgents in the Indian-held Kashmir Valley.

IT WAS PAKISTAN THAT PRECIPITATED THE PRESENT CRISIS BY PROVIDING funds, training and escalating supplies of weaponry to the Kashmir insurgency, inflaming Hindu chauvinist demands in India for an all-out military response. L.K. Advani, leader of the powerful Hindu nationalist faction in Prime Minister V.P. Singh's governing coalition, said that Pakistan would "cease to exist" if another war broke out. To be sure, Indian insensitivity to legitimate Kashmiri grievances over the past four decades led to the rise of the insurgency. But the problem was manageable for New Delhi until Islamabad's Intelligence Directorate began supplying Kalashnikov rifles, rocket launchers, mortars and other weapons from US Afghan aid stockpiles beginning in 1988.

To back up his warning, Gates pointed out that the administration has a variety of legal avenues readily available for cutting off aid. Congress has made military assistance conditional on an annual presidential certi-

fication that Pakistan does not "possess" a nuclear weapon. Every year, despite mounting evidence to the contrary, the White House has hitherto swallowed hard and given its go-ahead for continued aid. Gates told Pakistan military leaders that certification was becoming "increasingly difficult" for the President, adding that anti-terrorist laws could also be invoked as a rationale for suspending or terminating military aid.

It is now clear that the level of Pakistani support for the Kashmir guerrillas has sharply dropped off in the months since the Gates visit. India, for its part, has moderated its rhetoric and has pulled back some of its border forces in response to Soviet as well as American pressures. Although New Delhi has developed a significant military-industrial complex in recent years, it is still heavily dependent on Moscow for spare parts for Soviet military equipment, especially its MiG aircraft.

FOREIGN MINISTER SHEVARDNADZE CAUTIONED SECRETARY OF STATE Baker in their Bonn meeting in June that any overt Soviet-American collusion in cutting off arms deliveries would merely exacerbate nationalist passions in India and Pakistan alike. However, while not directly threatening a cutoff, he said, Moscow had used strong words in New Delhi, and India was well aware that the Soviet Union could find excuses for slowing down critical arms deliveries in the event of a conflict.

Apart from American pressure, two other factors have helped to dampen Pakistani support for the Kashmir insurgent movement. One is a renewal of covert Indian support for separatists in Pakistan's key southern coastal province of Sind, designed to show that two can play at the same game. New Delhi suspended its support for the Sindhi groups two years ago in the hope that Pakistan would stop fuelling insurgent movements in the Punjab and Kashmir. But when Pakistani involvement in Kashmir escalated last year, India revived its operations in Sind, signalling its readiness to back off if Islamabad cooled it in Kashmir.

An even more significant factor that may help to prevent intensification of the fighting in Kashmir is a split between the Intelligence Directorate and the strongest insurgent group, the Liberation Front, which advocates Kashmiri independence. Until recently, the Directorate has been supporting both the Front and the Hezbe Islami, a coalition of Islamic fundamentalist factions favouring accession to Pakistan. But a simmering conflict between the Front and its Pakistani mentors has now burst into the open. Islamabad has consistently opposed the idea of an independent Kashmir, insisting on a United Nations plebiscite that would give all Kashmiris a choice between joining India or Pakistan. The state has been divided into Indian- and Pakistani-administered sectors since a ceasefire line was demarcated following the first Indo-Pakistan war over Kashmir in 1948.

Prime Minister Benazir Bhutto said in May that independence could trigger "Balkanization" of the subcontinent by stimulating similar demands for autonomy or independence by other minorities in both countries. Behind this position lies a strategic concern that creation of an independent Kashmir would cut off Pakistani access to China. The

Front demands that the projected new state encompass not only Indian-held areas of Kashmir but also the Pakistan-occupied areas of Azad Kashmir, Gilgit, Hunza and Baltistan, as well as pockets of territory ceded by Pakistan to Beijing. Half of Pakistan's hydroelectric generating capacity and the headwaters of the Chenab, one of its major rivers, would lie within the new entity. Moreover, the creation of an independent, Muslim-majority Kashmir would invalidate Pakistan's own raison d'être as the homeland for the subcontinent's Muslims, a rationale already undermined by the Indian-supported secession of Bangladesh.

Although Pakistan insists that any aid to Kashmir comes from private, not governmental sources, the Front exposed the Islamabad connection in a detailed attack on 26 April, stating that the insurgency was directed from Azad Kashmir by "Brigadier Intiaz," chief of the Intelligence Directorate's "Cell No. 202." Reaffirming its goal of "an independent Greater Kashmir," the Front declared that "anyone who allows himself to be used by the Pakistani intelligence authorities for promoting their own narrow purpose of bringing all of Kashmiri territory under their control, would be looked upon as a traitor by the Kashmiri people."

The Intelligence Directorate, manned by fundamentalist officers installed during the regime of the late Pakistani president Mohammed Zia Ul-Haq, helped to build up the Liberation Front in the mistaken belief that Hezbe Islami would dominate a unified insurgent movement and would force the Front to shelve the independence demand. Kashmir, in this perspective, would be engulfed by the fundamentalist wave already spreading in the Middle East and nearby Soviet Central Asia.

Still embittered over the loss of Bangladesh, many Pakistani leaders saw in Kashmir a low-risk opportunity to get even with their more powerful neighbour. Acquisition of the nuclear option and a continuing flow of American weaponry induced a mood of heady confidence. On visits to Islamabad in July 1988, and October 1989, I was repeatedly assured that India would not launch a general counter-attack in re-sponse to subversion in Kashmir, as it did in 1965, because Islamabad's nuclear deterrent had made such a course too dangerous.

TO THE SURPRISE AND DISMAY OF THE INTELLIGENCE DIRECTORATE, THE Liberation Front is now stronger than the Hezbe Islami. Islamic fundamentalism is a recent implant in Kashmir, claiming a fervently dedicated but limited band of adherents. The Front makes a much broader and deeper appeal to the historically-rooted aspiration for autonomy in the Kashmir Valley, a mountain-bound region with its own language and a strong sense of separate identity. Long before their current struggle against absorption by Hindu-majority India, Kashmir Valley Muslims have resisted incorporation by Muslim rulers, notably the Mogul Emperor Akbar in 1586 and Ahmad Shah of Afghanistan two centuries later.

India granted nominal, limited autonomy to its sector of Kashmir in 1950 under a special constitutional provision but promptly nullified this provision in practice. Kashmiri leaders who have attempted to exercise autonomy have been either jailed or replaced by corrupt local opportunists willing to accept Indian dictation. Adding insult to injury, India has spent little on the economic development of the state.

Relations between New Delhi and Kashmir are complicated by the fact that the state is an artificial conglomeration inherited from the British period. The Muslim-majority Valley is lumped together with Hindu-majority Jammu and Buddhist Ladakh, each of which has sizeable Muslim minorities. Autonomy would place the Jammu Hindus

under Muslim dominance, and to avoid this fate, they have frequently enlisted the support of Hindu nationalists in other parts of India to block autonomy moves.

For India, one possible way out of the present impasse might be to split the state, integrating Jammu and Ladakh with the Indian Union while giving an autonomous Kashmir Valley special confederated status within the Indian defence and foreign policy sphere. Such a strategy, accompanied by large-scale economic developments, might well win over significant elements of the Liberation Front who recognize the futility of the independence objective in the face of combined Indian and Pakistani resistance. At present, however, Prime Minister Singh, constrained by his hard-line Hindu coalition partners, shows no sign of moving in this direction. Indian policy is to crush the insurgency militarily before pursuing a political solution.

India, like Pakistan, sees control of its part of strategically located

Kashmir as militarily vital and fears that autonomy there would set a precedent for demands by others. The controversy in India over what to do in Kashmir is part of an ongoing debate over whether the entire Indian federal system, with its linguistically-defined provincial boundaries, should be more decentralized.

THIS DEBATE IS DIRECTLY LINKED TO THE SENSITIVE problem of Hindu-Muslim relations in India. Contrary to the widespread image in the West, the 1947 partition of the subcontinent did not produce a tidy division in which Pakistan got all of the Muslims and India, all of the Hindus. India has ninety million Muslims, nearly as many as Pakistan. Nominally, India is a secular state, but the secular principle is under attack from the Hindu right. Advocates of secularism fear that an autonomous, Muslim-majority Kashmir Valley would end up seeking independence or accession to Pakistan, thus exposing Muslims in other parts of India to continuing attack as potential traitors.

While important in itself, Kashmir has become the focus of a broader unresolved struggle,

going back more than seven centuries, between the Hindu majority and the Muslim minority in South Asia. Invading Muslim armies conquered perennially feuding Hindu kingdoms and gradually established a series of strong dynasties culminating in the Mogul Empire.

For the Hindu right, independence from Britain was a chance to dominate the subcontinent at last. Partition was a trauma, and it was accepted reluctantly on the assumption that Pakistan would become a deferential junior partner within an Indian sphere of influence. Indian leaders did not bargain for the Cold War and the inflated power that Pakistan would acquire through three decades of American military aid. Above all, they did not foresee a nuclear-armed Pakistan. As the Hindu right grows ever more powerful in India, pressures are likely to intensify for a showdown before Islamabad perfects an operational nuclear capability with sophisticated delivery systems. The growth of Hindu nationalism is accelerated, in turn, by the increasing assertiveness of Islamic fundamentalist leaders in Pakistan and their military allies following the dismissal of Benazir Bhutto in August.

For the foreseeable future, the prospect of a nuclear war is marginal barring major political convulsions in New Delhi or Islamabad. But by the same token, the unprecedented process of political instability and decay now developing on both sides of the border make long-term scenarios of nuclear Armageddon all too credible.

# PIERRE TRUDEAU'S LAST HURRAH

*In a new book on the impact of the Trudeau years on Canadian foreign policy, two historians take a harsh view of the 1983 "peace initiative."*

BY J.L. GRANATSTEIN AND ROBERT BOTHWELL

**T**HE AMERICAN PUBLIC AND ADMINISTRATION WERE IN A PARTICULARLY jingoistic mood in late 1983. The Grenada invasion, botched though it was in its military implementation, had been trumpeted as a sign of a new resurgence of pride in the military, patriotism, and the old American virtues. The propaganda tomtoms were beating furiously to hail the virtues of the Strategic Defense Initiative (popularly known as "Star Wars"), announced by President Reagan (without consultation with his allies or even with the State Department) in a TV address in March 1983, as a way to protect America completely from nuclear attack. While few took SDI seriously in the West, the Soviets had been greatly alarmed. In Washington, the president continued to ride high in the opinion polls, many of his advisers remained true believers in the necessity to grapple with the communists, and Trudeau, a proponent of Canadian equidistance, inevitably was seen as suspiciously soft on the Soviets.

A Pentagon official recalled that when he heard of the initiative, his response was, "Oh God, Trudeau's at it again." But why worry, he added, if Trudeau had no influence on other people? An officer of the National Security Council noted that "there was no predilection here to alter [Trudeau's] lack of influence." And Lawrence Eagleburger, the third-ranking official of the Department of State, told a private dinner party a week before Trudeau arrived in Washington that the Canadian's peace efforts resembled nothing so much as those of a leftist high on pot. Eagleburger was thought to be one of the more "pro-Canadian" officials in the State Department, which made that slap all the more stinging – and outrageous.

IN THESE UNPROFITABLE CIRCUMSTANCES, HOW TRUDEAU PRESENTED HIS case to Reagan was obviously critical. Some of his advisers insisted that the prime minister say precisely the same things he had said to other leaders. But the ambassador to Washington, Allan Gotlieb, urged Trudeau to appeal directly and personally to Reagan on the high ground. The prime minister agreed and handled himself well. Realizing that he was approaching from the margin, he took the softest of soft lines. As the Gwyns [Richard and Sandra, writing in *Saturday Night*, May 1984] reconstructed it, Trudeau had said: "Mr. President, your intentions are good and I agree with them wholly. You are a man of peace. You want peace through strength. Because of your policies, the U.S. has regained its strength and self-confidence. But, Mr. President, your message is not getting through. The people think you want strength for its own sake, and that you are ready to accept the risks of war. That must change, Mr. President. You must communicate what you truly believe in." At least one American present felt offended by this approach, even if Reagan was not. Trudeau, he remembered, "took a condescending view of the President as a simpleton in international affairs." Instead, "that hour was a tutorial for Trudeau on superpower politics. We never heard much more about the initiative."

Reagan emerged from the White House after the meeting to wish Trudeau "Godspeed," a phrase that struck many Canadians as dismissive and patronizing and as an indication of Canada's – and Trudeau's –

influence. The Canadian was important enough to be treated politely, but his message was not. Still, for whatever reason, the president's militant rhetoric toned down slightly in the weeks that followed, and Trudeau and other Canadians clung to that as a positive result of the prime minister's visit. Even some Canadian officials in Washington who thought the initiative nothing other than "a form of local madness to which Canadians are prone" believed that Trudeau had cooled the president's fervid expressions of anti-communism. To no one's surprise, however, very few American officials appeared to agree.

THE TRUDEAU INITIATIVE PAUSED FOR A MONTH OVER THE CHRISTMAS holiday and into the new year. In the middle of January, the prime minister met UN Secretary-General Pérez de Cuellar to urge him to convene a meeting of the five nuclear powers, a request that met no action. Later in the month, with Andropov still ill and unable to receive visitors, Trudeau took his show on the road once more, this time to Eastern Europe. Perhaps the satellites, known to be troubled by Soviet missile deployment on their territory and by the slow pace of negotiation between Moscow and Washington, might have more freedom to act if the Soviet leadership was incapacitated, or so Trudeau was said to feel. As one official working on the initiative put it, "If there was no one home in the USSR, then you went to the satellites." That at least was the motivation behind the visits to Czechoslovakia, East Germany, and Romania, the first two of which were sites for Soviet SS-20 intermediate-range missiles. The Czechs called the initiative "useful and correct," but denounced the Americans for deploying cruise missiles in Europe. The East Germans, pleased that Trudeau was the first NATO leader to visit East Berlin, pledged their support. President Ceausescu of Romania, the most independent-minded of satellite leaders, hailed Trudeau's efforts for peace, even though the prime minister generally hewed close to the NATO line in his seven hours of conversations with the Bucharest leader. \*

After his return to Ottawa, Trudeau wrapped up the peace initiative – and declared victory – in a speech in the House on 9 February. In this speech, the prime minister suggested "ten principles of a common bond between East and West," a new decalogue that had been put together by Ivan Head, then the president of the International Development Research Centre.

The prime minister reiterated that his goal had remained the one he had announced in October at Guelph: to change the trend line of crisis. There had been, he believed, some small successes in Reagan's cooled rhetoric, in the Soviet return to the MBFR talks, in the meeting between Shultz and Gromyko at Stockholm. In any case, Trudeau concluded on the highest note possible by saying that "Canada and Canadians ... saw the crisis; that we did act; that we took risks; that we were loyal to our friends and open with our adversaries; that we lived up to our ideals;

*\*Romania was in economic crisis with food and electricity shortages in 1984 (and after) and a leadership that heaped praise on itself. The current joke in Bucharest asked why Romanians were like penguins. The answer: because they live in the cold, eat no meat and clap all the time.*

and that we have done what we could to lift the shadow of war." The prime minister's initiative was endorsed by opposition leader Brian Mulroney and NDP leader Ed Broadbent, striking testimony to the popular support Trudeau's efforts had received in Canada.

Though apparently concluded, the initiative had one last gasp remaining. Within days of Trudeau's address to parliament, Soviet leader Andropov finally expired and Trudeau jetted to Moscow for the funeral and, with luck, a meeting with Konstantin Chernenko, the new general secretary and a man whose health was little better than Andropov's had been. Trudeau got his thirty-five minutes, and used them to tell Chernenko that there was now a window of opportunity for accommodation between East and West. The dour Gromyko, present at the talks, responded bleakly that the West had to put something in the window if relations were to improve. Although the prime minister emerged from the meeting to claim that the initiative had received another jolt of political energy, there was room for doubt. Chernenko, desperately ill, could take only the most cautious steps in the direction of détente. And Robert Ford, long-time ambassador in Moscow, delivered a damning assessment two years later. Trudeau's "peace initiative was a total absurdity," Ford told the *Globe and Mail*, "and the Russians just laughed at it." Trudeau had no leverage in Washington and "no corresponding clout in Moscow ... he had no credit in the banks of either place."

The prime minister had one final crack at his allies when he attended the summit meeting in London in his last days in office and helped secure a communiqué that called for "security and the lowest possible level of forces." Trudeau had a shouting match with Reagan, telling the president "you have to do more" to promote détente. That led the usually unflappable (or comatose) president to pound the table and shout, "Damn it, Pierre, what the hell can I do to get those guys back to the table!" The source for that story, Patrick Gossage noted sourly, was "a well-detailed U.S. briefing."

PERHAPS FORD'S WAS THE PROPER ASSESSMENT OF THE WHOLE OF TRUDEAU's failed crusade or "world walkabout," as some sneered at it. Somehow, although he had been in power for sixteen years and a participant in NATO, Commonwealth, and summit meetings, Trudeau seemed not to understand how great power relations worked. Convinced of his intellectual powers and in no way immune from vanity, Trudeau naively continued to believe in the power of words and ideas, to believe that reason could dislodge the strenuous pursuit of self-interest by great powers, and to believe in his own star. He was and remained an adventurer in ideas, certain that he could persuade other leaders to join him in personal involvement in altering the nuclear threat. But for all his brilliance, he could not grasp why the Soviets and Americans were unwilling to take any risks for peace. Nor could he understand the American and Russian disinclination to allow smaller states to get in their way. In addition, as a believer in equidistance and a respecter of the superpowers' spheres of influence, Trudeau suffered from what his critics saw as an apparent unwillingness or inability to distinguish between the superpowers. Andropov's Russia was infinitely worse than the United States, even Reagan's United States, but Trudeau often seemed unable to make the distinction.

As important, Canada simply did not have the standing and power to

make such an ambitious effort. Canada was a small country, despite its citizens' puffed-up view of its power and influence. If Canadian foreign policy had had influence in the past, and it had, that was because of the unusual global situation that had followed the Second World War, not because of any fundamental shift in power. In other words, once the ravages of war had been repaired, Canada sank back to its normal place in the centre of the third rank. Only a near-Great Power could have had a chance of success in a peace initiative in the 1980s – and only if the preparations and plans had been carefully prepared well in advance.

That was not true of the Trudeau initiative. Inevitably, given Trudeau's sporadic interest in foreign policy, his unilateral initiative had been hurriedly cobbled together. Some of its ideas, notably the five-power meeting, were non-starters – "one of the worst ideas in arms control produced in modern times," one senior Canadian ambassador called it. And no effort had been made to build support for the initiative through patient low-level diplomatic discussions. Without that, success was virtually impossible. The result was that at times Trudeau seemed to be flying around the world, desperately trying to be received by national leaders. If he got in the door, he was listened to politely enough, but his message, satirized by one Canadian official as "let's love one another," left glazed eyes. On balance, this official concluded, the effect had been to diminish Trudeau – and his nation.

STILL, TRUDEAU HAD BEEN RIGHT TO TRY, AND NOT ONLY BECAUSE THE Canadian public overwhelmingly supported his efforts (and realistically expected little to come of them). The world was in crisis, and Soviet-American relations were so bad that war seemed to be a possibility. Someone had to speak out, and Trudeau took the risk. Whether or not the prime minister could claim the credit, the upward spiral of tension did ease. Leaders like Kohl in West Germany and Craxi in Italy began to press their allies towards accommodation, Thatcher in Britain eased off on her hard line, and Reagan became less interested in painting the Soviet Union as an "evil empire" than in beginning to talk to it. Trudeau had taken the risks, and he deserved some of the credit.

There was a definite irony here, however, most notably for those who seek consistency in their leaders' deeds and thinking. Trudeau at the end of his career had clearly resumed his assault on the entrenched positions of the Cold War, an effort he had earlier abandoned after his cuts in the Canadian NATO contingent in 1969. Moreover, he had turned himself into a helpful fixer. The prime minister who in 1968 had attacked Lester Pearson's style and role was, by 1983–4, trying to don the Pearsonian

mantle – and probably with less success than the original. Pearson certainly would have realized that preparation and careful lower-level negotiation were essential first stages to any peace initiative. Mike Pearson had his vanity and his desire to shine on the world stage, to be sure, but he also knew the strengths, weaknesses, and potential of middle-power diplomacy. Despite sixteen years in office, Trudeau still did not recognize the limitations that living precariously in a superpowers' world placed on his country. †

# SAVING EARTH'S ATMOSPHERE

*A progress report on the complex strategy and  
hardball politics behind the international effort to  
rescue the atmosphere*

BY DAVID RUNNALLS

---

THE EARTH'S ATMOSPHERE IS BEING CHANGED AT AN UNPRECEDENTED RATE BY POLLUTANTS RESULTING FROM HUMAN ACTIVITIES, INEFFICIENT AND WASTEFUL FOSSIL FUEL USE, AND THE EFFECTS OF RAPID POPULATION GROWTH IN MANY REGIONS. THESE CHANGES REPRESENT A MAJOR THREAT TO INTERNATIONAL SECURITY AND ARE ALREADY HAVING HARMFUL CONSEQUENCES OVER MANY PARTS OF THE GLOBE.

---

THESE ALARMING WORDS, READERS MAY recall, were part of the statement of the Changing Atmosphere Conference, hosted by the Canadian Government, in Toronto immediately after the 1988 economic summit. Some three hundred senior scientists and politicians convened for sober discussion of the implications of changes in the earth's climate, decided to "outgreen" Greenpeace.

But is the remarkable consensus that developed at the Toronto Conference beginning to fray at the edges? Hardly a day goes by without some new group of boffins claiming that no global warming has taken place, or citing some exotic study of Antarctic ice cores or remote sensing data to challenge the basic assumptions. These debates have been seized upon by those politicians who wish to do little or nothing about the problem, at least not until the spate of elections due to be held in 1992 in a number of Western industrialized countries has passed.

The old American cry of "do nothing until research tells us more about the problem" which so frustrated action on acid rain is being heard once again, most recently from John Sununu, the White House Chief of Staff. Speaking at one of the briefings which accompanied the Houston economic summit, he even summoned up one of the other hoary old chestnuts of the Reagan presidency – the one known in the White House press corps as the "killer tree" theory after the famous Reagan notion that trees cause pollution.

But when the curtain is pulled back on the scientific debates, one critical observation remains unchallenged. In the words of the American climatologist Stephen Schneider testifying before an unprecedented joint session of eight committees of Parliament earlier this year:

"... while legitimate uncertainty remains, and will continue to remain for decades over precisely where and when changes will occur, the vast bulk of responsible experts believe that we have a substantial chance of unprecedented change." This view was reinforced by the recent report of the Intergovernmental Panel on Climate Change. The IPCC represents a consensus of some of the world's leading scientists. Their conclusions were that emissions of the so-called "greenhouse gases," if left uncontrolled, would result in global mean temperature increases of up to three degrees Celsius and sea level rises of up to three-quarters of a metre by the end of the next century.

ENVIRONMENTALISTS HAVE LONG BEEN ACCUSTOMED to describing problems as "global," sometimes with dubious accuracy. But climate change is an issue that is of genuinely worldwide concern. Caused by all of us and affecting all of us, it has two aspects. First, the earth's thin layer of ozone which protects us from the worst of the sun's ultra-violet radiation, is being destroyed by the emission of chlorofluorocarbons (CFCs), previously thought of as benign chemicals used for refrigeration, for blowing insulating foam, and as solvents in the electronics industry. If not controlled quickly, this erosion of the ozone layer will lead to vastly increased numbers of skin cancers (this is now beginning to happen), reductions in crop yields, and perhaps most ominously, effects on the human immune system.

Second, the emission of carbon dioxide (CO<sub>2</sub>) and the other greenhouse gases may profoundly alter the earth's climate in ways that we cannot accurately predict. But, in the

words of our sober Toronto participants: "Such high rates of change would be sufficiently disruptive that no country would likely benefit in toto from climate change." The poorer countries of the Third World, with the least resilience, are likely to fare very badly as their already fragile agricultural sectors are buffeted by changes in rainfall patterns and growing seasons, or as large portions of their coastal areas, along with valuable infrastructure and industrial investments, are threatened with inundation. As populations continue to grow and the climate begins to change, the world is bound to experience more conflicts over resources that will make today's Middle East water disputes or the floods of environmental refugees that already dominate parts of Africa, seem routine.

If the effects of climate change are global, so are its causes. The overwhelming majority of the greenhouse gases emitted as a result of development (i.e. industrialization) are emitted by the developed countries. The US alone contributes some twenty percent of man-made greenhouse gases. The remainder of the Organization for Economic Cooperation and Development (OECD) countries together contribute twenty percent while Eastern Europe and the Soviet Union chip in an additional one-fifth. Yet the developing countries are not without blame. When all greenhouse gas emissions (including those from deforestation and agricultural development) are added together, Brazil, China and India become the third, fourth and fifth largest producers.

THERE IS COMMON AGREEMENT THAT THE FIRST step in combatting climate change must be to eliminate the production and use of CFCs. Not only are they damaging to the ozone layer, they are among the most potent of the greenhouse gases, accounting for up to thirty percent of the total for industrialized countries. There has been substantial progress in this area already – Canada opened the batting on this issue in 1987, by hosting the meeting which led to the Montreal protocol. This agreement called for a halt to the production of CFCs by the end of the century. Before the ink was dry

on the pact, it became evident that this was inadequate. The hole in the ozone layer was still growing and an additional hole had been identified over the Arctic.

This led the new green Margaret Thatcher to convene two meetings in London to strengthen the protocol. The first was held in February of last year, and agreed on the need to speed up the timetable. This meeting was followed by a conference in Helsinki which identified a the critical need for some form of burden sharing, if the large developing countries, such as India and China, were to sign the document. Both of these countries have plans to spread the use of refrigerators, at least so that each village has a capacity for the safe storage of medical supplies. Why, they ask, should they cut back on these plans because of ozone depletion caused almost entirely by the developed countries? Why should they pay five or six times the price for less efficient CFC substitutes?

This led to a proposal at the second London meeting in June of this year for the creation of a fund to ease the transition away from CFCs in the developing world. The fund was initially resisted by the White House, which feared the precedent that might be created for a much larger fund to deal with global warming. After considerable arm twisting by the other industrialized powers, the US agreed to go along with a level of US \$240 million for the first three years. If China and India signed the protocol, as it appears certain they will, the fund would rise to approximately \$320 million.

FOR THE FIRST THREE YEARS, THE FUND WILL BE used mainly for assessing the needs of developing countries. After that period, it will help finance the acquisition of the technology to use (and perhaps to produce) the CFC substitutes, the halochlorofluorocarbons (HCFCs), whose use is thought to be less hazardous to the ozone layer, although they remain fierce greenhouse gases. Some have criticized this arrangement on the grounds that the technical experts involved in the discussions tend overwhelmingly to be experts on chemicals and not on refrigeration, and therefore have neglected the potential for other refrigerants such as propane or butane which do not contribute to global warming. Nevertheless, the London meeting represents an enormous step forward in responding to the special needs of developing countries.

The success of the ozone negotiations opens the door to progress on the far more difficult question of global warming. The Toronto Conference recommended a cut in CO<sub>2</sub> emissions of twenty percent by the year 2005, leading to

Michael McPoline

an eventual stabilization of CO<sub>2</sub> in the atmosphere. The latter would require a cut of at least fifty percent in current levels of fossil fuel combustion. Even if draconian measures were taken by the developed industrialized countries to reduce their greenhouse gas emissions, the planned massive expansion of coal-fired electricity production by India and China would wipe out these gains – two hundred coal-burning generating stations are planned by China alone.

This gives developing countries a good deal of leverage in the formulation of the so-called global bargain, or more accurately, as Jim MacNeill of the Institute for Research on Public Policy points out, a series of small bargains leading up to a larger one. And as the preparations for the 1992 United Nations Conference on Environment and Development to be held in Brazil have shown, the Third World intends to use that leverage to bring attention to its priority issues of trade, debt and the need for economic growth in exchange for action on climate change.

THE AGENDA FOR ARRIVING AT SUCH A SERIES OF deals is now clear. The first steps must be taken by the developed world and will be a series of unilateral decisions to reduce greenhouse gas (GHG) emissions. Some countries have already made such commitments. The Federal Republic of Germany recently said it would reduce West German emissions of CO<sub>2</sub> by twenty-five percent of 1987 levels by the year 2005. The UK has promised a freeze by that date and the Japanese, a freeze by the turn of the century. Although Canadian policy has been muddy on this point, Mr. de Cotret, the acting Environment minister, also has promised a freeze by the end of the century.

All of these countries have concluded that not only are these policies technically feasible, but in most cases, they will result in enhanced international competitiveness and major savings in expenditures on energy. The exception is the US where, in his post-Houston press conference, a petulant President Bush equated controlling emissions with causing massive job

losses. None of the other leaders agreed with him.

The second part of the bargain is creating arrangements to allow developing countries to pursue more sustainable forms of development of the kind that would provide jobs and incomes for the poor without massively increasing their GHG emissions. These would include easier terms of technology transfer for non-polluting technologies; debt relief, perhaps in the form of debt-for-nature swaps that would provide substantial sums of money for reforestation programs to soak up some of the atmospheric carbon; and finally, it

must include the establishment of the very kind of fund which the Bush administration feared when it agreed to the CFC fund in London.

This new fund would need to be quite large by traditional international standards – US \$20 to 40 billion annually, according to Dutch estimates – but small when compared with world arms expenditure. It appears that a start had been made on a US \$2.5 billion fund at Houston, but German Chancellor Kohl, its main advocate, was unable to persuade his host to go along.

THERE ARE PLENTY OF FORA TO ACCOMMODATE this process. November will see the convening of the World Climate Conference in Geneva. A “framework convention” on climate change could be discussed at that time. The argument here is between those who, like the Germans, favour a convention with specific commitments for the limitation of greenhouse gases and arrangements for technology transfers, and those who are arguing for an “empty shell” containing a general commitment to deal with the issue, and to work out the details later. The latter group seems to be led by the US, but some other countries may also hold this view, content to let the Americans take the blame.

The denouement of this issue may well come at the 1992 Brazil Conference when the optimists hope to have a convention opened for signature. Whether the convention has substance may well be a function of whether or not the Houston summit has signalled the long awaited change in economic power relationships. Chancellor Kohl, and to a lesser extent, the other European leaders, seem determined to make real progress on the issue of climate change in the near future. It would be interesting to see what would happen if six members of the summit, perhaps led by Canada as the closest to the United States, decided to establish the initial \$2.5 billion fund on their own. After all, it is not a lot of money when the future of the planet may be at stake. [

# A DIRECTORY TO INSTITUTE PUBLICATIONS

The Institute produces several different types of publications, each filling a particular need.

## OCCASIONAL PAPERS

These monographs aim for scholarly excellence and policy relevance.

## BACKGROUND PAPERS

Written in a non-academic style. Provide timely analysis of major events and emerging issues.

## WORKING PAPERS

Designed for rapid distribution. Summarize the results of research work-in-progress or the proceedings of conferences.

## FACTSHEETS

Intended mainly for secondary schools. Provide short synopses of current issues and their historical contexts.

## THE GUIDE

An annual sourcebook on Canada's peace and security policies. Presents background information, along with government and Parliamentary comment, on major issues.

## DIRECTOR'S ANNUAL STATEMENT

Takes stock of the year's major events and trends in peace and security, and explores their implications for Canadian policy.

## ANNUAL REPORT

Sets out for the Parliament and the people of Canada the record of Institute activities and financial statements for each fiscal year.

## BIBLIOGRAPHIC REFERENCE WORKS

These bibliographies and other items make peace and security titles and subjects more easily accessible to the researcher.

## PEACE & SECURITY

A quarterly magazine providing a forum for a wide range of Canadian and international analyses and viewpoints.

*(All publications except Working Papers are available in both English and French)*

*Publications are listed under the following topic areas: within each category, the most recent titles are listed first.*

## EAST-WEST RELATIONS

### REGIONAL CONFLICTS AND SECURITY ISSUES

#### ARMS CONTROL — NUCLEAR

#### ARMS CONTROL — NON-NUCLEAR

#### DISARMAMENT

#### DEFENCE

#### CONFLICT RESOLUTION — THEORY AND PRACTICE

#### MISCELLANEOUS

#### REFERENCE WORKS

## EAST-WEST RELATIONS

**East-West Relations in Transition: Towards a New European Order**, Excerpts from a Report of the Strategic Assessment Group of Experts to CIIPS, July 1990. (WP27)

**Superpower Rivalry in the Indian Ocean**, by Paul George, February 1989, 36 pages. (WP 16)

**New Dimensions in Canadian-Soviet Arctic Relations**, by John Hannigan, November 1988. (BP-PoV 6)

**International Security and Canadian Interests, Report of a Working Group**, June 1988, 38 pages. (WP 11) \*

**From Lenin to Gorbachev: Changing Soviet Perspectives on East-West Relations**, by Paul Marantz, July 1988, 89 pages. (OP 4)

**East-West Relations in the 1980s**, by Adam Bromke, May 1988, 103 pages. (WP 9) \*

**Superpower Rivalry and Soviet Foreign Policy in the Caribbean Basin**, by S. Neil MacFarlane, June 1986, 70 pages. (OP 1)

**East-West Relations: Values, Interests and Perceptions**, by Geoffrey Pearson, March 1986. (BP-PoV 1)

## REGIONAL CONFLICTS AND SECURITY ISSUES

**Cyprus — Visions for the Future: A Summary of Conference and Workshop Proceedings**, by François Lafrenière and Robert Mitchell, May 1990, 106 pages. (WP 21)

**The Return of Vietnam to the International System**, by Gérard Hervouet, December 1988, 83 pages. (OP 6)

**Destabilization of the Frontline States of Southern Africa, 1980-1987**, by Dan O'Meara, June 1988. (BP 20)

**The War in the Gulf**, by Francine Lecours, May 1988. (BP 19)

**Measures for Peace in Central America**, 8-9 May 1987, by Liisa North, December 1987, 76 pages. (WP-CR 5) \*

**Peace, Development and Security in the Caribbean: Perspectives to the Year 2000**, Proceedings of a Conference, Kingston, Jamaica, 22-25 March 1987, by Lloyd Searwar, August 1987, 36 pages. (WP-CR 4)

**Conference on Militarization in the Third World**, by Paul Rogers, Michael Klare and Dan O'Meara presented at Queen's University, Kingston, Ontario, January 1987, 83 pages. (WP 5) \*

**Peace in Central America?**, by Steven Baranyi, October 1986. (BP 8)

**Negotiations for Peace in Central America, Proceedings of the Round-table on Negotiations in Central America**, Ottawa, 27-28 September 1988, by Liisa North, 59 pages. (WP-CR 1) \*

## ARMS CONTROL — NUCLEAR

**A Review of the Geneva Negotiations: 1989-1990**, by David Cox, May 1990. (BP 32)

**The Implications of the INF Treaty**, by Jane Boulden, March 1990. (BP 31)

**Nuclear Non-Proliferation: The Status and Prospects**, by Jozef Goldblat, June 1989. (BP 29)

**Non-Proliferation Treaty (NPT)**, June 1989. (FS 10)

**A Review of the Geneva Negotiations 1987-1988**, by David Cox, March 1989. (BP 27)

**Cruise Missiles and Strategic Arms Control**, by Jane Boulden, January 1989. (BP 24)

**Debate about Nuclear Weapon Tests**, by David Cox and Jozef Goldblat, August 1988, 86 pages. (OP 5)

**Has the ABM Treaty a Future?**, by Ronald G. Purver, February 1988. (BP 18)

**Accidental Nuclear War: Reducing the Risks**, by Dianne DeMille, January 1988. (BP 16)

**A Review of the Geneva Negotiations on Strategic Arms Reductions**, by David Cox, June 1987. (BP 13) \*

**Who's Ahead? Examining the Nuclear Arms Balance**, by Jane Boulden, March 1987. (BP 12)

**The Risk of Accidental Nuclear War, Proceedings of the Conference on the Risk of Accidental Nuclear War**, Vancouver 26-30 May 1986, by Andrea Demchuk, 38 pages. (WP-CR 3) \*

## ARMS CONTROL DIGEST

### Strategic Arms Reduction Talks (START)

At their summit in Washington from 30 May to 3 June, Presidents Bush and Gorbachev signed a "joint statement" declaring that the "basic provisions" of a START Treaty had been agreed to, and reaffirming their determination to have it completed and signed before the end of the year. Two of the major outstanding issues had been solved during US Secretary of State Baker's visit to Moscow from 16 to 19 May. First, the US accepted the Soviet preference for 600 km as the range over which air-launched cruise missiles (ALCMs) would be subject to START limits, in return for Soviet agreement to exempt conventionally-armed ALCMs, including the US anti-radar missile known as "Tacit Rainbow," that are distinguishable from nuclear-armed ALCMs. On the number of nuclear-armed sea-launched cruise missiles (SLCMs) with a range of over 600 km, the two sides agreed on a "politically-binding" limit of 880 for the duration of the Treaty (15 years), but in an attached declaration rather than in the Treaty itself.

Further progress on START was announced at the summit, when the two sides agreed on a "sub-limit" of 1,100 on mobile ICBM warheads – a compromise between the initial Soviet proposal of 1,600 and the US preference for 800. The two Presidents also signed a joint statement agreeing to begin follow-on START II negotiations "at the earliest practical date" following the signing of START I.

### Pacific Security Initiative

In a speech in Victoria on 17 July, External Affairs Minister Joe Clark called for a new "North-

Pacific security co-operation dialogue," to explore the possibility of European-style confidence- and security-building measures for the region. Composed of the US, USSR, the two Koreas, Japan, China, and Canada, the forum would seek "to identify those proposals that have serious merit and to make serious counter-proposals." Mr. Clark mentioned specifically "information exchanges, military manoeuvre notification and Open Skies regimes." Broaching the highly sensitive subject of naval arms control, he went on to say that "if the dialogue on conventional forces in Europe develops into a dialogue on naval forces, the Pacific Ocean is an obvious locus of concern and action." Mr. Clark repeated his proposal in talks with government leaders in Tokyo a week later but reportedly received little support, although the Japanese were said to be considering similar ideas.

### Chemical Weapons (CW) Agreement

At their Washington summit on 1 June, Presidents Bush and Gorbachev signed a bilateral "executive agreement" to destroy at least eighty percent of their CW stockpiles independent of negotiations on a global CW ban. Under the agreement, at least fifty percent of each country's declared stocks are to be destroyed by the end of the century, beginning in 1992, while stocks are to be reduced to 5,000 tons each (representing an 80% cut in current US stocks) by 2002.

The US had sought Soviet support for its desire to retain two percent of its stocks (500 tons) even after a global CW Convention went into effect, until all CW-capable states had joined it. The bilateral agreement of 1 June commits the parties to reduce their stocks further to a maximum of 500 tons each by the eighth year after a global Convention enters into force, at which time they propose to hold a special conference

"to determine whether participation in the convention is sufficient to complete the elimination of chemical weapons stocks over the following two years."

### Conventional Forces in Europe (CFE)

Little progress was reported at the CFE negotiations until late June, when agreement was reached on a French-Polish proposal regarding definitions and limits for tanks and other armoured combat vehicles. The Final Declaration of the NATO summit meeting in early July called for the CFE talks to remain in continuous session until an agreement was reached, and for the latter to be followed immediately by further negotiations (CFE II). Most important from the Soviet perspective, it also noted that "a commitment [would] be given at the time of signature of the C.F.E. Treaty concerning the manpower levels of a unified Germany."

Perceived Soviet "stalling" on CFE had been widely attributed to their insistence on limiting German forces prior to accepting a CFE agreement. This critical stumbling-block was finally overcome with the announcement by West German Chancellor Kohl and Soviet President Gorbachev on 16 July that a future unified German defence force would be limited to 370,000 troops, with reductions beginning after CFE I comes into effect. The only other major obstacle to the treaty concerns combat aircraft, particularly the Soviet desire to exclude land-based naval aircraft from the limits. In the wake of the Kohl-Gorbachev agreement, most observers were optimistic that a treaty would be concluded before the end of the year.

### Short-Range Nuclear Forces (SNF)

At the beginning of May, President Bush cancelled modernization programmes for the Lance short-range nuclear missile and US nuclear artillery based in Eu-

posed and won NATO acceptance of an accelerated timetable for SNF arms control negotiations, calling for them to begin shortly after the signature of a CFE Treaty, without awaiting its implementation as previously stipulated by the West.

In early June, Soviet Foreign Minister Shevardnadze announced the unilateral withdrawal of sixty of the USSR's 1,400 tactical nuclear missile launchers in Central Europe, as well as over 250 pieces of nuclear-capable artillery and 1,500 of its estimated 8,000 nuclear warheads there. US Secretary of State Baker welcomed the announcement as "something that we had been seeking for quite some time because the Soviet Union has a significant advantage in these types of weapons." A few days later, a Soviet proposal to begin SNF negotiations even before conclusion of a CFE agreement was rejected by Washington.

At its summit meeting in early July NATO agreed that, once SNF negotiations began, it would propose the mutual elimination of all nuclear artillery shells in Europe.

### Short Notes

The Budapest round of the Open Skies Conference adjourned without an agreement on 10 May. According to chief Canadian delegate John Noble, the main stumbling-block remained a Soviet refusal to allow overflights of its territory by foreign aircraft. The negotiations may resume later in the year.

During their Washington summit, the US and Soviet presidents signed verification protocols to the 1974 Threshold Test-Ban and 1976 Peaceful Nuclear Explosions treaties, which limit underground nuclear explosions to 150 kt in yield. The US had made its ratification of the treaties contingent on a strengthening of their verification provisions, and the agreements will now be submitted to the US Senate for ratification. □

— RON PURVER

## DEFENCE NOTES

### Canadian Forces Sent to Persian Gulf

At a press conference on 10 August, Prime Minister Mulroney announced the decision by the government to dispatch three ships to the Persian Gulf region "to assist in the deterrence of further aggression" by Iraq. The ships are: the HMCS *Athabaskan*, a Tribal-class destroyer commissioned in 1972 and equipped with torpedoes, guns, two helicopters, passive air defence systems and Sea Sparrow air defence missiles; HMCS *Terra Nova*, an Improved Restigouche-class frigate commissioned in 1959 and equipped with guns, torpedoes, and passive air defence systems, but no air defence weapons; and HMCS *Protecteur*, an unarmed supply and maintenance ship. The combined compliment on the ships is approximately 800.

The ships will be "on location in the region by mid-September," said the Prime Minister. He also noted that the ships precise operating location and manner of employment will be decided in light of circumstances at that time.

At a press conference immediately following the Prime Minister's, the Vice-Chief of Defence Staff, Vice-Admiral Charles Thomas stated that in the days before actual sailing from Canada, *Athabaskan* and *Terra Nova* would be modified by adding "close-in weapons systems," new electronic warfare equipment, and upgraded chaff and decoy systems for improved defence against air attack.

### The London Summit

At the beginning of July NATO leaders met in London to consider their response to the political changes in Europe. In advance of the meeting, President Bush sent a

letter to NATO heads of state proposing a variety of changes in alliance force structure and doctrine. In particular, recalling his earlier decisions to cancel plans for a follow-on missile to the short-range Lance, and for new nuclear artillery shells, Bush suggested modifying the doctrine of flexible response to reflect a reduced reliance on nuclear weapons. He also proposed to eliminate the nuclear artillery shells currently deployed in Europe.

Initial reaction to the Bush letter was mixed at home, but warm in Europe. The Bush letter appeared to reflect the thinking of allied leaders, with the partial exception of the French, and respond to the needs of the Soviet Union. In Washington, doubts were expressed, however, about the meaning of the proposed change in nuclear doctrine. In sum, the Bush proposal appeared to favour preserving the option of first use of nuclear weapons, while reducing reliance on such weapons.

### The NATO Declaration

On 6 July, at the end of the London meeting, a lengthy declaration was issued. Among other things, it proposed a non-aggression statement by NATO and the Warsaw Pact affirming the intention "to refrain from the threat or the use of force against the territorial integrity or political independence of any state...." The declaration underlined the need "to prevent any nation from maintaining disproportionate power on the continent."

The declaration also dealt with NATO forces in Europe. It noted that, with the withdrawal of Soviet forces from Eastern Europe, NATO's integrated force structure would change to include the following: smaller active forces, which will be multinational, mobile and versatile, permitting maximum flexibility for political leaders in crisis situations; a re-

duction in the readiness of active units, fewer exercises and less training; reliance on mobilisation to build up large forces should they be needed.

Echoing the language of the Bush letter, the communique spoke of nuclear weapons as "truly weapons of last resort," but asserted the need to maintain "for the foreseeable future" a mix of nuclear and conventional forces. However, the declaration proposed to negotiate the elimination of nuclear artillery shells in Europe, and to move away from the military strategy of forward defence.

Soviet reaction to the London meeting was positive. Foreign Minister Shevardnadze expressed general satisfaction with the declaration, describing the changes in doctrine as "potentially important decisions."

### Gorbachev Meets Kohl

Meeting at Mineralnye Vody in the Soviet Union on 16 July, Gorbachev and Kohl reached agreement on the place of a united Germany in NATO. Under an agreement to be worked out between a unified Germany and the Soviet Union, the 350,000 troops in East Germany will withdraw over a period of three or four years. The Soviet Union agreed that a united Germany can be a member of NATO. Chancellor Kohl agreed to accept a ceiling of 370,000 troops in the armed forces of a unified Germany. He also stated that when Soviet forces leave what is now East Germany, German troops under NATO control would be stationed there, but no foreign troops would be permitted. The two leaders also agreed that a united Germany would renounce the manufacture and possession of chemical weapons, and sign the Nuclear Non-proliferation Treaty.

### Britain's Peace Dividend

In May, a defence paper intended for the private use of Prime Minister Thatcher and se-

nior Cabinet members, was leaked to the *Economist*. The study proposed to reduce the British Army from fifty-five battalions to thirty-two, and Royal Navy frigates from fifty-eight to thirty-two, promising savings of almost \$40 billion over ten years. In mid-June less sweeping but highly controversial cuts were announced by Defence Minister Tom King. He told a Commons committee that the Warsaw Pact has "to all intents and purposes ceased to exist." Announcing a cut of approximately \$1.2 billion in the defence budget (about three percent before inflation), King cancelled an order for thirty-three Tornado aircraft and confirmed that Britain is planning major reductions in its army and air force units assigned to NATO. The planned reductions in forces stationed in Germany appear to be greater than those under negotiation at the Conventional Forces talks in Vienna.

### Grounded Looking Glass

Since 3 February 1961 the US Air Force has maintained a fleet of airplanes which would guarantee command and control of US nuclear forces even after the destruction of ground facilities. Referred to as "Looking Glass," one of the planes has been in the air at all times, commanded by an Air Force General. On Tuesday 24 July, the twenty-four-hour airborne alert was ended when General John Chain, Commander of Strategic Air Command, landed at Offutt AFB. The move to "ground alert status" reflects both budgetary pressures and greater confidence that a Soviet nuclear alert could be detected in time to take precautionary measures. The Soviets have also cooperated. A US Senate Armed Services Report released in late July noted that the Soviets have ceased submarine patrols off the US coast, and flights by Bear bombers to Canada's northern border. □

- DAVID COX

## REPORT FROM THE HILL

### Visits to Ottawa

Ottawa played host to three eminent statesmen in quick succession in the late spring: first to UN Secretary-General Javier Pérez de Cuellar on 27 May; then on 29 to 30 May to Soviet President Mikhail Gorbachev (the first visit by a Soviet leader since 1971); and finally to South African black activist and Deputy President of the African National Congress Nelson Mandela, who addressed both Houses of Parliament on 18 June – a highly unusual event for a non-head of government.

### The Middle East

Prior to the first two visits, External Affairs Minister Joe Clark confirmed in the House on 22 and 24 May that Middle East questions would be addressed with Pérez de Cuellar and Gorbachev. On 22 May he indicated that the Canadian Ambassador to Israel had that day expressed to Israeli authorities shock and great concern at the increasing violence in the occupied territories.

On 14 June, following the formation of a new Israeli government, NDP External Affairs critic Bill Blaikie asked the Minister in the House whether the government would consider using its position on the UN Security Council to influence the development of a peacekeeping force that would finally be acceptable to Israel to operate in the occupied territories to protect Palestinians. Mr. Clark responded that Canada would be prepared to apply its influence toward that end, but underlined the Member's own suggestion that "any action by the United Nations would have to be something that was acceptable to Israel."

Following the pipe-bombing death in Israel of a Canadian

woman, Mr. Clark, on 28 July, strongly condemned "this vicious act of terrorism" which he stated served only to perpetuate the distressing cycle of violence which characterized the Middle East dispute. Only five days later, on 2 August, he was again obliged to address the question of violence in the region following Iraq's invasion of Kuwait. He termed Iraq's actions "totally unacceptable" and promised that Canada would work with other members of the UN Security Council to ensure an "effective international response." (See "Report from the Security Council" for more on the UN and Iraq.)

### NATO and European Policy

On 17 May in the Commons – following a meeting of NATO Defence Ministers in Kananaskis, Alberta the week before – NDP MP Bill Blaikie challenged Defence Minister William McKnight for not opposing modernization of all nuclear weapons. The Minister rejected the Member's allegation and insisted that the testing of US cruise missiles in Canada did not constitute the testing of nuclear missiles, but of "a guidance system."

Minister Clark addressed the broader questions of European policy in the House on 31 May and indicated the five broad areas of discussion that had taken place during the recent visit of Mr. Gorbachev. He described the institutional pillars of Canadian policy toward Europe as: a new, more political, direction for NATO (to which Canada's military contribution was "bound to decline"); an expanded role for the CSCE; and an intensified relationship with the European Community.

### Environmental Issues

There were frequent questions in the House during the spring weeks relating to questions of global warming. NDP Environment critic Jim Fulton was particularly persistent in Question Period, pressing the government

to adopt measures to reduce greenhouse gas emissions significantly. On 10 May, Herb Gray, the acting Opposition Leader, joined in the attack by referring to a leaked US State Department telex which implied that Canada had agreed to join forces with the Americans "to block further progress in the fight against global warming" in discussions to be held in Bergen, Norway later in the week.

This was strenuously denied by then Environment Minister Lucien Bouchard who stated in Bergen that Canada was committed to the stabilization of carbon dioxide emissions by the year 2000 at current levels. Liberal MP Charles Caccia tried unsuccessfully in the House on 23 May to have the Prime Minister confirm this statement, but it was later confirmed on 28 May by Acting Environment Minister Robert de Cotret who replaced Mr. Bouchard.

### Asian Policy Shifts

A Canadian ban on aid to Indochina was lifted in January. By mid-May, Ottawa had agreed to commit \$8 million over five years to humanitarian projects in Cambodia, matching money from Canadian non-governmental organizations. Then, at the end of May Mr. Clark declared that Canada would no longer support the US-sponsored resolution at the United Nations that has given Cambodia's UN seat to the rebel coalition that includes the Khmer Rouge rather than to the Hun Sen government that is backed by Vietnam. All of these moves came in advance of the widely-hailed announcement of 18 July that the US would open a dialogue with Vietnam, which could include a shift in their UN position toward Cambodia.

The Cambodian seat at the UN was a major topic at the ministerial conference of the Association of Southeast Asian Nations which opened on 27 July in Jakarta, Indonesia and which Mr. Clark attended following an official visit to Japan. On both stops he proposed a new North Pacific security organization

with Canada, the United States, the Soviet Union, China, Japan and the two Koreas as members to cope with regional instability in the wake of the Cold War.

### Parliamentary Short Notes

Eight House standing committees collaborated on 23 and 24 April in an unprecedented Parliamentary Forum on Global Climate Change under the leadership of Dr. Harry Brightwell, chair of the House Agriculture Committee.

Mr. Clark, in an appearance before the House External Affairs Committee on 24 May, noted the meeting of the Commonwealth Committee of Foreign Ministers on Southern Africa that he chaired in Abuja, Nigeria on 16 and 17 May. He said that the committee was universally optimistic about changes in South Africa, while recognizing that they were partial and preliminary and that sanctions "must remain until there is clear evidence of irreversible change."

On 13 June the House Standing Committee on the Environment tabled a report, Part I of its "Our Changing Atmosphere" series, called *Deadly Releases CFCs*.

The House of Commons External Affairs Committee tabled two reports in the House on 18 June, one (*Report on the Committee's Visit to the Soviet Union and the Germanies*) the work of the full committee, and the other (*Securing Our Global Future: Canada's Stake in the Unfinished Business of Third World Debt*) the report of a sub-committee specifically struck to consider international debt issues under the leadership of Walter McLean.

On the same day, the Subcommittee on International Human Rights of the House Standing Committee on Human Rights and Disabled Persons tabled its third report which reviewed Canada's policy regarding human rights vis-à-vis international financial institutions and international trade including military equipment exports. □

– GREGORY WIRICK

## REPORT FROM THE SECURITY COUNCIL

### Iraqi Invasion of Kuwait

On 2 August, the Council met and condemned the Iraqi invasion of Kuwait. The resolution demanded the immediate withdrawal of Iraqi forces from Kuwait and called on the two countries to begin immediate, intensive negotiations. Iraq told the Council that the "Free provisional government of Kuwait" had requested its assistance to help establish "security and order" in that country. The US accused Iraq of having "carefully planned" the invasion. "They invaded Kuwait and then staged a coup d'état in a blatant and deceitful effort to try and justify their actions," US ambassador Thomas Pickering told the Council.

Resolution 660, which was co-sponsored by Canada, was supported by fourteen of the fifteen Council members. Yemen did not vote because its delegate had not received instructions.

Four days later on 6 August, the Council adopted Resolution 661 mandating comprehensive economic and trade sanctions against Iraq. The resolution was supported by thirteen Council members with Yemen and Cuba abstaining, and in rarely-used tough language conveyed the Council's decision that all States were thereafter obliged to prevent:

the import into their territories ... of all commodities and products originating in Iraq or Kuwait.... [A]ny activities by their nationals or in their territories which would promote ... the export or trans-shipment of any commodities or products from Iraq or Kuwait.... The sale or supply by their nationals or from their territories or using their flag vessels of any commodities ... including weapons or any other military equipment, whether or not originating in their territories,

but not including supplies intended strictly for medical purposes, and, in humanitarian circumstances, foodstuffs, to any person or body in Iraq or Kuwait.... [and] [D]ecides that all states shall not make available to the Government of Iraq or to any commercial, industrial, or public utility undertaking in Iraq or Kuwait, any funds or any other financial or economic resources...

Like the earlier Resolution 660, 661 was co-sponsored by Canada.

### Western Sahara

On 27 June, the Security Council unanimously adopted a peace plan for Western Sahara and called on Morocco and the Polisario guerrillas to extend indefinitely a temporary cease-fire. Resolution 658 calls for the peace plan to be implemented over a thirty-five week period during which a UN supervised referendum would be held. Western Sahara's 75,000 indigenous inhabitants would be asked to choose between independence under the Polisario or remaining under Moroccan control. Secretary-General Javier Pérez de Cuellar is optimistic that a referendum can be held by early 1991.

### Middle East

On 31 May, the Council granted a six month extension to the United Nations Disengagement Observer Force (UNDOF). The force, located in the Golan Heights, includes 227 Canadian military observers. On 1 August, the United Nations Interim Force in Lebanon (UNIFIL) also saw its mandate extended for six months.

In other business, on 3 May, the Council met to continue its ongoing debate on the issue of settlement in the Occupied Territories by newly arriving Soviet Jews. On 25 May, the Council met for the first time in Geneva, Switzerland. The Council shifted location as the result of a compromise to enable PLO Chairman Yasser Arafat

to participate without running the risk of being denied a visa by the US should he attempt to speak in New York. The meeting was prompted by an upsurge of violence in the Gaza Strip and the West Bank following the killing of seven Palestinians by an Israeli said to be mentally disturbed. During a speech, Arafat called for an international force to protect the Arab population.

On 31 May, the US vetoed a resolution which would have sent a commission to the occupied territories to determine how best to ensure the safety of the Palestinians there. Canada and thirteen other members voted in favour of the resolution. After the meeting, a US official told reporters that Washington favoured a solution in which the Secretary-General would send a personal representative to the area. After meeting the Secretary-General, Jochanan Bein, Israel's ambassador, announced on 13 June that his country was ready to receive the UN representative who would "be able to go where he wants to in Israel."

### Cyprus and the Peacekeeping Deficit

On 19 July, the Council met and expressed its support for the Secretary-General's plan to help Greek and Turkish Cypriots reach a negotiated solution. Reflecting on the failure of negotiations to advance, the Secretary-General said "the time has come to stop mutual recriminations and to concentrate efforts on promoting reconciliation."

The Council action comes in the wake of a 15 June decision to approve, once again, a six-month extension to the mandate of the United Nations Peacekeeping Force in Cyprus (UNFICYP). During the Council meeting, Canada and seven other members issued a statement pointing to the financial problems facing the force, particularly the drop in voluntary contributions to UNFICYP.

Saying they were "gravely concerned," that the situation put an "unfair" burden on those members providing contingents to the force, the eight countries proposed that rather than relying on voluntary contributions, the force should be financed from assessed contributions. As of last year, the accumulated shortfall had reached almost US\$175 million.

The issue has taken on added urgency as Council members ponder future peacekeeping operations. Recent progress in negotiations between the five permanent members of the council and the parties involved in the Cambodian conflict have raised hopes of a major UN role there both in peacekeeping and overseeing elections. On 28 June, the Secretary-General briefed the Council on a request by Haiti's provisional president Ertha Pascal-Trouillot for UN help in organizing elections.

As the UN is called on to monitor elections, some members of the General Assembly are expressing wariness at this new role. Countries such as Cuba and Columbia have expressed concern that in future, the Council may use this new function as a form of intervention. They prefer that any action involving elections be handled through the General Assembly, where the permanent members wield less power.

On 4 May, the Council extended the mandate of the United Nations Observer Group in Central America (ONUCA) for six months. The resolution was adopted with the understanding that ONUCA's involvement in the ceasefire and demobilization of members of the Nicaraguan Contras cease no later than 10 June. On 8 June, the Council extended its deadline to 29 June 1990. On 27 June, a final demobilization ceremony was held in Nicaragua. □

- TREVOR ROWE

## NEWS FROM THE INSTITUTE

Southern Africa was the focus of a good deal of Institute attention during the past few months. Stopping in London on his way to Zimbabwe, **Bernard Wood** gave a seminar on Canadian policy in Southern Africa at the Institute for Commonwealth Studies. The presentation will be published in the Commonwealth journal, *Round table*. In Harare, he spoke to the Canada-Zimbabwe Society on the effects of changes in Eastern Europe on developing countries, warning against the danger of the Third World becoming the new arms market for weapons systems now being removed from Europe as a result of the thaw in East-West relations.

In Mozambique Mr. Wood participated in a conference at the Institute for International Relations on the prospects for peace in the region. While the destabilization campaign by South Africa has lessened considerably, the rural areas of Mozambique are ravaged by violence, brutality and banditry. The possible applicability of some parts of the CSCE process to Southern Africa was one of the themes he raised for discussion at the conference.

He spent several days in South Africa talking with politicians, officials, journalists, diplomats and academics about the exciting developments in that country. "De Klerk and Mandela are now married", he said, "with all that such a union implies. They are at the centre of the political spectrum – a fragile centre – and have had to forsake all others on their respective margins."

On his return to Canada, Mr. Wood gave a press briefing at the Institute, and participated in various activities at the time of the Mandela visit to Canada, including providing commentary for

coverage by Télé-Métropole and CBC's *The Journal*. He also spoke to a conference in Hull on Canadian policies towards Southern Africa in the 1990s, organized by the Canadian Council for International Cooperation.

**Eugene Nyati** from the Centre for African Studies in Johannesburg, led a discussion at the Institute in June on the actors and possible scenarios for negotiations in South Africa.

**Arkady Cherkasov**, an exchange visitor from the Institute for the USA and Canada in Moscow, spent several weeks in Canada as a guest of CIIPS. Dr. Cherkasov, a geographer, is very interested in the non-military aspects of Canadian and Soviet northern development. At the end of his research in Canada, he gave a seminar at the Institute on prospects for cooperation in the north between the two countries.

The NORAD agreement between Canada and the United States, originally signed in 1958, is due for discussion and renewal in 1991. The debate during the next year promises to be particularly interesting, considering the changes which have taken place in the world since 1986 when it was last renewed, and the shifts in perceptions of the nature of the threat to continental North America. In June, Major-General **David O'Brien**, Commander of the Canadian NORAD region and of the fighter air forces in Canada, gave a briefing and led a discussion at the Institute on his perceptions of the requirements for air defence.

Five members of the UN Association of China visited the Institute in late June to exchange views on Canadian and Chinese foreign policy.

**Katherine Laundry** and **Susan Connell** participated in meetings

of the Canadian Library Association in Ottawa in June. They introduced two new publications: *Peace and Security Thesaurus*, and *Canada and International Peace and Security: a Bibliography, 1985–1989*. They also convened a workshop on peace and security reference materials.

In June **Ron Fisher** gave an address on "Social-Psychological Approaches to International Conflict Resolution" to the annual convention of the Canadian Psychological Association. Later in the month he gave a presentation to the annual conference of the International Association of Conflict Management on "Training Third Party Consultants in International Conflict Resolution." Dr. Fisher also gave workshop at the Institute on his on-going work in the same fields.

**Bernard Wood** spoke at a conference at Montebello sponsored by York University and the Institute on security in South-East Asia. He addressed a workshop in Mont Tremblant convened by the Centre of Research and Development in the Department of National Defence: his topic was "Current and Long-Range World Relations." And he gave the key-note speech at the annual meeting of The Peace Centre in St. John's Newfoundland on alternative security policies for Canada and their implications for disarmament, development and the environment.

There were a number of staff changes during the summer: **Gordon Sharpe**, a DND Fellow for the past year, was promoted to full Colonel in June and returned to National Defence Headquarters to become Director, Doctrine Coordination and Development. **Ron Fisher**, who spent the first year of a sabbatical from the University of Saskatchewan at the Institute, will spend the next year at Carleton University. **Fen Hampson**, a half-time research associate at the

### Major International Conference on Soviet Affairs in Ottawa

A major international conference on the Soviet Union will take place in Ottawa in late November 1990, involving some of the world's leading experts on Soviet affairs and East-West relations.

Titled *The Changing Soviet Union: Implications for Canada and the World*, the conference will provide over the course of two-and-a-half days from 26 to 28 November, in-depth analysis and expert opinion on a wide range of topics, including "The Soviet Economy: Prospects for Perestroika"; "The Climate for Trade and Investment"; "Rethinking the East-West Balance"; and "Soviet Power in a Changing World."

Among the featured speakers from abroad will be **Vitaliy Korotich**, the editor of *Ogonyok*, a leading reformist Soviet weekly; **Vladimir Popov**, the author of *The Turning Point*, a radical exposé of the immense economic problems facing the Soviets; **Anders Aslund**, a Swedish economist and author of what the *New York Times* calls the authoritative book on Gorbachev's struggle for economic reform; international journalists **Martin Walker** of the *Manchester Guardian* and **Christoph Bertram** of *Die Zeit*; **Vladislav Malkevich**, President of the USSR Chamber of Commerce and Industry; **Michael Sturmer**, a prominent German commentator on international affairs; **Goran Enerfelt**, a leading Swedish businessman who heads the world's largest trading company with the Soviet Union; and **Georgi Arbatov**, the Director of the Institute for USA and Canada in the Soviet Academy of Sciences – along with many others.

The conference fee of \$385.00 includes three lunches and two dinners. Dinner speakers – as yet unconfirmed – are expected to be **Aleksandr Yakovlev**, Soviet Politburo member and former Ambassador to Canada, and **Zbigniew Brzezinski**, former National Security Adviser to the President of the United States.

The conference is co-sponsored by the PARLIAMENTARY CENTRE FOR FOREIGN AFFAIRS AND FOREIGN TRADE, THE CANADIAN INSTITUTE FOR INTERNATIONAL PEACE AND SECURITY, and the CANADA-USSR BUSINESS COUNCIL. For registration, please contact the Parliamentary Centre, 275 Slater St., Suite 500, Ottawa K1P 5H9, tel (613) 237-0143 or fax (613) 235-8237.

Institute for the past three years, has taken a full-time position at the Norman Paterson School at Carleton. **Marie-France Desjardins** will begin a doctoral programme at the University of London, England, next year. **Johanne Di Donato** has left the Institute, as have **Dianne DeMille**, **Lynne Cardinal**, **Samantha Hayward**, **Annemarie Bélanger** and **Chantale Beaudoin**. **Marc Pierre-Louis** was a summer student in the Public Programmes section of the Institute. **Walter Bernyck** and **Réjean Hallé** have been working in the Research section.

**John Toogood** participated in an international meeting of peace institutes in Des Moines, Iowa in June. In August he attended a conference sponsored by St. Lawrence University and Queen's in Canton, New York, entitled "The Road from Ogdensburg: Fifty Years of Canada-US Defence Cooperation." **Roger Hill** spoke on the work of the Institute to Inter-action 1990, a national conference on dispute resolution in July. In August he gave a presentation on the role of the Warsaw Pact, to the Bedford Institute in Nova Scotia.

## Barton Awards Programme

The Institute invites applications for its Awards Programme, designated the Barton Awards in honour of the first Chairman, former UN Ambassador William Barton. The programme is open to both academics and non-academics who wish to enter or continue studies in the field of international peace and security. The programme is intended to encourage expertise and scholarship in that area by supporting Canadians and permanent residents who wish to pursue their studies at institutions abroad or in Canada.

The Institute expects to make eleven awards: two fellowships valued at up to \$30,000 and nine scholarships at up to \$14,000 each. Applications will be assessed by an independent selection committee and decisions will be announced in May 1991.

Applicants must be Canadian citizens or permanent residents whose experience or academic qualification enable them to pursue advanced study.

The deadline for applications for the 1991-1992 academic year is 1 February 1991.

For further information and application forms please write to:

The Barton Awards Programme  
Canadian Institute for International Peace and Security  
360 Albert, Suite 900  
Ottawa, Ontario K1R 7X7

## Peace and Security Competitions Fund Procedures and Deadlines

The Fund allocates contributions semi-annually. Contact the Fund for a copy of updated criteria and application forms. Please note the following deadlines:

30 June for an October decision

30 November for a March decision

Peace and Security Competitions Fund  
360 Albert, Suite 900  
Ottawa, Ontario K1R 7X7

**Ron Purver** presented a paper on "A Canadian Perspective on Maritime Security in the Arctic" to a conference at Glendon College in Toronto. He also spoke at a conference on Naval Arms Limitations and Maritime Security sponsored by the Centre for Foreign Policy Studies at Dalhousie University; his topic was "Ballistic Missile Submarine Sanctuaries and Stand-off Zones."

**Gabrielle Mathieu** participated in a conference at Carleton University's School of Journalism on the implications of *glasnost* for journalism in the Soviet Union. Participants included Canadian and Soviet journalists. **Michael Bryans** gave a presentation on issues of peace and security to a group of Soviet and Canadian students who were meeting on the shores of Georgian Bay under the auspices of the Canadian Society of Friends. **Nancy Gordon** participated in the annual meeting of the Academic Council of the UN System in New York in June where, among other speakers, Secretary-General **Pérez de Cuellar** addressed the delegates. □

## US perspective unacceptable in Canadian magazine

I am appalled that a magazine whose stated mandate is a "Canadian perspective" would print the article "Lying Low in Central America,"

legitimizing Washington's point of view. The US government already has the biggest propaganda machine in the world and doesn't need or deserve our cooperation. Although Peter Hakim acknowledges some token and obvious criticisms of US policy, he also makes some untenable basic assumptions.

Increasingly, Canadians concerned with peace and security have come to the realization that these goals cannot be separated from the goal of justice. Canada gives lip service to desirability of a stronger United Nations, the rule of international law, and non-violent conflict resolution. Why would you print, unchallenged, an article that assumes a US right to invade and otherwise interfere in other sovereign countries, thereby breaking international law?

The arrogance of the statement: "Troops rapidly subdued the Panamanian defense forces without an unacceptable loss of lives" is astounding. Whose lives? Acceptable to whom? Why should Canadians buy the US idea that American lives are the only ones that matter? An American life is not more important to me than a Panamanian life, or a Nicaraguan life, or a Salvadoran life. Another US propaganda theme that the article furthers is that misnaming, as "communist," popular nationalist movements struggling for freedom, democracy and human rights somehow gives the US a sacred right to annihilate them.

Hakim's article misrepresents (downward) the degree to which the US owns and controls the Contra forces in Nicaragua, and exaggerates the innocence of George Bush concerning "Reagan" policies. He was, after all, the vice president and former head of the CIA, and wasn't born, new and clean, in November 1988.

Past US policy in El Salvador is totally misrepresented. For that \$4 billion in aid, the Salvadoran government was supposed to defeat the people's revolution (i.e. establish peace without justice). The goals of democracy and reform were only trotted out when necessary to make the US people keep paying. Negotiation is being considered only because demolition didn't work. The article also implies a (false) separation between the Salvadoran government and the military wing responsible for the murders of the Jesuit priests, not to mention the four American women church workers, Archbishop Romero, and countless other Salvadoran leaders, teachers, organizers and church workers. No American responsibility for conditions in Guatemala and Honduras is acknowledged, although the US helped overthrow the last democratic government in Guatemala in 1954, and "USS Honduras" has become an international joke.

The closing paragraph is sickeningly pious, including "the rest of the international community" as co-spenders on armed conflict. The US government was assessed \$12.2 billion in reparations to Nicaragua by the World Court, which it conveniently ignores. Other countries, including Canada, have been trying for years to help Nicaragua rebuild, only to have their efforts destroyed by the US via Contra attacks. Switzerland, Sweden and Canada, among others, gave money and material aid for the last Nicaraguan electoral process, while the US spent millions to get "their" candidate elected.

After the publication of this article in *Peace & Security*, I have doubts about many others on subjects where I don't have as much background knowledge. I really have to question whether *Peace & Security* is fulfilling its obligations to Canadians, or whether it is serving other ends.

Lorna Diggle, Rimbey, Alberta □

## REVIEWS

### Continental Divide:

#### The Values and Institutions of the United States and Canada Seymour Martin Lipset

New York: Routledge, 1990, 337 pp.,  
\$35.00, cloth

Rumours of Canada's imminent demise are flourishing south of the border following the failure of Newfoundland and Manitoba to vote for ratification of the Meech Lake accords. Many analysts are jumping to the pessimistic conclusion that Canada's days as a unified nation-state are numbered; that first Quebec and later other provinces will go their own way or join the giant to the south.

In this context the differences between the Quebecois and other Canadians, or those between Anglophone and Francophone Canadians take centre stage in current and historical studies of Canada. The similarities between Americans and Anglophone Canadians are usually taken for granted. For Canadians in need of an elixir that reaffirms their identity as a people distinct from Americans, Seymour Martin Lipset provides it in *Continental Divide*.

Lipset theorizes that the multitude of differences between Canada and the United States, two "complex, continent-spanning federal unions marked by great social heterogeneity and economic diversity," stem from the contrasting circumstances of their births. Variations in governmental structure, institutions, policies, values and public opinion on a host of topics are traced to their origins as nations.

The United States, the product of a revolt against Mother Britain remains suspicious of government, rejects aristocratic notions, and is fervently devoted to the rights of the individual. Canada slowly evolved into a nation, long

clinging to the same parent the US rejected. Canadians, as a consequence, are more respectful of authority – both governmental and that flowing from class position – and persistently protective of groups' rights.

Lipset acknowledges the role of variation in geography, climate, demography, and economics in forging the present condition of the two states. Yet he supports his theory with an impressively broad array of evidence, ranging from economic data to literary criticism to public opinion polls. He argues that differences in welfare policy, education, religion, societal violence, national heroes, regional identification, and many others all stem to one degree or another from America's revolutionary genesis and Canada's anti-revolutionary foundation. Some of the differences are very small, others, like the sharp contrast in accessibility of health care, indicate seriously different societal choices.

While Lipset overuses the explanatory power of his theory, even if he is right only part of the time, his work deserves serious thought. Lipset weaves two tapestries, profoundly different in their intricate design, that appear at first glance to be remarkably similar. The book's main contribution may be more his insightful description of the differences that permeate each nation's identity, rather than his theory of their origins. – *Marie Isabelle Chevrier*

*Ms. Chevrier is a doctoral candidate at the John F. Kennedy School of Government, Harvard University. An American, she counts among her grandparents the first Francophone mayor of Casselman, Ontario; a Scottish Tory; and German immigrants to Nebraska.*

#### Damn the Torpedoes: My Fight to Unify Canada's Armed Forces Paul Hellyer

Toronto: McClelland & Stewart, 1990,  
306 pp., \$29.95, cloth

The problem facing any memoir writer is how to deal with the extraordinary mass of events that

make up a hectic life. Good memoirs read like novels, not like an exhaustive mining of private journals and cabinet minutes. If no way is found to accomplish this, the reader is left with the morass of details and confusion that make up day-to-day existence. For the reader, a work that does not transmute life into art becomes exhausting. It is difficult in Mr. Hellyer's book to gauge how he feels about any subject; they all seem to be treated equally, only some go on much longer.

This is, of course, literary criticism. But it is the first means to deal with the problems of this book. I know not everyone can write memoirs like Charles Ritchie (it would be wonderful if they could) but prolixity and sloppiness seem to be the hallmarks of this book. While discussing the introduction of Bill C-243, the unification bill, Paul Hellyer recounts the story of how Elgin Armstrong, deputy minister of National Defence, came to see him to discuss the minister's draft speech:

He was extremely nervous as he sat down opposite me and finally, ashen-faced, told me clearly and unequivocally that the second, and central, section was unacceptably bad.... "In that case," I said, "we will have to do it over again."

Mr. Hellyer needs a firm editorial hand.

In addition, Prime Minister Mike Pearson's initials never were "LPB," and as for calling Judy LaMarsh "the one and only" more than once ... And since I am carping about minor details: Ron Sutherland and R.J. Sutherland are two different people, but the indexer missed that, as well as getting numerous page references wrong.

"My fight to unify Canada's armed forces" – the subtitle for this book – should really read: "My fight, and Bill Lee's." The fight itself is between two "ideas fixes" – on the one side Paul Hellyer and Bill Lee and on the

other, Admirals Brock, Landymore and Dyer, Air Marshall Frank Miller and others. Bill Lee certainly played an enormous role in the whole unification debacle, though he seems to have been less Hellyer's Svengali than an extremely ambitious operator who was willing to play the Minister card as far as possible. Lee clearly believed that Hellyer would become Prime Minister and that he could help push his career.

Bill Lee is still remembered by many officers with particular loathing, and is reputed to have been somewhat of a trouble-maker even before he latched onto Hellyer (apparently he was involved in bringing in General Lauris Norstad to Canada during the time of the Diefenbaker government – a visit that contributed to the woes of a government already struggling with its own defence policy). During his stint as Hellyer's Executive Assistant, Lee seems to have become a sort of alter ego to the "MND," as he calls him.

The whole fight to unify the Armed Forces has passed into history: the Canadian Armed Forces were given one name; they were given unattractive "garbage bag" green uniforms (now replaced with distinctive uniforms once more) and the duplication and waste of three entirely separate services has dwindled to merely the duplication and waste of three inherently different services with one Chief of Defence Staff. Although the United States has never attempted unification (and probably never will), Paul Hellyer's term as Minister of National Defence saw the Canadian Armed Forces, above all the Navy, lose their traditional British character and style to become much more American.

What Hellyer never really seemed to understand during his battles with the Admirals, and with groups like "TRIO" (the "Tri-Service Identity Organization") was that the group loyalty and bonding that a clearly identifiable service and uniform pro-

mote are fundamental parts of military behaviour. Of course, it is not efficient or cost-effective, but what military forces are supposed to do is not part of our everyday, cost-effective world. No doubt inter-service rivalry has lost many lives, as well as costing millions of dollars, but I find it hard to believe that accountants would make good generals.

Hellyer's argument for unification is that he was streamlining the Army, Navy and Air Force and turning them into more efficient, modern forces. While he probably was right that the Air Force was extremely unlikely ever to have to play a nuclear role in Europe, he may have missed the point when he wanted to beef-up the F-104's capabilities in conventional warfare. Hellyer thought that "it didn't make sense to have planes sitting helplessly like so many stationary ducks." Actually, that was the role of the Canadian and the American Forces in Europe; they were there to make sure that Washington's commitment to European defence would not vanish during a crisis.

Nevertheless, Mr. Hellyer does begin to understand that the Canadian Armed Forces might have a useful contribution to make. When he discusses the forced withdrawal of the United Nations Emergency Force from Suez he admits that this was "a 'setback' to the cause of world peacekeeping ... the ideals of the United Nations Charter have been frustrated by the unwillingness of member states to accept restraints on the exercise of national sovereignty implicit in such a system."

Mr. Hellyer strikes one as a tremendously hard worker: he laboured at unification until he wore everybody down (how many tempests in a teapot can anyone bear?). His book has the same doggedness about it – there is a tremendous amount of information, but a lack of clarity about purpose, and effect. – *Tina Viljoen*

*Ms. Viljoen is co-author with Gwynne Dyer of The Defence of Canada: In the Arms of the Empire.*

## Unauthorized Action: Mountbatten and the Dieppe Raid Brian Loring Villa

*Toronto: Oxford University Press, 1989,  
314 pp., \$14.95, paper*

The minor resort and port town of Dieppe lies on the French coast facing England. There are literally hundreds of much nicer places in France worth remembering, yet in Canada the name resonates through the collective memory. There are dozens of "Dieppe" avenues across the country in towns and suburbs – incongruously stuck among the "maplewood" and "oak" streets.

The August 1942 raid on Dieppe has always been a puzzle. Of the five thousand soldiers – most of them Canadians – who actually landed on the beach that morning, 2,700 were killed or captured by lunch time. In proportion, this was the costliest Allied expedition of the entire war, and it had, according to the author of this new book – and contrary to the official British record of the event – no discernable military purpose or hope of success.

Dieppe has always been a tribulation not because it was a failure, but because it was not a beautiful failure, nor even a good gamble. It was a botched job from its conception and it should never have happened. The bravery of the Canadian soldiers was wasted. Military historian John Keegan, wrote of it: "Dieppe, in retrospect, looks so recklessly hairbrained an enterprise that it is difficult to reconstruct the official state of mind which gave it birth and drove it forward." In *Unauthorized Action*, Brian Loring Villa attempts that reconstruction, not as a bit of dark conspiracy, but with a view to understanding how the decision to launch the doomed operation got made, why, by whom and "explain why the evidence surrounding the background to the Dieppe raid has become so hopelessly muddled."

Villa's thesis is that Louis Mountbatten, then head of Britain's Combined Operations, and his assistant John Hughes-Hallett, were determined to launch the Dieppe operation against all military logic and in the face of considerable expert opposition

within the senior levels of the British and Canadian military. The operation went ahead anyway, with predictable – and at the time, predicted – results, because of a "corrupt" decision-making apparatus within the British government. The responsible people, from Churchill on down through the British High Command and senior civil service, could have stopped the raid and should have.

Borrowing on the theories in the American political scientist Graham Allison's seminal 1971 study of government decision making, the author constructs a classic case history of "why governments do what they should not do." It is a highly readable and well-documented account from which the British officers most directly implicated in the affair, Mountbatten and Hughes-Hallett, emerge as egregiously flawed individuals. Mountbatten especially, comes off very badly.

My own first recollection of a real war story is of a family friend visiting the house when I was six or seven – some twenty years after he was delivered onto the beach in front of Dieppe port and almost immediately captured by the German defenders. He spent the rest of the war shuttling from one prison camp in Germany to another. What still sticks in my memory of him is his fierce anger and bitterness. His voice was that of a man betrayed – outraged that he could be used by people he trusted in such a foolish way for nothing at all, at least nothing he could discern. If he were alive to read this book, I wonder whether Villa's attempt to answer the question, "why?", would give him some peace of mind.

– *Michael Bryans*

## BRIEFLY NOTED

### The Sea Is At Our Gates: The History of the Canadian Navy Tony German

*Toronto: McClelland & Stewart, 1990,  
360 pp., \$39.95 cloth*

*The Sea is at Our Gates* recounts the story of Canada's navy

from its colonial roots through the two world wars to the close of the Cold War in 1990. The story presented – the author is a retired Canadian naval officer – is one of "courage and sacrifice at sea ... [and] a proud force scuttled time after time by its political masters."

### The Domestic Battleground: Canada and the Arab-Israeli Conflict

David Taras and  
David H. Goldenberg, editors

*Kingston, Montreal: McGill-Queen's  
University Press, 1989, 250 pp., \$29.95  
cloth*

This book examines the domestic politics of the Arab-Israeli conflict and challenges the assumption that the Canadian state is relatively free from domestic pressures when it comes to making foreign policy. The first section describes some of the domestic actors and the policy-making roles they have taken "in the contest over Canada's Middle-East policy." The second looks at the decision making process in Ottawa, and the last section is an overall assessment of Canada's role in the region and initiatives that might be taken in the future. Contributors to this volume include, David Bercuson, University of Calgary; David H. Goldberg, director of Canadian Professors for Peace in the Middle East; John Sigler, Carleton University; and David Taras, University of Calgary.

### Avoiding the Brink: Theory and Practice in Crisis Management

Andrew Goldberg et al, editors

*London: Brassey's / Center for Strategic  
and International Studies, 1990, 138 pp.,  
US \$31.95, cloth*

A fairly specialized and scholarly survey of the field of international conflict crisis management, this volume contains chapters by *inter alia*: Joseph Nye on nuclear crisis management; Robert Jervis on psychology and crisis stability; Coit D. Blacker on Soviet approaches to crisis management; and Paul Bracken, Andrew Goldberg and Debra van Opstal on various elements of crisis simulation. □

Reviews of French language publications can be found in the *Paix et Sécurité* "Livres" section.

## LETTER FROM HEBRON BY JEAN-FRANÇOIS LÉPINE

**When the interview was over, Nader Tamimi just sat there behind the desk in the little office where he receives**

**customers who come to his pottery in Hebron.**

Then, after an almost embarrassingly long silence, he pointed to the article in the Jerusalem Arab daily, *Al Fajr*, open on his desk: "You see, even in South Africa things have changed. Why is it that we, after twenty-three years, are almost the only ones in the world who are still living under the domination of a foreign army?"

That was on 8 June, and the morning newspapers reported that the day before the South African government had announced the lifting of the state of emergency allowing the white minority to impose a curfew in black townships, make arrests without warrants, and hold people without trial. In Hebron this has been the situation since 1968, only a few months after Israeli troops invaded and occupied part of Jordan. Hebron has known four different occupiers in the past hundred years. This thousand-year old city, built around the tomb of Abraham, is populated by Palestinians, and has been occupied in turn by the Ottoman empire, the British mandate, and the Hashemite kingdom, before the arrival of the Israelis.

The day we met Nader Tamimi, the people of Hebron were opening their doors for the first time after eight days of strict curfew, during which no one except doctors and medics were allowed to go out. The curfew had been imposed after young Palestinians attacked Israeli occupying troops with stones. Now, the whole town was at the market, hurrying to stock up with food.

*This article is the first in a series of pieces, written from varied perspectives, that Peace & Security will present on the many elements that comprise the Middle East conflict – one of those confrontations that so far has seen little of the improvement evident in East-West relations and some other regional situations. It is appropriate to begin the series with Jean-François Lépine; he has for three years been a principal source of information for Canadians about this part of the world.*

Downtown, the Israeli army had put the troops on alert, with armoured personnel carriers at all the strategic crossings, soldiers armed to the teeth on the roofs and in the streets, and jeeps on constant patrol. But that day, nothing happened – maybe because the leaders of the *intifada* had not given the order to fight, but more probably because after eight days of house arrest, the citizens of Hebron had more important things to do than wage their daily little war.

**... about 100,000 Palestinians have been detained at least once.... That works out to one arrest per family, quite enough to make a lasting impression on a people.**

The Israeli authorities refuse to divulge just how many people – soldiers, special police, secret agents, bureaucrats, prison guards and interrogators – it takes to administer the occupied territories. The army runs municipal government, makes rules and hands out permits. The army closes schools, hospitals and businesses on a whim; it regulates public morality, and automobile traffic.

Israeli authorities maintain that present conditions are a direct result of the "aggressions" that have taken place since the beginning of the *intifada*. But Abu Nader, sixty-four year old head of the Tamimi family, and teacher turned businessman, sees things quite differently. Since 1985 he has been unable to leave Hebron to go to Amman, in Jordan, where most of his family lives. Today the two towns are separated by a world of political division and aggression between Jews and Arabs.

Abu Nader still has his Jordanian passport, even though King

Hussein of Jordan, weary of the war, relinquished all claim to the Israeli-occupied territories in 1988. It's the Israeli forces that have been preventing Abu Nader from going to visit his family since 1985, and all for reasons which even Israeli lawyers call fraudulent. For several years the army has been demanding that Abu Nader pay certain taxes that had never been levied before, mostly because the earlier Israeli administration simply wasn't sophisticated enough to do so.

Most of the family heads in the Israeli-occupied territories have had to face this kind of taxation over the past few years. The military administration assesses your

property and your income and then estimates, quite arbitrarily, what taxes you should have been paying all this time – when nobody was bothering to collect them. In some cases the sums are enormous.

Because Abu Nader resisted this arbitrary measure, he was forbidden to go the Amman. Around the time of our visit he had just won his case before an Israeli court which had all but wiped out his "debt" to the taxman. But the military authorities still refuse to allow him freedom of movement because some of his brothers haven't settled their own "debts."

Each time a citizen of the occupied territories wants to take advantage of normal human rights, like travelling, buying some land, building a house or even registering the birth of a new baby, he or she must obtain approval from the military administration which governs everything. The authorities have been using this "blackmail by permit" to put pressure on the leaders in towns and villages to stop the violence, and get information

about the leaders of the *intifada* so that arrests can be made. In fact, practices such as guilt by association, intimidation, limiting the freedom of movement, and extortion are all forbidden under international human rights conventions.

But in Hebron, as elsewhere in the occupied territories, this is just routine stupidity compared with the usual violence of this very unusual war. Eight hundred people have been killed by the Israeli army since the *intifada* began in December 1987, and two hundred more were killed in internal political struggles. Around fifty Israelis, civilians and military, were killed during the same period. Thousands, especially young people, have suffered gun-shot wounds – many are handicapped for life. Then there are the daily arrests: according to Israeli sources, about 100,000 Palestinians have been detained at least once during the *intifada*. That works out to one arrest per family, quite enough to make a lasting impression on a people.

In June, a few days after our visit with the Tamimis, the leaders of the European Community, meeting in Dublin, condemned the systematic violation of human rights in territories illegally occupied by the Israeli military administration. The Dublin Conference appealed to the Israeli authorities to accept the presence of permanent UN observers to protect the population against arbitrary measures by the army.

There isn't the slightest reason to think that the appeal from Dublin was heard. Yitzhak Shamir, leader of the Likud party, had just come to power at the head of a coalition of all the right-wing, and extreme right-wing parties in the country. After almost three years of uprising, the prospects for a peaceful settlement in the territories had never looked as bleak. □

## LETTRE DE HÉBRON

PAR JEAN-FRANÇOIS LÉPINE

**L'entrevue terminée, Nader Tamimi est demeuré assis quelque temps derrière le petit bureau où il accueille les clients, au rez-de-chaussée de son atelier de Hébron.**

Puis, après un silence presque embar-

assant, il pointe du doigt un article du journal *Al Fajr*, un quotidien arabe de Jérusalem, ouvert sur la page de devant lui : « Tu vois, dit-il, même pour l'Afrique du Sud, la page est tournée; alors pourquoi nous, après vingt-trois ans, sommes-nous pratiquement les seuls au monde à vivre encore sous la domination d'une armée étrangère ? »

« C'était le 8 juin dernier, les journaux, le gouvernement sud-africain avait annoncé la levée de l'état d'urgence qui avait permis à la minorité blanche, depuis 1986, d'imposer des couvre-feux dans les banlieues noires, d'arrêter sans mandat et de détenir indéfiniment sans procès. À Hébron, c'est le régime gèrès : ville millénaire bâtie autour d'Abraham et peuplée de Palestiniens de souche. Hébron a vécu tout à tour sous le joug ottoman, sous la dynastie bedouine des Husseins avant de passer sous la férule israélienne.

Le jour où nous avons rencontré Nader Tamimi, la ville de Hébron ouvrait ses portes après huit jours de couvre-feu strict où personnes, sauf les médecins et les ambulanciers, n'avaient eu le droit de sortir. Le couvre-feu avait été imposé après que des jeunes Palestiniens eurent affronté les troupes d'occupation israéliennes avec des pierres.

Le présent article est le premier d'une série de documents que l'Etat et l'armée israélienne ont publié pour illustrer les nombreux aspects propres au conflit du Moyen-Orient. Le dernier n'a pas profité de l'anthropologie récente du climat dans les relations Est-Ouest et dans d'autres régions du monde. Il semble pertinent de commencer avec un texte de Jean-François Lépine, car il est depuis trois ans une source principale d'information des Canadiens et Canadiennes sur cette partie du monde.

Dans les rues du centre-ville, l'armée israélienne avait déployé des troupes en alerte : blindés lance-pierres aux croisements stratégiques, soldats armés jusqu'aux dents partout sur les toits et dans les rues. Mais, jeps en patrouille constante. Hébron avait des besoins plus pressants que celui de poursuivre la petite guerre quotidienne. Les autorités israéliennes refusent de divulguer le nombre de soldats — policiers spéciaux, agents secrets,

fonctionnaires, gardiens de camps de détention ou interrogateurs — affectés à la gestion permanente des territoires occupés. L'armée dirige l'administration municipale, adopte ses règlements et décide unilatéralement de l'attribution des permis municipaux. L'armée ferme écoles, hôpitaux et commerces au gré de ses humeurs, régit les mœurs et la circulation automobile. Les autorités israéliennes prétendent que les conditions présentes résultent des «agressions» subies depuis le début de l'*infada*. Mais Abu Nader, chef de la famille Tamimi, notable de 68 ans et ancien enseignant devenu commerçant, ne voit pas les choses de la même façon. Depuis 1985, Abu Nader n'a pu quitter Hébron pour se rendre à Jourdain, où la majorité de sa famille habite. Aujourd'hui, les deux villes sont séparées par un monde de division politique et d'agressivité entre Juifs et Arabes.

Abu Nader détient encore un pas-seport jordanien, même si, en 1988, de guerre lasse, le roi Hussein de Jordanie a renoncé aux territoires occupés par Israël. Mais ce sont les militaires israéliens qui empêchent Abu Nader de visiter sa famille à Amman, et ce, depuis 1985. Le chef de famille de Hébron est victime de pratiques que même des avocats israéliens qualifient de frauduleuses. L'armée, depuis quelques années, exige d'Abu Nader qu'il paye des impôts que personne n'avait perçus à l'époque (parce que l'administration israélienne n'était pas assez face à cette méthode de taxation. L'administration militaire évaluait vos biens et vos revenus, puis elle estimait, souvent arbitrairement, que vous auriez dû payer, durant les années où personne ne percevait ces

impôts, des sommes souvent gigantesques. Parce qu'Abu Nader a refusé cet arbitraire, on lui a interdit de se rendre dans sa famille à Amman. Au moment de notre passage, il venait d'obtenir gain de cause devant une cour israélienne qui avait réduit presque à zéro sa «dette fiscale». Mais les autorités militaires lui refusaient toujours le droit de se déplacer librement, parce que certains de ses frères n'avaient pas réglé leur propre dette. Chaque fois qu'un citoyen des territoires occupés par Israël veut profiter des droits de tout être humain normal — droit de voyager, d'acheter une propriété, de construire une maison, ou même d'entretenir une nouvelle naissance — il doit obtenir le sceau d'approbation des sept laïcs qui régissent ses libertés, dont la police et des taxes. Avec le «changement» des permis de toutes sortes,

## ... environ 100 000 Palestiniens, selon les données fournies par Israël, auraient été détenus au moins une fois durant l'*infada*. Une personne arrêtée toute une population.

En juin dernier, quelques jours après notre visite chez les Tamimi, les chefs d'Etat et de gouvernement de la Communauté européenne, réunis à Dublin, ont condamné l'atteinte systématique aux droits fondamentaux dont l'administration militaire israélienne se rend coupable dans les territoires qu'elle occupe illégalement. La Conférence de Dublin enjoignait les autorités israéliennes d'accepter que des observateurs permanents de l'ONU soient affectés à la protection des populations locales contre l'arbitraire de l'armée. Mais rien ne permet de penser que l'appel de Dubin a été entendu, au même moment, Itzaak Shamir, chef du Likoud, accablait au pouvoir, cette fois à la tête d'une coalition de tous les partis de droite et d'extrême droite du pays. Après bientôt trois ans de révolte palestinienne, jamais les perspectives d'un règlement pacifique dans les territoires occupés n'avaient été aussi sombres. □

Les mères-patries du III<sup>e</sup> Reich.  
Les femmes et le nazisme  
Claudia Koonz  
Éditions Gallimard, Paris, 1989.  
556 pages, 45 \$

Plusieurs livres ont été écrits sur le nazisme. On a même souvent l'impression que tout a été dit sur le sujet et qu'un nouvel ouvrage ne pourrait que se reproduire ce qui a déjà maintes fois été analysé. Ce n'est pas le cas avec le livre de Chandra

Koonz qui nous plonge dans une dimension du nazisme jusqu'ici jamais explorée, ou si peu, qu'on pourrait croire que l'on a jamais rien écrit sur le sujet. *Les mères-patries du IIIe Reich* aborde un sujet presque

L'autre, dans une recherche féministe, nous démontre d'une façon magistrale l'apport des femmes au mouvement, de la création du Parti

jusqu'à la guerre. À travers le cheminement de la société allemande, un assiste à la montée du nazisme, par le biais des associations féminines. Ces associations, qui regroupaient des milliers de femmes sous la République de Weimar

un, petit à petit, laisse leur pouvoir à la Ligue nationale-socialiste des femmes, dirigée par Gertrud Scholtz-Klink.

responsables des camps de concentration, des politiques d'eugénisme, etc. ? Pourquoi ont-elles accepté que l'Elat nazi intervienne dans leur vie privée au point de leur indiquer quand se marier, quand avoir des

enfants et combien, et même comment faire la cuisine et s'occuper de la maison ?

Le livre débute par une entrevue avec Gertrud Scholtz-Klink. Cette femme, comme l'auteur le souligne, n'a en aucune manière renié son passé et l'idéologie nazie. « Je

n'avais pas été convoquée à recueillir une confession et cette femme n'était pas une ex-nazie. Elle était aussi nazie qu'elle l'avait été en 1933 ou en 1945... Ce qui l'intéressait, ce n'était pas d'éviter qu'un autre régime aussi meurtrier revienne.

un jour, mais de faire l'apologie de celui qu'elle avait soutenu. En fait, c'est que Claudia Koonz démontre, c'est que le Parti nazi et ses dirigeants considéraient les femmes comme peu intelligentes et n'étant que le complément du

«nouvel homme». Hitler aurait même déclaré devant un collaborateur : «Un homme intelligent doit choisir une femme primitive et stupide. Imaginez qu'un par-dessus le marché, je sois obligé de supporter qu'une femme se mette de mon

« Quand je me repose, je travail ! »

La soumission totale au mari, mais surtout à l'Etat allemand, était exigée de la femme allemande. Celle-ci avait pour principale fon-

tion de «produire» des enfants et de faire en sorte que sa famille (le centre de sa vie) vive en communion constante avec les préceptes du nazisme. La femme représentait, en fait, le rouage essentiel de ce système, où l'Etat prend en charge

toutes les parties de la vie privée et publique. « Tandis que l'Etat nazi détruisait toute moralité dans la sphère politique, les épouses et la famille devaient garder un espace affectif pour les hommes qui super-

L'Allemagne hitlérienne, les femmes offraient dans une sphère distincte créée par elles, l'illusion de valeurs maternelles qui donnaient un sain vernis au monde aryen des élus.»

## NOUVELLES DE L'INSTITUT

L'Institut a accordé beaucoup d'attention à l'Afrique australe au cours des derniers mois. S'articulant à Londres tandis qu'il se rendait au Zimbabwe, **Bernard Wood** a présidé un colloque sur la politique du Canada à l'égard de l'Afrique australe.

Le texte de l'exposé paraitra dans la revue du Commonwealth intitulée *Round table*. À Harare, il a parlé à la *Canada-Zimbabwe Society* des effets qu'ont sur les pays en développement les changements survenant en Europe de l'Est, et il a dit craindre que le tiers-monde devienne un nouveau marché où seraient écoulés les systèmes d'armes que l'on est en train de retirer d'Europe par suite du dégel des relations Est-Ouest.

Au Mozambique, M. Wood a participé à une conférence qui se tenait à l'Institut des relations internationales sur les perspectives de paix dans la région. La campagne de désaffectation que menait l'Afrique du Sud s'est résorbée considérablement, mais la violence, la brutalité et le banditisme font encore des ravages dans les localités rurales du Mozambique. Parmi les thèmes évoqués à la Conférence, il a qu'il a abordés à la Conférence, il a évoqué la possibilité que certains éléments du processus de la CSCE soient appliqués en Afrique australe.

M. Wood a passé plusieurs jours en Afrique du Sud pour dialoguer avec des hommes politiques, des dignitaires, des journalistes, des diplomates et des universitaires sur l'énervante évolution de la conjoncture dans ce pays. «De Klerk et Mandela sont maintenant marés, ils ont dû abandonner tous les autres dans leurs univers respectifs.»

À son retour au Canada, M. Wood a tenu une conférence de presse à l'Institut et il a participé à diverses activités quand M. Mandela a visité le Canada; il a notamment contribué à des reportages sur les ondes de

### Une importante conférence internationale sur l'Union soviétique est organisée à Ottawa

Une importante conférence internationale sur l'Union soviétique va se tenir à Ottawa à la fin de novembre 1990, à laquelle participeront quelques-uns des plus grands spécialistes et spécialistes des relations Est-Ouest au monde.

Initiée par l'Union soviétique au mouvement : *conséquences pour le Canada et le reste du monde*, la conférence, qui doit durer deux jours et demi, soit du 26 au 28 novembre, va être l'occasion pour les participants d'analyser en profondeur une vaste gamme de thèmes et d'entendre l'opinion de spécialistes. Au nombre des sujets abordés, mentionnons : «l'économie soviétique : l'avenir de la *perestroïka*», le contexte des échanges et des investissements», «Réponses à l'équilibre Est-Ouest», et «le pouvoir soviétique dans un monde en changement».

Parmi les orateurs étrangers qui ont été invités, il y aura **Vladimir Kozlovich**, le rédacteur en chef de *Gonoyok*, un grand hebdomadaire soviétique de tendance réformatrice; **Vladimir Popov**, l'auteur de *The Turning Point*, un exposé radical des gigantesques problèmes économiques auxquels sont confrontés les Soviétiques; **Anders Åslund**, économiste suédois et auteur d'un ouvrage dont le *New York Times* déclare qu'il fait autorité pour ce qui est de la lutte que livre Gorbatchev pour mener à bien sa réforme économique; les chroniqueurs internationaux **Walter Wolk**, du *Manchester Guardian*, et **Christopher Barrett**, du journal *The Zeit*; **Vladislav Malkevitch**, président de la Chambre de commerce et d'industrie d'URSS; **Michael Sturmer**, un important commentateur allemand, spécialiste des relations internationales; **Goran Eimerfeldt**, un des principaux hommes d'affaires suédois, qui est à la tête de la première société d'import-export avec l'Union soviétique; et **Georgi Arbatov**, directeur de l'Institut des études canado-américaines à l'Académie des sciences de Moscou — ainsi que beaucoup d'autres.

Le droit d'entrée à la conférence est de 385 \$, ce qui comprend trois déjeuners et deux dîners. Sous réserve, les orateurs invités aux dîners seront **Aleksandr Yakovlev**, membre du *Politburo* de sécurité nationale auprès du président des États-Unis.

La conférence est parrainée conjointement par le Centre parlementaire pour les Affaires étrangères et le Commerce extérieur, l'Institut canadien pour la Paix et la Sécurité internationales et par le Conseil canado-soviétique des Affaires. Pour vous inscrire, veuillez communiquer avec le Centre par téléphone : (613) 233-8237.

par téléphone : (613) 233-8237.

20 AUTOMNE 1990

**Katherine Laundry et Susan Connell** ont participé à des réunions de la *Canadian Library Association*, à Ottawa en juin. Elles ont alors présenté deux ouvrages, à savoir *Le Thésaurus de la paix et la sécurité et Le Canada, la paix et la sécurité internationale. Une bibliographie, 1985-1989*. Elles ont aussi dirigé un atelier sur les ouvrages de référence concernant la paix et la sécurité.

En juin, **Ron Fisher** a fait un exposé sur les votes socio-psychologiques susceptibles de conduire au règlement de conflits internationaux, pendant le congrès annuel de la Société canadienne de psychologie. Plus tard ce mois-là, il a participé à la conférence annuelle de l'*International Association of Conflict Management*. Il a alors choisi comme thème *Training Third Party Consultants in International Conflict Resolution*. M. Fisher a par ailleurs présenté un atelier à l'Institut sur le travail qu'il mène en permanence dans ce même domaine.

**Bernard Wood** a pris la parole pendant une conférence que par-tenait à l'Institut au sujet de la sécurité en Asie du Sud-Est. Il a aussi participé à Mont-Tremblant à un atelier organisé par le Centre de recherche et de développement du ministère de la Défense nationale; il s'est alors penché sur les relations mondiales actuelles et à long terme. Enfin, il a prononcé l'allocation-thème à la réunion annuelle du *Peace Centre*, à Saint-John's (Terre-Neuve); il s'est alors interrogé sur les nouvelles politiques canadiennes en matière de sécurité et sur leurs conséquences pour le désarmement, le développement et l'environnement.

De nombreux changements ont eu lieu dans les rangs du personnel au cours de l'été : **Gordon Sharpe**, chargé de recherche détaché par le MDN depuis un an, a été promu co-lonnel en juin et est retourné au Quartier général de la Défense nationale pour prendre le poste de Directeur — Coordination et développement de la doctrine. **Ron Fisher**, qui a passé le congé sabbatique accordé par l'Université de la Saskatchewan, travaillera à l'Université Carleton

durant la seconde. **Fen Hampson**, versité de la Saskatchewan, travaillera à l'Université Carleton

pendant une conférence que par-

tenait à l'Institut au sujet de la sécurité en Asie du Sud-Est. Il a aussi participé à Mont-Tremblant à un atelier organisé par le Centre de recherche et de développement du ministère de la Défense nationale; il s'est alors penché sur les relations mondiales actuelles et à long terme. Enfin, il a prononcé l'allocation-thème à la réunion annuelle du *Peace Centre*, à Saint-John's (Terre-Neuve); il s'est alors interrogé sur les nouvelles politiques canadiennes en matière de sécurité et sur leurs conséquences pour le désarmement, le développement et l'environnement.

# A L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

## L'invasion du Koweït par l'Irak

Le 2 août, le Conseil s'est réuni et a condamné l'invasion du Koweït par l'Irak. Dans une résolution, il a exigé le retrait immédiat des forces irakiennes du territoire koweïtien et a exhorté les deux pays à entreprendre immédiatement des négociations intensives. L'Irak a déclaré au Conseil que le «gouvernement provisoire libre du Koweït» lui avait demandé son aide pour rétablir la «sécurité et l'ordre» dans le pays. Les États-Unis ont accusé l'Irak d'avoir soigneusement planifié l'invasion. «L'Irak a envahi d'État, dans un effort aussi éhonté que rompre pour essayer de justifier ses actions», a déclaré l'ambassadeur américain Thomas Pickering au Conseil.

## Le Sahara occidental

Le 27 juin, le Conseil de sécurité a adopté à l'unanimité un plan de paix pour le Sahara occidental, et il a exhorté le Maroc et les guérillas du Polisario à prolonger indéfiniment le cessez-le-feu provisoire. La résolution 658 prévoit que le plan de paix serait mis en oeuvre sur trente-cinq semaines, au cours desquelles l'autorité administrative du Sahara occidental serait transférée à l'ONU. Les 75 000 réfugiés du Sahara occidental seraient rapatriés dans leur pays d'origine. Le 13 juin, après s'être réuni avec le Secrétaire général, l'ambassadeur d'Israël, M. Jochanan Benin, a annoncé que son pays était disposé à recevoir le représentant de l'ONU, qui «pourrait aller où bon lui paraîtrait en Israël».

## Chypre et le déficit des opérations de maintien de la paix

Le 19 juillet, le Conseil s'est réuni et a sanctionné le plan qu'avait élaboré le Secrétaire général pour aider les Chypriotes grecs et turcs en arrivant à un règlement négocié de leur conflit. Dénonçant l'ennemi des négociations, le Secrétaire général a affirmé que le moment était venu de cesser de part et d'autre de réclamer, et de se concentrer plutôt sur la promotion de la réconciliation. Le geste du Conseil suit une décision qu'il a prise le 15 juin pour prolonger le mandat de la Force des Nations-Unies chargée du maintien de la paix à Chypre (UNFICYP). Pendant la réunion du Conseil, le Canada et sept autres membres ont émis une déclaration qui soulignait les problèmes

interdire l'importation dans leurs territoires respectifs... de tout bien ou produit provenant du Koweït ou de l'Irak; empêcher toute activité de leurs ressortissants, ou dans leurs territoires; l'exportation ou le transit de tout bien ou produit provenant de l'Irak ou du Koweït... Interdire la vente ou la fourniture à toute personne ou à tout organisme en Irak ou au Koweït, par leurs ressortissants, ou depuis leurs territoires, ou encore avec des navires bat-

## Le Moyen-Orient

Le 31 mai, le Conseil a prolongé de six mois le mandat de la Force des Nations-Unies chargée d'observer les dégagements (FNUOD), qui est déployée sur les hauteurs du Golan. Elle compte notamment 227 observateurs militaires canadiens. Le 1er août, le mandat de la Force d'intermédiation des Nations-Unies au Liban (FINUL) a lui aussi été prolongé.

Par ailleurs, le Conseil s'est réuni le 3 mai pour continuer son débat sur la question de l'établissement de nouveaux colons juifs soviétiques dans les territoires occupés. Le 25 mai, le Conseil s'est réuni pour

la première fois à Genève (Suisse). Il s'est déplacé ainsi par suite d'un compromis dont l'objet était de permettre au président de l'OLP, Yasser Arafat, de participer au débat sans mettre en danger son visa par les États-Unis, à supposer qu'il ait tenté de prendre la parole à New York. La réunion a été convoquée par suite d'une recrudescence de la violence dans la Bande de Gaza.

Le 31 mai, les États-Unis ont opposé leur veto à une résolution en vertu de laquelle une commission aurait été envoyée dans lesdits territoires pour établir la meilleure façon d'y garantir la sécurité des Palestiniens. Le Canada et les treize autres membres ont voté en faveur de la résolution. Après la réunion, un porte-parole des États-Unis a déclaré à la presse que Washington privilégiait une solution en vertu de laquelle le Secrétaire général enverrait un représentant personnel dans la région. Le 13 juin, après s'être réuni avec le Secrétaire général, l'ambassadeur d'Israël, M. Jochanan Benin, a annoncé que son pays était disposé à recevoir le représentant de l'ONU, qui «pourrait aller où bon lui paraîtrait en Israël».

Le 31 mai, les États-Unis ont opposé leur veto à une résolution en vertu de laquelle une commission aurait été envoyée dans lesdits territoires pour établir la meilleure façon d'y garantir la sécurité des Palestiniens. Après la réunion, un porte-parole des États-Unis a déclaré à la presse que Washington privilégiait une solution en vertu de laquelle le Secrétaire général enverrait un représentant personnel dans la région. Le 13 juin, après s'être réuni avec le Secrétaire général, l'ambassadeur d'Israël, M. Jochanan Benin, a annoncé que son pays était disposé à recevoir le représentant de l'ONU, qui «pourrait aller où bon lui paraîtrait en Israël».

financiers auxquels la Force fait face, notamment la baisse des contributions volontaires. Précisant qu'ils étaient très inquiets et que la situation imposait injustement un fardeau aux États membres fournissant des contingents à la Force, les huit pays ont fait valoir que celle-ci devrait être financée à même les contributions mises en recouvrement, au lieu de dépendre des contributions volontaires. L'année dernière, le déficit accumulé atteignait presque 175 millions de dollars US. La question se fait d'autant plus pressante que les membres du Conseil s'interrogent sur les opérations de maintien de la paix à venir. Les récents progrès accomplis dans les négociations entre les cinq membres permanents du Conseil et les parties au conflit cambodgien ont fait grandir l'espoir que l'ONU joue là-bas un rôle important relativement au maintien de la paix et à la surveillance des élections. Le 28 juin, le Secrétaire général a communiqué au Conseil une demande émanant du président intérimaire d'Haïti, Mme Ertha Pascal-Trouillot, qui réclamait l'aide de l'ONU pour organiser des élections. À mesure que l'on fait appel à l'ONU pour surveiller des élections, certains membres de l'Assemblée générale se disent inquiets face à ce nouveau rôle. Des pays tels que Cuba et la Colombie craignent que cette nouvelle fonction pour s'infiltrer dans les affaires des pays. Ils préféreraient que toute mesure intéressante des élections soit débattue et définie à l'Assemblée générale, où le pouvoir des membres permanents est moindre. Le 4 mai, le Conseil a prolongé de six mois le mandat du Groupe d'observateurs des Nations-Unies en Amérique centrale (ONUCA). La résolution à cet égard a été adoptée à condition que l'intervention du Groupe pour le maintien de la paix et la démobilisation cessent le 27 juin 1990, et le 27 du même mois, une cérémonie a eu lieu au Nicaragua pour marquer la démobilisation finale. □

## EN DIRECT DE LA COLLINE PARLEMENTAIRE

Visites officielles à Ottawa

Au printemps dernier, en l'es-

pace de quelques semaines, Ottawa

a reçu trois hommes d'Etat émi-

nents. Elle a d'abord accueilli le

secrétaire général des Nations-

Unies, M. Javier Pérez de Cuéllar,

et enfin, au mois

de juin, du militant noir sud-africain

et vice-président du Congrès natio-

nal africain, M. Nelson Mandela,

qui, le 18 juin, a pris la parole de-

vant les deux chambres du Par-

lement, événement extrêmement

inhabituel pour une personne autre

qu'un chef de gouvernement.

### Le Moyen-Orient

Avant les deux premières visites

susmentionnées, le ministre des

Affaires extérieures, M. Joe Clark,

avait confirmé aux communs, les

22 et 24 mai, qu'il serait question du

Moyen-Orient avec M.M. de Cléllar

que l'ambassadeur du Canada en

Israël avait ce même jour exprimé

aux autorités israéliennes la conste-

nation et la vive inquiétude de notre

pays face à la montée de la violence

dans les territoires occupés.

Le 14 juin, après la formation du

nouveau gouvernement israélien,

M. Bill Blaikie, chargé au NPD des

questions relatives aux Affaires ex-

trérieures, a demandé au ministre si

le gouvernement pensait utiliser sa

position au Conseil de sécurité de

l'ONU pour insister sur la mise sur

le pied d'une force de maintien de la

paix qu'Israël accepterait de laisser

obtenir l'agrement d'Israël.

Le 28 juillet, après la mort d'une

jeune Canadienne dans un attentat

en Israël, M. Clark a fermement

condamné «cet acte de terrorisme

qui, a-t-il déclaré, ne servait

qu'à perpétuer le cycle affligeant de

la violence qui caractérise la con-

flit moyen-oriental. Cinq jours à

peine plus tard, le 2 août, il a de

nouveau dû aborder la question de

la violence dans la même région,

quand l'Irak a envahi le Koweït. Il a

alors qualifié l'invasion irakienne de

«totallement inacceptable» et promis

que le Canada s'efforcerait avec

d'autres membres du Conseil de

sécurité de l'ONU de trouver une

«règle internationale efficace».

(Voir «A l'ordre du jour du Conseil

de sécurité» pour plus de détails

concernant l'ONU et l'Irak).

### L'OTAN et la politique

européenne

Le 17 mai, à la Chambre des

communes, suite à une réunion la

semaine précédente des ministres de

la Défense de l'OTAN à Kananaskis

(Alberta), M. Bill Blaikie (NPD) a

accusé le ministre de la Défense,

M. William McKinnigh, de ne pas

s'être opposé à la modernisation de

toutes les armes nucléaires. Le mi-

nistre a rejeté l'allégation du député

et insisté sur le fait que les essais

des missiles de croisière américains

d'armes nucléaires mais de

Le 31 mai, abordant les questions

«systèmes de guidage».

plus générales de la politique eu-

ropéenne, M. Clark a précisé quels

avaient été les cinq grands domaines

discutés durant la récente visite de

M. Gorbachev. Il a décrit les piliers

institutions de la politique eu-

ropéenne du Canada comme étant

une réorientation plus politique de

l'OTAN (à laquelle la contribution

militaire du Canada «devait dimi-

ner», un rôle accru de la CSCE, et

une intensification des relations

avec la Communauté européenne.

### L'environnement

Le printemps, il a souvent été

question à la Chambre du réchauffe-

ment du globe. Pendant la période

des questions, M. Jim Fulton, chargé

des problèmes d'environnement au

NPD, n'a cessé de presser le gou-

vernement d'adopter des mesures

visant à réduire considérablement

les émissions de gaz responsables

de l'effet de serre. Le 10 mai, se

joignant à l'attaqu, M. Herb Gray,

chef de l'opposition par intérim, a

cité un téléx du Département d'Etat

américain, obtenu par des fuites, qui

laisseait entendre que le Canada avait

accepté de faire front avec les Etats-

Unis pour «bloquer de nouveaux

progrès dans la lutte contre le

réchauffement du globe» au cours

des discussions qui devaient avoir

lieu plus tard dans la semaine, à

Bergen (Norvège).

Le ministre de l'Environnement

d'at, M. Lucien Bouchard, a

répondu que le Canada n'avait pas

accepté de faire front avec les Etats-

Unis pour «bloquer de nouveaux

progrès dans la lutte contre le

réchauffement du globe» au cours

des discussions qui devaient avoir

lieu plus tard dans la semaine, à

Bergen (Norvège).

Le ministre de l'Environnement

d'at, M. Lucien Bouchard, a

répondu que le Canada n'avait pas

accepté de faire front avec les Etats-

Unis pour «bloquer de nouveaux

progrès dans la lutte contre le

réchauffement du globe» au cours

des discussions qui devaient avoir

lieu plus tard dans la semaine, à

Bergen (Norvège).

Le ministre de l'Environnement

d'at, M. Lucien Bouchard, a

répondu que le Canada n'avait pas

accepté de faire front avec les Etats-
